Secure in the protection of Uncle Sam; their exchequers bursting with the golden product of perpetual annuities and temporary gratuities; more fortunate than other ex-rebel communities of the South, in that they are relieved from all care for the support of the Government that upholds and protects them; with a thousand acres per capita of the richest agricultural lands in the United States; and blocking the pathway of civilization—with all these blessings the Indians ought to be able to pick their teeth in contentment.

But like the dog in the manger, they are unwilling that others should share what they can not use. Sole lords over a dominion broad enough to support two million people, they are alarmed and pained that the civilization which has magnanimously refrained from disputing their greedy position is disposed to go around them and plant itself to the west of them. So they hie themselves to their faithful friends, the cattle-barons, for comfort and advice. Between them they trump up an argument whereby they fondly hope to convince the people of this country that 23,000,000 acres of land, virtually unoccupied and lying wholly beyond the five civilized tribes, should be still longer reserved from public settlement, for the financial benefit of the cattle-kings and the parasites which always infest a great political monopoly like our Indian system.

These Indians and their attorneys are asserting that they hold the right of occupancy to the Indian Territory under solemn treaties with the United States, and that even the Congress of the United States can not assert over them the political power of this great Government. There stand these fifty thousand Indians, fenced around by this wall of protection, and say to the American Government "Hands off! We owe you nothing. We deny that you have any power over us. You are bound by your treaties to protect us; you are bound to see that we do not suffer from internal commotions; you are bound to keep from us the aggressive white men, the intruders, and the lawless; but, while you are bound thus to guarantee to us peace, you can never extend over us the power of any Territorial government except for judicial purposes only."

But, sir, there are other considerations than those I have just mentioned, by reason of which it is our duty to do something to change the chaotic condition of affairs in that Territory.

Notwithstanding the monopoly of lands on the part of the "bloated" *Indian* "bondholders" and the crying need of our surplus labor for "more lands," there are yet other aspects of this question which demand our careful attention.

CRIME IN THE INDIAN TERRITORY.

One can not come from a careful examination of the statistics of crime and lawlessness in that Territory without a feeling of shame that such a blot is allowed to exist upon the fair face of our civilization.

As I have before suggested, the Indian Territory is the paradise of law-breakers. It is indeed a "dark and bloody ground," where the criminal is free from justice and the dark passions of men find an ample field for their exercise. Here are gathered in largest numbers the adventurous and reckless spirits who always hover upon the confines of civilization. It is amid such associations, in contact with the worst elements of society, that the enemies of this bill appear to believe that the Indian is to be elevated to the lofty plane of American citizenship in a country which Mr. Carnegie pronounces the freest, the purest, and the happiest on the globe.

I make the assertion that the Indian Territory presents the blackest and most appalling picture of crime of any section in the United States. I propose to prove my statement, and I invite the attention of gentlemen to some statistics which I have culled from the last annual report of the Attorney-General of the United States. They relate to the United States district court for the western district of Arkansas, under whose jurisdiction this Territory is placed.

The number of criminal prosecutions terminated during the fiscal year ended June 30, 1885, was five hundred and fifty-two. This record is double that of fifty-seven out of sixty-eight other districts. It is two hundred and forty-five more than the record of all New England; one hundred and fourteen more than the record of the three districts of New York and the districts of New Jersey, Delaware, and Maryland; ninety-three more than the record of all the Territories, including Alaska and the States of California, Nevada, and Colorado; thirty-five more than the record of the three districts of Texas and the two districts of Missouri; fifty-three more than the record of Kansas, Nebraska, and the two districts of Iowa; five more than the record of Minnesota, the two districts of Wisconsin, the two districts of Michigan, and the two districts of Illinois, and four hundred and eighty-three more than the record of the district of Eastern Arkansas.

The expenses attending the administration of justice in this district are equaled only by those of the District of Columbia. They are double those of fifty-eight out of sixty-eight other districts. For 1883 they amounted to $9,192.22; for 1884, to $25,131.35. No district came within $4,200, and it was more than double all others, except six. For 1885 they amounted to $159,685.06. No district comes within $50,000. It is $62,000 more than Dakota; $59,000 more than South Carolina; $52,000 more than the Southern District of New York; $60,860.48 more than all New England; $19,215.63 more than Kansas and the two districts of Missouri; $36,488.96 more than the three districts of Texas; $7,048.64 more than Dakota, Wyoming, and Colorado; $39,708.86 more than New Mexico, Arizona, and Utah; $3,058.37 more than the whole Pacific Slope; $29,486.27 more than the two districts of Pennsylvania and the district of West Virginia; $47,500.53 more than the three districts of Tennessee, and $133,325.58 more than the eastern district of Arkansas.

The distribution per year of $160,000 in court expenses is quite a rich plum for the city of Fort Smith.

But, Mr. Chairman, there is no prospect that as long as the present friends of the Indian are allowed to control his destiny this disgraceful and alarming record will be bettered. Crime is on the increase, as testify two prominent Indian agents, Messrs. Owen and Taylor, in their reports for the past year to the Commissioner of Indian Affairs.

Robert L. Owen, United States Indian agent at Union agency, Muscogee, Ind. T., says:

> The long distances necessary for witnesses to travel to Fort Smith make the administration of justice very expensive both to the Government and to those compelled to attend, and actually operate to prevent many crimes being detected.

Isaac A. Taylor, United States Indian agent at Sac and Fox agency, says:

> The vice of gambling seems to be on the increase. A great deal of horse-stealing has been going on during the past year by parties of whites and colored men, who make frequent trips through the country.
>
> Considerable quantities of whisky have been introduced by parties who challenge arrest and speak defiantly of the United States soldiers.

It is reported that at an execution at Fort Smith this spring over sixty criminals were hung upon the same gallows. A dispatch dated Fort Smith, Ark., January 30, will illustrate my statement:

> Judge Parker passed sentence of death upon seven prisoners in the United States court here to-day. They were convicted of murders committed in the Indian Territory, over which this court has jurisdiction.

I quote still another, dated March 4, to show the wholesale business done in the criminal line in this delectable region, which our opponents declare should never be burdened with the responsibilities and restrictions of civilized settlement and government unless the consent of fifty thousand Indians can be previously obtained:

> The Federal court here continues to grind out justice from day to day, and yet the number of cases does not appear to diminish; but, on the contrary, the docket is replenished as rapidly as the cases are disposed of. During the present term a large number of cases have been disposed of, and since the 25th of February the following convicts have been sentenced to the house of correction at Detroit, Mich.

The report then gives a long list of names, and concludes:

> This makes twenty-two convicts awaiting transportation to Detroit, all convicted since the first Monday in February.

A period of one month.

> The marshall always holds them here until he gets a car-load, then charters a car and takes them straight through to their destination. This crowd will probably be taken off this week in order to make room in the jail for fresh arrivals, there now being one hundred and ten behind the bars—about as many as can be accommodated. Besides these a large number have been convicted who received short jail sentences. The eight condemned murderers, under sentence to be hanged the 23d of April, appear to be the jolliest of all, and, with one exception, none of them are making the least preparation to meet their fate.

Eight condemned murderers, twenty-two other convicts awaiting transportation, one hundred and ten others "behind the bars," and more to follow, all in one session of one district court. Surely the contemplation of such a state of affairs ought to mantle with shame the cheek of every American and every believer in nineteenth-century progress.

But a still darker side is revealed in the report of John W. Scott, Indian agent at the Ponca agency. He has several tribes under his supervision, and his report is dated 1884. He says:

> The most deplorable of all these barbarous customs is the selling of girls in marriage; this practice, I think, is universal. A marriageable girl in a family is considered as much an article of merchandise as a horse or an ox, and is sold to the highest bidder and assumes the married state and the duties of maternity when she is a mere child, and often sorely against her will. An unmarried girl of more than fourteen or fifteen years of age is not to be found. The elevating and refining influence exerted by young ladies in white society is unknown among the Indians. The effect is bad in every way. It cuts short their education at the very point where it would begin to be of some practical advantage. A girl over fourteen or fifteen years of age is seldom found in the schools. It breaks them down physically and they become prematurely old; it degrades the women to a condition little better than slavery.

Yet our opponents say, and it has been said in substance on this floor that if the Indians choose the society of cowboys, gamblers, and horse-thieves instead of honest-toiling white farmers, with their wives and children, their churches and school-houses, this Government has no right in justice or law to interfere; and the mournful strains of "lo, the poor Indian" have been sung in Congress and out by large-hearted philanthropists and paid minstrels until the tune is a trifle threadbare.

The imperative necessity of preserving the cattleman in his unlawful possessions, the outlaw in his immunity from justice, the Indian agent in his field for speculation, and the Indian in his mental and moral degradation, by a further continuance of the present anomalous and outrageous condition of affairs in the Indian Territory has been portrayed

in vivid colors until we are almost led to believe that Anglo-Saxon progress has reached an obstacle which it can not surmount, and that the civilization of the revolver and bowie-knife is the only civilization possible to that benighted region.

Mr. Chairman, as I said at the outset, I am in favor of observing to the utmost every guarantee made to the Indians; I would even give them the benefit of doubts in construing our obligations to them; but, sir, I believe there may be a limit to this doctrine; I believe the time may come when the assertion of American civilization and national supremacy may be justifiable; I believe that the position of wards, which the Indians choose to assume when they or their friends desire a subsidy from the national Treasury, should not be allowed to be turned into mastery over us when they desire to antagonize the wishes and needs of the whole American people and the sentiment of the civilized world; I believe the time may come when the American people—the much-flattered, much-cajoled, and much-abused American people—may be justified in asking the American Congress—the creature of their hands, and facetiously termed their servant—whether the interest of the people or that of the monopolist and criminal classes is to be subserved; and, sir, I maintain that that time has come; and I judge from the huge pile of petitions in the room of the Committee on Territories praying for the passage of this bill that the aforesaid people are to-day making that very pertinent inquiry.

But, sir, as I said before, the opponents of this bill say that we have no right to deal with the lands of the Indian Territory without first obtaining the consent of the five civilized tribes. They claim also that this bill concedes our inability to move in the matter without the consent of these Indians; and they quote section 5, which provides that the consent of the Creeks and Seminoles shall be obtained before opening to settlement Oklahoma and the remainder of the country bought by us of those tribes in 1866.

But, sir, I claim that it is as unnecessary in law or equity to consult the wishes of the Indians in regard to any of these lands, except perhaps the Cherokee Outlet, as it would be to consult the Republic of Mexico, were it proposed to admit the Territory of New Mexico to the sisterhood of States. Neither is this clause in the bill an acknowledgment of any right on the part of the Indians. It is merely designed to placate the tender feelings of the Indians, and was inserted in the bill after much discussion to gratify those who would not consent to report the bill without it.

I submit, sir, that it ought not to be there; but I protest against the action of those to whom this unwarranted concession was made in taking advantage of its presence in the bill and attempting to hold the bill up for ridicule because it does not provide for the immediate and peremptory opening and settlement of more than the Public Land strip and the Choctaw and Chickasaw leased lands.

TITLE OF THE LAND WEST OF THE FIVE CIVILIZED TRIBES.

I wish now to review the titles to the lands lying west of the five civilized tribes that we may arrive at some definite understanding of the foundation upon which this bill proposes to raise another prosperous American Commonwealth.

I claim that the United States holds an absolute title, subject to no reservation whatever in favor of the original owners, to that part of the Indian Territory lying south of the "Cherokee strip," and west of the Chickasaw, Pottawatomie, and Sac and Fox Indian reservations, and that those regions are as much a part of the public domain as any portion of Kansas, Nebraska, or Dakota, subject only to the rights of certain tribes temporarily occupying the same by order of the President. Some parts of these lands are not, however, subject to the immediate operation of the public-land laws, from the fact that Indians have been temporarily located thereon. But this temporary restriction does not apply to the 1,887,800 acres constituting what is popularly known as Oklahoma.

Of the status of Oklahoma alone I shall speak further on.

TITLE OF THE CHOCTAW AND CHICKASAW LEASED LANDS.

And first I will speak of the Choctaw and Chickasaw leased lands, lying in the southwestern part of the Territory, between the Red and Canadian Rivers, and occupied under treaty and executive order by about seven thousand Kiowas, Comanches, Apaches, Wichitas, Cheyennes, and Arapahoes (a part of the Cheyennes and Arapahoes being settled to the north of the Canadian River, on the land bought by us in 1866 of the Creeks and Seminoles). The lands in question were in 1855 leased by the Choctaws and Chickasaws to the United States for the settlement thereon of the Wichitas.

April 28, 1866, the Choctaws and Chickasaws, for the consideration of $300,000, ceded these lands to the United States, making no reservation whatever. I do not know that any one has questioned the absoluteness of that cession. Even the minority of the committee who opposed this bill agree that—

> Nothing is said in this article (Article III, treaty of April 28, 1866) as to the purposes for which the cession is made, and it would seem that the United States acquired by this cession a right to make such use of this Territory as it may deem proper. (House Report No. 1084, page 16, Forty-ninth Congress, first session.)

The Wichitas were settled, in 1872, on a part of this land, but no agreement with them has been ratified, and they hold their land only during the pleasure of the Government; so that these 7,000,000 and odd acres stand entirely unencumbered by any legal title in any party, except the United States, subject, however, to certain treaty rights of the Kiowas, Comanches, and Apaches, but these rights do not interfere with the provisions of this bill. Equitable provisions can be readily made for the seven thousand Indians, and this rich heritage of the people restored to its rightful owners.

TITLE OF OKLAHOMA—TERRITORIAL GUARANTEE.

I now desire to speak of the legal status of the Oklahoma lands, embracing the country to the west of the Creeks and Seminoles, and between the Canadian River and the Cherokee outlet. This includes what is known as Oklahoma and a part of the Cheyenne and Arapahoe country.

I would call attention at this point to certain transactions had by our Government with the Creeks and Seminoles, by which those tribes ceded to the United States all their right and title to the lands just referred to.

On the 7th of August, 1856, the Creeks sold to the Seminoles the country west of 97° and embraced between the Canadian and North Canadian Rivers and the Cherokee strip.

Mr. BROWN, of Pennsylvania. Was it not in 1866?

Mr. STRUBLE. No, sir; it was in the treaty of 1856 between the Creeks and Seminoles and the United States.

This cession included what is now the north part of the Cheyenne and Arapahoe country, the south part of Oklahoma, and the southwest part of Pottawatomie reservation.

As this treaty expressly superseded all previous ones between the United States and these tribes, it is not necessary to go beyond it to find a basis for our discussion.

I here quote article 26 of this treaty:

> This convention shall supersede and take the place of all former treaties between the United States and the Creeks, between the United States and the Florida and Seminole Indians, and between the Creeks and Seminoles, inconsistent herewith.

In article 4 of this treaty the United States guaranteed to the Creeks and Seminoles that no State or Territorial government should ever be extended over the country sold or that remaining to the Creeks (which was the tract north of the North Canadian and south of the Cherokee strip) without the free and full consent of the tribe "owning the same."

Observe that the United States did not guarantee that no State or Territorial government should ever be extended over those regions without the consent of the Creeks and Seminoles; but "without the consent of the tribe owning the same;" *i. e.*, "owning the same" when such a proposition might be made. The ownership contemplated in these three words must have referred to the future, and must have been contingent upon any conveyance of their rights and title to those lands which the Creeks and Seminoles might afterward make. Any other construction put upon these words would be contrary to all usage and to that well-established principle of law that a reservation is to be strictly construed against the grantor.

Can so absurd a proposition be for a moment entertained that the United States would thus have made a solemn guarantee in relation to lands then (1856) owned by others which would operate to control the disposition of those lands when, through the ordinary course of sale, the title to them should become vested in the United States, no such clause of guaranty having been attached to the contract of sale itself?

Observe again, the language of the treaty is "without the free and full consent of the legislative authority of the tribe owning the same." Now, it is obvious that the intention could not have been to make the organization of a Territorial government over any of that country depend forever upon the consent of the Creeks and Seminoles.

The word "tribe" being in the singular can not be understood as referring to the Creeks and Seminoles, as they did then and do now constitute two distinct tribes.

In the treaty of 1866 by which this land was ceded to the United States there is no reference to that guaranty in the treaty of 1856. There is a clause in the former treaty which reaffirms all prior treaty obligations "not inconsistent with this (1866) treaty." But any such guaranty as that of 1856 would be inconsistent with the treaty of 1866; for the latter treaty purported to be an absolute sale and was so regarded and acted upon by both parties. I believe I am right in my statements.

Mr. WEAVER, of Iowa. Yes, you are right.

Mr. STRUBLE. This, then, was the condition of affairs previous to the civil war, in which the Creeks and Seminoles largely espoused the cause of the Southern confederacy. By their rebellious conduct they lost all rights and immunities guaranteed them by the treaty of 1856. To restore them to their former comfortable condition of wardship which they by their disloyalty had voluntarily surrendered the treaties of August 11 and August 16, 1866, were made by our Government with the Creeks and Seminoles, restoring them to the condition *in statu quo ante bellum, i. e.*, to the basis of the treaty of 1856.

Now, if these treaties amounted to a sale of the land involved, the Creeks and Seminoles must have disposed of their title to the grantee,

the United States, and consequently are not "owning the same," nor have they any control over its disposition.

If the Creeks and Seminoles had intended to have forever precluded the organization of a Territorrial government over the country to the west of them they should have inserted a clause to that effect in the treaties of 1866; and the natural presumption is that they were satisfied that the guaranty of 1856 should remain in force over the country reserved to themselves, and were willing that its effect should cease over the country ceded to the United States.

But, whatever might have been the intentions of those Indians, the law does not allow a reservation to be strictly construed, in any event, against a grantee, and especially when the reservation is not made, even by implication, in the grant itself; and to me it appears perfectly plain that the effect of the guaranty of 1856 was removed, as far as the land ceded by those treaties was concerned, by the treaties of 1866, and that the proposition of this bill to extend a Territorial government over the land ceded to the United States by the Creeks and Seminoles in 1866 does not contravene the guaranty of 1856.

DID THE TREATIES OF 1866 AMOUNT TO CONDITIONS PRECEDENT?

It has been claimed by some that the treaties of 1866 were not equivalent to a sale; that the preambles contained in Article III of the two treaties amount to a condition precedent to the vesting of the absolute fee in the United States.

Article III of the Seminole treaty reads:

In compliance with the desire of the United States to locate other Indians and freedmen thereon, the Seminoles cede and convey.

Article III of the Creek treaty reads:

In compliance with the desire of the United States to locate other Indians and freedmen thereon, the Creeks hereby cede and convey to the United States * * * to be sold to and used as homes for such other civilized Indians as the United States may choose to settle thereon.

Notice that the language of these treaties merely expresses a desire then existing on the part of the United States.

In the Seminole treaty it does not even express a purpose, and a purpose can only be implied in the Creek treaty; while both are entirely silent as to what would happen should the United States cease to entertain that desire and put the land to uses not in accordance with such desire nor with the expectation of the Indians.

Mr. HERMANN. Is it not distinctly understood by the Indian tribes, and is it not now claimed by them, that it was the moving condition of their treaties of cession that these lands should be used for the permanent settlement of friendly and civilized Indians?

Mr. WEAVER, of Iowa. Will my colleague allow me to reply to the gentleman from Oregon?

Mr. STRUBLE. I shall be very glad to yield to my colleague, but it must be with the understanding that my time is not to be curtailed by reason of the interruption, as I have not sufficient time to say half of what I desire to say upon this question.

Mr. WEAVER, of Iowa. The title to that land does not depend on what the Indians claim, but on the language of the treaty. Now, the treaty of cession shows the purpose for which these Indians parted with their land. Their motive was to secure money required by them to stock their farms and with which to build houses and fences. That is shown in the record. The Creeks and Seminoles ceded all their lands, including Oklahoma and the land then occupied by them, and bought of the Government other land to the east, which was more fertile and better timbered. This is the land which constitutes their present reservation.

I do not understand, Mr. Chairman, that anything the Indians may now claim has anything more to do with the decision of the question than a mere averment in a plea. It depends altogether upon the testimony.

Mr. HERMANN. I understand the gentleman to say that the Indians do not claim what I suggested.

Mr. WEAVER, of Iowa. They do not claim title.

Mr. STRUBLE. Now, Mr. Chairman, if I have the floor, I wish to say that such language as is contained in the articles of the treaties of 1866 before mentioned can not in my opinion be construed to establish a condition *sine qua non*. A condition of this kind should be specifically expressed, and should provide for the disposition of the subject-matter of the contract upon non-fulfillment of the condition. No more can it be properly regarded as entering into the consideration of the contracts of treaty. The very indefiniteness of the clauses invalidates them as considerations. "A consideration must have some value and reality," and what value or reality can be attached to a condition which may practically never be performed, and which, as a notorious fact, was abandoned years ago?

By the most liberal construction the language of these articles can be admitted to express only a partial consideration, the failure of which can not invalidate the contract. (See Parsons and Chitty.) But whether an extremely loose application of well-established legal maxims may serve to admit these articles as expressive of partial consideration, how insignificant a part it appears viewed in the light of contemporary circumstances.

In the preamble to the treaty between the United States and the Creeks, June 14, 1866 (ratified July 19, 1866), occur these words:

Whereas the Creeks made a treaty with the so-called Confederate States on July 10, 1861, whereby they ignored their allegiance to the United States and unsettled the treaty relations existing between the Creeks and the United States, and did so render themselves liable to forfeit to the United States all benefits and advantages enjoyed by them in lands, annuities, protection, and immunities, including their lands and other property held by grant or gift from the United States; and

Whereas in view of said liabilities the United States requires of the Creeks a portion of their land whereon to settle other Indians, &c.

In the preamble to the treaty of March 21, 1866 (ratified July 19, 1866), between the United States and Seminoles, occur the same words as in the first part of the preamble to the Creek treaty above; and it proceeds:

Whereas the United States, in view of the said treaty of the Seminole Nation with the enemies of the Government of the United States and the consequent liabilities of said Seminole Nation, and in view of its urgent necessities for more lands in the Indian Territory, requires a cession by said Seminole Nation of part of its reservation, and is willing to pay therefor a reasonable price, while at the same time providing new and adequate lands for them, &c.

These preambles occur in the treaties of 1866, so often quoted, and which ceded to the United States the land now under consideration. Now, what is the logic of the language above quoted?

First. "In view of the liabilities" of said Indians for rebellion. Not "in view of the needs of the United States," although this does occur as a secondary and resulting consideration in the Seminole treaty. Here both parties expressly declare in both treaties that this session is required as a just penalty for the rebellious attitude of the Creeks and Seminoles.

Second. The United States does not request, ask, or desire, but peremptorily requires it, to which requisition the Indians engaging in such treaties assented. In other words, the language above quoted expresses a demand from the United States based upon a right. The Indians acknowledged the right and obeyed the demand.

Third. The prospective use of this land on the part of the United States is only incidentally mentioned in the preamble of the Creek treaty, "whereon to settle other Indians," and is not mentioned at all in the preamble to the Seminole treaty.

Now, the "right" of the United States being admitted, what further consideration can the friends of the Creeks and Seminoles claim as due from the United States? Could any further promises, guaranties, or reservations strengthen a right already possessed by the United States? Or even could a provision in the treaty of cession that this land should revert to the Indians if other Indians were not settled upon it within a given time (granting that such a provision had been made, which is in no respect true) operate to weaken an absolute right already possessed by the United States? I think not. I maintain that the statement of the Government that it was its intention to settle friendly Indians upon that land is no more in law than a statement of the inducement which led to the making of the contract. I insist that the Government was not and is not bound by that mere statement of inducement.

Well might the Creeks and Seminoles feel disposed to comply with the wishes of the United States, upon whose bounty and protection they had been dependent for so many years, at whose hands they had been receiving annuities and gratuities of money and stock and tools and clothing aggregating an enormous value, and this, too, without any further consideration than their restoration to those rights and privileges which they had lost by their own willful act.

But I find a still further and greater consideration for the magnanimity and generosity with which these tribes assented to the wishes of the United States. By these treaties our Government agreed to pay the Creeks $975,168 in cash, and to the Seminoles $225,362 in cash and 200,000 acres of the finest land ceded by the Creeks—quite snug considerations to be paid to a few thousand Indians for land for which they never had and never could have any use whatever. Moreover, the price paid per acre was fair and equitable, in view of the situation of the land and the meager development of the West at that time. The Creek and Seminole delegations now in this city have asserted that the price per acre for which the United States obtained title to these lands was "palpably inadequate."

In view of the fact that the so-called civilized Indians dwelt, in larger numbers than now, to the east of that country; in view of the fact that the country to the west was generally supposed to be, and was called, "the Great American Desert," and was overrun by the wild savages of the plain; in view of the fact that there were no railroads within hundreds of miles of that country, and that there were millions upon millions of choice acres much nearer civilization and to be had for the asking—in view of all these things, does it seem that the price we paid for those lands was "palpably inadequate?" If the United States had declared that land free to all comers we could not have given it away.

My mental vision is not sufficiently microscopic to detect the "palpable inadequacy" of the consideration to these contracts of sale paid by the United States. On the contrary, I consider it to have been amply adequate. I contend that the United States has lived up to its contract to the letter. The attempt to establish the non-validity of

that sale appears to me to be contrary to all reasonable construction of language and in utter disregard of the plainest principles of law.

DID THE TREATIES OF 1866 RESERVE THE LAND FOR INDIAN SETTLEMENT?

An additional objection, as untenable as the one I have just answered, is offered by the opponents of this bill. It is that although the treaties of 1866 granted the land in fee-simple to the United States, yet the third articles of these treaties operated to reserve the land from public settlement. This is the view held by Judge Parker in United States *vs.* Payne (2 McCrary, 282), tried in the district court of the western district of Arkansas. Judge Parker admits the validity of the sale, but holds that the clauses of the third articles before quoted constitute a reservation of the lands sold for a specific purpose, namely, the settlement of friendly Indians thereon.

That no reservation was expressly made is perfectly evident from the language used. We are left to imply one; and a reservation of land for a specific purpose, depending upon a reservation so weak, is inconsistent with the most elementary principles of law, and would not in my judgment be supported by the higher courts.

If Judge Parker's view of the significance of those articles is correct the reservations which he claims were made by them were in the nature of grants to those "other Indians and freedmen;" but the court, in Rice *vs.* Railroad Company, 1 Black, 360, and Railroad Company *vs.* Litchfield, 23 How., 66, held that "legislative grants are to be strictly construed against the grantee, and nothing passes but what is conveyed in clear and explict language;" and Judge Foster, in Goodfellow *vs.* Mucky, decided in the Kansas district, citing these cases, said (Circuit Judge Dillon concurring):

This rule of construction may very aptly be applied to grants and reservations claimed under Indian treaties. It has been the traditionary policy of the Government in treating with the Indian tribes to reserve from the public domain tracts of land for the use and occupation of the Indian tribes, and to limit them to such reservations.

In United States *vs.* Sevaloff (2 Saw., 311) and United States *vs.* Leathers (6 Saw., 17) it was held that the Indian intercourse laws could not extend *propio vigore* over territory acquired by the United States subsequent to the passage of those laws; and Justice Gray, in United States *vs.* McBratney (104 Otto, 621), says:

Whenever, upon the admission of a State into the Union, Congress has intended to except out of it an Indian reservation, it has done so by express words.

This case involved the jurisdiction over the Ute Indians in Colorado. The court held that, no reservation to the contrary having been made in the act admitting Colorado to the Union, the Ute Indians would be placed under the jurisdiction of Colorado, although a previous treaty with the Utes provided to the contrary.

Judge McCrary, in Forty-three Cases Cognac Brandy (Minn., 1882), 4 McCrary, 616, said:

I do not think an Indian reservation can be established by custom or prescription. The fact that a particular tribe or band of Indians have for a long time occupied a particular tract of country does not constitute such tract an Indian reservation.

Originally all of the public domain was occupied by the Indians, and the reservation policy was adopted with a view of locating them in certain districts and opening the remainder of the public lands to white settlement. It can not, therefore, be said that a particular portion of the public domain upon which an Indian tribe has been suffered long to remain, while other portions have been open to settlement, or set apart specifically for Indian occupation, constitutes such tract an Indian reservation. The fact that the tract of country in question has been sometimes referred to in treaties and official reports, as "Red Lake Indian reservation" is not sufficient to authorize the court to declare it to be such.

But I may go further and say that such a construction of these articles is inconsistent with other articles of the same treaties.

ATLANTIC AND PACIFIC RAILROAD GRANT.

These treaties, proclaimed August 11 and August 16, were made—the Seminole treaty on March 21, and the Creek treaty on June 14, 1866. During that time there was pending before Congress the bill which subsequently passed, on July 27, 1866, incorporating and granting lands in the same territory, ceded to the United States by the Creeks and Seminoles, to the Atlantic and Pacific Railroad Company. One of the principal objects of Congress in making these treaties with the Indians was to provide a right of way and a grant of land to aid in the construction of that road. In this act of incorporation of July 27, 1866, Congress granted to the Atlantic and Pacific Railroad Company a tract of country embracing each alternate section of land for 40 miles on each side of the line of location.

Are we to suppose that the Government intended, in their acceptance of these lands ceded to them in the treaties of 1866, to reserve them from public settlement for an Indian reservation when by the same treaty it provides for this railroad, and in the act of July 27 grants an 80-mile strip through the heart of that country to that same railroad? But this view of the reservation made by our Government rests solely upon the opinion of Judge Parker, and has never been passed upon by the higher courts.

In the act of July 28, 1866, before mentioned, occur these words:

SEC. 3. *And be it further enacted*, That there be, and hereby is, granted to the Atlantic and Pacific Railroad Company * * * every alternate section of public land, not mineral, designated by odd numbers, to the amount of twenty alternate sections per mile on each side of said railroad line, as said railroad may adopt, through the Territories of the United States; and ten alternate sections of land per mile on each side of said railroad when it passes through a State * * * and whenever, prior to said time, any of said sections shall have been * * * occupied by homestead settlers, or pre-empted, or otherwise disposed of, other lands shall be selected by said company in lieu thereof.

SEC. 6. *And be it further enacted*, That the President of the United States shall cause the lands to be surveyed for 40 miles in width, on both sides, on the entire line of said road, after the general route shall be fixed, and as fast as may be required by the construction of said road; and the odd sections of land hereby granted shall not be liable to sale or entry, or pre-emption, before or after they are surveyed, except by said company as provided in this act; but the provisions of the act of September, 1841, granting pre-emption rights, and the acts amendatory thereof, and of the act entitled "An act to secure homes to actual settlers on the public domain," approved May 20, 1862, shall be, and the same are hereby, extended to all other lands on the line of said road when surveyed, excepting those hereby granted to said company.

By this act Congress provided that as fast as the company should complete 25 miles of road it should receive a patent to the land grant pertaining to that 25 miles, and subject to no reservation or restriction. The United States agreed to extinguish as rapidly as possible the title which any Indian tribe might have to any of said land. Congress, having this bill then before it, had already a few weeks before extinguished the title of the Creeks and Seminoles to the land now known as Oklahoma, and to the west of Oklahoma, between the Canadian River and the Cherokee strip. By this act of July 27, 1866, the even sections in that land grant were opened to settlement under the public-land laws (see section 6 above).

I claim that the cession to the Government by the Creeks and Seminoles was alone sufficient to open that country to squatter settlement; but here, in the act granting land to the railroad company, we find the express provision that the public-land laws "are hereby extended over all other lands (meaning, of course, the even-numbered sections) on the line of said road." And this extension of the public-land laws over the "other lands" did not depend upon the survey and location of the road, but took effect as soon as the bill became a law; for in article 6, above quoted, it provides that the odd sections of land "hereby granted" shall not be liable to sale, entry, or pre-emption, except by said company, before or after they are surveyed; and it proceeds immediately to provide that the even sections should be placed under the operation of the land laws of the United States.

But, more than this, the United States plainly contemplates homestead and pre-emption settlement between the passage of the act and the location of the road, for in section 3, above quoted, it reads:

And whenever prior to said time [the filing in the General Land Office by the company of a plat, designating the location of the road] any of said sections, or parts of said sections, shall have been occupied by homestead settlers, or pre-empted, or otherwise disposed of, other lands shall be selected by said company in lieu thereof.

The lands granted by this act to aid in the construction of that road have been forfeited through the non-completion of the road within the specified time; but think no one will hold that, if the even sections of the land within the limits of that grant had been settled by homesteaders and pre-emptors, that the forfeiture of the grant to the company would invalidate the rights of those settlers; and if such forfeiture would not affect the rights of settlers who had settled before the forfeiture, it can not, in the absence of further legislation, affect the rights of those who settle there now; and that country, granted in 1866 to the Atlantic and Pacific Railroad Company, is still open to public settlement. Neither can it be urged that this grant was not intended to include land in the Indian Territory, for the act grants twenty alternate sections * * * "through the Territories of the United States," and no one will argue that the Indian Territory is not one of the Territories of the United States. Furthermore, we find that the provisions of this grant are to extend along the "entire length of the road;" and that was from Springfield, Mo., to the Pacific Ocean.

Nor is it a fact that the Indians themselves entertain such an idea. In a recent printed argument by the delegates of the five civilized tribes they bitterly assail the provisions of this bill, for the reason, as they allege, that it hides a scheme to open up this old land grant, although they know that the bill under consideration expressly provides for the forfeiture of that grant, even were it not already forfeited by lapse of time.

In view, Mr. Chairman, of these treaties of 1866 and the circumstances surrounding them, it seems to me that the conclusion is irresistible that these treaties constituted an absolute sale to the United States on the part of the Creeks and Seminoles, and that the guaranty of 1856 has no further force over the lands in question.

Mr. BROWN, of Pennsylvania. Is there any tribe which claims it does?

Mr. STRUBLE. The Indians claim everything they can claim. They are sharp fellows. They and their friends in this House are asserting that, by reason of the third article in the treaties of 1866, which I quoted a few moments ago, such an equity obtains between the Government and these Indians that, although by those treaties they voluntarily parted with their legal title, we have no authority to extend our political jurisdiction over the land ceded by them in 1866, they having sold it, as they allege, for the sole purpose of the settlement thereon of friendly Indians.

Mr. HERMANN. Was it not specially stipulated that these lands were to be used for a specific purpose?

Mr. STRUBLE. No, sir; not in terms.

Mr. BROWN, of Pennsylvania. If I understood your argument a few moments ago, you held that these statements of purpose on the part of the Government, in the third article of the treaties of 1866, did not amount to a stipulation that the lands were to be used for a specific purpose, as our friend from Oregon [Mr. HERMANN] suggests.

Mr. STRUBLE. Yes, sir; that is the point I made. I know my friend from Oregon and others of the Committee on Territories maintain that the effect of the language there used is to establish such a stipulation, but I do not agree with them.

Mr. HERMANN. Will the gentleman yield to me?

Mr. STRUBLE. Certainly.

Mr. WEAVER, of Iowa. There is no Indian tribe which claims that they own the Oklahoma land as a tribe or as individual Indians.

Mr. STRUBLE. That is correct.

DID THE CESSIONS OF 1866 CONVEY THESE LANDS TO THE UNITED STATES IN TRUST FOR OTHER INDIANS?

Mr. BAKER. Let me interrupt the gentleman from Iowa with his consent to ask a question. Do you not understand these conveyances to the Government were conveyances in trust for a specific purpose?

Mr. STRUBLE. I do not so understand them.

Mr. BAKER. And further, let me ask the gentleman if the heads of the departments of the Government, the Secretary of the Interior formerly, Mr. TELLER, and the Commissioner of the General Land Office also, do not insist that the title to the land was in the Indians and transferred to the Government, in trust, for a specific purpose, and that the Indians claim interest both in law and in equity in the lands?

Mr. HILL. Now, if my colleague upon the committee will allow me to suggest, even if it be true that the Government acquired the lands for a specific purpose (for settling the friendly Indians), whether that purpose of the Government has not long ago been permanently abandoned by the Government.

Mr. STRUBLE. Certainly; that is true, and well understood by all gentlemen who have examined the question.

Mr. SYMES. As far as the trust is concerned I apprehend that no lawyer would ever contend that it was a legal trust, continually binding upon the United States, as my friend from Iowa [Mr. STRUBLE] has so conclusively shown.

Mr. STRUBLE. I am very glad to have the help of my able friend on the right [Mr. SYMES].

Mr. BARNES. The Government has held in reference to all these lands, as shown by a Senate document (and we did not take that position when the minority report was prepared), in reference to the lands acquired from the Choctaws and Chickasaws, and also from the Creeks and Seminoles, that they held them in trust for a certain specific purpose.

Mr. HERMANN. That is right.

Mr. BARNES. And that document is Senate Document No. 111, Forty-seventh Congress, first session. It is very distinctly cited in the argument of the gentleman from New York [Mr. BAKER] when he addressed the House upon this subject. This reported is signed by C. W. Holcomb, acting Commissioner.

Mr. WEAVER, of Iowa. Will my friend from Iowa permit me a word in reference to that?

Mr. STRUBLE. I will with the understanding that I am to have all the time I want in which to conclude my remarks.

Mr. WEAVER, of Iowa. Now, I want to say in reply to the gentleman from Georgia——

Mr. BARNES. You will have to reply to the Commissioner, not to me. I simply give his opinion.

Mr. WEAVER, of Iowa. I understand the gentleman to be an able lawyer. When he talks of the Department having held so and so, does he undertake to say that there was a case made, and that the Government was represented, and that the Indians were represented, and that the people who desired the lands—the settlers—were represented, and that it was argued and discussed and so held by the Department after a case was made?

Why, he may find some *ipse dixit;* he may find some rhetorical flourish in a departmental report or some language of the kind to which the gentleman has referred; but that is not a holding in the meaning of the law where the parties have all been heard. It does not even approach the dignity of an opinion, because the question was not raised before the officer making this statement.

Mr. BARNES. The gentleman does not understand me to say more than I did say. I said that the Department had held so and so, and I referred to the document. As to the circumstances under which it so held, that is another question.

Mr. WEAVER, of Iowa. You may find a remark——

Mr. BARNES. It is more than a remark; it is a distinct statement.

Mr. WEAVER, of Iowa. I can go to Department reports and documents and find statements there in favor of anything under the sun. But to call that authority binding on the House or on any court is a very different thing. It will not do to call it a holding. And suppose it is a holding, this House has authority to set it aside.

Mr. HEPBURN rose.

The CHAIRMAN. Does the gentleman from Iowa [Mr. STRUBLE] yield further?

Mr. STRUBLE. I yield provided it does not come out of my time. But my colleague on the committee, the gentleman from Oregon [Mr. HERMANN] is to follow with remarks on this question, and I desire that the committee will bear in mind that the gentleman from Oregon is well prepared to talk on the question and will interest all who listen to him. Does my colleague from Iowa [Mr. HEPBURN] desire me to yield to him?

Mr. HEPBURN. Not at this moment.

Mr. STRUBLE. Referring to the reference of my friend, the gentleman from Georgia [Mr. BARNES], to the holding of the Department upon this question, I must say that I supposed I had enlarged upon this point a few moments ago sufficiently to have convinced the gentlemen of this committee that, as far as the Creek and Seminole treaties were concerned, the mere statements of purpose contained in the third articles of those treaties can not possibly be construed to have established any legal reservation or trust. I maintain that no more absolute, unequivocal bargain of sale of lands was ever made.

The document to which the gentleman from Georgia [Mr. BARNES] referred, and which was quoted at length in the able speech of the gentleman from New York [Mr. BAKER] is an opinion delivered in 1881 to Hon. S. J. Kirkwood, then Secretary of the Interior, by C. W. Holcomb, acting Commissioner of the General Land Office. It is only an opinion of a gentleman holding a subordinate position in the Department, and was delivered, as my colleague from Iowa [Mr. WEAVER] suggested, without having heard any side except that laid down in the library of the Interior Department. Moreover, the opinion is in grievous error upon several points, especially the very vital point of what is Indian country, Mr. Holcomb holding that all the Indian Territory is "Indian country" within the purview of the Revised Statutes. This view I shall controvert further on in my remarks, if time be allowed me.

But that no point may be passed by in this discussion without a fair and full elucidation, I quote so much of Mr. Holcomb's opinion as is pertinent in this connection:

The treaties by which the United States reacquired title to any of the lands in the Indian Territory, or obtained the conditional right to control the disposal of any of said lands, were the treaties with the Seminoles of March 21, 1866; with the Choctaws and Chickasaws of April 28, 1866; with the Creeks of June 14, 1866; and with the Cherokees of July 19, 1866.

By the third article of the treaty with the Seminoles (14 Statutes, 756), said Indians ceded to the United States about 2,100,000 acres of land," in compliance with the desire of the United States to locate other Indians and freedmen thereon."

In compliance with the same desire, the Creeks, by the third article of the treaty with that tribe (14 Statutes, 786), ceded about 3,200,000 acres to the United States, "to be sold to and used as homes for such other civilized Indians as the United States may choose to settle thereon."

The freedmen referred to were the former slaves of Indian tribes. The treaty stipulations, as uniformly understood and construed, have no application to any other freedmen than the persons freed from Indian bondage. They relate exclusively to friendly Indians and to Indian freedmen of other tribes in the Indian Territory whom it was the desire of the United States to provide with permanent homes on the lands ceded for that purpose.

I think Mr. Holcomb's statement that only the former slaves of Indians were referred to in the treaties of 1866 is open to serious question; but I will not stop to discuss the matter now.

The lands reconveyed to the United States by the foregoing treaties are therefore held subject to the trust named. They can be appropriated only to the uses specified, and to those uses only by the United States, and then only in the manner provided for by law. Miscellaneous immigration even by the intended beneficiaries would be unauthorized and illegal.

The Choctaw and Chickasaw cession of April 28, 1866 (14 Statutes, 769), was by the tenth section thereof made subject to the conditions of the compact of June 22, 1855 (11 Statutes, 613), by the ninth article of which it was stipulated that the lands should be appropriated for the permanent settlement of such tribes or bands of Indians as the United States might desire to locate thereon.

The lands embraced in the Choctaw and Chickasaw cession were also included in a definite district established by the stipulations of the treaty of 1855, pursuant to the act of Congress of May 28, 1830, the United States re-engaging by the seventh article of said treaty to remove and keep out from that district all intruders.

Articles 15 and 16 of the treaty with the Cherokees (14 Stat., 803, 804) provide that the United States may settle any civilized Indians friendly with the Cherokees and adjacent tribes within the Cherokee country, on unoccupied lands, on certain terms and conditions specified in the treaty.

These provisions made the United States the agent of the Cherokees for the sale and disposal of unoccupied land in the Cherokee country for the benefit of said tribe, but restricted such sale and disposal exclusively to friendly Indians.

In pursuance of the stipulations of the foregoing compacts, and in the exercise of the trusts assumed by the United States under the several treaties, and in accordance with specific provisions of law and the lawful orders of the President, all the lands in the Indian Territory to which the United States has title have been permanently appropriated or definitely reserved for the uses and purposes named.

As to the groundlessness of any claim of implied or actual trust contained in the Creek or Seminole treaties, I think I have already sufficiently expressed myself. I will only add that such a trust is impossible from the fact that the "other Indians and freedmen" referred to in those treaties were not identified and, consequently, could not become beneficiaries. I shall treat of the Cherokee treaty later on; I wish now to notice only Mr. Holcomb's argument in regard to the trust which he and some gentlemen of this committee appear to discover to have been imposed on the Choctaw and Chicksaw treaty. Mr. Holcomb says:

The Choctaw and Chickasaw cession of April 28, 1866, was, by the tenth section thereof, made subject to the compact of June 22, 1855 (the treaty by which their lands west of 98° were leased to the United States), by the ninth article of which it was stipulated that the lands should be appropriated for the permanent settlement of such tribes or bands of Indians as the United States might desire to locate thereon.

The clause of Article IX of the treaty of 1855 reads as follows:

And the Choctaws and Chickasaws do hereby lease to the United States all of their common territory west of the ninety-eighth degree of west longitude for the permanent settlement of the Wichita and such other tribes or bands of Indians as the Government may desire to locate therein; excluding, however, all the Indians of New Mexico; * * * which Indians shall be subject to the exclusive control of the United States, under such rules and regulations not inconsistent with the rights and interests of the Choctaws and Chickasaws as may from time to time be prescribed by the President for their government: *Provided, however*, The territory so leased shall remain open to settlement by Choctaws and Chickasaws as heretofore.

Article X of the Choctaw and Chickasaw cession of 1866 reads as follows:

The United States reaffirms all obligations arising out of treaty stipulations or acts of legislation with regard to the Choctaw and Chickasaw Nations entered into prior to the late rebellion and in force at that time, not inconsistent herewith. * * *

Now, Mr. Chairman, in comparing these two articles of the treaties of 1855 and 1866, several questions occur to me as being pertinent to an attempt to discuss the position of Mr. Holcomb.

First. Did the language of Article IX of the treaty of 1855 establish such a trust as that gentleman claims, or any trust in fact?

Second. If so, did the Article X of the treaty of 1866 revive that trust?

Third. If so, is it a continuing trust?

WHAT IS A TRUST?

The definition adopted by both Perry and Lewin in their works on Trusts is that given by Sir Edward Coke as his definition of a use, and they agree that the same is a legal and accurate description and definition of a trust. Mr. Coke, in his work on Littleton, page 272, says:

A trust is a confidence reposed in some other, not issuing out of the land, but is a thing collateral, annexed in privity to the estate of the land and to the person touching the land, for which *cestui que trust* has no remedy but by subpœna in chancery.

The courts in Wallace *vs.* Wainwright, 87 Pa. St., 263, and Chaffee *vs.* Rusk, 12 Harris, 432, defined a trust as "existing when the legal estate is in one person and the equitable estate in another."

Perry, in his work on Trusts, volume 1, section 24, says:

As direct trusts are expressly declared by the parties, there can never be any controversy as to whether they exist.

Lewin, in his work upon the same subject, page 18, says:

The machinery of a trustee is introduced for the execution of some purpose particularly provided.

Did the language of this article establish the legal estate in the United States and the equitable estate in the Wichitas? Did it give the Wichitas such a title that they could bring action against the United States to maintain it? Is the course of the United States as trustee so plainly marked out, and the future conveyance to the Wichitas made so binding upon the United States that it is not possible to construe the language into granting the United States the discretion of settling Indians there or not? I think not.

The language is too brief, too indefinite, to establish an express obligation to reconvey those lands to the Witchitas. I regard it simply as the statement of a purpose, not as entering into the consideration of the cession. Suppose the Wichitas had refused to be settled there, and the United States had not desired nor been willing to settle other tribes thereon, would the United States have been compelled to abandon the lease? I think not.

But admitting the trust as having been established by this language in the treaty of 1855, what follows? Was the trust entered upon prior to the sale of 1866? Were the Wichitas or any other tribe settled there prior to 1866? The Wichitas were not settled there until October 19, 1872, and then by an agreement which has never been ratified. No other tribes were permanently settled there prior to 1866. It is true that these lands were, in the treaty of October 18, 1865, embraced within the exterior limits of the Comanche and Kiowa reservation, which extended to New Mexico Territory; but there was no permanent settlement of these Indians upon these lands exclusively; and even the treaty of October 18, 1865, was not proclaimed until May 26, 1866, a month after the Choctaws and Chickasaws had sold these lands to the United States. So that in no sense were there any Indians, least of all the Wichitas, permanently located on that land prior to the vesting of the absolute title in the United States. What effect would such vesting of title in the United States have upon an unfulfilled trust imposed by the same Choctaw and Chickasaw tribes who were the vendors in the cession of 1866?

We will assume that in 1855 the Choctaws and Chickasaws imposed the trust of settling the Wichitas upon that land to the United States. That trust was not fulfilled. In 1866 the same Indians sold that land for a consideration to the United States, making no reference whatever to the trust of 1855 and laying no restriction whatever upon the most absolute exercise of power on the part of the United States over the region so ceded.

Would not the treaty of 1866 supersede that of 1855? Certainly it would. But as a matter of fact the United States have in 1872, of their own free will and in their own time, and taking no notice of the treaty of 1855 with the Choctaws and Chickasaws, settled the Wichitas on that land. What more can be asked of the United States? Though the trust was destroyed by the sale of 1866 the United States have fulfilled it, and certainly the question of trust can no longer be raised.

CHEROKEE TITLE, IN GENERAL.

I now desire to call the attention of gentlemen of this committee to the status of the Cherokee outlet. Soon after the Louisiana purchase Congress began to make provision for such of the Indians as desired to move west of the Mississippi, and by 1828 about half of the Cherokees were comfortably settled on the west of the Mississippi, between the Arkansas and White Rivers, in what is now the State of Arkansas, having a reservation of 7,000,000 acres. In that year the Cherokees on the Arkansas desiring to move farther from contact with civilization, and the Cherokees of Georgia wishing to join their brethren west of the Mississippi, the United States made a treaty with the Cherokee tribe.

It will be profitable for us to follow as briefly as may be the different links in the chain of the Cherokee title, not only because it will help us to an understanding of the basis of their present claims, but because the minority of the Committee on Territories argue that the Cherokees hold their land, including both the 7,000,000 now occupied by them and the 6,000,000 acres of the outlet, by an absolute fee-simple title. But they say, "This is not strictly true of any other of the civilized tribes." Very well; I shall undertake before I finish to prove that it is not strictly true of the Cherokees as far as their 7,000,000 acres are concerned, and that they have only a bare legal title to the outlet, the patent to the outlet having been given erroneously and contrary to the previous intention of both the United States and the Cherokees.

In the treaty of 1828 occur these words:

The United States agree to possess the Cherokees, and to guarantee it to them forever, and that guarantee is hereby solemnly pledged, of 7,000,000 of acres.

Then follows a description of the land:

In addition to the 7,000,000 of acres thus provided for and bounded, the United States further guarantee to the Cherokee Nation a perpetual outlet west, and a free and unmolested use of all the country lying west of the western boundary of the above-described limits, and as far west as the sovereignty of the United States and their right of soil extend.

In 1830 Congress passed a general law (4 Stats., 411) providing for an exchange of lands with any and all Indians east of the Mississippi River and their removal west of the Mississippi. By the third section of said act the President was authorized "solemnly to assure the tribe or nation with whom such exchange may be made that the United States will forever secure and guarantee to them and their heirs or successors the country so exchanged with them, and if they prefer it the United States will cause a patent or grant to be made and executed to them for the same; provided always that such lands shall revert to the United States if the Indians become extinct or abandon the same."

The treaty of 1833 purported to be "merely supplemental to the treaty of 1828, and not to vary the rights of the parties any further than said treaty of 1828 is inconsistent with that of 1833." And, as the minority report upon this bill admits (see page 12), "that is only so far as the territory described in the one is inconsistent with the territory described in the other." It was made necessary by a proviso in the treaty of 1828, which provided that the lands therein granted to the Cherokees should not be held to include any land previously selected by the Creeks. It was found that the Creeks had selected part of the 7,000,000 acres granted to the Cherokees by said treaty of 1828.

The treaty of New Echota, in 1835, recites the treaty of 1828–'33, and says (Article II):

And whereas it is apprehended by the Cherokees that in the above cession (of 7,000,000 acres) there is not contained a sufficient quantity of land for the accommodation of the whole nation on their removal west of the Mississippi River, the United States * * * hereby covenant and agree to convey the said Indians, and their descendants, by patent in fee simple, the following additional tract of land [in Kansas], estimated to contain 800,000 acres.

Article III provides that the lands ceded by the treaty of 1828–'33, "and those ceded by this treaty, shall all be included in one patent executed to the Cherokee Nation of Indians, according to the provisions of the act of May 28, 1830," which contained the clause providing for reversion to United States. This patent was granted to the Cherokees in 1838.

In commenting upon the above-mentioned treaties and the act of 1830, the minority argue that the clause of the treaty of 1835, providing that the 7,800,000 acres be patented to the Cherokees according to the act of 1830, provides for the granting of a lesser title than was granted to the Cherokees by former treaties; and that the provision, in the patent subsequently made in conformance thereto, is invalid.

CASE OF HOLDEN VS. JOY.

To support their view, the minority cite the decision of the Supreme Court in Holden *vs.* Joy (17 Wal., page 211), in which the court say:

Strong doubts are entertained whether that (this) condition in the patent is valid, as it was not authorized by the treaty under which it was issued. By this treaty, the United States covenanted and agreed to convey the lands in fee-simple title, and it may well be held that if that condition reduces the estate conveyed to less than a fee, it is void; but it is not necessary to discuss that point.

The minority evidently lay much stress upon the force of this decision, as also upon the opinion of Attorney-General Devens (16 Opinions, 430) upon the same case, in which he held views substantially the same

as those of the Supreme Court which I have quoted. But the most casual reference to the above decision of the Supreme Court and opinion of the Attorney-General will show that they have no relevancy whatever to this discussion, as they were rendered in a case which involved the "800,000 additional" acres of land in Kansas (which the Cherokees in 1876 reconveyed to the United States), and had no reference to the present lands of the Cherokees.

The very language of the court's decision reveals the fact that it did not relate to any of the present domain of the Cherokees; for the court, in the clause of their decision which I have quoted, say:

> By this treaty the United States covenanted and agreed to convey the lands in fee-simple title.

I defy any man to find any covenant or agreement of that kind in regard to lands now owned or even claimed by the Cherokees in the treaties of 1828, the supplementary treaty of 1833, or in the treaty of 1835—the very one to which the court in this decision refer. In the treaty of 1828 there is nothing said about a patent or conveyance of any sort; the United States simply "agree to possess," and agree "to guarantee forever." In the treaty of 1833 it merely says:

> And letters patent shall be issued by the United States as soon as practicable for the land hereby guaranteed.

Nothing is said as to the interest which it is proposed to patent "as soon as practicable." And, as there is nothing in this treaty inconsistent with the previous act of 1830, and as that act was intended to lay down a general policy, it is to be presumed that the act was kept in view in the making of this treaty.

That the United States and the Cherokees, in their treaty of 1835, regarded the treaty of 1833 as not an independent instrument, but a continuation and part of the treaty of 1828, is evident from the following reference in the second article of the treaty of 1835:

> Whereas, by the treaty of May 6, 1828, and the supplementary treaty thereto of February 14, 1833, the United States guaranteed and secured to be conveyed by patent to the Cherokee Nation of Indians the following tract of country.

Notice that this language conveys the idea that the guaranty to convey by patent was made, not alone in the treaty of 1828, nor in that of 1833, but in the treaties of 1828 and 1833 as one transaction. Any other construction to this language would make it express an untruth, for there is no mention of patent or future conveyance in the treaty of 1828.

The treaty of 1835, in regard to which the minority have been led into error by a misapplication of the decision of the court and opinion of the Attorney-General thereupon, contains no provision in regard to patenting in fee-simple to the Cherokees the land now held or claimed by them; but plainly provides (article 3) that it should be patented "according to the provisions of the act of May 28, 1830."

Nothing in the treaties of 1828 and 1833 calls for an absolute fee-title; the general law of 1830 expressly provides otherwise. That law superseded the treaty of 1828; and inasmuch as the treaty of 1833 was expressly for the purpose of curing defects in the treaty of 1828, to supplement it, and was founded upon no new considerations, making substantially the same grant, it was as much subject to the law of 1830 as the treaty of 1828. Moreover, it was in no way inconsistent with that law. The treaty of 1835 calls for the conveyance of no greater interest, as far as the 7,000,000 acres was concerned, than was provided for by the previous treaties of 1828 and 1833 or than was afterward patented in 1838.

Now, to what treaty does the court, in the decision before quoted, refer when they say, "By the treaty the United States agreed to convey the land in fee-simple title?" Not to the treaties of 1828 and 1833, for we have shown that neither treaty contains any such language. It only occurs in the treaty of 1835, and then only in reference to the 800,000 acres in Kansas.

Without discussing the question whether or not the clause in the treaty of 1835 containing this language would be made of no effect by a subsequent clause of the same treaty providing for the patenting of a less estate, we will consider whether, as a matter of fact, this promise to grant an unlimited fee referred to the 7,000,000 acres now occupied by the Cherokees and the Cherokee outlet now claimed by them.

We find that this promise is contained in the latter part of article 2 of the treaty of 1835, and found nowhere else in that treaty, nor, as I have before said, in any previous treaty. It reads:

> The United States covenant and agree to convey to the said Indians and their descendants, by patent, in fee-simple the following additional tract of land, situated * * * estimated to contain about 800,000 acres of land.

To this language the court referred.

Relying upon and citing this decision, Attorney-General Devens held that the Cherokees possessed the land involved (the 800,000 acres) by an absolute fee-title. This was in the somewhat famous Kansas school land indemnity case.

The minority admit that Mr. Devens referred only to the 800,000 acres in Kansas, but attempt to place the Cherokee lands in the Indian Territory upon the same footing by saying that they were included in the same patent. That signifies nothing.

The United States had agreed in the previous article (II) of this treaty of 1835 to give the Cherokees an absolute fee-title to those 800,000 acres in Kansas, and that agreement may be admitted to have superseded the general law of 1830 so far as those 800,000 acres were concerned. But the United States had never agreed to give the Cherokees such a title to any other lands, and they had passed a law to grant only a qualified fee to lands in general, and in the final treaty of 1835 had distinctly provided that the land granted the Cherokees should be patented to them in accordance with the act of 1830, erroneously including the 800,000 acres which they had promised to patent by a superior title.

In view of the express provision of 1830, reiterated in 1835, and embodied in the patent itself (1838), and in view of the fact that, as far as the Cherokee lands within the Indian Territory were concerned, there had never been any agreement inconsistent with the law of 1830, I am unable to agree with the minority that the patent of 1838, in so far as it grants less than an absolute fee-simple title to the present domain of the Cherokees, is void.

CASE OF UNITED STATES VS. REESE.

The minority also rely upon the decision of Judge Parker in United States vs. Reese (1879), 5 Dil. C. C., 405, to destroy the effect of the treaty of 1835 as far as the lands ceded by the treaty of 1828-'33 are concerned. The judge, in that decision, says:

> If the lands had been already ceded by treaty of 1833 (and which cession was recognized by second article of treaty of 1835), then the agreement by the United States by the third article of the treaty of 1835 to give them a patent to these lands, according to act of May 28, 1830, was a mere *nudum pactum*.

In other words, we are to look only to the treaty of 1833 to determine the degree of interest which has been patented to the Cherokees in the Indian Territory. Very well. I have already shown that the treaty of 1833 was only a part of the treaty of 1828; that it was so stated in the treaty itself, and that it was so regarded in the treaty of 1835; that it simply corrected the boundary of that treaty; that it expressly says that it is intended only as a supplement and "not to vary the rights of the parties" to that treaty; consequently it is as much limited by the act of 1830 as was the previous treaty of 1828, which act of 1830 expressly provided that these lands should be patented with condition of reversion to United States, and which, as Judge Parker admits, superseded so much of the treaty of 1828 as is inconsistent with the act.

But admitting for argument's sake that the treaty of 1833 was an independent instrument, that it had no connection with the treaty of 1828, may we not apply the *nudum pactum* argument of Judge Parker to the treaty of 1833 as well as to the treaty of 1835? If the treaty of 1835 was a *nudum pactum*, was not the treaty of 1833 also a *nudum pactum*? May we not apply the language of Judge Parker to the treaty of 1833 and say:

> If the lands had been already ceded by treaty of 1828 (and which cession was recognized by the preamble of treaty of 1833), then the agreement by the United States in the first article of the treaty of 1833 to give them a patent to these lands was a mere *nudum pactum*.

In other words, that we are to look only to the treaty of 1828 (and which said nothing about patent or future conveyance of any kind) to ascertain the degree of interest which the Cherokees have in the Indian Territory. But neither Judge Parker nor any one else has denied that the law of 1830, in so far as it affected the title of the Cherokees, was superior to and superseded the treaty of 1828. Consequently the act of 1830 is the fountain of all authority upon the subject, and the patent of 1838 having been made in conformity thereto, is valid in every respect. But however this point may be regarded, it is obvious that the United States intended in the transaction embraced in the treaties of 1828, 1833, and 1835, and the act of 1830, to grant to the Cherokees lands in the Indian Territory by a qualified fee only, and all the opposition to this proposition is based upon the purely technical argument that the treaty of 1833 was an independent instrument, and that (a reference to the law of 1830 having been inadvertently omitted) it superseded the law of 1830.

Whether or not the agreement in Article II of the treaty of 1835 was *nudum pactum*, it is perfectly clear that the United States had not abandoned the policy of 1830; neither had the Indians, else they would not have signed the treaty. The treaty of 1835 was an honest agreement between the United States that these lands should be patented to the Cherokees by the title provided for in the act of 1830, and in the patents granted to all the civilized tribes, and in conformity to the universal, unvarying policy of the Government in regard to Indian titles up to that time; and it was reserved for a later day and generation to discover or attempt to discover a way whereby the Indians can crawl out of their solemn agreement through the very small hole of a *nudum pactum*.

TITLE OF THE CHEROKEE OUTLET.

So far I have discussed the Cherokee title in general. I wish now to speak more particularly of what I started to discuss a little while ago—the Cherokee Outlet, 6,022,844 acres.

While I am bound to confess that the title to this land was conveyed to the Cherokees by the patent of 1838, I assert here and now that when the treaty of 1828 was made promising them the 7,000,000 acres, the "perpetual outlet west," and the "free and unmolested use of all the country lying west of the western boundary" of the 7,000,000 acres, it was not the intention of the Government to promise more than the 7,000,000 acres and a perpetual use of an outlet west; the intention to grant any title to the soil of the outlet west was not entertained by the Government or the Cherokees, as I shall show conclu-

sively further on; and it was only by an extremely liberal and loose construction of the treaty of 1828 that those acting for the Government were induced to include it within the patent of 1838.

The article of the treaty of 1828 referred to reads:

ART. 2. The United States agree to possess the Cherokees and to guarantee it to them forever, and that gurantee is hereby solemnly pledged, of 7,000,000 of acres of land, to be bounded as follows, namely [describing the territory]. In addition to the 7,000,000 of acres thus provided for and bounded, the United States further guarantee to the Cherokee Nation a perpetual outlet west, and a free and unmolested use of all the country lying west of the western boundary of the above-described limits, and as far west as the sovereignty of the United States and their right of soil extend.

Now, Mr. Chairman, if the intention had been to include the soil of the outlet, together with the soil of the 7,000,000 acres, in a future patent to these Cherokees, why did not the treaty of 1828 intimate that fact? On the contrary, there is a plain distinction, as much distinction as possible, for the few words employed, preserved in that treaty between the 7,000,000 acres of land and the outlet and use. Furthermore, there was never any authorization of a patent to the lands of the outlet. The treaty of 1828, as I have stated, contained no stipulation for nor mention of any future conveyance.

The supplementary treaty of 1833 contains the same description of the property guaranteed to the Cherokees, as does the treaty of 1828, and says further (I am now quoting article 1 of that treaty): "and letters patent shall be issued by the United States as soon as practicable for the land hereby guaranteed"—for the land, not for the privilege of an outlet.

I will here quote as much of Article I of this supplemental treaty of 1833 as relates to this point:

The United States agree to possess the Cherokees and to guarantee it to them forever; and that guarantee is hereby pledged (subject, of course, to the provisions of the law of 1830) of 7,000,000 acres of land, to be bounded as follows: * * *

In addition to the 7,000,000 acres of land thus provided for and bounded, the United States further guarantee to the Cherokee Nation a perpetual outlet west and a free and unmolested use of all the country lying west of the western boundary of said 7,000,000 of acres as far west as the sovereignty of the United States and their right of soil extend, * * * and letters patent shall be issued by the United States as soon as practicable for the land hereby guaranteed.

It does seem to me, Mr. Chairman, that the mere reading of this article ought to be sufficient to convince any lawyer of the absurdity of the claim that there was any intention expressed or implied to patent any land except the 7,000,000 acres "thus provided for and bounded."

In the treaty of 1835 a patent is provided for in nearly the same language:

The United States also agree that the lands above ceded by the treaty of February 14, 1833, including the outlet—

The land of the outlet was not ceded in 1833, as I have shown, but only the use of the land—

and those ceded by this treaty shall all be included in one patent executed to the Cherokee Nation of Indians by the President of the United States according to the provisions of the act of May 28, 1830.

Here provision is made for the future conveyance to the Cherokees of what? (1) The 7,000,000 acres of land ceded in 1828 and 1833; (2) the 800,000 acres of land ceded by this (1835) treaty; (3) the privilege of an "outlet" west. Nothing else was called for or thought of, and the survey and patenting of the land of the outlet was without authority and without consideration.

But, Mr. Chairman, I propose to show by documentary proof that it was the express understanding between the Government and the Cherokees that the latter were never to acquire any title to the land of the outlet.

UNDERSTANDING BETWEEN THE UNITED STATES AND THE CHEROKEES IN 1821.

I desire to call the special attention of gentlemen to the preamble of the treaty of 1828:

Whereas the present location of the Cherokees in Arkansas being unfavorable to their repose, and tending, as the past demonstrates, to their future degradation and misery; and the Cherokees being anxious to avoid such consequences, * * * resting also upon the pledges given them by the President of the United States and the Secretary of War of March, 1818, and 8th of October, 1821, in regard to the outlet to the west, and as may be seen on referring to the records of the War Department. * * *

Now, sir, I was led to inquire at the War Department whether there could not be found some records bearing upon the question suggested in this treaty as to the understanding between the Indians and the Government in regard to the outlet. After a laborious search among the musty records of the Department, with the assistance of the courteous gentlemen who have charge of them, I found the very "pledges" mentioned in the treaty of 1828 as having been given to the Cherokees in 1818 and 1821 by the President and the Secretary of War. The first is the record of a "conversation" had between the Secretary of War and the Cherokee Indians in March, 1818. It is entitled "Talk to the Cherokee deputation of the Arkansas," and is as follows:

To General TOOLONLUSKY,
Chief and Warrior of the Cherokee:

MY FRIENDS AND CHILDREN, NATION OF THE ARKANSAW COUNTRY: * * * The country which you give up is a good country, and it is near and very convenient to us, and I shall in return act generously toward you and endeavor to make you happy in your new homes on the Arkansaw. I have not yet obtained the land lying up that river, to the west of your settlement.

I will give instructions to Governor Clark to hold a treaty with the Quapaws this summer in order to purchase them, and when purchased I will direct them to be laid off for you. It is my wish that you should have no limits to the west; so that you may have good mill-seats, plenty of game, and not be surrounded by the white people.

By the President of the United States.

JAMES MONROE.
J. C. CALHOUN,
Secretary of War.

Then follows a letter from John C. Calhoun (then Secretary of War), signed "J. C. C." It is addressed to the Cherokee delegation, and dated "Department of War, 11 February, 1819." Although this letter is not strictly pertinent to the point immediately under discussion, yet its sentiments are so much in advance of those entertained by certain so-called modern champions of the Indians that I deem it not inappropriate to quote it here in full.

If the statesman-like advice of Secretary Calhoun had been heeded, and the Government had from that time to this energetically pursued the one policy of curtailing the Indian reservations and compelling the Indians to adopt civilization by making such a course necessary to their existence, we should not have had these fifty years of Indian degradation and filching from the national Treasury.

The letter referred to reads as follows:

It is understood that the delegation, in behalf of their nation, wishes to strengthen the guarantee of that portion of the land which may be left to them after making the proposed cessions, so that it may be to them a permanent and lasting home without further cessions. To secure such great benefits it is indispensable that the cessions which they may make should be ample, and the part reserved to themselves should not be larger than is necessary for their wants and convenience. Should a larger quantity be retained it will not be possible by any stipulation in the treaty to prevent future cessions. So long as you may retain more land than what is necessary or convenient to yourselves, you will feel inclined to sell and the United States to purchase. The truth of what I say you know can not be doubted, as your own experience, and that of all Indian nations, proves it to be true. If on the contrary you only retain a suitable quantity no more cessions will be asked for or made, and they will be settled down permanently.

You are now becoming like the white people; you can no longer live by hunting, but must work for your subsistence. In your new condition far less land is necessary for you. Your great object ought to be to hold your land separate among yourselves as your white neighbors. * * * Without this you will find you will have to emigrate or become extinct as a people.

I come now to the most important of these documents with reference to the point I am discussing. It is dated "Department of War, 8th October, 1821." On the left margin are the names of a number of Cherokee chiefs. The paper is as follows, and I wish to state that I refer to the original document, made out by Secretary Calhoun, and now on file in the Indian Office:

DEP'M'T OF WAR, *8th Oct'r*, 1821.

Teke-e-toke, John Jolly, Black Fox, W. Webber, Thos. Graves, } Chiefs of the Arkansaw Cherokees.

BROTHERS: I have received your communication of the 24th of July last, complaining that the promises of the Government in relation to intruders upon your lands and to an outlet to the west have not been performed. It has always been its intention to carry into effect fully every promise made to you, and which I was under the impression had been done, particularly upon the points complained of, as orders were issued some time since for the removal of the whites from your lands and from the tract of country to the west of your reservation, commonly called "Lovely's Purchase," by which you would obtain the outlet promised. Copies of these orders are herewith inclosed for your information.

The "Lovely Purchase" here referred to was the country to the west of the reservation in Arkansas, and forming a part of the present domain of the Cherokees.

Governor Miller, who is now here, on his return to the Arkansaw Territory, informs me that he knows of but one person who has settled upon your lands, and he believes that person resides there with the permission of the nation.

He is, however, authorized to call the attention of Major Bradford to the orders above referred to, and if they should not have been prev iously carried into effect to request him to do so without further delay.

Now, Mr. Chairman, I ask special attention to the following language:

It is to be always understood that in removing the white settlers from Lovely's purchase for the purpose of giving the outlet promised you to the west you acquire thereby no right to the soil, but merely to an outlet, of which you appear to be already apprized, and that the Government reserves to itself the right of making such disposition as it may think proper with regard to the salt springs upon that tract of country.

The words "right to the soil, but merely to an outlet" are italicized in the original document.

The document continues:

Governor Miller is also fully authorized to receive and adjust any other complaints you may have to make, which it is believed can be done satisfactorily by him upon the spot, without your sending a deputation for that purpose, as you express a wish to do. If, however, he should find any difficulty in the business and think it of sufficient importance for you to send on a delegation, he is vested with discretionary power to grant you power to send one in the spring.

I understand that some of your nation have settled to the south of the Arkansas River on our lands, and as it is equally improper for your people to occupy our lands as for our people to occupy yours, it is expected that you will immediately order all your people to remove from the south to the north side of the river within the limits of your reservation; which, if not done in a reasonable time, Governor Miller is instructed to take the necessary measures to effect.

I remain your friend and brother,

J. C. CALHOUN.

The correctness of my copy of this original paper is attested by the chief clerk of the Indian Office, with whom I compared it and the original, as follows:

A true copy.
A. B. UPSHAW,
Chief Clerk.

Mr. BARNES. What is the date of that?

Mr. STRUBLE. October, 1821—the date referred to in the treaty of 1828, in which the Indians agreed, by reference to this instrument, that they were to be bound by it, acknowledging that they knew of its existence and understood its terms.

Another point which proves conclusively that the United States had no intention of yielding the title to the land of the outlet is in the reservation of the right on the part of the United States to allow other Indians to get salt upon the outlet in common with the Cherokees. That provision is found in identical language in Article I of the supplemental treaty of 1883, and in Article II of treaty of 1835. It reads:

Provided, however, That if the saline or salt plain on the Western Prairie shall fall within said limits prescribed by said outlet, the right is reserved to the United States to permit other tribes of red men to get salt in said plain in common with the Cherokees.

Why should the United States be the custodian of such permission if they were to be deprived of the ownership of that outlet? If it was desired to secure to other Indians this right of access to the salt springs, why did not the treaties say that "the Cherokees shall permit it," &c.? Simply because there was no intention that the Cherokees would ever acquire any title to that outlet which would give them the right or authority to make such a concession.

Now, Mr. Chairman, I ask what stronger evidence we need to prove that the understanding in 1828, when the 7,000,000 acres and the "outlet" were first granted, was, as Mr. Calhoun said, that the Cherokees were not to have a title to the soil of the outlet, but merely the right to the use of an outlet?

[Here the hammer fell.]

Mr. HILL. I hope the gentleman's time will be extended, as he has been interrupted.

Mr. SPRINGER. It was understood that the time occupied by the gentleman from Louisiana [Mr. KING] should not be taken from the time of the gentleman from Iowa [Mr. STRUBLE].

The CHAIRMAN. The gentleman from Iowa will have fifteen minutes additional.

Mr. STRUBLE. Is there anything to show, Mr. Chairman, that this understanding has ever been altered? Certainly nothing but the bare provisions in the supplemental treaty of 1833 and the treaty of 1835 that the outlet should be patented along with the land, 7,800,000 acres, ceded in 1828 and 1835. There is not a shadow of evidence that either treaty contemplated the patenting of the land of the outlet, together with the other 7,800,000 acres. The Indians never asked anything of the kind.

Mr. BROWN, of Pennsylvania. How many acres were there in the outlet as originally patented?

Mr. STRUBLE. The area of the original outlet was never known, because it was surveyed in a body with the 7,000,000 and the 800,000 acres east.

When we speak of the present area of the outlet as being 6,022,844 acres we mean the land west of 96° minus the lands sold since 1866 by the United States to the Osages, Kaws, Nez Percés, Otoes and Missourias, and Pawnees.

The line of 96° was merely an arbitrary line agreed upon by the United States and the Cherokees as the eastern boundary of the country over which the United States might settle such friendly Indians as they saw fit. But the eastern boundary of the original outlet was never ascertained, because it was never run as it should have been. I suppose there were about 8,000,000 acres in that outlet.

Now, when the Eastern Cherokees proposed to join their brethren on the Arkansas, and it was apprehended that the 7,000,000 acres would not suffice for their combined numbers, what was done? Why, the Government, for the consideration of $500,000, ceded them in 1835 "800,000 additional acres" in Kansas, not about 8,000,000 additional acres to the west of their 7,000,000 acres; yet in the same treaty provision was made for patenting to them an outlet, showing that nothing was more foreign to the understanding of the parties to that treaty than that the title to the land of the outlet was to be patented to the Cherokees. What consideration is it now claimed by the Cherokees or the cattle-men that the Cherokees paid for obtaining a patent to about 8,000,000 additional acres of land? There is no consideration anywhere hinted at for such a patent.

Then, why was that outlet surveyed and the land patented in 1838 to the Cherokees? No treaty or conference ever even authorized the survey of that outlet. The treaty of 1828 provided (article 2) for a running of "the lines of the above cession without delay." But this evidently referred to the exterior lines of the 7,000,000 acres. There was no "cession" except of the 7,000,000 acres, although an outlet was guaranteed. The supplementary treaty of 1833 contained no reference at all to a running of any lines. It is natural, however, to infer that a survey of the lines of the cession as corrected, but only of the cession, was contemplated by the treaty. The same is true of the final treaty of 1835.

The fact that the exterior lines of the outlet were, in 1836, run by General McCoy at the request of the Interior Office, signifies nothing as to the intention of the Government to patent the land of the outlet.

Disregarding this plain understanding with the War Department, as evidenced by these documents which I have quoted, or forgetting, by reason of this language in the treaty of 1835, their provisions, the Department construed that there should be a patent to the whole 14,374,135.14 acres, including the land of the outlet; and that land of the outlet was patented contrary to the terms of the grant and contrary to this plain understanding, as shown by indisputable records in the War Department.

Now I confess that during all these years from the issuing of the patent, which was in 1838, the Government has treated this land as belonging to the Indians; but there is where the trouble began. Contrary to the plain understanding between these Indians and the Secretary of War, an understanding which was made a matter of record, a liberal construction or a forgetfulness of these documents to which I have referred resulted in the enlargement in the patents of the right to this Cherokee outlet.

But gentlemen may say, "What does it all signify? After the Government of the United States has for all these years recognized these Indians as possessing title it is too late now to raise any question on that point." Mr. Chairman, we are confronted in this discussion with the plea of our friends on the other side that there are equitable considerations in behalf of these Indians; and we are reminded that the Government of the United States can not in equity violate these equitable obligations.

I wish, Mr. Chairman, to call the attention of the committee to the fact that the Government, the people of this country, have equities as well as the Indians, and that the officers of this Government, the alleged servants of the aforesaid people, have, through an unwarranted liberality and by an unjustifiable construction of these treaties, conveyed to these Cherokees about 8,000,000 acres of land which they should not have had under any circumstances whatever; and that the patent of 1838 should be declared void as far as it relates to the Cherokee outlet, and that that rich domain, now wholly given up to great moneyed corporations, who are raising steers for 28 cents a head to compete with the cattle raised by our small farmers, be restored to its rightful owners, the people.

WHAT IS "INDIAN COUNTRY?"

Mr. Chairman, I shall, if granted the time, show more fully the character of the present occupancy of this outlet. I now desire to discuss the question of what is Indian country, because the persecution of immigrants who have attempted to settle within the limits of the proposed Territory of Oklahoma has been justified by what I claim to be a wholly erroneous view of that question, and because I shall, from my interpretation of the law governing the question, take the liberty to criticise such persecution. And, sir, in this connection I do not hesitate to take issue with the minority of the Committee on Territories and with their chief and indeed only authority, the able and learned Judge Parker of the western district of Arkansas.

The only question left to be considered in regard to the right of settlement in Oklahoma by United States citizens is whether or not it is "Indian country," as contemplated by the Revised Statutes regulating intercourse with the Indians. And here again we find a solid array of legal opinion that lands similarly situated are not in any sense "Indian country." No court, with the exception of Judge Parker, has ever considered this question in its bearings upon Oklahoma, notwithstanding the oft-repeated and persistent efforts of would-be settlers to force the matter before the courts.

The first act of Congress defining Indian country was that of March 30, 1802, 2 Stat., 139. The first section of that act devotes over a page to the description of what shall be regarded as Indian country, and declares that such country shall be distinctly marked by order of the President, and be considered as the line of the Indian Territory, or Indian country, as it is indifferently called in several sections of the act. The country west of the Mississippi River then belonged to France. The country described in the act of 1802 lay to the north of the Ohio and west of a line drawn from between the mouths of the Cumberland and Tennessee Rivers through Tennessee, Kentucky, and Georgia to the Saint Mary's River. From that time up to 1834, though there were many acts passed governing intercourse with the Indians, no other attempt was made to define the Indian country.

The only provisions of law ever enacted which made this particular Territory now under discussion a part of the Indian country was section 1 of the "Indian-intercourse" act of June 30, 1834, 4 Stat., 729, which read as follows:

SECTION 1. *Be it enacted*, That all that part of the United States west of the Mississippi River and not within the States of Missouri and Louisiana, or the Territory of Arkansas, and also that part of the United States east of the Mississippi River, and not within any State, to which the Indian title has not been extinguished for the purposes of this act, be taken and be deemed to be Indian country.

Mr. Justice Miller, in Bates *vs.* Clarke, 5 Otto 204, quoting this section, says:

If the section which we have given verbatim be read with a comma after the word "State," or if, without the insertion of any point there, we read it so as to apply the words "to which the Indian title has not been extinguished" to all the region mentioned in the section, we have a criterion which will always distinguish what is Indian country from what is not, so long as the existing system governing our relations with the Indians is continued.

The judge then proceeds to show the absurdity of the rendering, if

the comma be omitted, and the phrase be considered to apply to "State;" and says further:

On the other hand, if the section be read as describing lands west of the Mississippi, outside the States of Louisiana and Missouri and the Territory of Arkansas, and lands east of the Mississippi not included within any State, but lands alone to which the Indian title has not been extinguished, we have a description of the Indian country which was good then and which is good now, and which is capable of easy application at any time.

The judge continues:

Notwithstanding the immense changes which have since taken place in the vast regions covered by the act of 1834, by the extinguishment of Indian titles, the creation of States, and the formation of Territories, Congress has not thought it necessary to make any new definition of Indian country; yet, during all this time, a large body of laws has been in existence whose operation was confined to the Indian country, whatever that may be; and men have been punished by death, by fine, and by imprisonment, for which the courts who so punished them had no jurisdiction, if the offenses were not committed in the Indian country as established by law.

"These facts afford the strongest assumption that the Congress of the United States and the judges who administered those laws must have found in the definition of Indian country, in the act of 1834, such an adaptability to the altered circumstances of what was then (1834) Indian country as to enable them to ascertain what it was at any time since then.

"The simple criterion is that, to all the lands thus described, it was Indian country, whenever the Indian title had not been extinguished; and it continued to be Indian country so long as they had title to it, and no longer. As soon as they parted with the title it ceased to be Indian country, without further act of Congress, unless by the treaty by which the Indians parted with their title, or by some act of Congress a different rule was made applicable to this case.

"In the case of the American Fur Company *vs.* United States (2 Peters, 358), decided in 1829, the goods of the company had been seized for violation of the laws, by their introduction into the country, under the act of 1802.

"This court held that, if, by treaties made with the Indians after the passage of that act, their title to the region where the offense was committed had been extinguished, it had thereby ceased to be Indian country and the statute did not apply to it.

"So in the case of United States *vs.* Forty-three Gallons of Whisky, decided at the last term (93 United States, 188), where this act of 1834 was fully considered, while the court holds that by a certain clause in the treaty by which the *locus in quo* was ceded by the Indians, it remained Indian country until they removed from it, the whole opinion goes upon the hypothesis that, when the Indian title is extinguished, it ceases to be Indian country unless some such reservation takes it out of the rule.

"It follows from this that all the country described by the act of 1834 as Indian country remains Indian country so long as the Indians retain their original title to the soil, and ceases to be Indian country whenever they lose that title, in the absence of any different provisions by treaty or by act of Congress."

In the case of The American Fur Company *vs.* United States, above referred to by Justice Miller, the court lays down this rule, that—

A section of country which has been purchased by the United States, although still frequented and inhabited exclusively by Indians, is not to be regarded as Indian country within the act of Congress regulating trade and commerce with the Indians. Since the Revised Statutes, section 5596 of which repealed the Indian-intercourse act of 1834, the only Indian country consists of the various Indian reservations.

If "a section of country which has been purchased by the United States, although still frequented and inhabited exclusively by Indians," is not to be regarded as Indian country, how can the term be used of a country where no Indians have been since 1866?

In the case of Forty-three Gallons of Cognac Brandy (11 Federal Report, 47), decided in the circuit court for the district of Minnesota, March 24, 1882, this doctrine is laid down by Judge McCrary:

Section 1 of the act of Congress of June 30, 1834 (4 Statutes, 729), defining the Indian country as "all that part of the United States west of the Mississippi and not within the States of Missouri and Louisiana and the Territory of Arkansas, and also that part of the United States east of the Mississippi River and not within any State, to which the Indian title has not been extinguished, was repealed by the section 5596 of the Revised Statutes, and consequently the description of the Indian country found in section 1 of the act of 1834 is no longer a part of the law of the land."

In United States *vs.* Martin, 14 Federal Reports, 817, decided in the district court of Oregon in 1833, the court uses this language:

Since the repeal of section 1 of the Indian-intercourse act of 1834 (4 Statutes, 729) by section 5596 of the Revised Statutes, the only Indian country in the United States within the purview of that phrase, as used in chapter 4, title 28 of the Revised Statutes, is the tract set apart by the United States for the exclusive use and occupancy of particular Indian tribes and known as Indian reservations.

Now, admitting for argument's sake that Article III of the Creek and Seminole treaties of 1866 amounted to a reservation for the purpose of settling friendly Indians upon the land involved, it did not operate to bring this land within the meaning of the term "Indian country," not reserving said land for any "particular Indian tribes."

The court, in United States *vs.* Sevaloff (2 Sawyer, 311, 1872), says:

Only that part of the United States declared to be such by act of Congress is Indian country. A country which is owned or inhabited in whole or in part by Indians is not therefore a part of the Indian country.

This case involved the question whether or not Alaska was Indian country. It was held by the court that neither the act of 1834 nor the act of 1864 (March 15) making the disposition of spirituous liquors to Indians a crime applied to Alaska, because it was acquired after the passage of these acts, the court holding the language above quoted.

Judge Foster, in Goodfellow *vs.* Muckey (1 McCrary, 238), Circuit Judge Dillon concurring, said:

Grants and reservations claimed under Indian treaties are strictly construed against the grantee or beneficiary.

The case United States *vs.* Leathers (6 Sawyer, 17) involved the question whether or not an Indian reservation in Nevada was Indian country. It was argued on behalf of the United States that Nevada was Indian country by virtue of the Indian-intercourse act of 1834, also of section 7 of the appropriation act of 1851 (9 Stat., 587), which enacts that "all the laws now in force regulating trade and intercourse with the Indian tribes, or such provisions of the same as may be applicable, shall be, and the same are hereby, extended over the Indian tribes in New Mexico and Utah," Nevada being at that time a part of Utah; also of the sixteenth section of act of March 2, 1861, organizing the Territory of Nevada, and of section 2, act of March 21, 1864, enabling the people of Nevada to form a State government, both the latter acts extending the laws of the United States not locally inapplicable over Nevada.

Judge Hillyer, delivering the opinion and citing United States *vs.* Sevaloff, before alluded to, said:

The act of 1834, which in 1851 contained nearly all the law regulating intercourse with the Indians, defines the term "Indian country," and fixes its boundaries. Utah was not then a part of the United States, and did not become Indian country by the act of 1834.

The general provisions of 1851, 1861, and 1864, extending the intercourse laws of the United States over that region, do not make it Indian country.

Referring to the omission from the Revised Statutes of the section of the act of 1834 defining Indian country, Judge Hillyer continues:

It seems to me that the changed condition of the region embraced in that definition of Indian country no doubt induced Congress to leave it out as no longer applicable.

There is, then, if I am right in this, no longer any statutory definition of Indian country, and at the same time the term is retained in a number of important sections of the Revised Statutes, and the question is, to what does the term now apply, and does it include an Indian reservation?

The judge then proceeds to argue that the term must necessarily have been intended by the Revised Statutes to apply to Indian reservations, and that it did not apply to anything else.

Citing Bates *vs.* Clarke before mentioned, he says further:

It follows that, unless these various Indian reservations are "Indian country," and if we are still bound by the definition in the act of 1834, there is little or no country to which the various sections of the Revised Statutes regulating intercourse with the Indians can apply.

The court, in United States *vs.* Bridleman (7 Sawyer, 243), decided in the district court of the district of Oregon, in 1881, say:

There is also much force in the suggestion made by Mr. Justice Hillyer, in United States *vs.* Leathers, that, as section 1 of the act of 1834 was repealed by title 74, Revised Statutes, there is now no Indian country to which the various provisions of title 28, Revised Statutes, can apply, unless the several reservations set apart for the exclusive use of the Indians are considered to be such.

See also United States *vs.* Tom (1 Oregon, 26).

I quote again from that eminent jurist and lawyer, Judge McCrary. In the case of Pelcher *et al. vs.* United States, decided in Minnesota in 1882, and which involved the question of the legality of the seizure of liquors brought into what was alleged to be Indian country, the judge decided that the Revised Statutes had repealed the Indian-intercourse act, and that the lands involved in the case were not Indian country. After quoting the act of 1834 and the repealing clause (section 5596) of the Revised Statutes, and arguing that the act of 1834 was not a "private, local, or temporary" measure within the purview of this repealing clause, but a public, general, and permanent one, and that consequently it would not come under the exception to the repealing force of said section, Judge McCrary proceeds:

Upon one point I am clear. If necessity compelled the court to determine the meaning of the words "the Indian country," in the absence of any statutory definition I should in a criminal case, in obedience to the rule which requires that the words in a penal statute shall be construed strongly in favor of the accused, hold that the Indian country is that portion of the public domain which is set apart as a reservation, or as reservations, for the use and occupancy of the Indians, and not the whole vast extent of the national domain to which the Indian title has not been extinguished. I should feel constrained, if I were to define these terms, to construe them as synonymous with Indian reservations.

It will be remembered that Judge McCrary, in Forty-three Cases Cognac Brandy, before cited, held that the fact that a particular tribe of Indians have for a long time occupied a particular tract of country, or that a particular tract has been referred to in treaties and official reports as a particular Indian reservation, does not therefore constitute that tract an Indian reservation. No more would those facts constitute it Indian country, Indian country and Indian reservation being, according to Judge McCrary, in Pelcher *vs.* United States, before cited, synonymous.

In United States *vs.* Barnhart, 22 Federal Reports, 285 (1884), Justice Matthews, citing United States *vs.* Bridleman and United States *vs.* Martin, cases which I have before quoted, also the case of Ex-Parte Crow Dog, 109 United States, 526, said:

The term "Indian country" applies to all the country to which the Indian title has not been extinguished and actually in the exclusive occupancy of Indians.

It was decided by Judge McCrary that section 1 of the act of Congress of June 30, 1834, known as the "trade and intercourse act," was repealed by the Revised Statutes; and that consequently we have no act of Congress defining the Indian country. Judge Hillyer in the case above cited, the Senate Committee on Indian Affairs, and Hon. Commissioner Price concurred with Judge McCrary on this point. (See Senate Report No. 773, Forty-seventh Congress, first session.)

On account of this consensus of opinion on the part of the above gentlemen, a bill was drafted by the Commissioner and sent to the Senate

committee; but Judge Hillyer and the Commissioner did not think such a bill necessary, inasmuch as it was "well established" that the term included only lands allotted to the use and occupation of the Indians.

In view, then, of the fact that the Revised Statutes repealed the part of the act of 1834 defining the Indian country, so that we have to-day no definition of the term, and in view of the further fact that an unbroken line of authorities hold that the act of 1834 was never intended to embrace any lands except definitely defined Indian reservations, we can not possibly arrive at any other conclusion than that Oklahoma is not, and has not been since 1866, Indian country, and that no law regulating trade and intercourse with the Indians affects it in any way whatever. Consequently the attempts of settlers to establish for themselves and families homes in that country were perfectly lawful, were contemplated and provided for by the Revised Statutes, and were in accord with the general policy of the Government; and the use of the Army to expel these lawful settlers, resulting only to the benefit of cattle syndicates and "squaw" whites, was an arbitrary and unconstitutional act; and the repeated failures of the would-be settlers to obtain a decision upon the legal status of that country are a monstrous disgrace to American justice and honor.

[Here the hammer fell.]

Mr. SPRINGER. I ask unanimous consent that the gentleman from Iowa may be permitted to occupy fifteen minutes more.

Mr. WELLBORN. I hope the gentleman from Iowa may be permitted to conclude his remarks.

The CHAIRMAN. Without objection, the gentleman will proceed.

Mr. STRUBLE. I thank gentlemen for their kindness, and especially my friend from Oregon for his forbearance, when I know I am intruding upon his time. I wish to refer, however, to the condition of both the Cherokee outlet and Oklahoma in reference to the present occupancy of those lands. I state for the benefit of the honorable chairman of the Committee on Territories [Mr. HILL] that both the outlet and Oklahoma are entirely overrun with cattle, and have been ever since this administration came into power; that there are more cattle there than ever before; and that they are daily augmenting in numbers; and that the much trumpeted expulsion of the greedy cattle kings from Oklahoma by a reform Democratic administration was a farce and intended to be a farce.

I have shown that the Cherokees, Creeks, and Seminoles have no rights on these lands; they claim no rights or title to them. The only claim the Indians have ever made was that the United States held the lands in trust for some other Indians to be brought some time from somewhere and settled there, but I hope I have succeeded in overthrowing that theory. And whether I have or not the Government plainly disavows any intention of massing any more Indians in the Indian Territory, and it does not propose to cede the land back to these three tribes. So the only question is between the cattle kings and the people as represented by their Government. There can be no dodging this issue. Neither, I am pained to know, is there any dodging the conclusion that the present administration is unequivocally on the side of the cattle kings in this controversy.

GRAZING LEASES IN THE INDIAN TERRITORY.

This domain upon which neither Indians nor white citizens are settled is partitioned among cattle companies. I hold in my hand a list of the lessees of land in the Indian Territory as prepared by the honorable Secretary of the Interior, and which I wish to incorporate in my remarks.

No.	Date.	By what tribe made.	To whom made.	Location of lands.	Acres.	Term.	Rental or price per acre.	Remarks.

1	Dec. 23, 1884	Kiowa, Comanche, and Wichita.	B. B. Groom, Lexington, Ky., and others.	Kiowa, Comanche, and Wichita reservation, Indian Territory.	309,440	6 years.....	6 cents per acre, in cash or cattle.	Copy on file in Department.

* Estimated.

This list of leases foots up to about 12,000,000 acres. In accordance with the President's proclamation of July 23, 1885, some of the leases in the Cheyenne and Arapaho country (though not all, as I shall show) have been vacated.

LEASES OF THE CHEROKEE OUTLET.

The 6,000,000 acres of the Cherokee outlet is subdivided into nearly one hundred subleases.

The following is a list of some of the cattle ranges in Oklahoma and the Cherokee outlet as they are mapped out and designated on an official map published for private use by the Cherokee Strip Live-Stock Association.

This map bears the following:

This map was compiled from surveys of ranges made for the association in 1883 by S. T. Wood, Fred. Eckert, T. W. Walton, and C. H. Burgess, and is believed to contain the best information accessible for the location of ranches, camps, range-lines, &c.

It does not give the acreage of the different ranches, and it is impossible to obtain that information from sources at my command. The aggregate is pretty accurately known, being, as I have said, 6,000,000 acres for the Cherokee outlet, and probably 2,000,000 in Oklahoma and adjoining country. Many of these ranches are as large as those mentioned by the Secretary of the Interior in the table to which I have just referred. Among the larger ones are the McLellan Cattle Company, Wyeth Cattle Company, Standard Oil Company, Texas Land and Cattle Company, Eagle Chief Pool, Comanche Pool, and the Dominion Cattle Company. They probably average 300,000 acres apiece. Tomlin & Webb; Steward & Hodges; Kingman; Scott & Todlips, Roberts & Windsor (O. I. L.); A. Houghton; McLellan (private ranch, 60,000 acres); McLellan's Cattle Company (300,000 acres); Burns & Martin; Berry Brothers; Galisbe & Coleman; Bennet & Co.; Bennett & Dunham; Horsford; Wyeth Cattle Company; William Brothers; Tuttle & Co.; Hewins & Tytus; Ford & Co.; Wiley & Dean; George Miller; A. Constable; Williamson, Blair & Co.; Snow & Rannells; Cobb & Hutton; Dean & Broderick Pasture Company; Dye Brothers; Bridge, Wilson & Foss; Hamilton; Malaley; Bowers; D. T. Beal; Barefoot Ranch; Moore; Foresythe; W. B. Helm; Richmond & Sons; T. Horsley; McGrady; Crocker; Hollenbeck; Walworth, Walton & Rhodes; Craine & Larimer; Johnson & Hosmer; Colson & McAtee; Blair, Battin & Cooper; Camp Lynch; Cosine & Garland; Treadwell & Clark; Hammers, Forbes & Co.; Casteen, McDaniels & Co.; Miller, Payrose & Co.; F. Y. Ewing; Wick, Corbin & Co.; Drum & Snyder; Ward, Byler & Co.; A. Gorham; Cragin Cattle Company; B. H. Campbell; G. A. Thompson; W. C. Quinlen; Texas Land and Cattle Company; Bates & Co.; Dickey Brothers; Greener & Houghton; Gregory, Eldred & Co.; Walnut Grove Pool; Eagle Chief Pool; Comanche Pool; New York Cattle Company; Dominion Cattle Company; J. V. Andrews; Cattle Ranch and Land Company; H. Kallard & Brother; Day & Brother.

The cattle companies who have partitioned out among themselves the entire Cherokee outlet, and whose ranges run clear through Oklahoma, claim to hold their ranges on the outlet by virtue of authority from the Cherokee Nation. This authority was given by a contract of lease running from the Cherokee Nation to the Cherokee Strip Live Stock Association, a corporation created under the laws of Kansas and composed of wealthy capitalists of Kansas, Missouri, and other States. It bears date July 25, 1883, became operative October 1, 1883, and is to run five years. The annual rental stipulated for is $100,000, 1⅔ cents per acre for 6,000,000 acres. The whole tract has been relet to about one hundred lesser companies at an annual rental of from 2 to 6 cents per acre. This contract was made in pursuance of an act of the national council of the Cherokee Nation, passed in special session May, 19, 1883, and reads as follows (see page 152, Senate Executive Document No. 17, Forty-eighth Congress, second session):

EXECUTIVE DEPARTMENT, CHEROKEE NATION,
Tahlequah, June 19, 1884.

I, John L. Adair, assistant executive secretary, hereby certify that the transcripts hereunto attached are correct copies of the original papers now on file in this Department, the lease of the Cherokee lands west of the Arkansas River, various powers of attorney, authorizing the signing of certain names thereto, and a resolution of the Cherokee Strip Live Stock Association confirming the action of attorneys.

Witness my hand and seal of the Cherokee Nation, this the day and year first above written.

[SEAL.] JOHN L. ADAIR,
Assistant Executive Secretary.

This indenture, made the fifth day of July, in the year of our Lord one thousand eight hundred and eighty-three, by and between Dennis W. Bushyhead, principal chief of the Cherokee Nation, for and on behalf of said Cherokee Nation, party of the first part, and E. M. Hewins, J. W. Hamilton, A. J. Day, S. Tuttle M. H. Bennett, Ben. S. Miller, A. Drumm, E. W. Payne, and Charles H. Eldred, directors in trust for and on behalf of the Cherokee Strip Live Stock Association, a corporation organized and existing under and by virtue of the laws of the State of Kansas, for themselves, as directors in trust and assigns, parties of the second part.

Witnesseth, That the said party of the first part, for and in consideration of the rents, covenants, and agreements hereinafter mentioned reserved, and contained on the part and on behalf of the party of the second part, and their successors in trust and assigns, to be well and faithfully kept and performed, doth, by authority of law in him vested as principal chief, by and through an act of the national council, which said is entitled "An act to amend an act to tax stock grazing upon Cherokee lands west of the ninety-sixth meridian," approved in special session May 19, A. D. 1883, which said act is especially referred to and made part of these presents, does by these presents lease for grazing purposes only unto the aforesaid E. M. Hewins, J. W. Hamilton, A. J. Day, J. Tuttle, M. H. Bennett, Ben. S. Miller, A. Drumm, E. W. Payne, and Charles H. Eldred, directors in trust as aforesaid, their successors and assigns, parties of the second part, all and singular, the unoccupied lands of and belonging to the Cherokee Nation, being and lying west of the ninety-sixth "meridian" and west of the Arkansas River, not including any portion occupied, sold, and conveyed to the Pawnees, Poncas, Nez Percés, Otoes, Missourias, Osages, and Kansas Indians, or the Salines, set apart to be leased separately under act of Congress, approved August 7, A. D., 1882, as hereinafter set forth; the said portion herein leased for grazing purposes containing six million (6,000,000) of acres, more or less, and lying east of the one hundredth meridian, and the said hereinbefore named parties of the second part, their successors and assigns, shall, for the purpose herein set forth, have and hold the above mentioned and described premises from and after the first day of October, one thousand eight hundred and eighty-three (1883), for and during the term and period of five years thence next ensuing from said date, subject to the qualifications hereinafter provided for, and upon yielding and paying for the same the amounts of money as hereinafter provided for; and the said E. M. Hewins, J. W. Hamilton, A. J. Day, S. Tuttle, M. H. Bennett, Ben. S. Miller, A. Drumm, E. W. Payne, and Charles H. Eldred, directors in trust as aforesaid, hereby covenant and agree, on behalf of themselves, as such directors in trust for said Cherokee Strip Live Stock Association, their successors in trust and assigns, and not otherwise, in consideration hereof, and of the leasing aforesaid, to pay, on the order of the principal chief aforesaid, into the treasury of the Cherokee Nation at Tahlequah, Indian Territory, yearly, and for each and every one of said five years, the annual sum of one hundred thousand dollars ($100,000) lawful money of the United States, the same to be paid in two equal semi-annual payments, to be made and so paid in advance, to wit: On the first day of October and the first day of April in each and every year during the said term. Provided always, and it is further covenanted and agreed between the said parties hereto that if the said semi-annual payment in advance, or any part thereof, shall remain unpaid after the expiration of thirty days after the date the same becomes due as herein agreed to be paid; or if default shall be made in any of the covenants hereinbefore or hereinafter set forth, or as contained and required by the act of the national council approved May 19, A. D. 1883, as aforesaid, on the part and in behalf of the said parties of the second part, then and from thenceforth, it may be lawful, and is agreed, that said principal chief, or his successors in office, may declare the lease to be forfeited and annulled, and the said party of the first part may enter into and resume possession of the premises herein leased.

And it is further agreed, in accordance with the act of said national council, that in case the lands hereinbefore described, or any part of them included in the terms of this lease, shall be disposed of under present existing laws, or laws hereinafter to be passed by the Congress of the United States, by the said Cherokee Nation, that on the party of the first part giving six months' notice thereof to the party of the second part, that then, and in that event, the terms and conditions of this lease and the lease thereof shall terminate on the expiration of the said six months from the date of said notice, to all or to any portion of said tract of unoccupied Cherokee land thus sold or disposed of, and to parties to whom said lands or any portion of them should then be disposed of or sold to may enter into and take possession of the same; but then, and in that event, the said party of the second part, their successors and assigns, shall not be chargeable with rent on the lands so sold, but shall be allowed a rebate on all subsequent payments made on account of this lease at the rate of one and two-thirds (1⅔) cents per acre per annum on the lands so sold or disposed of.

Further, it shall be the privilege of said party of the second part, their successors or assigns, to erect on said lands such fences, corrals, and other improvements as may be necessary and proper and convenient for the carrying on of their business and for utilizing said lands for the purposes for which they are leased. And in case this lease shall be terminated as to all or any part of said lands by the disposal of the same as heretofore provided and set out, the said party of the second part shall have the right to remove all of said improvements, fences, and corrals, except such portions thereof as may be made from the timber or other property of the Cherokee Nation, or timber for which has been obtained from the aforesaid tract. It shall further be the privilege of said

party of the second part, their successors and assigns, to cut from the territory herein leased such timber as may be necessary for the purpose of building the fences, corrals, and improvements here before authorized to be erected on said leased premises, and to cut from said lands such timber as may be necessary for fire-wood and fuel, but not otherwise, and to commit no waste thereon.

And the said party of the second part doth further covenant and agree with the said Dennis W. Bushyhead as aforesaid, and as parts and conditions of this lease or contract, well and truly, and without deduction or delay, to make all payments as required in the foregoing, in the manner limited and prescribed; and in case of any failure as aforesaid, the said party of the second part agree that they will peaceably surrender the premises herein leased, and all improvements or erections thereon; and the said party of the second part, their successors and assigns, further agree and obligate themselves, and this is one of the conditions of this lease, to make no permanent improvements (the improvement, the right to make which is hereinbefore granted, being considered temporary improvements) on the aforesaid premises or leased tract, and only such temporary improvements as are authorized by the act of the national council approved May 19, 1883, hereinbefore referred to; and on the expiration of the lease or its being declared forfeited by default in the payments, as hereinbefore provided, then, and in either event, all improvements, structures, or erections thereon shall be and become the property of the Cherokee Nation; and said nation shall have possession of the same, and all and singular of such erections and improvements shall absolutely revert to and become the property of the Cherokee Nation, party of the first part.

And the *second* party of the second part further covenants and agrees with the said party of the first part, as one of the conditions of this lease, that they will cut no timber for removal from said lands, or take or remove any material or property being part of the premises so leased; or remove or ship material therefrom; and that they will use all due diligence to prevent the cutting or removing of any timber or other material therefrom; and that they will faithfully observe the intercourse laws of the United States; that they will obstruct no mail or stage line, and that they will not interfere with the salines, located or to be located, under the provisions of the act of Congress, before mentioned, approved August 7, 1882. And it is further agreed between the parties of the first part and the second part that the grounds excepted and reserved from, and not included in, the terms of this lease, necessary for the manufacture of salt at the said salines, may and shall not exceed in the aggregate for said salines, and all of them, 100,000 acres, with a right of way to and from said salines, such as may be required properly to work them; and the said party of the second part do hereby obligate themselves, for themselves as directors in trust aforesaid, their successors and assigns, *will* and truly to observe and faithfully execute all and singular of the foregoing agreements and covenants, which are declared to be part of the agreement, in consideration of which this lease is granted. And the said party of the first part, principal chief of the Cherokee Nation, in accordance with the act of the national council, as aforesaid, and on condition of the faithful payment of the sum of money as hereinbefore stipulated, in the manner and with the conditions hereinbefore prescribed, and as the further condition that the said party of the second part will well and truly fulfill all of the conditions, covenants, and agreements herein set forth, doth hereby covenant and agree by these presents that the said E. M. Hewens, J. W. Hamilton, A. J. Day, S. Tuttle, M. H. Bennett, Ben. S. Miller, A. Drumm, E. W. Payne, and Chas. H. Eldred, directors in trust for the Cherokee Strip Live Stock Association, their successors in trust, and assigns, shall and may at all times during the said term, subject to the conditions as aforesaid, peaceably hold and enjoy all the privileges of lease on the said premises, free, clear, and harmless from any let or hindrance whatsoever, together with all the privileges and rights of said party of the first part, in reference to the same, according to law and treaty stipulation.

In testimony whereof the said party of the first part, the said D. W. Bushyhead, principal chief, has signed his name as such principal chief and caused the seal of the Cherokee Nation to be affixed to these presents, and the said parties of the second part, the said E. M. Hewens, J. W. Hamilton, A. J. Day, S. Tuttle, M. H. Bennett, Ben. S. Miller, A. Drumm, and E. W. Payne, directors in trust, have caused these presents to be signed on their behalf by Chas. H. Eldred, their true and lawful attorney in fact, evidence of his authority being attached to the lease retained by the party of the first part, and the said Chas. H. Eldred, director in trust, signing his himself.

Done in duplicate, at Muscogee, Indian Territory, this the seventh day of July, in the year of our Lord one thousand eight hundred and eighty-three.

D. W. BUSHYHEAD, [SEAL.]
Principal Chief.

E. M. HEWENS, [SEAL.]
By CHAS. H. ELDRED,
Attorney in Fact.

CHAS. H. ELDRED. [SEAL.]

Resolved, That the action of Charles H. Eldred, acting under separate and individual power of attorney from the member of this board, in signing and executing on behalf of the board of directors and the association the lease of the Cherokee strip, made between the principal chief of the Cherokee Nation and the board of directors, be, and the same is hereby, confirmed, fully ratified, and adopted as the act and deed of the board of directors, acting for and on behalf of the Cherokee Strip Live Stock Association, and the secretary is directed to forward a copy of this resolution, duly certified and sealed, to Chief Bushyhead, to be by him attached to the original lease in his possession.

Attest:
[SEAL.]

JOHN A. BLAIR,
Sec'y C. S. L. S. Asso.

CALDWELL, KANS., *July* 10, 1883.

This instrument, Mr. Chairman, is what the minority of the Committee on Territories consider a mere grazing permit, and hence not illegal and not within the power of this Government to declare invalid.

HAS THE INTERIOR DEPARTMENT EVER SANCTIONED OR APPROVED THE LEASE OF THE CHEROKEE OUTLET?

I call this instrument a contract of lease of lands, and, as such, plainly contrary to the provisions of section 2116 of the Revised Statutes, and section 10 of this bill proposes to strike down these illegal leases as the backbone of the opposition to the civilization of the Indians. The minority say that this lease was made with the knowledge and even assent of the Interior Department. Admitting that such was the case, it does not affect the validity or non-validity of that lease. If that lease was a plain violation of the statute, no amount of passive consent on the part of the Interior Department can make it valid.

But the circumstances were as follows: John Q. Tufts, Indian agent at Muscogee, Ind. T., ascertained that there were about three hundred thousand head of cattle in the Outlet, a third of which belonged to citizens of Kansas who were pasturing them there and grubbing down the young timber without contributing anything to the Cherokee chiefs; and, although these one hundred thousand cattle had the same rights on the outlet as the two hundred thousand whose owners paid, in 1882, $41,000 to the Cherokees for a grazing permit, yet it occurred to Mr. Tufts, very naturally and as it would have done to the promoters of this bill, that, pending any attempt to enforce their removal, they should be placed under such restrictions as would prevent their wholesale destruction of young timber and free enjoyment of a strictly illegal occupancy until such time as the Government should see fit to assert its rights over that outlet. Mr. Tufts therefore wrote to the Secretary of the Interior and recommended that the fencing of the ranges be allowed to prevent the destruction of timber.

After a full review of the subject the Secretary of the Interior, March 16, 1883, decided to permit no more fencing, and that those constructed would not be permitted to remain, except on satisfactory arrangements with Cherokee national authorities.

This, then, was the reply of the Interior Department to Mr. Tufts's recommendation; that no more fencing should be permitted; and that that already constructed should be removed, except satisfactory arrangements could be made with the Cherokees.

This latter part of the honorable Secretary's decision is relied upon by the minority report upon this bill to prove that the Interior Department sanctioned the lease now under consideration. Why, sir, there is no such consent or approval intimated in the whole transaction. The only sanction given was that the fences already there should be permitted to remain if the Cherokees were willing. This was the substance of the honorable Commissioner Price's reply to Mr. Tufts.

Can it be supposed that the Secretary of the Interior contemplated that the Cherokee council would go ahead and lease that outlet for a term of years and allow the erection of "such fences, corrals, and other improvements as may be necessary, &c.," when he had just said that no more fencing should be allowed?

Why, sir, such a proposition is absurd. Commissioner Price had an interview with Chief Bushyhead, of the Cherokees, March 20, 1883, in which Mr. Bushyhead agreed to convene the Cherokee national council for the purpose of ascertaining whether or not they desired the fences removed. The Interior Department, plainly, never contemplated that the Indians would or could do more than grant these cattle-men a permission to graze their cattle on the outlet during the pleasure of the United States. But instead of that the Cherokee council, without, as I have shown, the knowledge, advice, or consent of the United States, granted the outlet to the Cherokee Strip Live-Stock Association by as plain a lease of lands as was ever made.

Receiving this unwarranted assumption of ownership on the part of the Cherokees, the Interior Department has simply suffered the lease to continue, as is indicated by the report of Commissioner Price (the same gentleman who, according to the opinion of the minority of the Committee on Territories, authorizing this lease), dated October 15, 1884:

Since the date of my last annual report numerous applications have been received from parties desirous to lease Indian land, mainly for grazing purposes. To all such answer, based upon Department ruling in the question in the Fenlon case, April 25, 1883, has been returned that no authority of law existed for the making of such leases or agreements by the Indians or by this Department, and that the Department would not approve them.

This, Mr. Chairman, I regard as the sound law of the case. Commissioner Atkins, in his annual report, dated October 5, 1885, referring to the Department letter of January 3, 1885, in reply to a Senate resolution calling for information in regard to leases in the United States (see S. Ex. Doc. No. 17, Forty-eighth Congress, second session), says:

It appears from said schedule (page 12) that with but one exception the leases reported to have been made by Indian tribes were all of lands in the Indian Territory for grazing purposes, and were for different periods, ranging from two to ten years, and at various rentals, as therein mentioned. Of these made in the Indian Territory there had been leased as follows: Cherokees, 6,000,000 acres.

The Commissioner then gives the list and acreage to which I have before called attention, and embodied in my remarks, and concludes:

It does not appear that any of these leases were ever authoritatively approved by the Department.

The Fenlon case, to which Mr. Price referred, was the case of Mr. E. Fenlon, of Leavenworth, Kans., who negotiated a lease with the Cheyenne and Arapaho Indians in 1884, and then attempted to secure its approval from the Interior Department.

Secretary Teller, under date of April 25, 1883, replied to Mr. Fenlon, refusing to confirm or "recognize" his contract. The correspondence in this case will be found on page 99 of Senate Executive Document

No. 54, Forty-eighth Congress, first session. There is no evidence that Fenlon's lease was as strong as that to the Cherokee outlet.

Not only the holdings of the Interior Department, as I have quoted them, but the opinions of two Attorneys-General of the United States, as I shall show further on, agree that the Cherokees have no right to lease, nor the United States to approve the leasing of, the Cherokee outlet.

Now, Mr. Chairman, having shown that the Interior Department has never authorized nor approved this or any other lease in the Indian Territory, the question remains: Could the Interior Department under existing laws and treaties authorize or approve such leases? And first let us determine whether the document made by the Cherokee council to the Cherokee Strip Live Stock Association is a lease. It is so held by the Department of the Interior, but the minority of the Committee on Territories disagree with the Department and with Attorneys-General Devens and Garland, and hold that it is a grazing permit. Let us refer to the instrument itself. Is it a lease of lands? It purports to be such. It is so styled several times in its different sections.

WHAT IS A LEASE?

This important question and the construction of the Department upon the instrument is entirely ignored by the minority in their report on this bill. They assume that the instrument is simply a grazing permit, and reason from that assumption that it is not within the prohibition of section 2116, Revised Statutes, and consequently not invalid. I assume that it is what it purports to be, and what the Department of the Interior and the Attorneys-General have declared it to be, and reason from that assumption that it is within the prohibition of section 2116, Revised Statutes, and consequently invalid.

Lord Bacon, in his Abridgment, says:

Whatever words are sufficient to explain the intent of the parties, that the one shall divest himself of the possession and the other come into it for such a determinate time, such words, whether they run in the form of a license, covenant, or agreement, are themselves sufficient, and will, in construction of law, amount to a lease for years.

Mr. Kent says (see Commentaries, volume 4, page 96):

A lessee for years may assign or grant over his whole interest. He may underlet for any fewer or less number of years than he himself holds. If the contract be that the lessee possess the land with the usual privileges of exclusive enjoyment, it is the creation of a tenancy for a year, though the land be taken to be cultivated upon shares.

Rapalye's Law Dictionary gives the following as a definition of lease:

A lease is in effect a conveyance or grant of the possession of property, to last during the life of a person, or for a term of years or other fixed period, or at will, usually with the reservation of rent.

The same author says:

If a person by deed grants an exclusive license for use of land, this may amount to a lease or to the grant of an incorporeal heriditament.

In Mason *vs.* Clifford (4 Federal Reports, page 177, 1880, Wisconsin), the question was whether a contract granting the use of a certain mill for the manufacture of shingles therein was a license or lease. In the contract there was no stated rental, but the license was to furnish the owner of the mill with shingles at a reduced price.

The court (citing Fisk *vs.* Farmingham Manufacturing Company, 14 Pick., 491, a perfectly parallel case) decided nevertheless that the contract was a lease for years, because the evidence showed "that the grantee was entitled to possession and management of the mill during the life of the contract as against his grantor and the whole world."

The Supreme Court of the United States in United States *vs.* Gratiot (13 Curtis, 641) lay down a very clear exposition of what constitutes a lease. Under an act of Congress the President had power to grant a license to smelt lead at the mines in the State of Illinois, reserving a rent in kind, and stipulating for certain privileges connected therewith. The case was an action of debt founded on a bond given by the defendant, Gratiot, to the United States. The decision of the case hinged upon the construction as to the nature of the contract.

The court say:

Is this contract a lease within the meaning of the law? It purports to be a license for smelting lead ore; and it is objected that this is not a lease within the meaning of the act of Congress. But this objection is not well founded. It is a contract for one year. Is it, then, a lease? The legal understanding of a lease for years is a contract for the possession and profits of land for a determinate period, with the recompense of rent. The contract in question is strictly within this definition. It is for the possession of land, and there is an express permission to use as much fuel as is necessary to carry on the smelting business; and there is an express reservation of the rent of 6 pounds of every 100 pounds of lead smelted. It is not necessary that the rent should be in money. If received in kind it is rent in contemplation of law. We are accordingly of opinion that the question certified in the record must be answered in the affirmative.

These opinions and decisions show us that a lease is for a determinate time, and for a rent consideration; that it grants an estate in land with right of exclusive possession against the grantor and the whole world, and with power to assign or sublet; and that if a contract possess these elements and grant these rights, it is a lease of land, no matter what it purports to be. Does the lease from the Cherokees to the Cherokee Strip Live-Stock Association come within the purview of this definition? It does in every particular. It contains every element entering into the usual land-leases. It is in the usual form of a lease. It purports to be a lease.

E. M. Hewins *et al.* were granted an exclusive use and enjoyment of 6,000,000 acres of land. They can assert their title against the Cherokees and against the whole world. They had the power to assign their whole interest or any part of it. They have assigned their whole interest to about one hundred sublessees. They are obliged to defend their sublessees in the enjoyment of the interest so sublet against the Cherokees and against the whole world. They are secure in this interest for five years (unless they violate the terms of the contract). They pay an annual rental. Their rent, and not personal favor, is the consideration of the contract; and yet gentleman call it a grazing permit.

Now, Mr. Chairman,

WHAT IS A LICENSE?

Mr. Kent says (Commentaries, volume 3, page 452):

An authority to do a particular act, or series of acts, upon another's lands without possessing any estate therein. It is founded in personal confidence, and is not assignable, and is not within the statute of frauds.

The court, in Morgan *et al. vs.* New York (14 Court of Claims, 319), say:

A license is in the nature of a permission granted by the one party and acted upon by the other; and it is strictly a matter of favor, and in no sense a matter of right.

Rapalye's Law Dictionary says:

In the law of real property a license is generally an authority to do an act which would otherwise be a trespass. A license passes no interest, and, therefore, if A grants to B the right to fasten barges to moorings on the river, this does not amount to a demise, nor give the licensee an exclusive use of the moorings, nor render him liable to be rated as the occupier of part of the bed of the river.

Again:

If the intention of the parties is that the grantee is not to be entitled to exclusive possession of the property, the grant is a license and not a lease.

In Morgan *et. al. vs.* New York, before mentioned, the court say:

A license is an authority to do a particular act or a series of acts upon the land of another without possessing an estate therein. When executed, it will prevent the owner of the land from maintaining an action for the acts done under it; but it is revocable at pleasure, and will not be a defense for an act done after revocation. A consideration may have been given for it or expenditure made strictly on the faith of it, yet the owner of the land may revoke it when he will, unless it be coupled with an interest, without paying back the money or making compensation for the expenditure. (Wood *vs.* Leadbitter, 13 Mees. & Wels., 838; Wolfe *vs.* Frost, 4 Sand. Ch., 72; Selden *vs.* Delaware and Hudson Canal Company, 29 N. Y., 639; Jamison *vs.* Milleman, 3 Duer., 255.)

From what I have just read, Mr. Chairman, I gather that a license is founded in personal confidence; may or may not have other consideration; may or may not be in writing. It passes no estate, and consequently there is no estate to assign. The licensee can not maintain his estate against the world or his grantor, for he has no estate to maintain. It does not warrant exclusive possession. It is revocable at pleasure.

Does the instrument under consideration come within this description? Is it founded in personal confidence? No. Does it pass an estate? Yes. Does it grant exclusive possession? Yes. Can the licensee maintain that estate and possession against the grantor and the world? Yes. Can he sublet? Yes. Is it revocable at pleasure? No. Then it is a lease of lands, and not a license "to do a particular act or series of acts upon the land of another without possessing an estate therein;" and, being a lease of lands, is within the prohibition of section 2116 of the Revised Statutes. That section reads as follows:

No purchase, grant, lease, or other conveyance of lands, or of any title or claim thereto from any Indian nation or tribe of Indians, shall be of any validity in law or equity, unless the same be made by treaty or convention entered into pursuant to the Constitution.

Every person who, not being employed under the authority of the United States, attempts to negotiate such treaty or convention, directly or indirectly, or to treat with any such nation or tribe of Indians for the title or purchase of any lands by them held or claimed, is liable to a penalty of $1,000.

The agent of any State who may be present at any treaty held with Indians under the authority of the United States in the presence and with the approbation of the commissioner of the United States appointed to hold the same, may, however, propose to, and adjust with, the Indians the compensation to be made for their claim to lands within such State which shall be extinguished by treaty.

There can be no doubt that the instrument we have been considering is covered by this section of the Revised Statutes; but we are not left to our own opinion of the matter.

I quote from the majority report on this bill, at page 4:

It is claimed by some members of the committee that the leases made by the Cherokee tribe to the cattle company referred to are valid and can not be abrogated by act of Congress. This position, in the opinion of your committee, is wholly untenable. It has been the settled policy of the Government from its foundation to the present time to exercise the right to regulate and control the sale or lease of Indian lands. As early as 1796 it was enacted that no nation or tribe of Indians within the boundaries of the United States should grant, sell, or lease or make any other conveyance of lands, or of any title or claim thereto, without the consent of the United States, made and entered into by some public treaty held under authority thereof. This act has remained in force from that time to the present, and was re-enacted in section 2116 of the Revised Statutes of the United States. There is no exception in the history of the Government to this declared policy. In no case has the United States recognized the authority of any Indian tribe or nation to sell, lease, or otherwise alienate or grant a claim to any portion of the lands occupied by them, whether such lands are held by patent in fee-simple or by Departmental orders. All treaties heretofore entered into between the United States and Indian tribes have been made and published while this law was in existence. All treaties so-called with Indian tribes, having been made during the existence of this provision now incorporated in the Revised Statutes, section 2116, are made subject to those provisions, and they are just as much a part of all such treaties as if they had been incorporated into the text hereof.

But we are not obliged to rely upon the opinion of the committee, or any member thereof, as to whether section 2116 covers the contract in question.

OPINIONS OF ATTORNEYS-GENERAL DEVENS AND GARLAND.

Attorney-General Devens (16 Opinions, 470) held that the Cherokee Nation itself could not settle one of its own citizens on the outlet; and if they could not settle one of their own number thereon, it will hardly be argued that they can settle white men thereon.

The present distinguished and able Attorney-General, Mr. Garland, in a recent opinion has covered the whole ground so completely and supports my view so conclusively, that I beg leave to incorporate the whole of it in my remarks. It reads as follows:

DEPARTMENT OF JUSTICE, *Washington, July* 21, 1885.

SIR: By your letter of the 8th instant, inclosing a communication from the Commissioner of Indian Affairs of the 7th, the following questions are, at his suggestion, submitted to me with request for an opinion thereon:

"Whether there is any law empowering the Interior Department to authorize Indians to enter into contract with any parties for the lease of Indian lands for grazing purposes; and also whether the President or the Interior Department has any authority to make a lease for grazing purposes of any part of any Indian reservation, or whether the approval by the President or the Secretary of the Interior would render any such lease made by Indians with other parties, lawful and valid."

These questions are propounded with reference to certain Indian reservations, namely:

1. The Cherokee lands in the Indian Territory west of ninety-sixth degree of longitude, except such parts thereof as have heretofore been appropriated for and conveyed to friendly tribes of Indians.
2. The Cheyenne and Arapaho reservation in the Indian Territory.
3. The Kiowa and Comanche reservation in the Indian Territory.

Our Government has ever claimed the right, and from a very early period its settled policy has been, to regulate and control the alienation or other disposition by Indians, and especially by Indian nations or tribes, of their lands. This policy was originally adopted in view of their peculiar character and habits, which rendered them incapable of sustaining any other relation with the whites than that of dependence and pupilage. There was no other way of dealing with them than that of keeping them separate, subordinate, and dependent, with a guardian care thrown around them for their protection. (3 Kent. Com., 381; Beecher *vs.* Wetherby, 95 U. S., 517, where most of the cases on this subject are cited and discussed.)

Thus in 1783 the Congress of the Confederation, by a proclamation, prohibited "all persons from making settlements on lands inhabited or claimed by Indians, without the limits or jurisdiction of any particular State, and from purchasing or receiving any gift or cession of such lands or claims, without the express authority and directions of the United States in Congress assembled," and declared "that every such purchase or settlement, gift or cession, not having the authority aforesaid, is null and void, and that no right or title will accrue in consequence of any such purchase, gift, cession, or settlement." By section 4 of the act of July 22, 1790, chapter 33, the Congress of the United States enacted "that no sale of lands made by any Indians, or any nation or tribe of Indians within the United States, shall be valid to any person or persons, or to any State, whether having the right of pre-emption to such lands or not, unless the same shall be made and duly executed at some public treaty, held under the authority of the United States." A similar provision was again enacted in section 8 of the act of March 1, 1793, chapter 19, which by its terms included any "purchase or grant of lands, or of any title or claim thereto, from any Indians or nation or tribe of Indians, within the bounds of the United States." The provision was further extended by section 12 of the act of May 19, 1796, chapter 30, so as to embrace any "purchase, grant, lease, or other conveyance of lands, or of any title or claim thereto." As thus extended it was re-enacted by the act of March 3, 1799, chapter 46, section 12, and also by the act of March 30, 1802, chapter 30, section 12.

In the above legislation the provision in terms applied to purchases, grants, leases, &c., from individual Indians as well as from Indian tribes or nations, but by the twelfth section of the act of June 30, 1834, chapter 161, it was limited to such as emanate "from any Indian nation or tribe of Indians." And the provision of the act of 1834, just referred to, has been reproduced in section 2116, Revised Statutes, which is now in force.

The last-named section declares: "No purchase, grant, lease, or other conveyance of lands, or of any title or claim thereto, from any Indian nation or tribe of Indians, shall be of any validity in law or equity, unless the same be made by treaty or convention entered into pursuant to the Constitution."

This statutory provision is very general and comprehensive. Its operation does not depend upon the nature or extent of the title to the land which the tribe or nation may hold. Whether such title be a fee-simple, or a right of occupancy merely, is not material; in either case the statute applies. It is not, therefore, deemed necessary or important, in connection with the subject under consideration, to inquire into the particular right or title to the above-mentioned reservations held by the Indian tribes or nations respectively which claim them. Whatever the right or title may be, each of these tribes or nations is precluded, by the force and effect of the statute, from either alienating or leasing any part of its reservation, or imparting any interest or claim in and to the same, without the consent of the Government of the United States. A lease of the land for grazing purposes is as clearly within the statute as a lease for any other or for general purposes, and the duration of the term is immaterial. One who enters with cattle or other live-stock upon an Indian reservation under a lease of that description, made in violation of the statute, is an intruder, and may be removed therefrom as such, notwithstanding his entry is with consent of the tribe. Such consent may exempt him from the penalty imposed by section 2117, Revised Statutes, for taking his stock there, but it can not validate the lease or confer upon him any legal right, whatsoever, to remain upon the land; and to this extent and no further was the decision of Judge Brewer in United States *vs.* Hunter (21 Fed. Rep., 615).

But the present inquiry in substance is (1) whether the Department of the Interior can authorize these Indians to make leases of their lands for grazing purposes, or whether the approval of such leases by the President or the Secretary of the Interior would make them lawful or valid; (2) whether the President or the Secretary of the Interior has authority to lease for such purposes any part of an Indian reservation.

I submit that the power of the Department to authorize such leases to be made, or that of the President or the Secretary to approve or to make the same if it exists at all, must rest upon some law, and therefore be derived from either a treaty or statutory provision.

I am not aware of any treaty provision applicable to the particular reservations in question that confers such powers. The Revised Statutes contain provisions regulating contracts or agreements with Indians and prescribing how they shall be executed and approved (see section 2103), but those provisions do not include contracts of the character described in section 2116, hereinbefore mentioned.

No general power appears to be conferred by statute upon either the President or Secretary, or any other officer of the Government, to make, authorize, or approve leases of lands held by Indian tribes; and the absence of such power was doubtless one of the main considerations which led to the adoption of the act of February 19, 1875, chapter 90, "to authorize the Seneca Nation of New York Indians to lease lands within the Cattaraugus and Allegany reservations, and to confirm existing leases." The act just cited is, moreover, significant as showing that, in the view of Congress, Indian tribes can not lease their reservations without the authority of some law of the United States.

In my opinion, therefore, each of the questions proposed in your letter should be answered in the negative, and I so answer them.

I am, sir, very respectfully,

A. H. GARLAND, *Attorney-General.*

THE SECRETARY OF THE INTERIOR.

According to the honorable Attorney-General, then, not only the lease in question is contrary to the law as laid down in section 2116, Revised Statutes, and contrary to the unvarying policy of the Government, but the Government can not authorize nor approve such a lease, re-enforcing the statement which I made a little while ago to the effect that the Interior Department could not be held to have authorized or approved this lease to the association, as it did not possess the power for such authorization or approval.

I wish to call attention of the committee to the argument of the minority upon this point to show the erroneous assumption and consequent fallacious conclusions contained in that argument. I quote from page 22 of their report:

It is now said that such a license (for grazing purposes) is violative of section 2116 of the Revised Statutes.

That section reads:

"No purchase, grant, lease, or other conveyance of lands, or of any title or claim thereto, from any Indian nation or tribe of Indians, shall be of any validity in law or equity unless the same be made by treaty or convention entered into pursuant to the Constitution."

This language is broad in itself, but it is not broad enough to embrace any instrument which in itself does not convey land, or an interest in land, or a title or a claim to land. Beyond that in its very terms it does not go. It does not render invalid an instrument, by whatever name it may be called, which merely conveys a certain limited use in the land, whether that use be in grass which naturally grows on the land, or in the products which through the labor of man may have been produced from its soil. But this section must be construed in conjunction with section 2117, which reads as follows:

"Every person who drives or otherwise conveys any stock or horses, mules, or cattle to range and feed on any lands belonging to any Indian tribe, without the consent of such tribe, is liable to a penalty of $1 for each animal of such stock."

When these two sections are read together, is it not apparent to any mind that the first section refers to a conveyance of land, or some interest therein, or a title or claim to land, and the second refers to a certain special use of the land? Says Judge Brewer, in the case of The United States *vs.* Hunter (21 Federal Reporter, page 617), quoting this last-mentioned section:

"This implies that an Indian tribe may consent to the use of their lands for grazing purposes"—

Thereby expressing an opinion on the section, but recalling that the construction of the section was not before him for decision, adding cautiously—

"or, at least, if it does consent, no penalty attaches."

And then proceeding, he says:

"If the tribe may so consent, it may express such consent in writing, and for at least any brief and reasonable time."

The chain of reasoning starts out with a misapprehension of our position. We do not claim that a mere license for grazing purposes is violative of section 2116. But I have proved, I think, conclusively that the lease of the Cherokee outlet is not a license. And because it is not a license, but a lease, we claim, and Attorney-General Garland claimed, that it is violative of that section.

Citing section 2116, the minority say:

It is not broad enough to embrace any instrument which in itself does not convey * * * an interest in land.

I agree with the minority. I have never claimed that this section embraces an instrument which does not convey an interest in land. But I must beg leave to differ with the minority in their opinion that a "lease" of 6,000,000 acres for five years at a money rental, with full and exclusive possession and power of subletting, is not an "interest in land" but a grazing permit; and my judgment compels me to adopt the contrary view of Lord Bacon, Edward Kent, Rapalyé, the Supreme Court of the United States, Attorney-General Garland, and others.

It is a serious question whether section 2117 of the Revised Statutes provides for such grazing permits as are contemplated by the minority and by Judge Brewer, in United States *vs.* Hunter (21 Federal Reporter, page 617), where the judge, quoting this section, says:

This implies that an Indian tribe may consent to the use of their lands for grazing purposes, or, at least, if it does consent, no penalty attaches.

But that question is not involved in this discussion.

But whether the contract of lease in question was a lease or a grazing permit, or, if a lease, whether valid or invalid, is not touched by Judge Brewer. The only question discussed by him was whether by section 2116 of the Revised Statutes a penalty attached to a person who attempted to negotiate with the Indians for a grazing lease; and upon this point and not looking at any law passed subsequent to the date of section 2116 (1834), the judge's argument was sound. For the penalty provided for in section 2116 attaches, by virtue of that section, to two, and only two, classes of offenders: First, those who attempt to usurp the authority of the United States, and to negotiate with the Indian, by public treaty, for the title to, or an interest in lands; second, those who attempt to treat with the Indians, by private contract, for the title to land. It is plain that this lease which was a private contract for an interest in land did not come within the penal provisions of either clause of this section. And this was what Judge Brewer

decided, and only this. Judge Brewer does not intimate that the lease was not invalid, but distinctly says:

So that this sentence (referring to the first sentence of section 2116) emphatically declares the invalidity of any purchase, lease, or other conveyance of Indian lands, except through the means of some public treaty.

Moreover, this cautious suggestion made by Judge Brewer, to which I have alluded as having been quoted by the minority, if it antagonized my position, which is not the fact, would not be relevant in this discussion, being mere *obiter dictum*. Yet, notwithstanding these facts and the opinion of the Attorney-General that the decision of Judge Brewer in the Hunter case decided nothing as to the validity of the lease (which was not in question), the minority rely upon that decision to establish the validity of the same.

THE UNITED STATES IS BOUND BY THE TREATY OF 1866 TO BREAK UP EVERY LEASE IN THE CHEROKEE OUTLET.

But, Mr. Chairman, I have another reason for holding that this lease to the Cherokee Strip Live Stock Association is invalid; and not only all contracts prohibited by section 2116 but all grazing permits possibly contemplated in section 2117. I refer to Article XXVII of the treaty of July 10, 1866, with the Cherokees. It seems to have been entirely overlooked by the minority, and Judge Brewer could not have had it in mind when he uttered the *obiter dicta* before referred to, for the treaty of 1866 superseded the law of 1834, and any prohibition of the former would supersede any implied permission in the latter. Articles XXVI and XXVII of that treaty read as follows:

ART. XXIV. The United States guarantee to the people of the Cherokee Nation the quiet and peaceable possession of their country and protection against domestic feuds and insurrections, and against hostilities of other tribes. They shall also be protected against interruptions or intrusion from all unauthorized citizens of the United States who may attempt to settle on their lands or reside in their territory. In case of hostilities among the Indian tribes, the United States agree that the party or parties commencing the same shall, so far as practicable, make reparation for the damages done.

ART. XXVII. The United States shall have the right to establish one or more military posts or stations in the Cherokee Nation, as may be deemed necessary for the proper protection of the citizens of the United States lawfully residing therein and the Cherokees and other citizens of the Indian country. But no sutler or other person connected therewith, either in or out of the military organization, shall be permitted to introduce any spirituous, vinous, or malt liquors into the Cherokee Nation, except the medical department proper, and by them only for strictly medical purposes. And all persons not in the military service of the United States, but citizens of the Cherokee Nation, are to be prohibited from coming into the Cherokee Nation, or remaining in the same, except as herein otherwise provided; and it is the duty of the United States Indian agent for the Cherokees to have such persons, not lawfully residing or sojourning therein, removed from the nation, as they now are, or hereafter may be, required by the Indian intercourse laws of the United States.

I wish, Mr. Chairman, that I had more time to comment upon this treaty, but I must hurry through this argument in order to give place to others who may wish to be heard.

The obligations of the Government under the above treaty stipulations are as plainly indicated as language can express them.

But what are the provisions of the Indian-intercourse act referred to in the latter part of Article XXVII, just quoted? Let the statute speak for itself. Section 2147 of the Revised Statutes, and being a part of the Indian-intercourse act, is as follows:

The Superintendent of Indian Affairs, and the Indian agents and subagents shall have authority to remove from the Indian country all persons found therein contrary to law, and the President is authorized to direct the military force to be employed in such removal.

Also see sections 2149 and 2150 on same subjects.

As I understand it the above sections are the only references to the subject of removal of intruders contained in the Indian-intercourse act.

It now becomes material to ascertain what persons are excepted from the operations of that part of Article XXVII of the treaty, June 19, 1866, and hence being excepted may be lawfully in the Indian country or may lawfully enter therein, and not be liable to removal under the treaty and statute quoted.

It will be noticed that, by the treaty, all persons not in the military service of the United States and not citizens of the Cherokee Nation are to be prohibited from going into the Cherokee Nation or remaining in the same except as therein, by the treaty, otherwise provided. Let me inquire, first, by whom prohibited? By the Indians into whose particular country they enter? Certainly not, for the Indians are not authorized to attempt the exercise of any power for the purpose of prohibiting entry or accomplishing removal.

It is apparent that the United States must both prohibit and remove.

If any doubt could possibly exist upon this point, Article XXVI of the treaty of July 19, 1866, makes it entirely clear. After providing by guarantee for the peaceable possession of the country ceded to the Cherokees and protection against domestic feuds and insurrections and against hostilities of other tribes, it further enacts:

They shall also be protected against interruptions or intrusions from all unauthorized citizens of the United States who may attempt to settle on their lands or reside in their territory.

Now it becomes pertinent to inquire what class of persons may, according to this treaty and the intercourse law, enter into or remain in the Cherokee country.

A careful examination of the treaty justifies the following answers:

First. All persons in the military service of the United States.

Second. All citizens of the Cherokee Nation.

Third. Such persons as are connected with the Indian agency of that country.

Fourth. Such as might be connected with the United States courts, authorized by Articles VII and XIII of the treaty of 1866, to be created.

Fifth. Such persons as may be licensed to trade there (Article VIII).

Sixth. All freedmen who had been liberated by voluntary act of their former owners by law as well as free colored persons who were in the country at the commencement of the rebellion and were then (July 19, 1866) residents therein, or who might return within six months, and their descendants. (Article IX.)

Seventh. Any railroad company, its agents, and employés, and all laborers, while constructing and repairing any railroad which might be built through that country.

Eighth. Agents sent by the Interior Department to enumerate the Indians (Article XII, Section 1).

Ninth. All persons connected with such missionary enterprises as by Article XII of the treaty might be established within the Territory.

Tenth. Such friendly Indians as under that treaty might be settled on any lands claimed by the Cherokees.

Eleventh. Such persons, in addition to those above enumerated, as by the Indian intercourse act may enter the said country; and these are—

a. Authorized traders.

b. Foreigners who may be granted passports by the Interior Department or other officer authorized by section 2134, Revised Statutes, to grant the same.

Can any gentleman, with due regard to the treaty stipulation above referred to and the Indian-intercourse act, claim that owners of cattle or other stock come within any one of the above descriptions?

In my humble judgment no such claim can be made with any regard for truth and accuracy. No man, be he American or foreigner, has any right, under the treaty of 1866 and the Indian-intercourse laws, to enter any Indian country for the purpose of remaining or of making any use of the land belonging to the Indians, and when he does he not only trespasses upon Indian rights, but he defies the authority of the United States.

By this treaty the Government is bound not only to keep off intruders but to keep all persons out of that Territory, and the Indians were a party to this contract and assented to the right and duty of the United States to keep such persons out.

The exceptions which I have enumerated do not include the men who hold these leases. Not one of them has a right to go there, and the Government is bound by the treaty to prohibit them from going there. If so, then how can they go under the leases? If the Government must keep them out under all circumstances, and the obligation to do that rests with the Government, and without regard to the requests upon the part of the Indians, I submit the question, what right has the Government even under the pretense of leases to permit them to go into this Cherokee outlet at all?

Mr. Chairman, in the light of these facts which I have adduced can any gentleman object to section 10 of this bill, which proposes to strike down these illegal leases, or urge that it threatens the property rights of the Cherokees?

But, sir, this section ought to be unnecessary, and would be, were the law already provided enforced by this administration. Its own Secretary of the Interior has declared the leases unauthorized. Its Attorney-General has declared them illegal. By sections 2149 and 2150 of the Revised Statutes and by Article XXVII of the treaty of 1866 it is made the bounden duty of this administration to remove every cattle-man and every hoof of cattle now in illegal occupancy of any part of the Indian Territory.

ATTITUDE OF THE PRESENT ADMINISTRATION.

I call this administration to account for its stewardship. What has it done in this important matter? I know that gentlemen will attempt to justify the "masterly inactivity" and criminal negligence of this administration by attempting to hide behind the skirts of a Republican administration. But that will not do, gentlemen. The American people know where you are.

The failures of the past are no excuse for the failures of the present. I regret that a Republican administration is largely responsible for the condition of things now existing in the Indian Territory.

But have the gentlemen forgotten that this is an era of reform?

The country has passed from the control of Republicans, and we are now enjoying the beneficent rule of an alleged reform administration, one which our Democratic brethren (some of them) delight to style as "pure," "able," and "patriotic," and run on the line of "Jeffersonian simplicity." The political power which for twenty-five years administered governmental affairs and preserved the nation from dismemberment at the hands of disloyal Democrats, in obedience to the commands of the people of a reunited country, peaceably surrendered to the men of adverse political faith and practice.

We all remember how vigorously during the last national campaign

Democratic orators, from Maine to California, from Michigan to Texas, vociferated and reiterated charges of fraud and corruption against the Republican party, coupled with eloquent portrayals of the sweet days of reform which would dawn when their party should be again entrusted with the Ship of State. Every fraud was to be unearthed; every ring was to be broken; every abuse was to be swept away.

The country has had fifteen months of Democratic reform rule, and it can not be said that the new servants of the people have not yet had sufficient time to begin the loudly proclaimed reforms promised the people. We are in the full enjoyment of the rich blessings of a pure (?) and patriotic (?) Democratic administration; we must all be in the most delightful condition possible under any form of government; if any one seriously entertains a contrary opinion, mark him at once a "crank" and shun him accordingly.

Another reason why the Democratic administration should have grappled long ago with this great issue is that the people demanded it. Their demand, under the present administration, encouraged no doubt by the promises of the Democratic advance agents, has been louder than under any preceding administration. Public interest in this matter has greatly increased since Grover Cleveland entered the White House. Ignorance of the question, uncertainty as to the law, can no longer be pleaded in defense of the let-alone policy of this administration. The light of the press and Congressional investigation and discussion has been turned on.

LAMAR'S PHILOSOPHY.

But there is still another and more peremptory reason why the "reformers" should have fulfilled their pledges in this vital matter. I refer to the law passed March 3, 1885, and I will quote it, giving, by way of explanation of the causes which led to its passage, some remarks by Secretary Lamar in his last annual report, in which he quotes it (pages 34 and 35).

It has become generally known throughout this country that this large tract of land, fertile, well watered, and with its mild climate, is unoccupied, and that it has continued in this idle condition since the treaties of 1866. It is therefore not surprising that a large class of hardy, industrious people, residing in more thickly settled States, are eager to acquire homesteads upon it.

The respectful petitions of many peaceable and law-abiding citizens from numerous localities throughout the country requesting that it be opened to settlement, no less than the threatened unlawful invasions of the land, have had the effect of inducing consideration of the subject by Congress, which, at its last session, enacted the following provision of law, namely:

"That the President is hereby authorized to open negotiations with the Creeks, Seminoles, and Cherokees for the purpose of opening to settlement under the homestead laws the unassigned lands in said Indian Territory ceded by them respectively to the United States by the several treaties of August 11, 1866, March 21, 1866, and July 19, 1866; and for that purpose the sum of $5,000, or so much thereof as may be necessary, be, and the same is hereby, appropriated out of any money in the Treasury not otherwise appropriated; his action hereunder to be reported to Congress." (23 Stat., 384.)

This provision of law refers not only to the lands ceded by the Creeks and Seminoles referred to above, but also to lands ceded by the Cherokees, the status of which is considered herein under the title "the Cherokee outlet."

The unlawful combinations above referred to have rendered it, in my judgment, unwise to appoint this commission.

Here is a plain, unequivocal act of Congress, backed by public sentiment, instructing the President to negotiate with these Indians for the opening of that country, and appropriating the expenses of the negotiation. The country was expecting that the commission contemplated by this act would be immediately appointed. On April 13 Secretary Lamar assured Hon. Sidney Clarke and Capt. W. L. Couch that the commission would soon be appointed. Notwithstanding these things Mr. Lamar decided that it was "unwise to appoint this commission" which the law called for and which he had solemnly promised.

Mr. Chairman, I desire to ask who constituted Secretary Lamar a judge to decide whether the laws passed by this Congress should be obeyed? From what foreign power does he derive such commission? He certainly does not from the American people.

I ask the attention of gentlemen while I read some more gospel from this new dispensation:

Will it not be a lesson—valuable there and valuable elsewhere—to show to such transgressors that their way is hard, and that nothing will render the Indian occupation more permanent, or postpone the change in the use of these lands longer, than the attempts to invade and by force to obtain possession and enjoyment of them? The outlaws and depredators who imagine they can override the law and violate treaty obligations with the Indians will discover the impossibility of success when they find themselves confronted by the law of the land, strengthened by the civil and military arm, and backed by the moral sentiment of a just people.

THE NEW NULLIFICATION.

This, then, is the advanced moral doctrine, the grim doctrine of nullification, which was stamped out in 1865 by the genius of the three greatest statesmen of the nineteenth century—Grant, Lincoln, and Stanton, backed by the blood and treasure of the loyal North; this is the doctrine which the distinguished gentleman from Mississippi has, after months of broken pledges, revived to guide the Democratic administration and teach the American people a "valuable lesson."

This disposition of the present administration to override the rights of the common people, as shown in its use of military power to expel honest settlers from the Indian Territory, while protecting cattle-men in their illegal possession of the same country, is well illustrated by the President's veto of the very moderate and humane bill passed by this Congress for the relief of settlers upon the lands in Iowa known as "The Des Moines Valley Lands," and for its course in driving innocent settlers from the Old Winnebago and Crow Creek reservations, in Dakota. In the latter case President Cleveland issued an order to the settlers to vacate those reservations which they had, under authority of a previous proclamation of President Arthur, entered and made improvements upon, thus taking the law into his own hands and not waiting for the action of Congress in the premises.

But, sir, not only is this administration pledged by its promises made before election to expel the cattle-men from the Indian Territory, but it has repeatedly and explicitly made that promise since assuming the reins of Government. Not one of those promises has been fulfilled. It has used the Army to expel poor settlers with their wives and children, and to protect the occupancy of the cattle-kings.

I know, sir, that this sounds like harsh language, but I propose to prove every assertion which I have made. Let us, if possible, follow the sinuous course of this administration in connection with this great question.

PLEDGES MADE BY THIS ADMINISTRATION TO MESSRS. WEAVER AND CLARKE.

As soon as the Democratic administration came into power its attention was called to the evils resulting from the illegal occupancy of the Indian Territory by cattle-men. My colleague from Iowa [Mr. WEAVER] and Hon. Sidney Clarke, of Kansas, formerly a member of this House, called upon Mr. Cleveland soon after his inauguration. General WEAVER took with him a map, which afterward became famous for the use which he made of it in the Iowa campaign.

These gentlemen called the attention of the President to the condition of things in this country, as they had a right to do, and as it was a very timely thing to do. We are informed that the President was astonished at their recital and referred them to the Secretary of the Interior, Mr. Lamar. To that worthy functionary these gentlemen repaired, General WEAVER keeping a tight grip on his historic map. He laid it down before the Secretary, showed to him the extent and evils of the cattle occupancy and the glories which would dawn upon that fair region when it should be covered by the homes of white citizens instead of the barbed-wire fences of cattle barons. In the next campaign in Iowa we were told of the deep impression which the presentation of these facts made upon the susceptible mind of the Secretary; that, with tears in his eyes, and in tones husky with emotion, he said: "General WEAVER, there is a right and a wrong in this matter, and the right shall be done."

Messrs. WEAVER and Clarke withdrew from this affecting scene under the impression that the Secretary was very much in earnest. That was on March 7, three days after the inauguration. So impressed were the President and Secretary Lamar by the statements made by Messrs. WEAVER and Clarke that on the 13th of the same month the President issued his famous proclamation authorizing the removal of all corporations and unauthorized persons from Oklahoma. It is as follows:

A PROCLAMATION.

Whereas it is alleged that certain individuals, associations, and persons, and corporations are in unauthorized possession of the territory known as Oklahoma lands within the Indian Territory which are designated, described, and recognized by treaties and laws of the United States, and by the executive authority thereof as Indian lands; and,

Whereas it is further alleged that certain other persons or associations within the territory and jurisdiction of the United States have begun and set on foot preparations for organized and forcible entry and settlement upon the aforesaid land and are now threatening such entry and occupation; and,

Whereas the laws of the United States provide for the removal of persons residing or being found upon such Indian lands and territory without permission expressly and legally obtained of the Interior Department:

Now, therefore, for the purpose of protecting public interests as well as the interests of the Indian nations and tribes, and to the end that no person or persons may be induced to enter upon the said Territory where they will not be allowed to remain without permission of the authority aforesaid, I, Grover Cleveland, President of the United States, do hereby warn and admonish all and every person or persons now in occupation of such lands, and all such person or persons as are intending, preparing, or threatening to enter in or settle upon the same, that they will not be permitted to enter upon said Territory, or if already there will not be allowed to remain thereon, and that if due regard for, and voluntary obedience to, the laws and treaties of the United States and this admonition and warning be not sufficient to effect the purposes and intentions of the Government as herein declared, the military power of the United States will be invoked to abate all such unauthorized possession, and prevent such threatened entry and occupation, and to remove all such intruders from the said Indian lands.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

By the President.

GROVER CLEVELAND.

[SEAL.] T. F. BAYARD,
Secretary of State.

The able chairman of the Committee on Territories [Mr. HILL], in his instructive speech the other day opening discussion upon this bill, made an error in stating that no proclamation except that relating to the Cheyenne and Arapaho country was ever issued by the President. The proclamation to which Mr. HILL referred was dated July, 23, 1885, and was entirely independent of this one of March 13.

The first clause was aimed at the cattle companies; the second, at the settlers; the third refers to the binding force of the Indian intercourse act and the treaty of 1866, which I have before treated at length.

This proclamation was heralded over the country as the harbinger of a political reformation, a crusade against monopoly. It was the first

toot of the little Democratic tin-trumpet of reform. Monopoly was paralyzed with dread and wonder that a reform was really, seriously contemplated by a Democratic administration. The Mugwumps shrieked themselves hoarse with enthusiasm.

It clearly appears that this proclamation refers to the Oklahoma country and not to the Cherokee outlet nor to the lands occupied by the Cheyennes and Arapahoes. The proclamation covering the latter country was issued July 23, 1885, four months after the first one, which I have just read.

The second proclamation was reasonably well enforced, and the cattle were generally removed from that part of the Territory, but it should be borne in mind that the home-seekers were not asking the Government to open that land for settlement; they knew it was occupied by a few thousand Indians under proper authority; the country they did seek to enter and possess was Oklahoma, and by that name clearly identified and distinguished from all other lands within the Territory, 1,800,000 acres of choice land, which for twenty years past has continuously remained unoccupied by either Indians or white men, except the favored cattle-men.

This and the Cherokee outlet are the lands from which the Government, in justice to its own obligations and to a large number of its citizens who demand that favored classes shall not forever be preferred and shielded by national authority, should expel the intruding cattle-men.

HAS THIS ADMINISTRATION ENFORCED ITS PROCLAMATION?

This administration, speaking through its Secretary of the Interior, pretends to affirm that the proclamation of the President, of date March 13, 1885, has been enforced, and that the cattle-men and their herds have been removed from Oklahoma.

On page 32 of his annual report Secretary Lamar, in speaking of this land, says:

No agent of the Government resides upon this land, and it is not occupied in any way by any person or persons for any purpose under any authority of this Department.

The last six words are italicised in the report, thus indicating clearly that, while holding out the land to be wholly unoccupied, the Secretary, as if uncertain of his ground, adds the saving clause to which I have just called attention.

Mr. Chairman, it seems to be the belief of some Democratic members of this House that the administration did, in good faith, carry out the proclamation of March 13, 1885, and cause all cattle-men and their herds to be removed from Oklahoma, and has since prevented similar occupancy; and my distinguished friend from Indiana [Mr. HOLMAN], judging from a remark dropped during the speech of the chairman of the Committee on Territories [Mr. HILL], appears to be laboring under that delusion. It seems to me this gentleman and some other Democrats have indulged undue confidence in the present administration. They seem to be content—that is, some of them, but not all, by any means—to presume that all is going as it should and that the perfection of human government is now attained.

Mr. Chairman and gentlemen of the committee, if the President of the United States and his Secretary, Mr. Lamar, really intended in good faith to rid Oklahoma of cattle-men and their stock, subsequent events are very poor confirmation of that good faith. I state what has been satisfactorily shown me to be a fact, that while the officers in the Indian Territory charged with executing the President's proclamation did most effectually remove such of the poor home-seekers as ventured to go there and openly and manfully declare that they were such home-seekers and not cattle-raisers, yet that as to the cowboys and others in charge of stock or claiming to be there for the purpose of going into that business, those officers, except in the case of one man, named J. H. Anderson, did no more than make a pretense of removing the cattle-men by requiring them to "round up" their stock, as if preparing to remove them from the lands named, and then, and shortly after Secretary Lamar's annual report was made to the President, they were all, save the man Anderson, allowed to again turn their cattle loose; and ever since that time this country has swarmed with the cattle, supposed by the too-confiding statesmen, like the gentleman from Indiana [Mr. HOLMAN], to be pasturing on other lands than those from which, had the President's proclamation been enforced in good faith, they would have been removed.

THE CATTLE STILL IN OKLAHOMA.

I now submit to the committee, in the form of affidavits and letters, proof of my assertions in regard to the non-execution of the proclamation, and I have not the least doubt but the evidence will convince all who are disposed to recognize facts that my charges against the administration in regard to the point referred to are fully sustained by satisfactory proof. The affidavits and letters are as follows:

STATE OF KANSAS, *Sumner County, ss:*

I, Henry Boston, a citizen of the United States, and of the age of twenty-seven years, and by occupation a farmer, having been duly sworn, do depose and say that for several years I have resided upon and farmed a tract of land known as "Ben. Keith's farm," situated on the North Canadian River and about 12 miles east of Fort Reno and in the Oklahoma country; that I am familiar with the entire Oklahoma lands, and hereby make oath and affirmation that there have been and are at this time to my knowledge and best belief not less than sixty thousand (60,000) head of cattle held in Oklahoma as their home grazing grounds; and desire to state further that the above-mentioned cattle are owned by the following-named companies and men, to wit: W. B. Grimes & Co., Hewins & Titus, McClelland Cattle Co., Ford and Co., Tuttle and Co., Belle Plaine Cattle Co., The 4 D Ranch, The Z V Ranch, Burke and Martin, Berry Brothers., Wyeth Cattle Co., Horsford, Garrison, Beard Bros., McClure & Co., and others.

HENRY BOSTON.

Personally appeared before me, a notary public in and for the county of Sumner and State of Kansas, the above-named affiant, who voluntarily makes the foregoing statements under oath this March 30, 1886, Caldwell, Kansas.

[SEAL.] CASS BURRUS, *Notary Public.*
Com. expires Sept. 19, 1887.

On the same day, and at the same place, to wit, at the city of Caldwell, Kansas, personally appeared the undersigned citizens, who voluntarily make oath and affirmation that they have during the entire winter just past been employed by the Government contractor in cutting and hauling cord-wood and saw-logs from the timber on the North Canadian River, in the Oklahoma country, to the Ft. Reno military post, and are familiar with the entire Oklahoma country, and hereby voluntarily make oath and affirmation to the statements hereinbefore mentioned by the foregoing affidavit of Henry Boston as to the occupancy of the Oklahoma country by cattle; and that the estimate of 60,000 head of cattle held now in Oklahoma is not exaggerated, but is within the numbers we believe to be now in that section of country known as Oklahoma.

GEO. F. BROWN,
S. N. JONES.

CALDWELL, KANSAS, *March* 30, 1886.

Personally appeared before me, a notary public in and for Sumner County, Kansas, the above-named persons and affiants, who voluntarily makes the foregoing statements under oath.

[SEAL.] CASS BURRUS, *Notary Public.*
Com. expires Sept. 19, 1887.

We whose signatures are hereto attached are well acquainted with the men who have signed the foregoing affidavits, and believe them to be men of truthfulness, and with a high sense of honor; that the statements set forth in their affidavits are true, as many of us have at various times been through Oklahoma the past few months and witnessed the herds of cattle in that country. Done at Caldwell, March 31, 1886.

[John Miller's affidavit.]

To all whom it may concern:

Personally appeared John M. Miller, the undersigned affiant, before me, a notary public in and for the county of Sumner and State of Kansas, and by me, being first duly sworn, deposes and says: That he has many times been over and across and is thoroughly acquainted with all the lands within the limits of Oklahoma, and just returned out of Oklahoma the 1st of this present month of April; that at the time I left Oklahoma the said country was literally covered with cattle, that I never at any time have seen more cattle in Oklahoma than there were on the 1st of April, this year. One man named Johnson, who has a band of horses and also a herd of cattle between the North and South Canadian Rivers, told me that the Army officials repeatedly told him to just keep his cattle out of sight, so they could report they did not see any, and that was all they cared for. In answer to how many cattle are now in Oklahoma, I would say that the country is practically covered with them, and in, my judgment, there are fifty thousand head, and I think there were one hundred thousand head of cattle turned loose last fall in Oklahoma, and no cattle have been removed except a small bunch of about one hundred and seventy-five head which were owned by a man named J. H. Anderson, who held them on Deer Creek, and was removed with his cattle by Major Sumner, of the military post at Fort Reno, I. T. Major Sumner, of the Ft. Reno post, previously to the ejection of this cattleman, Anderson, had ejected the settlers with their wives and children, ther teams, tools, and household goods, and escorted them across the Cherokee strip lands, and into the State of Kansas. This ejection of settlers was done about the 1st to middle of November, 1885, or last fall. Immediately after the settlers were ejected Major Sumner's command began to round-up the cattle in Oklahoma. These cattle were, however, all turned loose on or about the 10th to 15th of December, 1885, and it was common report among all the cattle-men and cowboys, obtained from the Army officials who came to notify the cattle-men to turn the cattle loose, that the orders to Major Sumner came from Lamar, Secy. of Interior.

There has been no further attempts by any of the military officials or other persons to remove the cattle in Oklahoma. In answer to the question, is Major Sumner, the commanding officer at the military post at Fort Reno, aware of the fact that Oklahoma is covered with cattle, I must say he certainly is aware of this fact.

And Lieutenant Rice, who has charge of the Indian scouts, is regularly around over the whole of Oklahoma looking for settlers, with strict orders to arrest and bring to Ft. Reno, if any are found, and must see these cattle and cattle-men every day. The cattle-men and cowboys are there in tents and are in no fear of being disturbed.

JOHN M. MILLER.

CALDWELL, KANSAS, *April* 21st, 1886.

Subscribed and sworn to before me, a notary public, in and for Sumner County and State of Kansas, the day and year above written.

[SEAL.] M. F. MAY, *Notary Public.*
Commission exp. Feby. 17th, 1886.

STATE OF KANSAS, *Sumner County, ss:*

Personally appeared before me, a notary public in and for the county of Sumner and State of Kansas, the persons who have hereunto set their hands to this affidavit, and, after being sworn, do make solemn oath and affirmation to the facts contained in the following statements, to wit:

That during the month of October, 1885, we did go with our families and make settlement on lands selected for our future homes in that portion of the Indian Territory called Oklahoma. That on the 3d, 4th, and 5th days of November Major Sumner, commanding the military post at Fort Reno, in the Indian Territory, with his command, acting, as claimed by him at the time, under orders from the Secretary of the Interior, arrested us as trespassers, and, under his military escort of United States cavalry and Indian scouts, took us from a point on

the North Canadian River some 40 miles from Fort Reno to the post, to wit, Fort Reno; we were kept for three days without rations, and in all five days at Fort Reno under guard; at the expiration of the five days we were started for the Kansas line, a distance of 110 miles, under the military cavalry escort of Captain Hayes, of the Fifth Cavalry, and by him and Captain Armstrong, of the infantry, escorted under close guard to the Southern Kansas State line, where we arrived on the 17th day of November, 1885.

The undersigned say furthermore that while they were dwelling in Oklahoma, going into and returning from that country, they saw many thousands of cattle ranging over all that country, and the owners and herders of the cattle, and that these men and their cattle were not molested nor disturbed; and in further remonstrance with Major Sumner upon the injustice and discrimination of removing settlers with their families, farming utensils, and household goods, and permitting cattle-men to remain, said he had no orders to remove either the cattle or cattle-men.

We desire to further state that some of our number have, during the time since their ejection, been employed in cutting wood for the Government contractor, having the contracts to furnish cord-wood to the military post at Fort Reno, the same being cut some 20 miles east of Fort Reno, and on the lands known as Oklahoma, and that no cattle or cattle-men have been removed from off the Oklahoma lands by any authority, from either the military post at Reno, Washington city, or elsewhere.

We desire further to say that Major Sumner, having ejected us from off and out Oklahoma, placed his command at work to eject the cattle-men and their cattle, and did eject one small owner of cattle by the name of Anderson with his herd of something less than two hundred head of cattle, and that while the larger herds were being rounded up preparatory to being driven out of the Oklahoma country the soldiers were suddenly withdrawn, and again the cattlemen with their cattle were left in sole possession and occupancy of the country. The soldiers and cattle-men all claimed that the orders to turn the cattle loose emanated from the Secretary of the Interior, L. Q. C. Lamar, by and through the request of Ginnes & Co., a wealthy cattle firm of Kansas City, Mo., and other cattle-owners interested in the continued possession of this vast country for grazing purposes only.

Com. exp. February 17, 1889.

CAMP NEAR DARLINGTON, IND. T., *April* 14, 1886.

This is the Cheyenne agency in the Fort Reno military reservation, and is just west of the western line of Oklahoma.

SIR: We are now hauling logs from Council Grove to Fort Reno on Government contract.

Council Grove is an old town-site of the boomers.

The weather is fine, grass is growing, and plenty of cattle to graze upon it. Last November the military removed the settlers from Oklahoma; afterward they made a faint effort to remove the cattle-men and cattle; but the cowboys were mostly out of sight. They will ride a long ways while Mr. Soldier is getting ready to start. The cattle were partly rounded up and drove to the north side of the Cimmaron River, and then turned loose, and, of course, in a few days the greater part of them had drifted back to their old range. As soon as the soldiers had returned to the post, the cowboys were back again as usual; made permanent camps and remained there ever since. I was at the "J. H." camp in February. There were several men there. I asked them if the officers at the post knew that they were there. They said: "Oh, yes; some of them have stopped over night with us, and we shall not be molested unless the settlers come in and they have to make another round-up." I think there are as many cattle in Oklahoma now as there were at his time last year. I passed through here then, and have been through considerable of the country this spring, and the number of cattle is about the same. I can not make an estimate, but they can be counted by the thousands. I see it published in the papers that the Secretary of the Interior says that there are no persons in Oklahoma by the authority of the Department. Now, I would like to know why it is that Keith, Shields, Pronsen, Housen, and others remain here year after year with their large herds and fine farms?

It is calculated to make men desperate to see these men plowing up Government land and planting corn, when others are dragged out, time after time, by the military.

DAVID ROSS.

SILVER CITY, IND. T., (southern part of Oklahoma,) *March* 8, 1886.

* * * * * * *

The removal of the cattle by the army was a mere farce.

All the cattle that were on the Oklahoma lands last fall have wintered there this winter, and there have not been any soldiers in this part of Oklahoma, although the officers at Fort Reno know that the cattle still remain.

A. C. McCORD.

SILVER CITY, IND. T., *March* 8, 1886.

DEAR SIR: Things are about the same as they were last summer. The cattle are all here that were last summer.

The military failed to take any cattle out. They did round-up a few, but turned them over to the cowboys, and they would drive them out of sight and let them go. I was out with the "Long O" outfit about two weeks, and we never brought out a hoof. I think there are at least 10,000 head of cattle at this time within 5 miles of our camp. The "Z. H." outfit is still in the same place it was last fall.

All the companies are holding their same old ranges. The cattle along the South Canadian are mostly "Long O," Smith & Forsyth, owners, with several side brands; besides Beard & Johnson, Johnson & Campbell, Bound & Williams. The O, the "Z Z" brand, and quite a number of others are here.

The north part of Oklahoma is occupied by the same companies and brands that have been there. I am in camp 12 miles south of Round Grove.

Yours, truly,

JOHN McGREW.

CALDWELL, KANS., *May* 22, 1886.

MY DEAR SIR: Although I am a stranger to you, I take the liberty to call your attention to the disgraceful condition of affairs which exists in the Indian Territory at the present time. It is now more than a year since the President's proclamation ordering the cattle-men out of Oklahoma, and nearly a year since acting Attorney-General Garland declared all leases of Indian lands, including those of the Cherokee strip, "illegal and contrary to law." No respect has been paid to the proclamation by the cattle-men, and they still occupy all of that country and are driving in more cattle nearly every day. The same is true of the Cherokee strip and of the surrounding Indian reservations, which are all in possession of the cattle syndicates. I only say to you what everybody knows here, and ask you, as a friend of fair dealing and honest government, to make it known to the country that while the home-seekers are excluded from the vacant lands with a relentless hand the cattle syndicates are left in full possession, and are protected by the military and by the officers of the Interior Department in plain violation of law. The illegal lease system seems to have resulted in corrupting the whole Indian service in the Indian Territory, and since the Interior Department does not enforce the law against the leases the people here do not see why it is that such a relentless spirit should be shown toward people who want homes. The greatest dissatisfaction exists among fair-minded men of all parties in regard to the discrimination of the authorities at Washington against the people and in favor of the cattle-men. Even the cattle-men who are here on the ground do not claim that such a policy is just. But they claim to have control of the premises, and to have a good understanding with the Army officers and Indian agents. They are and have been planning to get their leases extended on all the lands south of here for ten, and if possible, twenty years, and some of the most domineering of these speculators taunt the home-seekers with the remark of "What are you going to do about it?"

Very respectfully, your obedient servant,

AMOS FRANKLIN.

Hon. ISAAC S. STRUBLE,
House of Representatives, Washington, D. C.

But, sir, any one who is doubtful as to there still being cattle in Oklahoma has only to turn to the papers published in Southern Kansas, and he will find therein open statements to that effect by the cattlemen themselves in their advertisements.

Why, sir, it seems an unnecessary thing to do in order to convince this intelligent body of men that there are cattle there to offer these affidavits which I have read, when the substance of those affidavits is a matter of general notoriety throughout the Southwest, and the owners of those ranges advertise them in every weekly paper.

With the permission of the House I will quote from the advertising columns of only one of the many papers in which these gentlemen advertise their ranges. I hold in my hand a recent number of the Caldwell Journal, published at Caldwell, Kans. I find the following companies advertise ranches in Oklahoma and illustrate their private brands: McClellan Cattle Company, range on Black Bear and Stillwater Creeks, Oklahoma; Hewins & Titus, range on Skeleton, Oklahoma; Wyeth Cattle Company, fenced range on Bed Rock and Black Bear Creeks, Cherokee outlet, open range, on Cimarron and Cottonwood Rivers, Oklahoma; G. W. and C. T. Gorton, range 40 miles southeast of Fort Reno, Oklahoma; W. B. Roberts & Son (Stand. Oil, brand O. I. L.), range south of Cimarron, on Cottonwood and Campbell Creeks, Oklahoma.

Perhaps Mr. Cleveland does not subscribe for the Caldwell Journal; but he is not ignorant of the facts, as I shall show further on.

Besides these ranges in Oklahoma advertised, I find two in the Cheyenne and Arapahoe country advertised—R. H. Campbell's and the Cheyenne and Arapahoe Cattle Company. Yet we are asked to believe that the President's proclamation of July 23, 1885, swept all the cattle from that country, too.

Thus we see that all is now quiet in Oklahoma and the Cherokee outlet. The fences and buildings in use by the one hundred different cattle syndicates occupying the Cherokee outlet remain intact, and the "cattle upon a thousand hills" feed and drink at their pleasure, and at a cost of 28 cents per head are rapidly maturing for the benefit of the millions of poor consumers who pay just as much per pound for beef raised upon these prairies as for that produced on the farms of Iowa. In Oklahoma the delicate and sensitive cowboys roam at pleasure over the land which for twenty years has seemed to belong to no person or government. The poor people who for years have hoped to supplant both the cattle and cowboys, after waiting with suspense for long months for the fulfillment of the promises of the new reform administration, have been forced to scatter and surrender long and fondly cherished hopes.

The proclamation of March 13, and the personal pledges given by Secretary Lamar to Messrs. Weaver, Clarke, and Couch that the cattle should be removed, the commission appointed to negotiate with the Indians, and an early settlement of the difficulty accomplished, filled the home-seekers and the friends of civilization throughout the country with hope.

Captain Couch, relying upon the false assurances of the administration, was able, by his wise and moderate counsels, to prevent his impatient followers from entering the Territory, and from that day to this Captain Couch has led no force into that Territory, nor has there been any organized entrance of the country by any of his followers.

FURTHER ASSURANCE FROM LAMAR.

Months rolled away. In June Captain Couch wrote to Secretary Lamar that the cattle in Oklahoma were fat and being daily shipped, and inquiring when they were to be removed and the commission appointed. In reply, Mr. Lamar assured Captain Couch in the most solemn manner that his promises in regard to both the cattle and the commission would be fulfilled at an early day. In the fall Captain Couch, at the advice of his attorney, visited Oklahoma for the first time during the Democratic administration for the purpose of satisfying himself in

regard to the number of cattle there. He started out alone in a buggy, and by the time he reached Oklahoma was attended by about a dozen teams of unarmed farmers. Yet Mr. Lamar has seen fit to term this an "armed invasion," and to attempt thus to cast discredit upon a worthy man and a worthy cause.

The results of Captain Couch's visit to Oklahoma are best told in his own letter to Secretary Lamar, dated Winfield, Kans., November 21, 1885:

WINFIELD, KANS., *November* 21, 1885.

SIR: I left Caldwell on my trip through the Oklahoma country on the 22d of October. I reached the Oklahoma lands on the 25th. I overtook on the road about fourteen teams *en route* for the Oklahoma country. I reached the North Canadian, about the central portion of the Oklahoma country, on the 28th, and pitched camp at that point, and proceeded on horseback over the country to investigate the reports made of settlers and cattlemen occupying the country. In my investigations I found that about three hundred persons were in the country, apparently for the purpose of settling, but no improvements of any importance had been made. There appeared to be no organization of any kind of these persons; they had come from different parts of the country, independently, and located on the different streams, mostly living in tents. I found but very few of the members of our colony—perhaps not over ten per cent. of the persons there were members. I found, also, that very nearly all of the cattlemen who have occupied that country for years past are still in occupancy, and that none have been removed since the President's proclamation of March 13. They have not only been permitted to remain during the summer unmolested, but have made preparations for wintering, putting up hundreds of tons of hay, and make no hesitancy in saying that they were assured by the authorities of Washington that they would not be molested.

In addition to these who have been there for years, other cattle-men from the Cheyenne, Arapaho, and other reservations, and from Texas, have also located here with thousands of cattle. I found also that a military timber reservation had been established at Council Grove, 25 miles east of Fort Reno, and that a detachment of troops were then placed there to guard the same.

I was informed by several settlers located near this reservation that the officer in command had given encouragement to the settlers in the statement that in his opinion the country would soon be thrown open to settlement, and had even gone so far as to select a piece of land for his brother's location. It appeared to be the general opinion with the settlers, cattle-men, Army officers, and soldiers that no one would be ejected by force.

At Mount Grove, the point where I had pitched camp, about forty persons, men, women, and children, had congregrated up to the time of November 1, but no improvement had been made at this place of any character whatever, at which time Lieutenant James appeared with a detachment of troops and asked for an interview with myself. He stated he had been sent with orders to inquire who we were and what we were doing in the country. I asked to see his orders, which he refused. He asked each person their names and what they were doing, and to all except those there for the purpose of engaging in the cattle business orders were given to immediately leave the country. I asked him if persons engaged in the stock business were recognized as legal occupants, and he answered that it appeared they were, as his instructions were to molest no one engaged in that business, but to remove all others, except Government employés.

I made objection to this manner of proceeding and told him that it was unjust discrimination, and not in accordance with the assurances made to me by the Interior Department last spring; that I had been assured by the Secretary of the Interior that the richest cattle-man or corporation would receive no more favor from this administration than the humblest settler, and I was surprised and indignant to find this state of affairs, and stated that under the circumstances I should refuse to obey the order. He stated that if any hesitancy or resistance was made his instructions were to arrest the parties and take them to Fort Reno immediately, and ordered me under arrest at once. Several words passed between us, he insisting that he should place me under arrest, and I that I would not submit to it. Finally I suggested to him, to avoid difficulty, that I would amend my answer; that I would state that my object there was to locate a stock ranch, which he accepted and recorded as such, and withdrew the orders of removal and withdrew his men.

Other persons present made the same answer, and all orders of removal were withdrawn. His report, however, was sent to Fort Reno, on receipt of which Major Sumner with three companies of troops made a tour down the North Canadian, arresting all persons except those actually engaged in the cattle business. In the mean time eleven head of horses and mules had been stolen from the different settlers' camps in that vicinity, and the next day after Lieutenant James's appearance at our camp, I went with other persons who had lost stock in search of them, following them for several days. When I returned I found that all persons at the camp and in that vicinity, except the cattle-men, had been arrested; and I returned to Kansas by the way of Arkansas City, reaching that point on the 16th of November. Since that time the troops have escorted and turned loose at Caldwell sixty or eighty persons, a small proportion of whom were members of our colony.

I desire to say further that on my trip to and from Oklahoma, while I traveled through the Cherokee outlet, I found that the cattle-men holding leases declared to be invalid by the Attorney-General were still in possession unmolested, and in many cases quite valuable improvements have been made on said land since the opinion of Mr. Garland was rendered. I found that thousands of tons of hay had been put up for wintering their cattle, and they claim to have the assurances from the authorities at Washington that they will not be removed. On account of this state of affairs the people throughout the whole country are becoming impatient and are fast losing faith in the administration.

In my opinion the only way to peaceably settle this question is to either throw the whole country open to settlement at an early day or to remove all cattlemen as well as settlers from the country. The people will not quietly sit down and allow one class of citizens to enjoy the advantages of that country while another class is prohibited.

Yours respectfully,

W. L. COUCH.

The Hon. SECRETARY OF THE INTERIOR,
Washington, D. C.

The substance of this letter was given out by the Secretary to the Associated Press, on December 9, 1885, coupled with a statement from him that there were only five thousand head of cattle in Oklahoma. Yet on the next day, in response to a telegraphic summons from W. B. Grimes, a prominent cattle-man of Kansas City, Mo., Senators VEST, COCKRELL, and others waited upon Secretary Lamar and represented to him that it would be inhuman to drive the cattle out of Oklahoma; that the cattle were pressed for range on account of the great numbers which had come in from the Cheyenne and Arapahoe reservation. This interview was also given out to the press by the Secretary. So that the Secretary can not claim ignorance in regard to the presence of cattle there throughout the summer, fall, and winter, during which the poor people who knew that Oklahoma was public domain and had staked their all upon false promises of a Democratic administration were waiting for the great teacher to keep his word.

No attempt has ever been made to enforce the President's proclamation, except in October of the same year (1885), when the military authority at Fort Reno requested one Anderson, with his vast herd of about two hundred head, to vacate the country, and he kindly assented, driving his stock to Kansas.

Mr. Lamar did not move in June, 1885, because the cattle were spring poor; he did not move in December because Oklahoma had been so full of cattle during the summer that they had not done well. This past spring I suppose the same reason was assigned for leaving the cowboy to riot on the people's land. The country overflows with cattle, the pledges of the administration are unredeemed, while the people are demanding relief.

In the meantime this illustrious exponent of political morality sets himself up as a teacher of the American people and the American Congress; he proposes to teach them a lesson, a valuable lesson—that "the way of the transgressor is hard;" and he proposes to inculcate this valuable piece of instruction by nullifying the acts of Congress. But this is not the first time in which the Democratic chivalry of the South has attempted to nullify the voice of the people, from the days of Calhoun down to the last treasonable whine of that unrepentant old arch-traitor, Jeff. Davis. But, Mr. Chairman, although they may nullify, they can not stifle that voice, and it will grow louder and louder, until, ere many moons shall come and go, it will be heard throughout the land in such a deep, determined murmur of disapprobation as shall overwhelm this illustrious political pedagogue and his followers, and usher into power once more the grand old party of the Union and the flag.

Mr. Chairman, I thank the gentlemen of the committee for the very kind attention which they have given me, and now ask consent to append to my remarks in the RECORD arguments which I have prepared in regard to Original Indian Tenure and the Abrogation of Treaties and some statistics with reference to the consideration of our treaties with various Indian tribes.

OPINIONS OF OUR STATESMEN.

The Indians must abandon tribal relations; they must give up their superstitions; they must forsake their savage habits and learn the arts of civilization.—*Hon. J. D. C. Atkins.*

When the Indians become a part of the great brotherhood of American citizens, the last chapter in the solution of the Indian problem will be written.—*Hon. J. D. C. Atkins.*

The Indian reservations should be reduced in size commensurate with the wants of their occupants.—*Hon. H. M. Teller.*

Civilization will come slowly, if it comes at all, to those who wander about without fixed homes, however well the Government provides for their wants.—*Hon. H. M. Teller.*

The Indian does not need to have so much guardianship as many people would have us believe.—*General George Crook.*

The solution of the Indian problem is citizenship, and we believe that the time has come to declare by an act of Congress that every Indian born within the territorial limits of the United States is a citizen of the United States and subject to the jurisdiction thereof.—*Board of Indian Commissioners.*

We could not fit the negro for freedom till we made him free. We shall never fit the Indian for citizenship till we make him a citizen.—*Board of Indian Commissioners.*

The Indian can no longer hide himself in the fastness of the mountains or in the solitude of the wilderness.—*Hon. H. M. Teller.*

Contact has come between the settler and the Indian in all parts of the country.—*Hon. H. M. Teller.*

Civilization and savagery can not dwell together; the Indian can not maintain himself in a savage or semi-civilized state in competition with his white neighbor.—*Hon. H. M. Teller.*

He must adopt the "white man's ways" or be swept away by the vices of savage life, intensified by contact with civilization.—*Hon. H. M. Teller.*

Why should the Government support the able-bodied Indian who refuses to work any more than it should the white man who refuses to exert himself for his support?—*Hon. H. M. Teller.*

Let the fat steer of the non-resident, non-taxable cattle-baron no longer roam over the people's heritage.—*Hon. James B. Weaver.*

There is no branch of the public service where the opportunities are so great for peculation and embezzlement as in the Indian service, none where detection is so difficult.—*Hons. W. S. Holman, S. W. Peel, and W. H. Hatch.*

The Indians can no longer exist in this country in a savage or semi-civilized state, nor can they longer recede before the advancing march of civilization.—*Hon. L. Q. C. Lamar.*

The wild herds and flocks that so long furnished the race clothing and food are gone, and they must in some degree accept the methods and conditions of civilization or disappear.—*Hons. W. S. Holman, S. W. Peel, and W. H. Hatch.*

The resistless energy and enterprise of the American people have spanned all the great mountains and united the Atlantic with the Pacific by bands of iron and steel. The same energy and enterprise will not forever permit this vast area of fertile country to be turned over to monopolists and worthless savages.—*Hon. William D. Hill.*

We are upholding these rotten governments there under the pretense of civilizing the Indians. We justify our conduct by clinging to treaties that have served their purpose, and were never intended as anything but temporary expedients. We expected the time would come when the logic of events would enforce a different condition for them. We knew by past history that in the march of civilization these Indian governments must give way. These treaties with the Indian tribes were but expedients for their civilization. They are simply instrumentalities. They have served their purpose so far as the five tribes are concerned. The power is with Congress, and its duty in the interest of good morals, good government, their civilization and development, is to destroy the present systems of government in that country and give them a government that will afford protection to life and property. By wise legislation bring them

in contact with the whites, not as now, with fugitives from justice from other States and the bad and lawless elements congregated there, but with the sturdy, honest farmer and mechanic, who works and is contented with work and a quiet and peaceful home and family. When this is done, their real civilization will begin.—*Hon. John H. Rogers.*

The proper policy to pursue, not only in the Indian Territory but generally, is to cut up the reservation system at the roots; abolish the tribal relations; allot to each Indian adult a tract of land in severalty; let it be his, and let it descend to his children; compel him to settle upon it; make it inalienable for a generation, or longer if necessary; sell the remainder of the lands in the different reservations to actual settlers in not exceeding 160-acre tracts; let the proceeds of such sales constitute a trust fund for the Indians, &c.—*Hons. J. G. Cannon and Thomas Ryan.*

Large reservations foster the Indian in barbarism and offer an inviting field to the cattle-king. Break up the reservation; make the Indian a citizen; give him a farm; surround him with the best style of American civilization.—*Hon. James B. Weaver.*

The lands reserved for the accommodation of the Indians are undoubtedly much larger in extent than are needed for their wants and accommodation.—*Hon. L. Q. C. Lamar.*

Those who have most carefully studied the welfare of the Indians believe that it will be best advanced by the sale of his unneeded and unoccupied lands, and by bringing him into healthful contact with a good class of white settlers.—*Indian Rights Association.*

We can not stop the legitimate advance of emigration and civilization if we would, and, we add most emphatically, we would not if we could.—*Indian Rights Association.*

To-day the march of progress halts at the boundaries of the Indian reservation, but we can no more stop its resistless force than we can stop Niagara.—*Hon. Charles H. Allen.*

We shall have to waive certain rights guaranteed to the Indian, but which the march of events has made it impossible for us to execute.—*Hon. Charles H. Allen.*

What we need to-day is to break up these reservations and to bring the Indians in contact with the white men, that they may learn and know the white man's ways.—*Hon. Charles H. Allen.*

The policy of tending the Indian on a pillow and feeding him with a spoon will no longer serve; only by putting him on his feet and making him walk will he ever be able to stand up a man in the image of his Maker.—*Hon. Charles H. Allen.*

No more "free-soup" charity for the Indians.—*Hon. Charles H. Allen.*

Let the Indians learn that, ever since the Almighty issued His command, "In the sweat of thy face shalt thou eat bread all the days of thy life," obedience to that command has been the first step to be taken by any individual or any community in its march toward civilization.—*Hon. J. G. Cannon.*

By the present system of supporting Indians without labor you make paupers of them and their children.—*Hon. J. G. Cannon.*

We should take care to see that the Indians are protected from their own ignorance upon the one hand and the greed of dishonest or selfish individual white men on the other, who would keep them in their present state upon reservations that they may prey and fatten on them.—*Hon. J. G. Cannon.*

I would let the white man who obeys the laws take his implements of husbandry, his Bible, his courts, and his school-houses, and march in and settle among the Indians. I would not have the Indians off in a little knot at one side—a knot of concentrated barbarism. Oh, no. I would intersettle them with this sober, Christian, magnificent yeomanry of ours that has made this country, and that now, amid the storm and the tempest and the mutterings, preserves the country and will continue to do so.—*Hon. J. G. Cannon.*

The Indian on the reservation, without help, starves or murders. We must continue to feed him until we break up his reservation.—*Hon. J. G. Cannon.*

The very size and immensity of those Indian reservations tend to keep up the roaming and nomadic spirit, and militate against a settled and industrious life.—*Hon. Knute Nelson.*

Tribal life, tribal thoughts, tribal notions and aspirations should be forever emasculated and rooted out.—*Hon. Knute Nelson.*

Such a land system as the Indian reservation system would be demoralizing and degrading to even our own race, and would lead to mental, moral, and social degradation.—*Hon. Knute Nelson.*

The furnishing of rations to the Indians under the annuity system is an unmitigated curse.—*Hon. B. M. Cutcheon.*

I believe the preservation of reservations where, in the deep wilderness and vastness, hundreds of miles from civilization, these Indians can hide themselves beyond the reach and touch of the white man, is a hopeless system for the Indians.

These great reservations should be broken up, so that the touch of civilization may come upon them from every side. I would send the railroad with its pulsating life from border to border, that civilization might run along the iron way, bringing with it the newspaper, the school, the church, and the college, in their due time, until the Indian should feel he was existing in the touch of civilization, the touch of the white man, the touch of the white schools, the touch of all that goes to make up an English-speaking community.—*Hon. B. M. Cutcheon.*

Every one understands these leases (of the Cherokee Outlet) were without authority of law, and the Secretary of Interior perhaps did not possess the power to confirm them. The probabilities are that the Secretary did not possess the power.—*Hon. W. S. Holman.*

I fully agree that in nine cases out of ten they (the leases) were obtained by fraud, and I have long since declared both privately and publicly they are all void.—*Hon. S. W. Peel.*

Your great object should be to hold your land separate among yourselves as your white neighbors. Without this you will find you will have to emigrate or become extinct as a people.—*John C. Calhoun, in 1819, to the Cherokee delegation.*

We are glad that earnest attention is at last turned to the Indian Territory. Ten years ago we recommended that a government and United States courts be established over the Territory. Two years ago we called attention to the growing evil of leasing large tracts of grazing land, and to the danger that in a short time the whole Territory, except the small part actually occupied by Indians, will be in the possession of great monopolies. We hope that the investigation now going on and the propositions now before Congress will lead to some good result. If negotiations are conducted in a fair and wise and kindly spirit, we believe that an agreement may be made for the organization of a government extending over the whole Territory in place of the several national councils now maintained, each too weak to enforce its laws, and having no common bond of union. This would lead ultimately to the admission of the Territory into the Union as a State. Its unoccupied lands would be sold to hardy, enterprising settlers, who would develop the resources of the country and give it prosperity. It is evident that something must be done, for the Indian Territory can not always remain in seclusion. The annual trouble in Oklahoma has already grown to serious magnitude, and is attracting the attention of the whole country to the necessity of prompt and wise measures to settle the questions in dispute.

We recommend then—

1. The organization of a government in the Indian Territory.
2. The declaration by Congress that Indians are citizens of the United States.
3. The prompt passage of the general allotment bill and the Sioux reservation bill.
4. A large increase of the facilities for education—especially industrial education.

CLINTON B. FISK, *Chairman.*

ALBERT K. SMILEY.
WILLIAM McMICHAEL.
JOHN K. BOIES.
WILLIAM T. JOHNSON.
ORANGE JUDD.
MERRILL E. GATES.
JOHN CHARLTON.
E. WHITTLESEY, *Secretary.*

The Hon. SECRETARY OF THE INTERIOR.

Steps should be taken at once to change the present condition of affairs in the unoccupied portion of the Indian Territory. It can be done without the violation of treaties or without subjecting the Government to the charge of bad faith. The power that made the treaties may in like manner abrogate or modify them. It is not proposed to despoil the Indians nor to compel them to accept less than the full value of whatever they surrender.—*Hon. H. M. Teller.*

What he (the Indian) does need is protection under the law; the privilege of suing in the courts, which privilege must be founded upon the franchise to be of the slightest value.—*Board of Indian commissioners.*

Unless some system can be devised gradually to extend over them our laws and authority it is feared that all efforts to civilize them, whatever flattering appearances they may for a time exhibit, must ultimately fail. Tribe after tribe will sink, with the progress of our settlements and the pressure of our population, into wretchedness and oblivion. Such has been their past history, and such, without this change of political relation, it must probably continue to be. Preparatory to so radical a change in our relation toward them, the system of education which has been adopted ought to be put into extensive and active operation. It ought to be followed with a plain and simple system of laws and government, compression of their settlements, and a division of landed property.—*John C. Calhoun, in 1822.*

INDIAN TITLE IN GENERAL.

The immunity which that monumental and extravagant anomaly of American statesmanship, "our Indian policy," has hitherto enjoyed has arisen from a mistaken idea of the original rights of the Indian upon the American continent. This idea, entertained by many honest philanthropists like the fair author of a Century of Dishonor, has been fostered by parties interested in perpetuating that policy for their own selfish ends. Certain self-appointed guardians of the rights of the Indians never tire of referring to the "original ownership of the soil" granted by God Almighty to the noble red man, and of citing the numberless instances when, by misrepresentation, bogus treaties, and trifling consideration, they have been induced to give up the "home of their fathers" and to steadily retreat before the advancing tide of civilization.

Let us examine the subject of original Indian tenure and of the paltry considerations for which we have wrested from them their paternal hunting grounds, in order that we may ascertain the degree of our indebtedness to this much-abused remnant of the North American aborigines.

It is a fundamental principle of the law of nations that the aboriginal inhabitants of the soil possess only a right of occupancy; and the measure of title acquired by that occupancy is determined by the extent of their wants and of their capacity to use the soil to supply those wants. (1 Grotius, 2, c. 11; see also Barbeyr; Puffendorf; 2d Bl. Com., 2; Locke on Government.)

This is the theory which has obtained in the subjugation of new countries from a very early day, and the greater advancement in civilization the leading powers of earth have made the more firmly fixed has this doctrine become and the more clearly has it appeared to be in accord with the highest interest of mankind and the progress of the human race. Upon the authority of this principle the New World has been subjugated, peopled, and civilized. Upon it, as a foundation of right and title rests the present greatness and the possibilities of the empires of the Western Hemisphere. England recognized this principle and claimed it as a right when, a few years ago, she overthrew the savage King of Ashantee and reclaimed the Guinea coast from the dark pall of cannibal barbarism, and the world said, "It is just."

The American Indians could have acquired no proprietary rights to the illimitable tracts over which they roamed. They had no natural right to more soil than that for which they had a natural use. As justly might the puny fisherman claim proprietorship over the trackless ocean. The original use of the soil by the Indians was the use of the wild beast of the forest; and in no rightful sense could it interfere with appropriation by those who earned their bread by the sweat of their brow. Their tenure was not like ours. Civilization affords no example of it. They did not inhabit the country; they overran it. Theirs was not a legal possession in the true sense of the term. Vattel, in his Law of Nations, Book I, section 81, says:

The whole earth is destined to feed its inhabitants; but this it would be incapable of doing if it were uncultivated. Every nation is then obliged by the law of nature to cultivate the land that has fallen to its share.

Those nations who inhabit fertile countries, but disdain to cultivate their lands, are wanting to themselves, are injurious to all their neighbors, and deserve to be extirpated as savages and pernicious beasts. There are others who, to avoid labor, choose to live only by hunting and their flocks. This might doubtless be allowed in the first ages of the world, when the earth, without cultivation, produced more than was sufficient to feed its small number of inhabitants. But at present, when the human race is so greatly multiplied, it could not subsist if all nations were disposed to live in that manner.

In section 209, same book, the author speaks as follows:

There is another celebrated question to which the discovery of the New World has principally given rise. It is asked whether a nation may lawfully take possession of some part of a vast country in which there are none but erratic nations whose scanty population is incapable of occupying the whole?

We have already observed (section 81) in establishing the obligation to cultivate the earth that those nations can not exclusively appropriate to themselves more land than they have use for, or more than they are able to settle and cultivate. Their unsettled habitation in those immense regions can not be accounted a true and legal possession; and the people of Europe, too closely pent up at home, finding land of which the savage, stood in no particular need and of which they made no actual and constant use, were lawfully entitled to take possession of it and settle it with colonies.

We do not, therefore, deviate from the views of nature in confining the Indians within narrower limits. However, we can not help praising the moderation of the English Puritans who first settled in New England, who, notwithstanding their being furnished with a charter from their sovereign, purchased of the Indians the lands of which they intended to take possession. This laudable example was followed by William Penn.

Furthermore in book 2, section 97, the author holds this view:

The savages of North America had no right to appropriate that vast continent to themselves; and, since they were unable to inhabit the whole of these regions, other nations might without injustice settle in some parts of them, provided they left the natives a sufficiency of land.

See also Smith's Wealth of Nations, book 6, chapter 1, and Montesquieu, book 18, chapter 12.

The opinion of Chief-Justice Marshall in Johnson *vs.* McIntosh (8 Wheat., 543), decided in 1823, is appropriate right here. After reviewing the history of the conquest and settlement of America he says:

All the nations of Europe who have acquired territory on this continent have asserted in themselves and recognized in others the exclusive right of the conqueror to appropriate the land occupied by the Indians.

In Fletcher *vs.* Peck (6 Cranch, 87 and 142), decided in 1810, the same distinguished jurist holds this opinion:

The nature of the Indian title, until it be ligitimately extinguished, is not such as to be absolutely repugnant to a seizure in full on the part of the State.

In United States *vs.* Cook (19 Wall., 591), the court, referring to Johnson *vs.* McIntosh, holds that "the fee is in the United States, subject only to the right of occupancy by the Indians;" and "the possession, when abandoned, attaches to the fee without further grant." (See also Beecher *vs.* Wetherby, 62 United States, 525.)

Attorney-General Cushing (8 Op., 262) uses this language:

It is a fundamental doctrine of our public law that the Indians do not hold a fee in the lands of their original occupation, but only a usufruct, the fee being in the United States. (See Mitchell *vs.* U. S., 9 Peters, 711; Latimer's Patent, 14 Peters, 4; U. S. *vs.* Fernandez, 10 Peters, 303.)

There was a time when the true relation of the Indians to the United States was not so clearly seen as it is now. We had been accustomed to make treaties with them, as if they were independent of us; that was an error.

We dealt with their petty tribes as nominal nations; that led to strange misconceptions. We had spoken of their lands, as if a mere handful of savages who happened to be within the geographical limits of a region of country large enough for a civilized umpire could be deemed its proprietors in virtue of any rule of natural right or of positive law.

We had respected their assumed rights; that is, had left them to their savage quasi-independence, instead of, by force, compelling them to enter into some appropriate place in the social organization; and thus they have perished of too much liberty.

Words of mine are not needed to add force to the language of this eminent lawyer, who has so clearly and graphically presented the absurdity and injustice of our position. The fact that our Government, in order to placate the Indian tribes and prevent needless bloodshed, dealt with them as though they really possessed a title to the soil did not create that title in them nor strengthen this right of possession. The Indian, in his ignorance and savage independence, imagined that he was absolute lord over all the country he could traverse in a week's journey; and for politic reasons alone, to prevent a sanguinary conflict between civilization and barbarism, it was well to allow him this conceit; but can it be argued, in the light of all the decisions and opinions I have quoted, that the empty forms of a so-called treaty strengthened the title of the party purchasing from him? Certainly it can not.

If, in more recent years, we have granted to certain tribes, in fee-simple, an extravagant amount of land, out of all proportion to their past, present, or possible needs, it has been a free gift to them, without the consideration of their relinquishment of any ownership of other lands. Indeed, I claim that in most cases such gifts have been without any consideration at all. The alleged consideration for which certain tribes have been granted vast areas of land (of an adaptability to their mode of life equal to the land which they had relinquished, and increasing in quantity with each succeeding removal) and large subsidies in money and merchandise was, that they relinquished to us what?—their right of possession which, except so far as it related to the land absolutely needed by them, Congress had the moral and legal right to take from them. In other words, Congress has, and always has had, perfect right to deprive all Indian tribes, except those holding a fee-title to their lands, if the use of more territory than needful to them in a state of civilization.

I even go further, and agree with the honorable Secretary of Interior Teller, who says (see Senate Executive Document No. 54, Forty-eighth Congress, second session):

It is believed that there will be found at all times in the United States a wholesome public sentiment that will demand of the Government that its contracts heretofore made with the Indians be respected in all cases where they do not conflict with the interests of the Indians and are not unjust to the people of the United States; but contracts or treaties impossible of execution, unjust and unfair to both whites and Indians, ought to be segregated or modified by legislative action. It is not beneficial to the Indians to have millions of acres of valuable land remain unoccupied around them.

The power that made the treaties may in like manner abrogate or modify them.

INDIAN TREATIES—CONSIDERATIONS FROM UNITED STATES TO INDIANS.

Mr. Chairman, inasmuch as it is frequently asserted that the consideration for which we have obtained from time to time the lands of the Indians was inadequate and often trifling, mere parchment promises made to be broken, I have thought it desirable to carefully examine our past Indian treaties with a view to ascertaining just how inadequate and trifling those considerations were. I have already mentioned some of the perpetual and temporary annuities which we have paid or engaged to pay; but I wish to call attention to the merchandise and various cash gifts which have entered into the consideration of these treaties. In preparing the following list I have had time to consult our treaties with only three tribes, the Creeks, Seminoles, and Cherokees. The list is incomplete, not mentioning numerous services stipulated for, and which were equivalent to a cash consideration, such as the payment by the United States of the expenses of all removals of Indians and all surveys of lands sold by or to the Indians.

Creeks:

August 7, 1790.—One thousand five hundred dollars perpetual annuity.

June 29, 1796.—Six thousand dollars spot cash; 2 blacksmiths, strikers and tools.

June 16, 1802.—Three thousand dollars perpetual annuities; $1,000 for ten years (per annum); $10,000 of merchandise; $10,000 due by Creeks to Government, released; $5,000 cash; 2 sets blacksmith tools and man to work them for three years.

November 14, 1805.—Twelve thousand dollars cash or merchandise, at option of Creeks, annuity for eight years; $11,000 annually for ten years; 2 blacksmiths and 2 strikers for eight years (in lieu of former agreements in regard to blacksmiths).

August 9, 1814.—Temporary gratuities of corn.

January 22, 1818.—Twenty thousand dollars spot cash; $10,000 annually for ten years; 2 blacksmiths and strikers for three years, in lieu of former stipulations to supply these sons of Vulcan.

January 8, 1821.—Ten thousand dollars spot cash; $40,000 upon ratification; $5,000 annually for two years; $16,000 annually for five years after preceding two; $10,000 annually for six years after preceding five; claims of citizens of Georgia against Creeks, not exceeding $250,000.

February 12, 1821.—Lands west of Mississippi River, acre for acre, for lands in Georgia relinquished by Creeks; $200,000 at ratification; $100,000 at removal; $25,000 within one year after settlement west of Mississippi River; $25,000 at end of two years thereafter; $5,000 thereafter for ten years.

January 24, 1826.—Repeals above treaty; country in the promised land proportionate to their numbers;" $217,600 at ratification; $100,000 upon removal.

November 15, 1827.—Twenty-seven thousand four hundred and ninety-one dollars on ratification; $15,000 in cash and merchandise on demand.

March 24, 1832.—Twelve thousand dollars annually for five years; $10,000 thereafter for fifteen years; $100,000 upon ratification; $16,000 expenses of Indian "junketing excursion" to examine lands west of Mississippi River; $20,000 claims against Creeks assumed by the United States; $400 in life annuities; $3,000 cash; $1,400 to those who emigrated without cost to United States; rifles, molds, wiper, and ammunition to each emigrating warrior; blanket to each family; $3,000 annually for twenty years for education; two blacksmiths to be supported by United States for twenty years; 2 tons iron and 200 cwt. steel annually for twenty years.

June 14, 1866.—Nine hundred and seventy-eight thousand one hundred and sixty-eight dollars.

Seminoles:

May 9, 1832.—Fifteen thousand four hundred dollars cash in hand; $3,000 annually for fifteen years; blanket and frock apiece; support of blacksmith for ten years; $7,000 claims against Indians for slaves and other property stolen by them, assumed by the United States; United States agrees to buy all their spring-poor cattle; expenses of removal to country west of Mississippi River; subsistence for twelve months after removal; $90,000 cash in hand; $7,200 annually for ten years; $12,500 annually forever; $12,500 annually forever as soon as Seminoles in Florida join their Western brethren; expenses of all Seminoles who wish to emigrate from Florida; subsistence during removal and for one year thereafter; to each warrior, one rifle, two blankets, powder and lead, hunting shirt, pair of shoes, 1½ yards strouding, and 10 pounds good tobacco; to each woman, youth, and child, one blanket, pair of shoes, "and other necessary articles of comfortable clothing;" $20,000 in improvements after removal; $3,000 in agricultural implements.

August 16, 1866.—Two hundred and twenty-five thousand three hundred and sixty-two dollars cash; 200,000 acres.

Cherokees:

July 2, 1791.—"Certain valuable goods;" $1,000 perpetual annuity; implements of husbandry; support of four interpreters.

February 17, 1792.—One thousand five hundred dollars perpetual annuity instead of above $1,000.

June 26, 1794.—Five thousand dollars perpetual annuity in lieu of above.

October 2, 1798.—Five thousand dollars in merchandise: $1,000 in merchandise as perpetual annuity.

October 25, 1805.—Three thousand dollars valuable merchandise; $11,000 within ninety days; $3,000 perpetual annuity.

October 27, 1805.—One thousand six hundred dollars within ninety days.

January 7, 1806.—Two thousand dollars upon ratification; $2,000 annually for four years; grist mill; machine for cleaning cotton; $100 life annuity.

September 11, 1807.—Two thousand dollars.

March 22, 1816.—Five thousand dollars within ninety days; $25,500 indemnity for losses sustained by march of United States Army through Cherokee country.

September 14, 1816.—Five thousand dollars within sixty days; $6,000 annually for ten years.

July 8, 1817.—Lands on Arkansas River, acre for acre, for lands ceded east of Mississippi River; to all warriors who may remove to west of the Mississippi River, one rifle, ammunition, blanket, brass kettle, and beaver-trap apiece; means of transportation and subsistence during same; payment for improvements on lands; reservation out of lands ceded by the Cherokees of 640 acres for each head of a family.

February 27, 1819.—Reservation as above; payment for improvements.

October 24, 1804.—Five thousand dollars in "useful goods;" $1,000 perpetual annuity.

May 6, 1828.—Grist and saw mill "out West;" $50,000 upon removal; $2,000 per year for three years; $8,760, "spoliation claims;" $1,200, gift to Chief Tom Graves; $500, gift to George Guess; $2,000 annually for ten years; $1,000 toward

printing establishment; $3,500, debt of Cherokees to United States factory; surveyors to be furnished and found to survey their 7,000,000 acres west of the Mississippi; $500 to Jim Rogers; $5,000,000 for lands east of the Mississippi.

February 14, 1833.—Four blacksmith shop; one wagon-maker shop; one wheelwright shop and necessary tools and implements furnished for same; 4 tons iron; one thousand pounds steel; four blacksmiths; one wagon-maker; one wheelwright, to be furnished and found, annually during pleasure of President; erection of eight patent railway corn-mills in lieu of mills agreed to be built by treaty of 1828; 4,000,000 acres west of Mississippi and perpetual outlet.

December 29, 1835.—Eight hundred thousand acres; all expenses of removal from the East and subsistence for one year after removal; $600,000 in lieu of expenses of removal and spoliation claims previously stipulated for.

August 17, 1846 (date of proclamation).—One hundred and fifteen thousand dollars bonus; $27,000 claims.

July 10, 1866, (proclaimed).—Three thousand dollars, orphan asylum; $10,000, expense of Cherokee delegation to Washington; future expenses of Cherokee Government, salary of officers, &c.

CAN THE UNITED STATES ABROGATE A "TREATY" MADE WITH ITS INDIAN "WARDS?"

Now, Mr. Chairman, there is one more point which I wish to discuss and I am done. Has this Government the right to abrogate treaties, so called, made with Indian tribes? This right has been questioned by some who oppose such legislation as is contemplated by this bill; and I wish to review, as briefly as possible, the authorities upon this subject.

I have been greatly aided in the preparation of this argument by consulting the speech delivered a few weeks ago in the United States Senate by Hon. J. H. MITCHELL, of Oregon.

The legal right of a government to abrogate a treaty which is distasteful to it, and its moral right to abrogate one which is pernicious to its interests, are pretty well understood; yet it may not be out of place to refer to a few authorities upon this point.

Article VI of the Constitution places public treaties and the laws of Congress upon the same footing, making them together "the law of the land."

Story, in his Commentaries (volume 3, section 1502), says:

The treaty-making power is necessarily and obviously subordinate to the fundamental laws and constitution of the state.

Again, in volume 2, section 1508, he says:

A power given by the Constitution can not be construed to authorize a destruction of other powers given in the same instrument. It must be construed, therefore, in subordination to it and can not supersede or interfere with any other of its fundamental provisions. Each is equally obligatory and of paramount authority within its scope, and no one embraces a right to annihilate any other.

Now, it will not be denied that the articles in the Constitution giving Congress the right to make treaties with foreign powers and to regulate intercourse with the Indians are of equal force and that neither can annul the other. They are parts of the same instrument and stand upon the same footing.

The court, in Taylor *vs.* Morton (2 Curtis, 454), said:

It is impossible to maintain that under our Constitution the President and the Senate exclusively possess the power to modify or repeal a law found in a treaty. If this were true no change in a treaty could be made without the consent of some foreign government. That the Constitution was designed to place our country in this helpless condition is a supposition wholly inadmissible. It is not only inconsistent with the necessities of a nation, but negative by the express words of the Constitution. That gives to Congress in so many words power to declare war, an act which *ipso facto* repeals all treaties inconsistent with a state of war. It can not, therefore, be admitted that the only method of escape from a treaty is by the consent of the other party to it or a declaration of war.

To refuse to execute a treaty for reasons which approve themselves to the conscientious judgment of a nation is a matter of the utmost gravity, but the power to do so is a prerogative of which no nation can be deprived without deeply affecting its independence. That the people of the United States have deprived their Government of this power I do not believe; that it must reside somewhere and be applicable to all cases I am convinced, and I feel do doubt that it belongs to Congress.

Attorney-General Akerman, in 1870 (13 Opinions, 357), referring to Taylor *vs.* Morton, said:

There is nothing in the Constitution which assigns different ranks to treaties and to statutes; both the one and the other, when not inconsistent with the Constitution, seem to stand upon the same level and to be of equal validity; and as in the case of all laws emanating from an equal authority, the earlier in date yields to the later.

Attorney-General Crittenden (5 Opinions, 345), had held similar views:

An act of Congress is as much a supreme law of the land as a treaty. They are placed on the same footing, and no preference or superiority is given to the one or the other. The last expression of the law-giving power must prevail, and just for the same reason and on the same principle that a subsequent act must prevail and have effect, though inconsistent with a prior act, so must an act of Congress have effect though inconsistent with a prior treaty.

In Foster and Elan *vs.* Neilson, 2 Pet., 253, the Supreme Court held this language:

Our Constitution declares a treaty to be a law of the land. It is consequently to be regarded in courts of justice as equivalent to an act of the legislature whenever it operates of itself without the aid of any legislative provision.

Mr. Justice Field, in the case of a Chinese laborer from Hong Kong, decided by him in 1883, said:

The Constitution of the United States, however, places both treaties and laws made in pursuance thereof in the same category, and declares them to be the supreme law of the land. It does not give to either a paramount authority over the other. So far as a treaty operates by its own force without legislation, it is to be regarded by the courts as equivalent to a legislative act, but nothing further. If the subject to which it relates be one upon which Congress can also act, that body may modify its provisions or supersede them entirely.

The court in the Clinton Bridge case (1 Wool., 150) said:

A law declaring lawful a bridge over the Mississippi River which obstructs the navigation of the river is not unconstitutional because of the treaty with France by which its free navigation is secured.

In the case of "The Amiable Isabella" (6 Wheat., 1), Justice Miller, delivering the opinion of the court, said:

Courts possess no power to declare a statute passed by Congress and approved by the President void, because it may violate such obligations.

President Hayes, in his message of March 1, 1879, said:

The authority of Congress to terminate a treaty with a foreign power by expressing the will of the nation no longer to adhere to it is as free from controversy under our Constitution as is the further proposition that the power of making new treaties or modifying existing treaties is not lodged by the Constitution in Congress, but in the President, by and with the advice and consent of the Senate, as shown by the concurrence of two-thirds of that body.

During the Senate discussion upon the Chinese question in 1876 Senator EDMUNDS said:

The Supreme Court has decided unanimously more than once, and I think upon perfectly impregnable grounds, that if a law is in conflict with a treaty that existed when the law was made, the treaty, to the extent that the law does conflict it, is abrogated by the general sovereign power of the nation.

The first exercise by Congress of its right to abrogate a prior treaty was in 1798. On July 7 of that year an act of Congress was passed abrogating our treaties with France. It read as follows:

That the United States are of right freed and exonorated from the stipulations of the treaties and of the consular convention heretofore concluded between the United States and France, and that the same shall not henceforth be regarded as legally obligatory on the Government of the United States or citizens of the United States.

Senator Thurman, in the debate above-mentioned, quoting the act of July 7, 1798, said:

There was a treaty abrogated expressly by act of Congress, and on the question of power it does not in the least militate against this exercise of power by Congress that the preamble to this act sets forth divers causes why the treaties ought to be abrogated, and alleges breaches of the treaty on the part of France; because, whether there was cause or not cause to abrogate that treaty, if the Congress had no power to abrogate it, if the power to abrogate it resided with the treaty-making portion of the Government, then no matter what was the cause, Congress had no right to pass the law. But it was not so regarded then. Congress did pass that law; and we have again and again since, and notably in our treaties with the Indian tribes, modified or even put an end to them, according to our own opinion of what was right and proper; and that we have that power in the opinion of the Supreme Court of the United States has been conclusively shown by the Senator who last spoke on this bill.

Senator EDMUNDS, in the debate of 1876 above referred to, said:

To me it seems perfectly clear that the proposition can not for a moment be sustained, and that it would be ruinous to this country, or to any country, to hold that a treaty can only be put an end to by the negotiation of another; for that would put you completely at the mercy of the party with whom you had negotiated the treaty.

A case still more pertinent to our discussion is the Cherokee Tobacco Case, 1870 (11 Wall., 616). The court held that the act of Congress of July 20, 1868, superseded Article X of the Cherokee treaty of 1866. Article X of the treaty exempts from taxation Cherokee agricultural products. The act of 1868 extended the revenue laws of the United States "over articles produced anywhere within the exterior boundaries of the United States, whether the same shall be in a collection district or not." The court held that the act embraced within the operation of its provisions the Indian Territory.

Justice Swayne, citing Taylor *vs.* Morton and The Clinton Bridge, the two cases to which I referred a few moments ago, said:

In the cases referred to these principles were applied to treaties with foreign nations. Treaties with Indian nations within the jurisdiction of the United States can not be more obligatory. In the case under consideration the act of Congress must prevail as if the treaty were not an element to be considered.

Here we have the opinions of two Attorneys-General, two distinguished constitutional lawyers, President Hayes, and the Supreme Court in Taylor *vs.* Morton, Foster *vs.* Neilson, and the Cherokee Tobacco case, besides the decisions of Justice Field in the ninth circuit, all agreeing upon the equality, under the Constitution, of an act of Congress and a treaty. We find that we have already exercised this right of abrogation in several cases. Three times we have abrogated our treaties with France: once in 1798, before referred to; again in the case involved in the Clinton bridge; and again in 1804. An act of 1804, erecting Louisiana into two Territories, annuls all grants for lands in the ceded territories the title whereof was at the date of the treaty of St. Ildefonso in the Crown of Spain. Not only this, but we are even now contemplating an abrogation of our treaties with China and the Sandwich Islands, and no one questions our right to do so, and but few the justice and wisdom of such a measure.

In view of all these facts, it does not seem to me that this point needs further argument in order to sustain it.

In conclusion, I wish to say most emphatically that the American Indian is the intellectual peer of most, if not all, the various nationalities we have assimilated to our laws, customs, and language. He is fully able to protect himself if the ballot be given and the courts of law not closed against him.

If our aim be to remove the aborigine from a state of servile dependence, we can not begin in a better or more practical way than by making him think well of himself, to force upon him the knowledge that he is a part and parcel of the nation, clothed with all its political privileges, entitled to share in all its benefits. Our present treatment degrades him in his own eyes by making evident the difference between his own condition and that of those about him. To sum up, my panacea for the Indian trouble is to make the Indian self-supporting, a condition which can never, in my opinion, be attained so long as the

privileges which have made labor honorable, respectable, and able to defend itself be withheld from him.—*General George Crook.*

To Oklahoma I would apply the words of Mr. Herbert Welsh, the able and conscientious secretary of the Indian Rights Association of Philadelphia (speaking of Senator DAWES's Sioux bill):

The waves of an importunate civilization that can not long be either staid or stopped at the bidding of any man are beating incessantly upon the border of the great reservation. It is the deep conviction of the Indian Rights Association that sound policy now demands the opening of a lawful channel for the advance of this mighty tide. Hesitation at the present critical time invites catastrophe.

The words of Hon. J. G. CANNON, of Illinois, in his speech a few days since upon the Indian appropriation bill, are deeply significant in this connection:

In the onward march of our race, of our civilization, there is no time or place where he (the Indian) can slowly through the centuries grow out of barbarism, retaining his race identy. If we would not have him perish we must incorporate him into the body-politic, into our race. This can only be done by prompt action, and now is the time to commence. Every year that passes makes the work more difficult; for those white men who believe that equitably they should have homes on these reservations are ever increasing. You may undertake to hold them back month after month, and year after year, but if you hold them back much longer they will, supported by the force of public opinion, which makes and unmakes laws, sweep across the boundary, and t e hand of no Congress and no Executive dare stay them, because no "body" that ever existed is more responsible to public opinion than we, the representatives of the people.

Post-Office Appropriation Bill.

SPEECH

OF

HON. PRESTON B. PLUMB,

OF KANSAS.

IN THE SENATE OF THE UNITED STATES,

Wednesday, April 28, 1886,

On the amendment of the Committee on Appropriations relative to foreign mail service in American steamships to the Post-Office appropriation bill.

Mr. PLUMB said:

Mr. PRESIDENT: I do not desire at this time to say very much upon this amendment, but having charge of the bill and to that extent being the organ of the committee I think it proper to state generally what the view of the committee was in regard to it. This is an amendment somewhat similar in its terms and entirely similar in its intention to the provision which was adopted in the Post-Office appropriation bill of last year, and to which the Postmaster-General did not give effect.

It has been widely assumed that the intention is in the first place to subsidize a steamship line, or more than one steamship line engaged in the foreign carrying trade, and for the purpose of maintaining that subsidy idea it is alleged that this amendment is not germane to to the Post-Office appropriation bill, because it does not design in any material way to expedite or give value to the postal servie of the United States, but that its design is wholly for the accomplishment of a commercial purpose.

For the purpose of the vote which I have already given in committee and for the purpose of the vote which I shall give upon it in the Senate, I do not stand upon a ground other or different from that which I stand upon when I vote to give the Postmaster-General a right to pay whatever price he finds necessary for the inland transportation service of the country, whether that be by rail, by star-route, or by steamboats engaged upon the rivers and the coast waters of the United States.

The people of the United States have been for the last twenty-five years so engaged in the development of the empire which lies west of the Mississippi River that they have seemed to eliminate entirely from their consideration commercial intercourse of any kind or description whatever with any portion of the world which lies outside of the bounds of the Republic. We spend $5,000,000 and upward every year for what is called the star-route service, and the amount has been $7,000,000 in recent years. Nine-tenths of that service in its incipiency is a service which does not yield to the Department a direct return of half its cost. No matter where our people go upon our changing and constantly receding frontier the star-route mail service follows and supplies them. The unbroken prairie of to-day to-morrow has upon it the cabins of a handful of settlers; in some gulch of the Rocky Mountains a new mining camp is established, and promptly the mail service is extended to meet the new wants.

The Postmaster-General, whoever he may be, does not stop to inquire whether the service which he puts on, whether it be weekly, triweekly, daily, or double daily, shall immediately return to the Post-Office Department a sum of money equal to the amount expended, but he says in the first place, "Here is a collection of American people who are entitled to be served by the United States mail. I know that the establishment of this service will in time, not next year perhaps, nor it may be for ten years, but at some time, give back to the Post-Office Department in the shape of increased revenues the expenses which we may now go to beyond the immediate receipts."

These new lines quicken the entire service. The New York people, for the purpose of magnifying their importance with reference to the postal-revenues of the Government, point with a great deal of pride to the fact that the receipts of the service in that State are much greater than the expenses; but there is not a hamlet in the United States which does not contribute to the sum which New York receives. Every new post-office established in Arkansas, in Kansas, in Colorado, or anywhere else in this new region of country, with its corresponding mail-route, stimulates the sending of the mails from New York city, and from all Eastern places, and, in fact, from all portions of the United States.

Looking further in this bill we find an item of $500,000 for the transportation of mails upon the inland waters of the United States. That service is put on in the same way without any calculation whatever as to the ratio between expenses and receipts.

These methods concerning internal transportation of mails has been going on for a generation. During that generation millions of people have sought new homes west of the Mississippi. Occasion has arisen for railroads, for school-houses, for bridges, for agricultural implements, and by means of this occasion there has been work for American laborers in American manufactories. There has been given to all branches of trade and commerce life, permanence, and profit, which without this extension of the settlement of the country it never would have had. The Post-Office Department looking at this thing from the postal standpoint alone has been ministering to all this growth, to all this improvement, and to all this extension of the business of the American people by the establishment of mail service upon the rivers and upon the prairies which for the time being outran the receipts from that service.

This amendment is for the purpose of doing for American residents in foreign countries and for the people who do business upon American soil with foreign countries precisely what is being done every day for the people of the United States with reference to their business with each other upon American soil.

Mr. BECK. I am anxious, and I know the Senator from Kansas is, to have this question fully presented. If he will allow me just a moment, I will say in the line of his present argument that one of the serious objections I have to the amendment is that it looks to crippling and curtailing the postal service rather than advancing it. I am speaking in perfect good faith, not to make any objection, when I say that in all matters relating to the postal service in our great country west of the Mississippi and in the great Territories, where it is carried on at a loss, we are looking simply to the most efficient, the quickest, and the cheapest service. We do not care whether the locomotive was made in London or Berlin, whether the wagon was built in New Jersey or in Paris. Now, we are seeking to pay service for American-built ships that may take twice as long to deliver the mail which we seek to send as other ships on other lines, and we are preventing the Postmaster-General from using the fastest, the best, and the cheapest means of reaching our people at home or abroad. That is the point to which I desire to call the Senator's attention as one of the objections which I shall make to the amendment.

Mr. PLUMB. The Senator from Kentucky seems to say as expressing his own opinion, although he may have been doing it simply for illustration, that he did not care whether the cars and the wagons which carried the American mails of which he has spoken were manufactured by British manufacture or American manufacture.

Mr. BECK. I meant to say that our present law does not prescribe where the conveyance shall be built.

Mr. PLUMB. I was going to say that I do very much care. I am desirous, so far as I can aid in it, that whatever instrumentality the Government of the United States puts in motion for the accomplishment of any of these purposes shall be an American instrumentality.

Take the case which the Senator from Kentucky mentioned. Supposing it to be true that at this present moment of time there is not plying between American and foreign ports named and intended to be covered by this amendment American-built steamers which are as swift and which ply as frequently as British steamers do between the same ports, I think the policy of the Senator from Kentucky would continue that disparity between American and foreign steamers. If I had my way about it I would adopt a plan which would reverse the relations now existing, and which would make the ocean service, by means of American ships, more swift, more frequent, and more fully answering all the purposes of our foreign commerce than the ships of any other country could possibly do.

But I was proceeding to say that this amendment is fashioned, and so far as my support is given to it it can be given and will be given upon the basis of that which we are doing to-day, as we have done in all times heretofore with reference to the inland service of the United States. I believe that if the service between New York and Rio, the Argentine Republic, the River Plata, and all the ports of South America should be quickened it would result in increased revenues to the postal department. I believe that it would be bread cast upon the waters with as much certainty of return as the Department has ever cast it upon the waters in the star-route service.

All modern business is done upon the basis of expedition and convenience. Men will not go around two sides of a triangle to go to Brazil to do business as obviously as they would if they could go across one side of the triangle and thereby accomplish the same purpose. To require our business to go from New York to Rio or to any other of the ports of South America via Liverpool is to interpose a barrier which is practically fatal. The whole sum and substance of accomplishment in a business way for the last thirty years has been to contract time and space, because in doing so you not only contract the cost but because you have adapted yourself to the increasing ambition and determination of the people to bring all their ventures within the smallest possible compass. The merchant in Saint Louis who should be content to get his goods within the limit of time which twenty years or even ten years ago amply suited his purpose, would to-day be left in the race. So whenever we do business with foreign ports and peoples we must do it upon a scale which will be sufficiently quick and frequent to meet modern conditions.

That the Senator from Kentucky will say I have no doubt trenches upon the commercial side of this question. So it does, but while it trenches upon the commercial side it is still carrying out the postal idea, because just as we say when we give the service to a new town in the West, we know that there will follow it merchants, lawyers, doctors, and everything else that comes as the concomitant of settlement, production, and town-building there or elsewhere, making trade and commerce, and that trade and commerce gives revenue to the Postal Department. So if we can multiply by one or two or ten fold the carrying trade, the commercial transactions existing between this country and South America, we will have multiplied not only one but ten fold the revenues of the Postal Department, and thereby will bring back to that Department the same returns upon a like investment which it receives now by reason of the extension of the inland mail service of the country.

I do not see why the Senator from Kentucky above all the Senators on this floor should seem to be so fearful that we shall do something to stimulate the communication between this country and South America and other foreign countries. That Senator supported on this floor as I think, in fact it almost went without opposition, the proposition to give $1,600,000 to establish an exposition at New Orleans for the sole and only purpose of stimulating and building up our trade with South and Central America. Yet when it is proposed to give only one-half of that sum to get a better American steamship service than we get now, whereby our mails and the productions of our fields and shops may be carried to South American markets under conditions which give them a fair chance there, it meets with an opposition which is to me a great surprise.

Is there any good reason why the mails to South and Central America and to other foreign countries with whom we have trade relations which we desire to extend should not be carried in American steamships? Why should not our facilities for this business be as adequate as those of Great Britain and other countries? Why should we cling to our theory of isolation, the theory which cuts us off wholly from communication and from trade with other countries, when with a little effort we may enter into that trade with great chances of success? I do not know that the proposition that this mail shall be carried by American steamships has anything to do with it, but there seems to be a very great complacency over the fact that the bulk of our mails is now carried by foreign steamships; and it seems to me that we have been pursuing a policy of non-action which is going to make the disparity between American steamers and those of foreign build in the ocean carrying service greater than ever, and always to continue.

It is no satisfaction to me to hear, as I do very often from our people returning from abroad, that they never see an American flag flying in a foreign harbor. It is no satisfaction to me to know that our minister to Rio goes to Liverpool in a British vessel and from Liverpool to Rio in another British vessel because there is no adequate regular communication between New York and Rio by means of an American ship. I should be glad to have it otherwise. I should be glad indeed if in the direct line of this appropriation, in the line of increasing the facilities and the revenues of the postal service, we could in addition help to build up an American line of steamers between New York and those ports and between other of our domestic ports and foreign ports.

As I said, we have given ourselves over so wholly to internal affairs, we have rejoiced so much in the acquisition of the great wealth which has come from the development of the West, that we have ceased to include within the objects to be accomplished by the American people any extension whatever either of influence or trade into foreign countries. We have given up supinely the trade of Mexico to Germany and to Great Britain. We have refused to meet half way the republics of South and Central America, who have for many years past subsidized lines of steamers to New York, hoping thereby to get some good-will and some reciprocal action upon the part of their older brother of the North American Republic. We have even refused to meet half way the Pacific colonies of Great Britain in the same line. We are getting to-day nearly a hundred thousand dollars profit for carrying the British closed mails from New York to San Francisco, where they are put upon a line of steamers subsidized by the Australian colonies to run from San Francisco to Melbourne, a subsidy which we have refused to meet by doing anything to keep up the same line. And now Great Britain and Canada combined have subsidized with a great sum, stated as being a million dollars per annum, a line of steamers to ply between Vancouver and the ports of China and Japan. It will only be a short time until the British closed mails, in place of going by American railways across the continent, will go by British railways to meet at Vancouver British steamers, which will carry them to their destination, and the line to San Francisco be a thing of the past, and along with it will disappear American trade with the Australian colonies and the other Pacific islands. The preparations at Vancouver, the urgency which has been manifested in building the Canadian-Pacific railway, the great subsidy already granted to steamships, shows the British determination to not only maintain ascendency in the Pacific Ocean commerce but to take bodily possession of the whole of it.

Millions for trifles, a constant increase of salaries, gifts, and donations everywhere, anything and everything for internal affairs, and nothing, not even wise provision, we do not even do that which we could do without money and without price, for the purpose of extending our influence beyond our borders, for the purpose of opening new markets for American labor, for American capital, and for American enterprise.

Mr. President, the loaf will not for a long time be perceptibly larger. Those who may rightfully claim a share in it are growing in numbers every day. There is room enough on American soil for more people, but they will not readily come down to the Chinese theory that the survival of the fittest means the survival of those who can live upon the least. The American people are not yet ready to come to that nor to that condition of things in which a bare livelihood comes as the result of labor and enterprise. They want new fields for their enterprise, they want opportunity for their genius and their skill, and they will not always have it at home. We have carried forward the great enterprises which have engaged the attention of our people under great pressure; and as the great floods of the Mississippi, when they come down as the result of the melting the snows in the mountains, leave wrecks behind, so the forward movement of our great national enterprises leave wrecks of hopes and fortunes to mark its course. These great monuments have added greatly to the wealth of the American people and on the whole have been beneficent, but they have their undertow and reaction of personal misfortune.

Instead of gathering them up we float them off the shores and bars by new forward movements, which give new opportunities in new fields. We are not yet ready to sit down as with completed fortunes and a mission that is ended and adjust ourselves to a state of affairs in which there are to be no gains except the modest ones which come from traffic in old and well-worn fields. That means the settlement of delicate, difficult, and perhaps dangerous questions now which can well be postponed and which may be forever removed by the opening of new fields for our enterprise.

It is just as well while the field is open to us and we have the opportunity and our people are willing to engage therein that we should give opportunity for them to get into the neighboring States and places which are waiting for the touch of skill and capital to bloom into new life. If the Government had engaged in building the Nicaragua Canal there would have been now an American colony extending from the Gulf of Mexico to the Pacific along its line, and millions of the American people would have engaged in enterprises in Central America with profit; there would have been new fields for labor, for enterprise, and for capital. That opportunity was thrown over our shoulders.

All South America to-day is anxious, hungry even, for rapid communication with the United States, anxiously waiting and watching and hopeful that we will so order our affairs that they may trade with us as they trade with other people.

Everybody who speaks of this question with intelligence, every one who approaches the consideration of this subject fairly and thoroughly, agrees that the one thing more than anything else which we need is that we shall have frequent and rapid communication with the South American republics. But conceding this it is asked, why not have this communication by means of foreign ships as well as with those of American build, why not hoist the American flag over the ships built on the Clyde from iron ore taken out of British soil, manufactured and put into shape by British labor? We can thus get cheap ships, and I have no doubt the Senator from Kentucky will say that with foreign ships we can get a cheap service; but, Mr. President, service of that kind will not bring business to American mechanics or American merchants as it would if it were carried on in ships manufactured by American mechanics out of American material. Is ship manufacturing to become a lost art among the American people? With more seacoast than any other country in the world, are we to be the only ones that man no ship the result of our own skill and of our own material? If I had my way about it, I would never permit the American flag to be hoisted over a ship that had in it other than American material or which was the product of other than American labor.

I would make that creation of all others representative of the highest and the best of American skill. An American ship will convey to foreign people something significant of the American Republic, some idea

of what its people are, of what the country is, of the productive skill which comes of free institutions. I know we can buy ships in Great Britain and in France cheaper than we can build them. There are hundreds of them to-day in the various harbors of Great Britain that are for sale, some old and some new. Many of them can be bought perhaps at a price that would be the price of old iron, and the value of them probably would not be much greater. Who wants to have them purchased to engage in American trade and to fly the American flag?

I would like to ask the Senators who sit on the other side of the Chamber and who rendered gallant and faithful services to the confederacy under arms, if they want to vote money to build up British shipyards by buying British ships over which the American flag is to float? If I have read the history of the confederacy aright, I should think that the men who fought that valiant fight and who went down after four years of such struggle as the world never before saw, had more occasion to despise and hate Great Britain than any other people in the world. She promised the confederacy that which kept it alive with hope, and she broke her promise as she always does when it is her interest to do so. She was the friend of the confederacy in the time when it needed the encouragement of that friendship to stimulate it with the hope necessary to inaugurate the desperate struggle; and when it was entered upon, when it had assumed its bloodiest phases, when there came the Macedonian cry for that help which had been promised, she basely deserted you. What true confederate would vote to fly the American flag over an English-made ship, the representative of English capital and skill?

At the close of the war there was a sentiment in the South against Great Britain growing out of her heartless treachery which looked as though it would never be appeased except with blood. The North also had a quarrel with Great Britain growing out of the war, and there was a feeling well nigh universal that war was necessary to appease the wrath of both sections, now again united. The veterans of the South were desirous of joining their late antagonists of the North in a bloody punishment of the foe of both.

This sentiment was kept in abeyance by the trouble of reconstruction under Andrew Johnson; but the feeling was only dormant, and when Grant became President the old feeling broke out. The Alabama-depredation claims were unsettled, and a war could have been easily brought about. I say now what I have said over and over again elsewhere, that I think it was General Grant's greatest title to fame that he, a soldier, opposed the war feeling, said in substance, "No; we will have no war until we have exhausted every effort for peace. There has been war enough in this generation." The Alabama commission followed, and war was averted. The sentiment of the country, North and South, would, however, have justified it, and I know that of those men who reflect to-day as every day upon the glories and the woes of the confederacy not one of them does so without bringing to his mind a recollection of the fact that Great Britain at that time was your foe where she had promised to be your friend.

Mr. BECK. Will the Senator from Kansas allow me to call to his recollection the fact that General Grant as President of the United States, when the Franco-Prussian war broke out, sent a special message to Congress insisting that Congress should authorize a free registry for foreign-built ships, in order to carry on American trade during the embarrassments we should be under when France and Germany went to war with each other, and he urged it with great power.

Mr. PLUMB. The circumstances then and now are entirely different. At that time it seemed as though two great powers, great in a maritime way as well as great on land, were about to devote all their energies to war. Naturally President Grant wanted the United States to take advantage of a condition of things in which the merchant marine of both those great nations would be weakened if not destroyed to build up its own. To do this might require sudden effort, and hence the proposition that we should permit our own people to give American register to foreign-built ships. But I think the proposition was a mistake, for the result would have been not that Americans would have bought the French and German ships, but that their ships would have been given American register and thus avoided capture, while the ownership would have remained the same.

Whoever votes to put ships built in foreign yards under the American flag and under American register votes in substance that there shall be no American ship-yards, votes that ship-building shall be a lost art among American mechanics, and votes that the American people shall be dependent always in time of war and in time of peace upon foreign ship-yards for everything that may be necessary for commerce or war upon the sea.

And, Mr. President, we shall not get an American navy merely by building American naval ships. We shall only get an American navy by building up an American merchant marine. We have given hundreds of millions, an enormous sum certainly, for the purpose of subsidizing railroads and other instrumentalities of intercourse and development on American soil. We have built up this great interior space; we know now what every acre of soil will produce; we have a system of railroads that enables us to bring the products of those acres to any or all points upon the Atlantic or the Pacific coast cheaply and quickly. No nation can get all its producers to one point as completely as the American nation.

One per cent. of what we have done for that purpose—a purpose that I do not belittle, a purpose that was vital to the growth and development of the American people—will give to us supremacy upon the sea. I said here two years ago that the time was near at hand when the young men of New England would not hereafter, as heretofore, inevitably go to the West; that there would be a turn in the tide, and that shortly the old feeling would lead the adventurous youth of New England as they looked out upon the sea to think of the islands in it and of the foreign countries beyond, in which they could find fruitful fields for their enterprise and their skill, and that we were on the threshold of an outward development which would be the equal of the great internal development of which I have spoken.

But, Mr. President, when you seek to turn a stream in a new direction you have got to cut the channel to give direction to it. Capital is not going into new enterprises at home as freely as formerly. The field is not as free from competition, nor is there the room for new, long lines of railroads. There are no longer opportunities for building railroads five hundred or a thousand miles long; and the short lines are being built by existing companies as feeders to their main lines. The great enterprises absorbing large amounts of new capital and opening new fields for speculation are things of the past, comparatively. It is the day of minor things, comparatively speaking. And now here lies Mexico on one flank and South and Central America upon another, our next-door neighbors, the places where if at all we are to have a foreign trade commensurate with our abilities to supply it. Let the Government do a little something; let there be something of the spirit which animated the Government in its determination to have the Rocky Mountains traversed by a railroad and to thereby have the two great seas bound together with iron bands and we shall fill every plain and every valley of Mexico and South and Central America with settlers and thereby make markets for all American products and give ample opportunity for American enterprise and ambition.

If the Democratic party to-day was the Democratic party of forty years ago, if it was the Democratic party of the Monroe doctrine, there would be no halting and hesitating here about this or about measures involving ten times the expenditure that is proposed here if found necessary; but the Democratic party of to-day is not the Democratic party that in former days had so much to say about its devotion to the Monroe doctrine. Instead of that it is here objecting to any means of communication being established which shall bind to us the south half of the American continent. We see it objecting specially that there should be any carrying of American mails in American ships.

This work, according to modern Democracy, is to be done for the American people by foreigners in ships built in foreign ship-yards. Eight hundred thousand dollars! We vote away without a yea-and-nay vote, without a single response from either side of this Chamber, bills expending millions of dollars for objects of luxury, stale claims, increasing salaries, libraries, monuments, so-called scientific work designed primarily to create places, things which give neither wages to labor nor opportunity for enterprise, and $1,600,000 for an exposition in New Orleans in the hope that the sluggish currents of life in that locality might be awakened to the opportunity offered by its proximity to Mexico and Central America to do something for our trade with those people, and yet a proposition to appropriate half that amount in such a manner as while legitimately adding to the efficiency of the mail service will also stimulate the building of American ships and the extension through their agency of our trade and commerce, the Democratic party shivers from center to circumference.

While we have been debating about questions of minor importance Germany has taken bodily possession of the Mexican Republic. I have it from an authority which is not to be disputed, and which if I were to name it would not be disputed, that there is great danger that the Mexican Central Railroad, extending from El Paso to the City of Mexico, built by American capital, will pass into the hands and under the control of British and German capitalists. I would not blame the patriotic people who built that railroad if they sold it to whoever would buy. The United States Government has manifested no interest in the enterprise or any indication of its intention to protect the Americans who built the road from unjust and illegal treatment by the Mexican Government. It is not strange, therefore, that the Mexican Government has taken away the subsidy granted to the road and otherwise violated the contract under which the road was built. They know they can do this with impunity, and judging the future by the past, they can go further and destroy or take possession of the entire property whenever they see fit without risk of interference from our Government.

Before this session is over we shall tumble $5,000,000 into the Mississippi River to be washed out and every sign of it disappear during the fiscal year for which the appropriation is made. We shall put further millions into little creeks where nothing but a possibility of towboat navigation ever existed or ever can exist, rather than to navigate the free ocean in search of the trade that is waiting and anxious to come to us and the coming of which will enable us to keep on in that same scale of improvement and development which has characterized the last twenty years of American history.

Mr. President, I had not designed to enter into this subject at this

length. I stated in the outset what I repeat, that I can justify my vote for this measure upon the narrow ground that it will return certainly within a brief period of time to the Postal Department all the dollars we spend just as certainly as we get them back from the investment of money in the star-route service. Is there any man who believes if while we are doing that we are bringing the Central and South American states nearer to us by means of American ships commanded by American officers and manned by American seamen, we shall not thereby open wider and make more permanent the channels that will carry increasing quantities of goods of American manufacture into those waiting countries? It is because of the fact that this result is likely to follow this expenditure that opposition is made. I am glad myself to support it upon the narrow ground that I have stated, and more so because of the incidental but great results which I can see will follow in the extension of the trade in our manufactured goods and food products. This may not be the best opportunity that will present itself, but it should be taken advantage of.

Business depression exists with us as all over the civilized world. A slight addition to our trade would relieve us and give employment to all our idle labor. We can do this while holding firmly to our home market, the greatest in the world. We are comparatively free from debt, without the necessity of keeping up a great army and navy. Our people are vigorous, enterprising, ingenious, practical. They are capable of competing successfully with any other people in the world upon conditions at all equal. Why should not the Government with the resources drawn by taxation from all expend a reasonable sum in establishing the same mail service between our own ports and those of our nearest neighbors and who desire to trade with us and generally accommodate themselves to our wishes and interests? Why should we not at least enter upon this field and do something to relieve the burdens that exist here and lay the foundation for a larger and broader and more profitable and more hopeful future than we can ever expect to have if we continue the policy of isolation heretofore practiced?

Oleomargarine.

SPEECH

OF

HON. JOHN T. HEARD,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 3, 1886,

On the bill (H. R. 8328) defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine—

Mr. HEARD said:

Mr. SPEAKER: It is not my purpose at this late stage in the consideration of the bill now pending to attempt a general discussion of its provisions; but in view of the wide variance of opinion held by those who respectively favor and oppose it, and preferring to state for myself the reasons which control my action thereupon rather than to have them supplied for me by those who differ from me, I shall briefly state my reasons for supporting the measure.

In examining this subject there are two foundational questions to be considered, the determination of which by each member for himself must control his individual action. Those questions are: First, is the proposed legislation constitutional; and, secondly, is it necessary? Holding for myself the affirmative on both these questions, I shall unhesitatingly support the bill.

In support of my position on the first of these two propositions I shall confidently refer to the decisions of the Supreme Court of the United States, especially that in the case of the Veazie Bank *vs.* Fenno (8 Wallace, 533), referred to in the report of the committee on this bill, and also by the gentleman from Georgia [Mr. HAMMOND] in his speech in opposition thereto. In that decision the court declares that the subjects to be taxed and the extent to which they may be taxed is a matter resting in the discretion of Congress alone, and that "the power to tax may be exercised oppressively upon persons, but the responsibility of the legislation is not to the courts but to the people by whom its members are elected."

Then, Mr. Speaker, it being established by this unquestioned authority that Congress has the power to lay taxes upon all taxable objects which it may select for the purpose of raising revenue, and further that such power may be exercised to whatever extent Congress may decide to be proper; and it being admitted, as it is on all sides, that such action on the part of the legislative branch of the Government is not subject to revision by the judicial, it results that if this is a bill to raise revenue Congress has full power over the subject, and that the exercise of such power in nowise conflicts with any constitutional limitation.

The distinguished gentleman from Georgia [Mr. HAMMOND] in his speech in opposition to this bill, concedes the correctness of this position as to the law of the case; and bases his opposition to the measure upon his denial of the fact that the object of said bill is to raise revenue.

Now, Mr. Speaker, if the courts of the country in construing legislative acts are bound by the face of the statute which they interpret, and can not, as they hold, pass beyond the text of a law in an attempt to penetrate the chamber of the law-maker's mind to ascertain and declare his meaning otherwise than as expressed in his act, I respectfully submit that it is not the province of any gentleman on this floor, while conceding that the objects expressed in the bill under consideration are legitimate and clearly within the limits of the Constitution, to assume to go beyond the language of the measure and declare for it a purpose of a different and more objectionable character, and to supply to those who favor the bill motives other than those which they avow.

I say to these gentlemen, with all due respect, that for myself, and in view of my responsibility to my constituents and of my conceptions of the obligation of my oath to support the Constitution, I shall exercise the right to interpret the language of this bill for myself, and will absolve those who differ from me in that interpretation from all responsibility for my action. If, Mr. Speaker, I were willing to accept the position to which the unfair judgment of these gentlemen would assign me, and were ready to admit that this is not a bill to raise revenue, I could not dissent from the conclusions reached by them, and I should feel compelled to vote against the bill; for I hold, with them, that the use by Congress of any power conferred by the Constitution for any given purpose, for the accomplishment of a different object, would be wholly unjustifiable; and for Congress to use the taxing power given by the Constitution for the purpose of destroying any legitimate industry, the product of which only was nominally sought to be taxed, in order simply to build up another, would be a flagrant abuse of that power and violative of the spirit of that instrument.

But again calling attention to the fact that the opponents of this bill all admit that it contains no provision which interpreted by the ordinary and accepted rules of interpretation conflicts with the Constitution, and that therefore their opposition to said measure proceeds from their objections to some purpose suspected for but not appearing on the face of the bill, I now proceed to explain why this measure is not necessarily calculated to destroy the industry of making imitations of butter, but is calculated to produce for the use of the Government some revenue by the taxation of an object that can well bear it, and placing the manufacture of the same under proper and necessary regulations. Assuming that the object of the bill is to raise revenue, the propriety of its enactment depends upon three conditions, namely: First, does the Government need the revenue? Secondly, will this object of taxation bear the tax proposed? And finally, does the character of this industry make it necessary and proper that such taxes should be collected by the machinery proposed in this bill?

With reference to the first condition, do we need the revenue, I respectfully refer to the last report of the executive head of the Treasury Department, in which it will be seen that at that date his estimates of the probable expenditures of the Government for the next fiscal year would absorb the anticipated receipts, and leave a deficit of $24,000,000; and to this we may add, as the result of legislation had since the date of said report, at least $6,000,000, which must also be provided for.

We are told by some of the opponents of this bill that we should not rely upon this estimate, for the reason since it was made the receipts of the Government have exceeded, while the expenditures thereof have fallen below the amounts fixed for them respectively in said estimate. This variance from the estimate may be true, but if so it only shows that the ever-changing conditions of the business of the country makes it unsafe to disregard the conservative margin fixed by the Secretary of the Treasury as the result of his best judgment based upon the experience of the past applied to the prospects of our near future.

It is estimated by the Committee of Agriculture of this House, whose report is before us, that the extent of the manufacture of these imitations of butter reach 200,000,000 pounds per annum; and therefore, should the production continue in the same volume, and the tax be fixed at 8 cents per pound, as now provided in the bill, and the entire product become taxable and pay the tax, the revenue to be derived from this source would be $16,000,000, less the cost of its collection. I think, therefore, that it is safe to assume that the revenue to be raised by this measure may be needed to meet the ordinary expenses of the Government; but even if it should not be, if it be just to tax this product as proposed, and necessary to do it by the means proposed, the prospect of the accumulation of money to be derived from this source to be held idle in the Treasury need not be alarming, in view of the fact that we have a large interest-bearing debt on which any surplus may be applied.

Advancing next to the examination of the second question, Will the object proposed to be taxed bear the rate of tax proposed in the bill? I submit that I think it has been clearly shown by the evidence presented to the committee and referred to in their report that the affirmative of this proposition can easily be maintained, and it is a significant fact that not one of the opponents of this measure has shown or attempted to show the contrary to be true. Instead of their showing that the effect of the legislation proposed would be to destroy the oleo-

margarine industry, they content themselves with charging that such is the object of the advocates of this bill.

It is shown by competent evidence that the average cost of this product is about 7½ or 8 cents per pound, and that the average retail market price to the consumer is about 26 cents, leaving between the cost of manufacture and the price paid by the consumer the extraordinary margin for profit, less the cost of handling, of about 18 cents per pound, or more than twice the original cost. Deduct then from this margin 2 cents for the tax proposed, and 2 cents to cover the cost of obtaining special license to deal in the article, and you still have left 8 cents, or 100 per cent. on the original cost.

But, Mr. Speaker, I wish to be distinctly understood in the position, that if 8 cents per pound is a greater tax than the business, conducted under the proper and necessary surveillance of law, will fairly stand, then let the rate be reduced; but in justice to all concerned, let it be all that it will stand. As a Democrat, and one opposed to the doctrine of "protection for protection's sake," I do not intend to commit myself to the support of any measure which avowedly, or otherwise, is based upon the claim that it is the duty or the right or within the proper exercise of the power of this Government to destroy any legitimate industry in order, simply, to build up or maintain another.

But I do hold that it is a necessary and inevitable result of all such taxation that an incidental protection is given thereby to such kindred industries as may escape the tax levied; and I desire to say, Mr. Speaker, that in this case—not admitting in the first place that the manufacture and sale of oleomargarine, as at present conducted, is a legitimate industry—the incidental protection which may result to the languishing dairy interests of the country, is such an one as I think clearly comes within the range of constitutional authority as declared in the platforms of the Democratic party, and practiced in the legislation of all the political parties which have ever controlled this country. Not basing my support of this bill upon the right or duty of Congress to legislate against any interest, or for the encouragement of any industry, any further than may result from an attempt to lay taxes so as to justly equalize the burdens of the people, and protect them whenever practicable against imposition and fraud, I do not hold it to be pertinent to my discussion of this measure to inveigh against the character of the product which we propose to tax, any further than to justify fully those features of the bill which have been, from some quarters, so vigorously denounced on account of their inquisitorial features.

For my part, Mr. Speaker, while I appreciate and regret the inconvenience and the evils necessarily incident to this character of laws I still realize that there is a certain character of legislation that can not well be dispensed with, and yet from which this disagreeable feature can not be eliminated. I confess that, while I would, were it practicable, rid all our laws of this objectionable incident to their execution, still, sir, I am unwilling to change, as against the interest of the whole people, the substance of these laws—I mean, of course, the "internal-revenue laws"—in order to dispose of the disagreeable form of the same. I believe that since the Government must have revenue it is proper and right that a liberal part of such revenue should be collected from whisky, tobacco, and oleomargarine, if you will, instead of relieving those articles from taxation at the expense of the actual necessaries of life.

It has always appeared to me, Mr. Speaker, that the intensity of a man's objection to the form of these laws was materially affected by the effect of the substance of such laws upon his individual or representative interest. As a rule I think we find the great objection to and pressure in favor of the repeal of the internal-revenue laws comes from these two sources—first, the man who now pays the tax which said laws impose; and the other fellow, who wants the Government to remit the tax thus imposed, so that it may become necessary to raise the tariff so as to more fully protect something already protected.

Gentlemen talk about repealing the internal-revenue laws and taking the tax off of whisky and tobacco, and offer amendments to this bill looking to that result. I respectfully ask the advocates of such views how they can justify a proposition which necessitates either one or the other of two results—either that we neglect to provide the means to meet the obligations of the Government, or that the $115,000,000 now collected from these sources shall be put as an additional burden on the food and clothing and other necessaries of life already taxed by our present tariff at the rate of 47 per cent.

But, Mr. Speaker, I have no intention of discussing further the merits of or necessity for the continuance of our present internal-revenue system, or going further into the consideration, collaterally, of that subject, but simply desire to say that if one-half be true that is told of the impurity of the compounds we now seek to tax we need not scruple at imposing upon their manufacture the most vigorous exactions which the application of this system may render necessary with reference to watching the processes and results of such industry in all their various stages.

Reaffirming my dissent from the doctrine that it is within the scope of the legitimate exercise of the taxing powers of Congress to purposely and needlessly cripple or destroy any industry not prohibited by law, State or national, in order that some other industry may be benefited; and yet, defending the position that it is the necessary result of the imposition of such taxes that some incidental protection will ensue, and that such result can not be and in this case should not be avoided, I am frank to say that this bill, being to my mind free from objection on constitutional grounds and commending itself to my judgment on grounds of public policy, is all the more acceptable to me because it may yield indirectly a benefit to the important but depressed dairy industry of the country.

In that industry about six millions of people are directly engaged, and almost the whole thirty millions of our agricultural population are more or less interested. That by reason of the manufacture and sale of imitations of butter, which are almost invariably fraudulently sold as butter, the dairy interests have been most unfavorably and unjustly affected, there is no contention or doubt; and I think it is the duty of Congress, as a measure of public conscience and right between the promoters of this original and honest industry and that of the imitators of its wholesome products, who are amassing fortunes at the expense of said industry by counterfeiting its products, and thus displacing the same in the markets of the country, to so shape legislation as to secure to the one what it has been despoiled of by the other, and make the inferior article sell under its own true name and character and to pay all the expense necessary to the accomplishment of that result.

Evidence is before us to show that, as the result of this fraudulent interference with the business of the dairy by the manufacturers of these imitations of butter, the export demand for our dairy products has been almost destroyed, while through the apprehension of would-be consumers at home that genuine butter can not be had in the general market, the domestic demand has also and correspondingly been crippled; that the dairymen are no longer able to profitably keep their herds; that in Chicago alone, in the last year, 300,000 milch cows were sent to the slaughter; and that within the last few years the value of the milch stock in this country has by these causes been reduced $150,000,000.

Let it be understood, Mr. Speaker, that the class of our people to whom these cows belong is now and always has been burdened by the exactions of high-tariff laws, which in the last year averaged 47 per cent. on every dutiable object which they bought, in order that more favored classes might prosper.

While the burden inflicted by the wrongful and fraudulent manufacture and sale of these imitations of butter oppresses six or seven millions of our people directly, and indirectly affects nearly the entire thirty millions living by agriculture, the millions of dollars profit derived from these frauds upon an honest and important industry accrue to a small number of rich manufacturers whose very processes of counterfeiting are covered and protected by letters patent issued by this Government. The statistics bearing on this subject show that not over three hundred and fifty manufacturers, big and little, are engaged in the oleomargarine business; and that less than one hundred firms produced over seven-eighths of the entire product. Further, that some fifty-eight different patents have been issued by this Government licensing the patentees to counterfeit the genuine dairy product of the country, but effectually protecting the respective counterfeits thus authorized to be produced against interference from the products of other ingenious counterfeiters in the same line. The counterfeits are thus protected by the strong arm of the law; but the genuine alone is lawful prey for the cupidity and frequent dishonesty of those who see fit to engage in counterfeiting it. Is it to be told to the millions of agriculturists who are thus being wronged with the sanction, and under the license of this Government, that Congress can give no redress against wrongs being perpetrated under laws of its enactment? Let me say that no such answer will be or ought to be received by them.

In the name of these people, and as a measure of justice to them, I demand that we now place upon these nondescript products, by the fraudulent manufacture and sale of which so great loss has been inflicted on an honest and once prosperous industry, that rate of tax which, in the judgment of Congress it can and ought to bear, in order that the proper burdens of the Government may be more equitably distributed among the different classes of our people, and that the public may be protected against the fraudulent manufacture and sale of products deleterious to health, under the good name and character of the honest product which they simulate to destroy.

These millionaire manufacturers of this counterfeit product seek to invoke in their interest the name of the poor people of the country, claiming that the imitation stuff, sold in the name of genuine butter, is sold cheaper than the genuine, and that therefore it is in the interest of the poor that its unrestricted and untaxed manufacture and sale be permitted to continue. This claim is false and dishonest; for ninety-nine times out of a hundred this counterfeit is sold as butter and at the price of butter, or else it could not be sold at all.

The poorer classes in America buy such food as they may be able to afford, but it is not their habit or desire to buy unwholesome food at any price; hence, with the prejudice which obtains against these counterfeit products with all classes of our people, there is not at present a willing market for them with any class. But, Mr. Speaker, if anything can fit these products for competition with the genuine products of the dairy and make them acceptable to our people as wholesome food it will be the confidence inspired by the enforced attention to and observance of such regulations governing their manufacture as it is the purpose of this bill to compel, and as will by said measure be made possible.

The friends of oleomargarine on this floor contend that said product

is honestly made and sold according to character, and not as butter. If so, the provisions of this bill do not affect it, for it is aimed at the dishonest manufacture and sale only; and if their statement be true the manufacturers of this product will be benefited instead of injured, because the advantage resulting from the possession of the Government's certificate of the purity of the goods offered for sale will more than compensate for the tax required by the Government in the form of license for its manufacture or sale.

In conclusion, Mr. Speaker, I would say Congress has full and unquestioned power to enact this legislation, and it is not only justified under the conditions existing, but is demanded by a sense of duty to the public, whose trusted servants we are.

Rivers and Harbors.

SPEECH

OF

HON. RICHARD P. BLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 15, 1886,

On the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. BLAND said:

Mr. SPEAKER: The improvement of the rivers of this country as a means of cheap transportation is of vital importance to the producers of all exportable products. In this lies the only, or at least the most effective, check on the exactions of railroads. The competition afforded by our rivers with the railroads of the country should be encouraged. For our Western country the improvement of the Missouri and Mississippi and their tributaries is of the utmost importance.

It has been proclaimed for us by the protectionists that a policy of high tariff would give to our farmers a home market for their breadstuffs, meats, and other commodities, but to-day we find that this protective system has broken down, our home market ruined. The protective system has been used to stimulate industries of that kind, and the operators of this system, while professing to be the friends of the laboring man, have cut his wages to the lowest point; and to enable them to do this they have imported from other countries contract labor till to-day this country is filled with unemployed men.

These men have been induced to come here under promises of better wages than they were receiving in the countries of the Old World, but as soon as the products of the factories became in excess of our demand these imported laborers are thrown out of employment to wait in idleness till the consumption of the factory products of the protectionist is accomplished. They are thus thrown out of employment in order that the employer may shut down his mill or factory till the surplus is disposed of. The laborer is thus compelled to bear all the loss. These facts and others I will allude to have had the effect of not only breaking down our home market but of ruining our foreign markets as well.

The difficulties in the way of our agriculturists are many; but I shall state the most important. About sixteen years ago the Suez Canal was completed, thus bringing Europe and India near together, and making it entirely feasible for Europe to get her supplies of wheat and corn from India. A short time since England purchased from the Khedive of Egypt a controlling interest in the canal at a cost of near $25,000,000, so that to-day England has quick and easy communication with this vast Empire of India. India is under the protectorate of England. India has a population of 250,000,000 of people, embracing much of the greater part of southeastern Asia, and having an area of a million and a half of square miles. Enlarged now by the annexation of Burmah, its area is half as great as the whole of the United States, from the Atlantic to the Pacific Ocean and from Mexico to British America. The dominion of Great Britain extends over three-fourths of all India. The staple food of this people is millet. They sell all the rice and wheat for which a market is found. The cost of living is but a trifle. India is on a silver basis, so that everywhere in India silver has maintained its true value and purchasing power.

What is the consequence of this state of facts? The answer is that the Suez Canal has brought India and England near together as respects cheap transportation. Again, the silver we produce here and prohibit from going to our mints and into circulation at home is bought up at a discount of more than 20 cents on the dollar by the English traders, then sent to India, and with it cheap Hindoo laborers are employed in raising wheat, corn, and cotton for English consumption; and more, with this cheap silver England is employing this cheap labor to build her railroad system throughout India, and thus preparing for still further competition with us in producing grain and bringing it to European markets. I can not better illustrate this point than to quote from a memorial to Congress giving facts and figures upon this subject, as follows:

THE WHEAT QUESTION.

The average crop in India is from 10 to 11 bushels per acre, against 15 to 16 bushels in the United States; but India is capable of an immense increase in yield under careful cultivation, and where fertilizers have been applied its yield has increased to 40 bushels per acre. Great as is already the present production of wheat in India it is steadily increasing, its development being limited only by the lack of transportation to the seaboard, an obstacle that is steadily disappearing in the rapid construction of the great railroad and canal system under direct patronage of Great Britain.

It was not until 1874 that the first shipment of wheat from India to Europe was made, and was then only 95,000 bushels; in 1875 it extended to 1,560,000 bushels; in 1876 it exceeded 4,500,000 bushels; in 1877 and part of 1878 over 12,000,000 bushels. During the famine of 1878–'79 the exports fell to about 2,500,000 bushels, but reached in 1880 over 15,000,000 bushels; in 1881 rapidly increased to 38,500,000 bushels; in 1882 the exact amount was 36,485,580 bushels; in 1883 the crop slightly failed, and only 26,021,875 bushels were exported; but in 1884 the crops rose once more to 28,502,285 bushels, while in 1885, up to November, over 42,500,000 bushels were exported, and for over 3,400,000 bushels freight-room had been engaged for Europe.

To obtain such results the English Government has widely and gratuitously distributed among the native ryots, or farmers, for the purpose of encouraging them in the use of improved machinery, a number of plows, constructed with a special design and of peculiar style to meet the requirements of their soil. In addition, large quantities of all kinds of plows and other implements, adapted with studious care to the wants of Indian agriculture, have been sent out by the English Government to be sold at a mere nominal price.

Great care has been exercised to select seeds from foreign countries—mostly American—of the best varieties and suitable for the soil of India.

PRICE OF LABOR AND LIVING CONTRASTED.

The Indian ryot, or farmer, lives in a bamboo hut; cost about 20 rupees, or $9.60; his utensils, a few earthenware pots, value 2 or 3 rupees, or 96 cents to $1.44. His meals consist of half an anna's (1¼ cents) worth of rice or millet seed. His farming outfit consists of rude plow, a primitive wooden cart constructed with his own hands, a grubbing-hoe, a pair of bullocks, a few cows or sheep. He cuts his grain with a sickle, treads it out with his bullocks, winnows it in the air, and carries it to market on his back. If he employs a farm hand it is at about 2 annas (6 cents) per day. These circumstances tend toward an equalization of the terms of competition between the Indian and American farmers in laying down wheat in Europe, but notwithstanding the low wages of India and its increased railroad facilities, it would still be impossible for the Indian ryot to sell wheat as cheaply in Liverpool as the American farmer were it not for the divergence caused by legislation in the relative values of gold and silver.

OUR HEAVY LOSSES.

The exportation of wheat from India during 1884 and the eleven months of 1885 amounted to over 84,400,000 bushels, representing a loss of over $80,000,000 to our farmers and of over 3,500,000 tons of freight to our "granger" railroads, and of over $47,000,000 on their earnings.

It is needless to point out the manifold ways in which such a subtraction from one principal article of our export trade has made itself felt in all employments, and to the detriment of all branches of business.

But this is not all. On the 22d of October last, Indian wheat sold in Liverpool at 89 cents per bushel; while quality for quality compared, brought in Chicago on that day 88½ cents. The cost of transportation, partly by water, of each bushel of wheat from Chicago to New York is a little over 6 cents; the present laydown cost of wheat from New York to Liverpool is:

	Cents.
Free on board and insurance per bushel	1.60
Freight to Liverpool	6.82
Cost of discharging in Liverpool without commission	4.50
Total per bushel	12.32

Add to it 6½ cents from Chicago to New York and the cost of transportation, less commission, is just 18¾ cents per bushel, which added to 88½ cost in Chicago brings our American wheat in Liverpool first cost equal to $1.07 per bushel, or 18 cents per bushel more than quality for quality Indian wheat is selling in Liverpool.

This state of affairs is the consequence of the extremely low price for silver bullion which is more or less controlled in the British market. At the present price of silver bullion in London, forty-seven pence per ounce, the exchange on India is one shilling and sixpence per rupee, or 33⅓ per cent. in favor of the British importer of India's wheat, who with one thousand pounds sterling purchases 13,333 rupees instead of 10,000 rupees, which is all he could have purchased for that number of pounds in 1873, and yet the purchasing power in India of the rupee is a little greater now than it was in 1873.

Add, therefore, to the ruling rate of 89 cents per bushel of wheat in Liverpool the 33⅓ per cent., and the price at once advances to $1.19 per bushel. This rate of $1.19 in Liverpool, less freight and other charges from New York to Liverpool, would leave the market price of wheat in New York $1.06½ per bushel, in place of 90½ cents, the now ruling rate; and in Chicago it would be equal to $1 in place of 85 cents per bushel as it is now. It is evident from these figures that the restoration of silver to its old place by free coinage would at once enable the American farmer to put Indian wheat out of the European markets.

This price of 89 cents per bushel in Liverpool not only prevents us from exporting our wheat, but actually regulates the market value of it to the detriment of our farmers, who lose from 20 to 25 cents per bushel on their wheat in order to enable them to meet the now ruling low market price in Liverpool. These 20 to 25 cents on our present crop of 1885 of 352,000,000 bushels of wheat mean a loss to the American farmers of from $70,000,000 to $88,000,000.

RAPID DECLINE IN OUR WHEAT EXPORTS.

Let us review the rapid decline in our wheat exports for the past few years.

In 1883 we exported 106,383,828 bushels, for which we received $119,879,341, equal to $1.12⅔ per bushel.

In 1884 our exports declined over 30 per cent., and we exported only 70,349,012 bushels, for which we received $75,026,584 or $1.06⅔ per bushel.

In 1885 we exported some 84,509,000 bushels of wheat, for which we received only $72,933,097, or 86.32 cents per bushel, while the year previous we got over $75,026,000 for only 70,349,012 bushels, a loss of over 20 cents on each bushel.

Not only has the American farmer been a direct loser by this reduction of the demand and price abroad for his wheat product, but he has indirectly suffered in still greater degree by the resulting depreciation of his whole crop, whether consumed at home or sent abroad; and on the crop of 1885 alone, so far, he has submitted to a loss of over $70,400,000 as compared with last year's price.

This one fact is therefore proved beyond cavil or dispute, and should always be borne in mind, that to destroy the profits of the American wheat-grower it is not necessary that India should raise a crop which will meet the whole demand of Europe; it has but to furnish such a portion of the amount as will prevent an advance in the price to a point which will repay the cost of production by our own farmers.

How important a part the wheat crop of this country constitutes of the total

of our exports is shown by the fact that since 1873 to 1883 about 24.85 per cent. of the whole value of our agricultural exports was made up by wheat and flour; yet the latest official statistics for the month of December, 1885, as compared with 1884, show a decline which must create an uneasiness to all who have America's welfare at heart.

Exports of wheat and flour.

December, 1884:
Wheat, bushels..... 8,261,153
December, 1885:
Wheat, bushels..... 4,211,850

A decline of nearly 50 per cent.

December, 1884:
Flour, barrels..... 1,016,617
December, 1885:
Flour, barrels..... 757,829

A decline of over 25 per cent., ending with December, 1885, as compared with 1884 and 1883, as shown by the latest official custom-house returns.

Total value of exports of breadstuffs.

July to December, 1883..... $88,014,626
July to December, 1884..... 79,700,507
July to December, 1885..... 52,998,732

But the contrasts of the average yearly exports of wheat and flour exhibit still greater and more deplorable deficits.

The exports of wheat and flour from 1873 to 1883 were:

Articles.	Exports.	Value.
Wheat.....bushels...	919,073,737	$1,005,174,727
Yearly average.....do.....	91,907,373	109,517,472
Flour.....barrels..	54,001,528	325,308,458
Yearly average.....do.....	5,400,152	32,530,845

The accumulation of stock on hand January 16, 1886, in the United States as compared with corresponding period of 1885, 1884, and 1883, shows the marked decline in our exports of wheat.

Stock on hand or visible supply:

	Bushels.
January 15, 1883.....	21,909,118
January 15, 1884.....	33,948,813
January 16, 1885.....	42,575,703
January 16, 1886.....	57,108,226

While our exports are gradually decreasing our stocks on hand have rapidly increased from 21,909,113 bushels in 1883 to 57,108,226 in 1886.

In order to comprehend more fully the rapid decline in the exports of wheat from this country, the official returns of the Bureau of Statistics give the following figures:

	Bushels.
Exports of wheat from all ports for December, 1884.....	8,400,000
Exports of wheat from all ports for December, 1885.....	3,773,153
Decrease.....	4,626,847
Twelve months ending with December 31, 1884.....	81,628,478
Twelve months ending with December 31, 1885.....	53,025,918
Decrease.....	28,602,560

If we consider that from 1873 to 1883 inclusive we exported 919,720,637 bushels, or 91,972,063 bushels on the average for each year, the decline from 91,972,063 bushels down to 53,025,918 bushels shows a decrease of 38,946,145 bushels, or a decline of over 37½ per cent. Compared with the exports of 1879, when 122,775,751 bushels were shipped, and in 1880 153,250,685 bushels, and in 1881 150,565,450 bushels, as well as 104,030,584 bushels in 1883, the rapid decline is startling.

The half-yearly returns of shipment of wheat from San Francisco from July 1 to December 31, 1885, compared with 1884, are equally as disturbing:

	Bushels.
July 1 to December 31, 1884.....	12,447,000
July 1 to December 31, 1885.....	5,850,000
Decrease, 1885.....	6,597,000

A loss of over 50 per cent.

The imports of wheat into Great Britain for the four months August (harvest time), September, October, and November, 1885, when compared with corresponding period of 1884 are equally important and exhibit the gradual supremacy India's wheat is gaining in that country:

Wheat from United States:	Bushels.
1884.....	11,973,100
1885.....	4,494,879
Decrease.....	7,478,281
Wheat from India:	
1884.....	6,333,195
1885.....	8,367,427
Increase.....	2,034,232

While the exports of wheat to Great Britain from the United States have decreased by over 7,000,000 bushels, those from India to Great Britain have not only held their own but have increased by over 2,000,000 bushels.

The contrast between the rapid increase in the exportation of wheat from India and the equally rapid decline in the exportation of wheat from the United States is significant and startling. The export of wheat from India in 1879 amounted to 1,972,544 bushels, but has rapidly increased year by year until in 1884 it amounted to 39,202,636 bushels; our own exports have, when compared with corresponding period of 1879, when we exported 122,353,936 bushels, fallen in 1884 to 75,026,678 bushels, a decrease most appalling as well as mortifying.

The decrease in the exportation of wheat from New Orleans exhibits the following: 1880-'81, 6,523,747 bushels, while the year following it fell to 2,474,581 bushels, gradually reaching for the fiscal year September 1, 1884-'85, down to 784,195 bushels; while so far this fiscal year, of which five months have passed, not one bushel has been exported from New Orleans.

CORN QUESTION.

Indian corn, equal in every particular to our own of the same appellation, though of comparatively recent introduction, has increased in favor most rapidly, and there were raised in 1882 in India over 75,000,000 bushels. The first cargo of India's corn was shipped to Europe in January, 1883. In 1883 the crop was over 120,000,000 bushels; in 1884 over 160,000,000 bushels. It would indeed be one of the curiosities of international trade if from this small beginning in 1882 there should grow, as in the case of wheat, an export trade from India to Europe of equally as great proportions. It is a positive fact that in the central provinces of India alone enough Indian corn can be raised to supply the wants of Europe, to which we have shipped during the year (calendar) of 1885 62,525,742 bushels, and for which we received $33,090,350.

Here we are confronted with the startling facts that by the demonetization of our own silver and sending it to London where it is bought up at a discount and taken to India and there used in the employment of Hindoo laborers, the export of wheat from that country to Europe has increased steadily, so that while in 1874 only 95,000 bushels of wheat were exported from India, the enormous amount of over 42,000,000 were exported last year. The further fact appears that our exports of wheat have declined in proportion to this increase from India. It also appears that India can lay down wheat in Chicago and New York about as cheaply as can our Western farmers. We are not only losing our market abroad, but are threatened with India competition at home. The same danger is shown as to our corn.

What is the remedy? The remedy to my mind is plain. Let us coin all our silver at home to stimulate our own productions of the farm. Give us cheap water transportation down the Missouri and the Mississippi Rivers so we can compete with the water transportation of the Suez Canal. I know of no other means of preventing absolute poverty and distress that must come upon our Western farmers, who are now toiling in poverty in the vain effort to compete with this cheap Hindoo labor paid for by the products of our own silver mines.

I know, Mr. Speaker, that I am often accused, here and elsewhere, of giving a silver lining to all my discussions on this floor, but I shall not heed these taunts and jeers so long as I have the honor to represent a constituency who live by the sweat of their brow and not by the cutting of coupons. More money and cheaper transportation shall be my watchword and battle-cry.

Having said this much in a general view of the subject of water transportation, I desire to call attention to the improvement of a river that flows through a part of the district I have the honor to represent.

THE OSAGE RIVER.

I wish to present a few facts in regard to this stream for the purpose of having a survey of it made with a view of improving it by movable locks and dams. Recognizing the fact that Congress will make no appropriation for such purpose till such a survey is made and a favorable report made thereon, I desire to read from previous reports of the Army engineers upon this subject so as to bring the whole matter to the attention of Congress in order that it may be properly understood. For while these reports were against the improvement of this river by locks and dams, I want to say that the adverse reports were based not upon the feasibility of the plan, but upon the supposed cost as compared with the commerce to be benefited. That while the river is stated to be susceptible of such improvements, yet the officers in charge based their report declining to recommend it more upon the fact that the commerce of the river did not justify the outlay of money than anything else.

The first report was made in 1875, from which I make the following extract (Appendix L, page 23):

Before the advent of railroads, the Osage River, at high and mean stages of water, was the main channel of supplies for the Indian country. It does not at present constitute a military line of any kind; and, if improved, would only be tributary to the State of Missouri, in which it would be alone navigable. Besides, a bar exists at the debouchment of the river into the Missouri, the depth upon which fluctuates with the stage of water in either stream. When the Missouri is at its highest stage, it affects the level of the water in the Osage as far up as Elizabeth, a distance of 40 miles. During low water boats drawing 2 feet 6 inches are frequently denied passage over the bar referred to for weeks. The ruling depth in the Missouri River during the low-water season seldom exceeds 3 feet, so that, unless a ruling depth of 4 feet can be secured to this river, the Osage, if improved to give a 4-foot navigation, would necessarily be tributary, for a portion of each year, only to the railroads crossing it.

The water-power developed by the dams would be considerable.

As in the case of most slack-water improvements, questions of land-damage of greater or less extent may be expected, which would also increase the cost of the improvement.

The results may, then, be summed up as follows:

1. The Osage River is not susceptible of permanent or even satisfactory temporary improvement for navigation at low stages of water.

2. It is susceptible of improvement to the extent of obtaining a ruling depth of 4 feet at all times, by means of locks and dams, twenty-two in number if of 8 feet lift, and twenty-seven if of 6½ feet; the cost of the former estimated at $2,857,330.30; of the latter, at $3,090,825.

3. If a ruling depth of 4 feet is obtained in the Osage by means of locks and dams, the same would be required over the bar at the debouchment of the river and as far down the Missouri as its junction with the Mississippi, to utilize the improvement at all stages of water—problems not yet solved.

4. The Osage, since the introduction of railroads running parallel with it, and at no very great distance, is no longer a necessary link in the great current of trade westward.

5. Its navigable portion would be entirely within the State of Missouri, and though its improvement would doubtless be of value in developing the rich mineral and agricultural resources of the region through which the river passes, it can not be regarded as one of national importance and therefore requiring Government aid.

6. Should the improvement be made, the advantages resulting would be far from commensurate with the great cost, say $3,000,000.

For these several reasons I do not feel justified in recommending the project and therefore do not advise that any further appropriation by Congress should be made for the work.

The maps and plans are in process of completion, and will be forwarded as soon as finished.

The collection-district in which the work is located is New Orleans.

The nearest port of entry is that of Saint Louis.

I can not conclude this report without expressing my obligations to Mr. Gor-

tion and his assistants for the very satisfactory manner in which they have performed their duties.

All of which is respectfully submitted.

J. H. SIMPSON,
Colonel of Engineers, Bvt. Brig. General, United States Army.

Brig. General A. A. HUMPHREYS,
Chief of Engineers, United States Army.

In 1874 I procured an order from Congress to have another survey made with a view of improvement of the Osage by locks or dams. From the report of Major Ernst I quote as follows as to the last survey. (Appendix 10, page 1657, Engineer's Report, 1884):

X 5.—Preliminary examination of Osage River Missouri, from mouth to Linn Creek, with a view to movable locks and dams.

UNITED STATES ENGINEER OFFICE,
Saint Louis Mo., August 22, 1884.

GENERAL: The river and harbor act of July 5, 1884, provides for the examination or survey of "Osage River, Missouri, from mouth to Linn Creek, with a view to movable locks and dams," upon the condition that after a preliminary examination it shall be deemed "worthy of improvement."

By your letter of July 31, 1884, I am directed to report as to whether, in my opinion, the stream is "worthy of improvement." From the wording of the law and from the fact that the Osage has already been the subject of some minor improvements, I understand the question now to be, is it worthy of improvement by movable dams? That is, is it worthy at this time of a radical and expensive improvement, which will cost several millions of dollars?

The Osage empties into the Missouri River at a point about 140 miles from its mouth. To improve the navigable capacity of the Osage beyond that of the Missouri would be almost, if not quite, useless. The navigable depth of the Missouri at low stage is about 3 feet. An improvement of the Missouri River has been projected, but the amount of time which must elapse before that improvement shall be completed is uncertain. It will probably be many years. But whether many or few it would seem proper to defer the inauguration of any scheme the usefulness of which is very largely dependent upon the safe navigation of the Missouri until such safety of navigation is an accomplished fact.

The distance from Linn Creek to the mouth of the Osage is about 107 miles. In this distance it passes through or touches five counties, Camden, Morgan, Miller, Cole, and Osage, the last two lying also on the Missouri River. Some portions of these counties will not be affected by the improvement of the Osage, but as it is difficult to say how much, the statistics of the entire counties will be used in determining the interests to be benefited. The total area of these counties is about 2,800 square miles. By the census of 1880 (see Compendium of the Tenth Census, pages 39, 40, 1553–1555, 788–792, and 738) their total population was 54,542; their total assessed valuation, real and personal, was $9,093,013; their total taxation, State, county, and town, was $175,222; and their total production of cereals, including wheat, corn, oats, rye, barley, and buckwheat, was about 5,000,000 bushels, the total production of the State of Missouri being about 247,000,000 bushels. The geology of these counties is known only in a vague way. They contain deposits of iron, lead, and coal, but the size of the deposits is unknown; those of iron are supposed to be large, and those of coal to be small There are at present no extensive mining interests.

The total value of the commerce of the Osage River during the fiscal year ending June 30, 1882, was $950,778, of which $565,405 was floated in rafts (see Annual Report Chief of Engineers, 1882, page 1660), and for the year ending June 30, 1883, was $1,043,052, of which $215,790 was floated in rafts (see Annual Report Chief of Engineers, 1883, page 1295). Deducting the rafting interest, which would not be benefited, but which would rather be injured by a slack-water improvement, there remains a trade of $385,373 for 1882 and $827,262 for 1883. As near as can be computed from the data at hand the weight carried in 1882 was 9,416.5 tons, and in 1883 21,967.5 tons. The average charge for freight in 1881 was $2 per ton, and in 1882 $4 per ton. Taking the higher rate, the total freight charges would not exceed $38,000 in 1882 and $88,000 in 1883, or an average of $63,000 for each of the two years.

From these facts it appears that there are no interests at this time, either upon the Osage River itself or upon its banks, which will justify a heavy expenditure in the improvement of the river. There are undeveloped resources which such an improvement would aid to develop, but they are uncertain in amount. The most important results to be expected from a radical improvement can not be attained until after the improvement of the Missouri River. I am accordingly of the opinion that the Osage River from its mouth to Linn Creek is not at this time worthy of improvement by movable dams.

Very respectfully, your obedient servant,

O. H. ERNST, *Major of Engineers.*

Brig. Gen. JOHN NEWTON,
Chief of Engineers, U. S. A.

Both of these reports being against the improvement I have procured another order for such survey to be put in the bill now pending. The people interested have organized and appointed their committees at a recent convention at Jefferson City, and no doubt these committees will lay before the engineer in charge such facts and statistics as will induce a more favorable report. The Osage is an important stream. The country through which it passes is without railroad facilities and hence the great necessity to them of this means of transportation. With a more favorable report from the engineer in charge it is hoped that Congress will enter upon this work.

Mr. Speaker, I can not close these hasty remarks without again calling attention to the fact that in my humble judgment the rivers of our country must be made the means of affording competition with railroad transportation, thereby enabling the producers of the country to get their products to the markets at such rates as to afford them at least a living profit for their labor and outlay of capital. The amount, $7,500, given to the Gasconade, though not as much as I have asked, it is hoped will be sufficient to keep it in a condition for navigation.

Our Eastern States being much older than our new Western country have for many years past had the benefit of Government aid in improving their rivers and harbors. The Government as a rule has been quite beneficent to them. Their rivers have been the beneficiaries of Government aid till they are not so much in need of it now as are our Western streams. It is to be hoped that no sectional or jealous policy will be pursued by our Eastern brethren in respect to the just demands of the people of the West for means of cheap transportation. The bill also contains an appropriation of $10,000 for continuing the improvement of the Osage under present plan.

The Ouachita.

SPEECH
OF
HON. J. FLOYD KING,
OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 30, 1886,

On the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. KING said:

Mr. CHAIRMAN: As there has been so much said on the floor of this House about extravagant and useless expenditure on the improvement of insignificant rivers and unimprovable streams, I wish to say a few words on the subject of the rivers in my district, their claims upon us as Representatives, and the amounts expended upon them since I came to Congress. There are eight navigable streams for which Congressional aid has been asked in that portion of Northern Louisiana which I have the honor to represent; and of these, the most important (as well as one of the most important in Louisiana) is the Ouachita.

This river rises in the Ouachita Mountains, in Polk County, Arkansas, and following an irregular course flows in a general southeasterly direction through that State and Louisiana until it is joined by the Tensas and Little Rivers at Trinity. These three form the Black River, which runs southward and enters the Red River near its mouth. Its entire navigable length is 540 miles; from its junction with the Tensas to the Red River it is 75 miles; and thence to the Mississippi it is 25 miles. Flourishing villages and important towns are on its banks, such as Ouachita City, Monroe, West Monroe, Columbia, Enterprise, Harrisonburg, Trinity, Troyville, and many others. The country through which it flows is rich, fertile, and occupied by a generous, thrifty, industrious and hard-working population, its fields smiling with corn and cotton, and its banks abounding with forests of the most valuable timber. In many parishes through which it flows recent Government explorations, undertaken through my urgency, have developed the existence of large deposits of iron and other valuable minerals, destined at no distant day to add greatly to the wealth of the State and country. This is the river, Mr. Chairman, for the improvement of which we ask the sum of $17,500; of which $7,500 is for repairs to the disabled snag-boat, leaving but $10,000 for actual improvement works. For the improvement of this river I have repeatedly introduced bills, each of which exceeded in amount $100,000. Why the engineers have submitted such small estimates for the improvement of this important stream I can not divine.

The first examination of this river by the United States Government with a view to its improvement was made in 1870; and a survey of so much of it as extends between Trinity, La., and Camden, Ark., followed in 1871 and 1872 with the result that a project was formed for increasing its navigable depth between those two points by means of locks; so that a depth of not less than 4 feet could be had at the lowest stages of the river. Though the result aimed at would doubtless have been productive of much good, the cost was considered too great for the expected resultant benefits—the estimates being no less than for $1,163,083—so it was abandoned by the United States engineers and a new plan formed, which has been prosecuted up to the present time. By this plan improvements are confined to the removal of snags, wrecks, leaning timber, and other obstructions, and the deepening of shoal places. For this purpose, since I have sat in this House there has been appropriated $79,000, and in the bill now before the committee we ask for $17,500 more.

I have, to the best of my ability, strongly advocated from time to time the appropriation of the above sums and of much larger ones, because I knew the value of this river and its tributaries to the commerce of the country through which they flow. I find the Chief of Engineers and his assistants stating annually in their official reports that a much greater sum could be profitably expended than has at any time been appropriated. I presume no one here will doubt that the Chief of Engineers speaks advisedly when he uses the words "profitably expended."

The reasons for my action and that of those who, with me, have advocated this expenditure I can give in a few words:

1. The Ouachita district is the "collection district" of Arkansas and the third in importance of the collection districts of Louisiana. It is navigable as far up as Camden, Ark., from November to June inclusive, and to Monroe, La., according to the report of the Chief of Engineers, all the year round, by steamers of from 500 to 900 tons burden. Of these there were, last year, twelve plying regularly on the river and six on the river and its tributaries.

2. The commerce of the Ouachita in 1876, previous to my coming to Congress, consisted, as it does now, in the transportation down-stream to New Orleans and other ports of cotton, cotton-seed, oak staves, hides, cattle, hogs, &c., and an up-river or return transportation of provisions, clothing, and supplies of all sorts. In that year (1876) the down freight

amounted to $2,150,000, and the return freight to $1,500,000. In 1878 the down freight besides cotton amounted to $11,604,512; cotton $6,566,200; and the up-river or return freight to $4,596,340. In the fiscal year 1882–'83 the return freight carried amounted alone to $8,596,160. During the fiscal year 1884–'85 (the latest of which we have official record), the twelve steamers plying regularly on the river carried down 108,600 bales of cotton, 390,000 sacks of cotton-seed, 715,500 oak staves, 5,785 head of cattle, 5,000 cords of wood, and 175,000 logs of valuable timber; and brought back cargoes in return on which the estimated freight (for I could not get the exact figures) was not less than $2,000,000. When to this commerce is added that of its tributaries—the Bartholomew, the Bœuf, the Tensas, the Macon, and the D'Arbonne—which would be valueless without it—we must increase the amount of business traffic on the waters of the Ouachita by the annual sum of $6,000,000.

When, then, Mr. Chairman, so large an amount of traffic exists on a stream as I have here shown to be the case on the Ouachita, and when, as we certainly know, this traffic will grow larger year by year, we certainly ought not to grudge the small amount which yields so large a return.

Mr. Chairman, I am, and have always been, in favor of these works being done by local contractors. The law contemplates their being so awarded; and I am confident there are men to be found in these localities competent, honest, and in every way worthy to be intrusted under properly guarded contracts with the performance of such work.

What is the inevitable result of clearing the river of obstructions and deepening the channel? The goods will all go by water instead of by rail. Why? Because it costs the farmer $5.80 a bale to send his cotton by rail, including wagon-hauling charges of 75 cents a hundred pounds on each bale, and it costs him only from $1 to $1.50 per bale to send it by water. Here is a difference of $4.30 in favor of the water-route, or $4,300 in every thousand bales of cotton alone. Suppose the planters on the Ouachita annually compelled by the bad navigation of the river to send their tens of thousands of bales by land with a dead loss in freight charges of $4,300 on every 1,000 bales; would not that consideration be—or perhaps, Mr. Chairman, in deference to the gentleman from Iowa [Mr. HEPBURN] and the gentleman from Maine [Mr. REED] I ought to say, *should* it not be sufficient to dispel all opposition to this item of the appropriation?

Another consideration, Mr. Chairman. We must not forget that increased facilities and safety in navigation mean diminished charges for freight and insurance. We must not forget that, as the amount of goods to be transported increases in volume and value, competition will step in and beat down freight charges still lower; and the freight-ridden farmer may at length confidently look forward to a bright future when cheap transportation will be the beneficent goddess that will bring competence to his door.

Thus, Mr. Chairman, I have given for myself and those who, like me, have recommended and advocated and urged these appropriations, the "reasons for the faith that is in us." If gentlemen from the North and East can clear their skirts as readily from some of the river and harbor burs that are sticking to them we shall soon hear little more of the outcry against this much-maligned bill from the self-styled "watch-dogs of the Treasury."

In conclusion, I wish to add that further on in this bill I have succeeded in getting inserted a provision for a survey of this river with a view to the establishment of permanent slack-water navigation throughout its entire navigable length; and when the United States engineers have reported upon the value and necessity of this improvement I shall ask the House to give the question its favorable consideration and to grant the appropriation necessary to carry it to a successful issue.

The Administration and the Civil-Service Law.

SPEECH

OF

HON. WILLIAM M. SPRINGER,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 9, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8974) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1887, and for other purposes—

Mr. SPRINGER said:

Mr. CHAIRMAN: I desire the attention of the House for the purpose of replying to some remarks made by my colleague from Illinois, a member of the Committee on Appropriations [Mr. CANNON]. That gentleman stated yesterday that General Black, Commissioner of Pensions, had violated the civil-service law in the appointment of special examiners in the Pension Office. Am I correct in saying that was the gentleman's statement? The RECORD this morning did not contain his remarks.

Mr. CANNON. What I did state was based on what the papers had reported touching the investigation before the Senate committee, namely, that General Black had stated that out of seventy-five appointments of special examiners seventy-one were Democrats and there were four whose politics he did not know. I said if that was the case the spirit of the civil-service law in my opinion had been violated.

Mr. SPRINGER. I understood the gentleman to say that the law had been persistently violated and disregarded by the Commissioner of Pensions. I also understood the gentleman from Maryland [Mr. MCCOMAS] to state that the object of the proposed legislation in this bill was to make a "clean sweep," by which I presume he means that this Democratic administration is making arrangements to turn all of the Republicans out of the classified and other service and put Democrats in.

Now, in reference to the remark made by my colleague, the gentleman from Illinois [Mr. CANNON], I propose to show that every appointment made by the Commissioner of Pensions since he assumed the duties of that office has been strictly in accordance with both the letter and the spirit of the civil-service law. Instead of appointing seventy-four special examiners, General Black has appointed one hundred and fifty. The law of 1884 provided for the appointment of one hundred and fifty special examiners for one year. At the end of the year all those positions became vacant, and thus it became the duty of General Black soon after he took charge of the office to appoint one hundred and fifty special examiners. Let us see how he performed that duty.

About sixty-five of the one hundred and fifty appointments in the first instance were made by promotions from those already in the service; the others were made, under the civil-service law, from outside. The first appointments made under that law were made by Colonel Dudley, not by General Black. Colonel Dudley made a requisition to fill eighty-five places, and between four hundred and five hundred names were sent to him by then Civil Service Commission composed of Messrs. Eaton, Gregory, and Thoman. The civil-service law was then in force, and the names sent in comprised all the eligibles on the list. The minimum standard then required to pass the examinations was an average of 50. The standard remained unchanged until 1885, when it was raised by the commission to an average of 65. Eighty-five persons were appointed by Colonel Dudley from the four hundred or five hundred names sent him. These were all Republicans, or supposed to be Republicans. That was the beginning of the appointment of the special examiners, and the precedent was then set by the Republican Commissioner of Pensions of taking the whole list and appointing only Republicans from it. That is the way the law was, in the first instance, put in force. The Attorney-General, Mr. Brewster, had decided that these appointments must be made under the civil-service law, and Colonel Dudley proceeded to make them in the way I have indicated.

Mr. HISCOCK. I desire to ask the gentleman a question for information. Were those first appointments of examiners simply details from the clerical force of the Pension Office at that time?

Mr. SPRINGER. I have stated that sixty-five of those first appointed by Colonel Dudley were assigned or transferred to this duty from persons employed in other positions, and that about eighty-five were outsiders appointed under the civil-service law and rules. The first appointments were made by Colonel Dudley in July, 1884, and under the terms of the law, they were for one year. In 1885, when the terms of these officials expired, General Black was the Commissioner of Pensions, and it became his duty under the law to make the new appointments. What did he do? As Colonel Dudley, his predecessor, had done? Not at all. He reappointed, from those already in the service, who were Republicans, seventy-one special examiners, and they became, under the civil-service law, his appointments. The others went out by the expiration of their terms of office.

Mr. ADAMS, of Illinois. Will my colleague permit me a question?

Mr. SPRINGER. Yes, sir.

Mr. ADAMS, of Illinois. The Republicans whom General Black appointed special examiners, had they been special examiners under Commissioner Dudley, or were they taken from the permanent force of the Pension Office?

Mr. SPRINGER. If the gentleman had paid attention to what I have been saying he would understand that.

Mr. ADAMS, of Illinois. I tried to.

Mr. SPRINGER. I will restate it. Commissioner Dudley in 1884 made the first appointments under the law, and it so happened that they were all Republicans. Those appointments were made for one year. At the end of the year, when their terms expired, it became the duty of General Black, in July, 1885, to fill those places. He proceeded to do it by reappointing seventy-one of the old force.

Mr. ADAMS, of Illinois. What old force?

Mr. SPRINGER. Those already in employment.

Mr. ADAMS, of Illinois. In what employment?

Mr. SPRINGER. Employment as special examiners. General Black made reappointments of the old force to the number of seventy-one. The others not reappointed went out of office under the provisions of the law. General Black then made a call upon the Civil Service Commission (consisting of Messrs. Eaton, Gregory, and Thoman, two Republicans and one Democrat) for a list of persons eligible to fill sixty of

the existing vacancies. The Commission responded by sending him the old list from which Colonel Dudley had drawn the eighty-five persons appointed by him in 1884, with eleven additional names, the whole list embracing between three hundred and four hundred names.

Now, gentlemen have said that General Black violated the law. The law was in force at the time when the Civil Service Commission (which had been appointed by a Republican administration and which was composed of two Republicans to one Democrat) sent that list to Colonel Dudley in July, 1884.

Mr. BUCHANAN. Will the gentleman permit me to ask him a question for information?

Mr. SPRINGER. Upon this line?

Mr. BUCHANAN. Yes, strictly upon this line. How many appointments were to be made by Colonel Dudley?

Mr. SPRINGER. One hundred and fifty was the number of special examiners authorized by the new law.

Mr. BUCHANAN. And he made a requisition for how many to be appointed from the outside?

Mr. SPRINGER. He appointed about sixty-five from those already in the office, and drew on the Civil Service Commission for the rest of them, and it turned out that they were all Republicans.

Mr. BUCHANAN. How many names were included in the list of eligibles sent by the Commissioner?

Mr. SPRINGER. I have already stated that.

Mr. BUCHANAN. You have not stated the number on that list. You have stated the number on the list sent to General Black. How many were on the list sent to Colonel Dudley and from which he made his selections?

Mr. SPRINGER. Between four hundred and five hundred.

Mr. BUCHANAN. I want accurate information, if the gentleman has it.

Mr. SPRINGER. I have accurate information. Four hundred will do, will it not?

Mr. BUCHANAN. No; I want accurate information.

Mr. SPRINGER. The commission sent in the names of all the eligibles.

Mr. BUCHANAN. I am trying to find the extent of that list.

Mr. SPRINGER. They sent in the names of all the eligibles.

Mr. BUCHANAN. Does the gentleman know how many names were sent?

Mr. SPRINGER. I have already given the gentleman the statement. There were between four hundred and five hundred. It is not material how many there were. The commission sent in all the names they had.

Mr. BUCHANAN. I would like to know (if the gentleman has not accurate information, of course I can not get it) whether the commission sent in more than the requisite number of four names for each place.

Mr. SPRINGER. They sent in all they had.

Mr. BUCHANAN. I have already been informed that they sent in all they had. It seems the gentleman does not know how many were sent in.

Mr. SPRINGER. I will come to that point. There was no reference to the number of four for each place. That idea was not advanced at all.

Mr. PETERS. Did not the Civil Service Board hold examinations in the different States, and were not the names of all who passed the examinations sent up to the board and that list of names sent to the Commissioner from which to select?

Mr. SPRINGER. The civil service commissioners made their examinations as required by law. I am not familiar with the details; but when a requisition was made they sent in all the names they had.

Mr. PETERS. They sent in the names of all who had passed the examinations which were held at different points throughout the United States?

Mr. SPRINGER. They sent in all they had.

Mr. PETERS. At the instance of General Dudley I introduced the bill to which the gentleman refers; so I know something about it.

Mr. HILL. I wish to ask my friend from Illinois [Mr. SPRINGER] whether he intends this as an apology for the appointment of Democrats to office under a Democratic administration?

Mr. SPRINGER. I am sorry my friend has interjected that question. I am not apologizing for anybody. I am telling the truth. It ought to be told. If it hurts Democrats, let it hurt them. But it will not hurt this administration.

Now I wish to go on uninterruptedly for a little while, if possible. The last list sent to General Black in 1885 embraced between three hundred and four hundred names. From these names he appointed about twenty-four examiners in July. He made another call in October, 1885, for a list of eligibles, and in response to that call the commissioners sent him seventy-two names, sixty of which were new names, and twelve from the old list. The other eligibles had been certified, I suppose, three times theretofore or had dropped out by reason of having been carried on the roll for two years. Twenty-seven of those certified were appointed at that time—that is, in October, 1885. The next call made by General Black for eligibles was in December, 1885, when sixty-four names were sent in, eighteen of which were new names. From those sent in at that time seventeen appointments were made. In February, 1886, General Black made another call for a list of eligibles. Sixteen names were sent in, two of them new names, and those two were appointed. In May, 1886, General Black again called for a list of those eligible, when twenty-six names were sent in to fill eleven vacancies; and from those twenty-six names eleven appointments were made. This completed the list of one hundred and fifty that he was required by law to appoint.

Now, of these one hundred and fifty special examiners appointed by General Black it happened by accident or design—I presume by design—that about one-half were Democrats and the other half Republicans.

Mr. CANNON. As I understand, about one-half of the old force was reappointed by General Black; and nearly one-half of the one hundred and fifty examiners were appointed from men who were examined after General Black went into office. Now, as to this list, does the gentleman know the politics of the appointees?

Mr. SPRINGER. Of the appointments from those in office and those out of office, it happens that about one-half of the appointees of General Black are Democrats and the other half Republicans. For this he has been denounced as guilty of undue partisanship and as having nullified the civil-service law.

Mr. CANNON. That does not answer my question. I am speaking of the new appointees—the appointees from those not in the service. I want to know the proportion of Democrats and Republicans in round numbers.

Mr. SPRINGER. More of them were Democrats than Republicans, of course.

Mr. CANNON. How many were Democrats?

Mr. SPRINGER. I have given the exact numbers as I have gone along, and I can not now go back to recapitulate.

Mr. CANNON. I do not understand that the gentleman has done so.

Mr. SPRINGER. I want to come to the point which my friend tried to make yesterday, that General Black had nullified the law——

Mr. CANNON. No.

Mr. SPRINGER. I am going to show what the law is and what the rules of the Civil Service Commission are.

Mr. REAGAN. The difficulty with the gentleman from Illinois [Mr. CANNON] is that half were Democrats and half were Republicans. He wanted all Republicans.

Mr. CANNON. My colleague [Mr. SPRINGER] does not want to place me in a false position, nor to answer a man of straw. My statement was that as to the new appointees—the appointees from those not already in the service—the evidence of the Commissioner before the Senate committee, as stated in the newspaper press, was that out of seventy-five of these new appointees but four were Democrats, and as to the balance he did not know their politics. Now, I would be glad if my friend could corroborate or dispute that statement. I have no knowledge of the matter except what I got from the newspaper press.

Mr. SPRINGER. I presume that is true. I hope it is true. It ought to have been true.

Mr. CANNON. In order to put myself right I wish to say that if that was true it was, in my opinion, a violation of the spirit of the civil-service law; that is all.

Mr. SPRINGER. Now, my friend has modified his statement so much that it does not amount to anything.

Mr. CANNON. I beg the gentleman's pardon. This is what I stated yesterday and what I state to-day.

Mr. SPRINGER. The gentleman said boldly and defiantly that General Black had violated the law.

Mr. CANNON. Oh, no.

Mr. SPRINGER. Now, I propose to show he did not violate the letter or the spirit of the law in doing what the gentleman says he did and what I presume he did.

Mr. CANNON. If the gentleman wants to answer a man of straw, he can do so; if he wants to answer what I said, let him answer it.

Mr SPRINGER. I say that of those one hundred and fifty appointments one-half were Democrats and one-half were Republicans; and as to those selected from the outside nearly all were Democrats, as the Commissioner had the right to make them. Now, how did it happen that it was in his power to do this? I call the attention of my colleague to the rules of the Civil Service Commission in regard to these special examiners. The case is covered by a special rule.

Mr. CANNON. I so stated yesterday.

Mr. SPRINGER. I propose to read it. It is special rule No. 3, approved July 22, 1884, applying to these very officers—special examiners of the Pension Office:

> Appointments to the one hundred and fifty places in the Pension Office provided to be filled by the act of July 7, 1884, except so far as they may be filled by promotions, must be separately apportioned by the appointing power in as near conformity to the second section of the act of January 16, 1883, as the need of filling them promptly and the residence and qualifications of the applicants will permit.

Now what was the second section of the act of January 16, 1883, otherwise called the civil-service law, to which reference is here made? That second section provides among other things that appointments to the public service in the Departments at Washington should be ap-

portioned among the several States and Territories and the District of Columbia upon the basis of population as ascertained in the last preceding census. Under the law, these apportionments as to other offices than special examiners are made by the Civil Service Commission, but under the rule which I have read the civil-service commissioners were required to send the whole list of eligibles to the Secretary of the Interior, and it was the duty of the Secretary of the Interior and the Commissioner of Pensions to apportion these appointments in their own discretion among the several States and Territories according to population. They could not apportion them according to population if the rule which my friends on the other side have asserted should apply—that only four names for each vacancy to be filled should be sent in. It will thus be seen that in regard to these special examiners an entirely different rule applied from that relating to any other appointments in the public service.

Now, I assert, and defy contradiction of the assertion, that General Black and the Secretary of the Interior, in administering the law in regard to these special examiners, complied with it in letter and in spirit; and their action in this respect has had the sanction of the civil-service commissioners appointed by a Republican administration as well as those appointed by Mr. Cleveland.

Mr. CANNON. Will the gentleman yield for a question upon this point?

Mr. SPRINGER. I do not like to give away so much of my time, but as my colleague says the question is pertinent, I yield.

Mr. CANNON. The law, if I understand it correctly, does not prescribe the politics of a man who may apply for examination under the civil-service rules. Now, if the law in this respect was fairly administered, how did it happen that out of seventy-four new appointments seventy-odd appointees were Democrats, and there were no Independents, no Greenbackers, no Republicans at all?

Mr. SPRINGER. It so happened he had one hundred and fifty appointments to make, and he so arranged them that half were Democrats and half were Republicans; and he had the right to make them that way.

Mr. TOWNSHEND. The first seventy-two appointments made by Commissioner Black of special examiners, every one of them was a Republican.

Mr. SPRINGER. The House understands these facts.

Mr. REED, of Maine. I wish the gentleman would deal fairly with the House in this matter.

Mr. SPRINGER. I have stated it exactly as it occurred.

Mr. REED, of Maine. Does the gentleman say those were men who were out of office?

Mr. REAGAN. They were out of position and had to be reappointed.

Mr. SPRINGER. The gentleman from Maine is mistaken in supposing they were men who were not out of office.

Mr. REED, of Maine. Do you mean to say anybody General Black had the choice of appointing a Republican was appointed—that out of seventy-two men appointed by him every one of them was a Republican?

Mr. SPRINGER. That is exactly what I mean to say.

Mr. TOWNSHEND. That is exactly what I have said.

Mr. REED, of Maine. That he did appoint seventy-two men—all Republicans?

Mr. SPRINGER. Yes.

Mr. REED, of Maine. I should want some affidavits of that.

Mr. SPRINGER. It is entirely susceptible of proof.

Mr. RANDALL. The law put them out of office.

Mr. REED, of Maine. They were men, then, who were in office?

Mr. RANDALL. They had been in office, but their time under the law had expired.

Mr. REED, of Maine. The law reinstated them, and he simply reappointed them; and that is all there is about it. But that is a very different thing from the masquerading business we have had here.

Mr. SPRINGER. I stated it that way three or four times. If the gentleman from Maine had been in his seat he would have heard me.

Mr. REED, of Maine. I was in my seat but did not hear it.

Mr. SPRINGER. These seventy-two examiners had been in office, but their terms had expired and the Commissioner reappointed them.

Mr. REED, of Maine. Could he have appointed other men to the positions?

Mr. SPRINGER. Yes; he could have appointed other men to these positions.

Mr. REED, of Maine. He simply continued them in the same positions.

Mr. SPRINGER. He gave them new commissions.

Mr. REED, of Maine. He could not do anything else.

Mr. RANDALL. The fact is, as the gentleman from Illinois has stated it, that he did appoint these seventy-two men who were Republicans. And his example can be commended to the other side of the House if they shall ever come again into power. [Laughter.]

Mr. SPRINGER. The House, I believe, now understands the matter as I first stated it.

Mr. REED, of Maine. I think they understand it thoroughly.

Mr. SPRINGER. And I am not going to reiterate it.

Mr. REED, of Maine. But they would not understand it if it had not been explained thoroughly.

Mr. SPRINGER. My printed remarks will show how I stated it, and how I explained it from the very first.

Mr. WEAVER, of Iowa. Under the law was Commissioner Black required to retain any of that force in office?

Mr. SPRINGER. No law required him to retain any of that force in office, but on the contrary the law terminated their service. It became the duty of the Commissioner and the Secretary of the Interior to make new appointments; and in making those reappointments, as it has already been explained, out of one hundred and fifty special examiners he appointed one-half the number from the Republican party. And in doing this I commend his example to gentlemen on the other side of the House who have been parading their non-partisanship before the country, so that if they should ever by some unfortunate turn of events come back into the control of the administration of the Government, they will treat members of the Democratic party as fairly as the Democratic administration has treated members of the Republican party. I hope the example of Commissioner Black will commend itself to their consideration and to their imitation.

Mr. RANDALL. Gentlemen can see how much his conduct in that direction is appreciated by the Republican party.

Mr. SPRINGER. Every one understands this who wants to appreciate it.

But outside of these one hundred and fifty examiners appointed by Commissioner Black, one-half of whom were Republicans and the other half Democrats, I wish to call the attention of the House to other appointments in the Pension Office. Four chiefs of division not under the civil-service law have been appointed by General Black who were Democrats, and eight have been retained who were Republicans, every one of them drawing $2,000 a year, and not one of them protected at all by the civil-service law. He could have appointed a Democrat to every one of those offices if he had chosen to do so. The law did not stand in his way.

A MEMBER. And he ought to have done it. [Applause.]

Mr. SPRINGER. But he only appointed four Democrats out of the twelve places.

Mr. HISCOCK. Could he have appointed Democrats to every one of those positions and found competent men to do the work?

Mr. SPRINGER. Yes, sir; he could.

Mr. REED, of Maine. Well, you are going to make him very unpopular with the Democratic party if you keep on with that speech. [Laughter.] But the fact is, the public know that the speech does not amount to anything.

Mr. DOUGHERTY. I desire to suggest to the gentleman from Illinois that the only sin Mr. Black committed is that after these fellows were turned out ever to have issued a commission to one of them.

Several MEMBERS. That is true.

Mr. SPRINGER. But to go on with this list. Two qualified surgeons have been appointed, not under the civil-service law, both of whom are Democrats. Their salaries are $2,000 each. Five medical examiners have been appointed, at a salary of $1,800 a year. Two of these were appointed before the decision of Attorney-General Garland bringing these officials under the civil-service rules, and three afterward. The three appointees for this service were certified up by the Civil Service Commission under the law. These five medical examiners are Democrats, and thirteen remain in their old positions and are supposed to be Republicans. So that out of this number only five changes have been made, and the thirteen Republicans still remain in office.

The CHAIRMAN (Mr. COX in the chair). The time of the gentleman has expired.

Mr. SPRINGER. I hope the gentleman from New York will yield to me a little longer.

Mr. REED, of Maine. I wish the House would give the gentleman five minutes more, and I want five minutes to expose this thing.

Mr. WEAVER, of Iowa. I want the House to give the five minutes then, because I want to see if it can be exposed.

Mr. RANDALL. I will yield five minutes to the gentleman and will try to get it from some other source.

Mr. SPRINGER. Mr. Chairman——

Mr. TOWNSHEND. Mr. Chairman, I certainly must take the floor.

Mr. RANDALL. Then I will have to take back the time that I have yielded.

Mr. TOWNSHEND. I reserved my time and have yielded now for some time to other gentlemen.

Mr. SPRINGER. I will get through in five minutes.

Mr. RANDALL. Illinois must settle its own controversies, but not at my expense.

Mr. REED, of Maine. The gentleman from Pennsylvania had better give me five minutes and depend upon the other side to reimburse him. [Laughter.]

Mr. RANDALL. I have not any more time to spare.

Mr. TOWNSHEND. I will let my colleague proceed now without insisting upon my right to the floor.

Mr. SPRINGER. I will not occupy more than five minutes longer.

Mr. REED, of Maine. Let us have some more of the same kind of Democratic actions.

Mr. SPRINGER. I will give the gentleman, if he will be still, a good deal of valuable information.

Mr. REED, of Maine. I have no doubt you will.

Mr. SPRINGER. I can assure him that we have so far "tempered the winds to the shorn lambs" upon that side of the House.

Now, all the other officers in the office of the Commissioner of Pensions not appointed under the civil-service law, but selected by the Commissioner of Pensions personally, such as messengers, watchmen, &c., only about half the number have been changed, and the other half remain just as they were under the Republican administration.

These positions in the Pension Office are twenty messengers, twenty-five watchmen, twenty-five laborers, twenty messenger boys, and five charwomen. Seven of the old messengers remain. One who has left this service was promoted to a better position. Ten of the old watchmen remain, nine of the laborers, and nine of the messenger boys, and four charwomen.

Gentlemen have assumed and the gentleman from Maryland [Mr. McCOMAS] said that it was the object of the Democratic party to make a clean sweep of these offices. No such intention has been shown since Mr. Cleveland took control of the administration. I want to call the attention of gentlemen to the wonderful forbearance that the Democratic party has shown in regard to the offices as far as the Republicans are concerned. Look at the Government Printing Office, still run by Mr. Rounds, a Republican, while there are over one thousand employés.

Mr. RANDALL. Over twenty-six hundred.

Mr. SPRINGER. Twenty-six hundred, as the gentleman from Pennsylvania tells me; not one of them protected by the civil-service law.

Mr. RANDALL. And the office expends $2,700,000 annually.

Mr. SPRINGER. Yes, sir. I refer also to the Bureau of Engraving and Printing, where the number of Republican employés is nearly a thousand, and which is presided over by a Republican, not one of the employés in the bureau being protected by the civil-service laws.

Mr. HISCOCK. Let me ask the gentleman if their protection is not——

Mr. SPRINGER. I decline to yield to the gentleman. The Architect of the Treasury Department is a Republican and still holds his place; not one of his employés is protected by the civil-service law. And look at the offices throughout the country generally that are still filled by Republicans. The consul-general and vice-consul at Paris are Republicans; many of the positions of governors of the Territories and the judges of the Territorial courts, officers of the Indian Bureau and of the land offices are still in the hands of the Republicans. Look into any branch of the public service in every State and Territory and you will find hundreds of Republicans are still in office.

The incumbents of the following offices of the Treasury Department have not been changed by this administration:

Supervising Surgeon-General of Marine-Hospital Service.
Supervising Inspector-General of Steam-Vessels.
Chief of the Secret Service.
Superintendent of Life-Saving Service.
Chief of the Bureau of Engraving and Printing.
Deputy commissioner of customs.
Deputy second auditor.
Deputy fourth auditor.
Deputy fifth auditor.
Deputy sixth auditor.
Deputy commissioner of internal revenue.
Commissioner of Navigation.
Five chiefs of division in Secretary's Office.
Eight assistant chiefs of division in Secretary's Office.
Three chiefs of division in First Auditor's Office.
One chief of division in Second Auditor's Office.
Two chiefs of division in Third Auditor's Office.
One chief of division in Fourth Auditor's Office.
Two chiefs of division in Fifth Auditor's Office.
Two chiefs of division in Sixth Auditor's Office.
One chief of division in First Comptroller's Office.
Two chiefs of division in Second Comptroller's Office.
One chief of division in Comptroller of Currency's Office.
Four chiefs of division in Commissioner of Internal Revenue Office.
Four chiefs of division in Treasurer's Office.

None of these positions are protected by the civil-service law.

There are also in the Treasury Department about one hundred and seventy-five messengers, assistant messengers, laborers, firemen, watchmen, paper-counters, &c., at salaries ranging from $840 to $360 per annum, and about six hundred employés paid per diem salaries in the Bureau of Engraving and Printing, all of whom may be appointed without reference to the civil-service rules.

Under the general leave to print which has been given I will insert lists of Presidential and Department offices in the Interior Department not covered by the civil-service law, and in which there have not as yet been any changes made by the present administration.

List of departmental offices above the "classified service" to which appointments have not yet been made (June 10, 1886) by the present administration.

[A star (*) against a name indicates service in Union Army or Navy.]

Office.	Salary.	Present incumbent.	Legal residence.	Original appointment.
OFFICE OF THE SECRETARY.				
Chief clerk and superintendent of the building	$2,750	George M. Lockwood*	New York	Feb. 9, 1877
Disbursing clerk	2,000	George W. Evans	District of Columbia	Apr. 16, 1864
Chief of Indian division	2,000	Robert V. Belt*	Maryland	Apr. 15, 1882
Chief of patents and miscellaneous division	2,000	Edw. M. Dawson	Maryland	Aug. 22, 1868
Member board of pension appeals	2,000	George Ewing	Pennsylvania	Mar. 28, 1863
Superintendent of documents	2,000	John G. Ames	New York	Nov. 1, 1873
Chief of stationery division	2,000	Amos Hadley*	Maine	Aug. 23, 1876
Custodian of the Department	1,600	Charles W. Thompson*	Massachusetts	Aug. 8, 1882
Clerk to sign land patents	1,200	Miss Marcia McKean	District of Columbia	July 12, 1884
OFFICE OF ASSISTANT ATTORNEY-GENERAL.				
Law clerk	2,500	Frank L. Campbell*	Ohio	June 27, 1870
Clerk	2,000	Samuel V. Proudfit	Iowa	Apr. 7, 1881
Do	2,000	Luther R. Smith*	Alabama	July 8, 1883
Do	2,000	Edwin P. Hanna	Kansas	July 21, 1875
GENERAL LAND OFFICE.				
Law clerk	2,000	John W. Le Barnes*	District of Columbia	Nov. 1, 1875
Inspector of surveyors-general and district land offices	2,000	Francis D. Hobbs*	New Hampshire	Dec. 9, 1871
OFFICE OF INDIAN AFFAIRS.				
Financial clerk	2,000	Edmund S. Woog*	Missouri	May 23, 1877
Principal book-keeper	1,800	Joseph B. Cox	District of Columbia	Nov. 28, 1871
Chief of accounts division	1,800	Samuel M. Yeatman	Virginia	Feb. 6, 1878
Chief of lands division	2,000	Charles A. Maxwell*	Ohio	Dec. 23, 1874
Special Indian agent	2,000	Charles H. Dickson	Indiana	Aug. 21, 1884
PENSION OFFICE.				
Chief of board of review	2,000	Jacob R. Van Mater	New Jersey	Mar. 17, 1866
Chief of Eastern division	2,000	Fred Mack*	Vermont	May 15, 1873
Chief of War and Navy division	2,000	William H. Webster*	Connecticut	June 8, 1869
Chief of mail division	2,000	David L. Gitt	Missouri	June 8, 1869
Chief of miscellaneous division	2,000	Fred. C. Peck*	Colorado	Apr. 21, 1882
PATENT OFFICE.				
Chief clerk	2,000	Schuyler Duryee	Virginia	Jan. 3, 1881
Examiner of interferences	2,500	Frank MacArthur	Wisconsin	July 14, 1877
Principal examiner	2,400	Oscar C. Fox*	New York	May 21, 1870
Do	2,400	William H. Blodgett	Wisconsin	May 1, 1871
Do	2,400	Benjamin W. Pond	Virginia	July 17, 1873
Do	2,400	William Burke	Wisconsin	Dec. 1, 1866
Do	2,400	Thomas Antisell*	District of Columbia	June 1, 1866
Do	2,400	Oscar Woodward	Iowa	Feb. 1, 1874
Do	2,400	Frank T. Brown	Kentucky	Nov. 15, 1875
Do	2,400	Henry P. Sanders*	New York	July 6, 1869
Do	2,400	John P. Chapman	Ohio	June 1, 1872
Do	2,400	Jos. W. Jaynes	Pennsylvania	May 21, 1861
Do	2,400	Solon W. Stocking*	New York	Sept. 3, 1869
Do	2,400	Benjamin S. Hedrick*	North Carolina	Apr. 10, 1864

In the postal service equal forbearance has been shown. The Third Assistant Postmaster-General still holds his place; Mr. Jameson, Superintendent of the Railway Mail Service, and numerous others have not been changed. The postal railway clerks, numbering several thousand, have not been changed except for causes other than political. These places are not embraced in the civil-service law, and could all have been filled ere this by Democrats. In the State Department two Assistant Secretaries, the chief clerk, and many others are still retained. In the Army and Navy Departments but few changes have been made, and none, so far as I am advised, for political reasons. The President has not even changed the employés at the Executive Mansion. He sends his messages to Congress by the same secretary who brought those of Hayes and Arthur. In short, his whole administration is characterized by acts of forbearance toward his political opponents.

In view of these facts I assert, and the history of this country will concede the fact, that the administration of President Cleveland is the most non-partisan since that of George Washington. He has endeavored faithfully and honestly to execute the civil-service law, and has extended its spirit far beyond its letter. The Democratic party is in favor of the execution of this law in its letter and spirit, but it never was intended by the framers of that law, or by those who passed it, to put into the hands of a small cabal the power to arrange the appointments of all the officials of this Government against the will and judgment of the President and the heads of the Departments. All that was ever intended by the civil-service law was to provide an examination for those who were applicants for public service with a view to ascertaining their fitness for the positions to which they aspired. Gentlemen on the other side of the House are now endeavoring to pervert and distort this law for the purpose of keeping Republicans in and Democrats out of office.

Macht Platz fuer Alt Berks.

SPEECH

OF

HON. DANIEL ERMENTROUT,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 7, 1886.

The House having under consideration the bill (H. R. 1983) extending the limit of the appropriation for the erection of a public building at Reading, Pa.—

Mr. ERMENTROUT said:

Mr. SPEAKER: It is hardly worth while to take up much time in the discussion of this bill. It is not the first time that a bill for this purpose has been before Congress. As early as the Forty-second Congress a bill was passed by the House, but owing to the lateness of the session it was not considered in the Senate and consequently did not become a law. In the Forty-seventh Congress a bill was reported favorably to the House, but no opportunity given to call it up. In the Forty-eighth Congress a bill was reported providing for an appropriation of $80,000 and became a law. Commissioners were appointed to select a site for the erection of the building, and they reported the amount of the appropriation to be utterly inadequate. Hence a bill was introduced in this Congress asking for an appropriation of $250,000. The committee to which the bill was appropriately referred, upon examination, amended it by reducing the amount from $250,000 to $180,000, and that is the sum this bill appropriates.

Mr. WARNER, of Ohio. Is that $180,000 in addition to the former $80,000?

Mr. ERMENTROUT. No, sir; it is an addition of $100,000. After an investigation the Secretary of the Treasury thought $230,000 a sufficient sum. The committee, however, concluded that we must be content with $180,000, and we are willing to make the effort.

Mr. Speaker, perhaps it is hardly necessary for me to tell this House where the great metropolis of Reading is. And yet as there are so many things to engross the time and minds of Congressmen such information might be very necessary. Such also has been her astonishing growth that many of you who knew the Reading of old would hardly recognize the Reading of to-day. Reading is located on the eastern bank of the Schuylkill, "the hidden river" of the early Dutch explorers, on a gently sloping area of wide extent.

Beyond the river on the west, with a church-spire, a school-house, some bridge, or furnace stock, or factory, or mining operation thrown in, are the broad and fertile acres of the rich Lebanon Valley, dotted everywhere with farm-houses and homes, and now, in this month of June, thickly covered with fragrant clover and timothy and the waving wheat and rye almost ready for the reaper. Here and there rise hills and hillocks decked with forest foliage, revealing a picture pleasing to the eye and grateful with shade to the toiling laborer and the feeding herds. Back of this noble city stands out in bold relief against the eastern sky Penn's Mount, and along the winding river the Neversink Mountain, with its romantic Lover's Leap. Behind them lies Alsace, marshaling on the bosom of its sloping hills under the ripening sun battalions of the purple vine and the hills of Oley rich with corn and oil. These verdure-covered mountains command full views of the city below, and of miles and miles of the country beyond—a very garden of Paradise unrolling itself to the vision like some beautiful panorama. They are also interspersed with many pretty places of resort for entertainment and summer life, some hidden in the woods, some standing prominently forth, and are reached by means of good, broad roads cut in the mountains, or inclined railway. So well adapted for a city is its site, so charming its natural surroundings, so inexhaustible its facilities for comfortable and orna-

mental suburban homes and places of recreation, and so genial its thrifty population, that should its material resources fail Reading would continue to be a splendid and flourishing city.

But her material resources will not fail. Year after year adds new enterprises; year after year the hum of her industries swells louder and louder; year after year the thumps of her forge-hammers become more deafening; year after year the smoke ascending to the heavens from her furnaces and foundries, her factories, her mills, and her shops becomes denser in perpetual testimony to the solid, conservative, abiding progress which the genius of improvement has breathed into her people. Year after year new railroads from all directions project their tracks into and out of her territory and waken the echoes with their locomotive-whistles. Year after year buildings and shops are erected and enlarged to meet growing wants. Her streets are extended, her borders enlarged, her reservoirs increased, her natural advantages improved by art, and her population augmented. Her population is now at the lowest 55,000 souls, and will at the past rate of increase double within the lifetime of the present generation.

The revenues from the Federal offices have paid for the amount of the appropriation twenty times over and more.

But there is another reason why this bill should commend itself to the support of the House irrespective of party or locality.

We all love the "fathers of the earlier and better days of the Republic." Often on this floor have I heard gentlemen grow eloquent over the virtues, the principles, and traditions of Jefferson and Jackson and the fathers and the "good old times." Well, sir, let me say that Reading is the capital of that magnificent domain known in the political history of the country as "Old Berks." It was Samuel J. Tilden, the sage of Greystone and greatest of living statesmen, who, I am glad to know, still lives in the unimpaired possession of his faculties, while others who contended with him as rivals for the Presidential prize have passed away and are dust—he it was who paid the people I have the honor to represent that most magnificent compliment:

From the days of Jefferson, since the foundation of parties, through all the vicissitudes of parties, you have remained firm and steadfast to your political ideals.

Yes; and in the olden days elections were never considered settled till "Old Berks" was heard from.

Mr. STRUBLE. Will the gentleman permit me to ask him a question?

Mr. ERMENTROUT. I decline to be interrogated. It is not often that "old Berks" gets the floor so entirely to herself with such a following as she has to-day. [Laughter.]

People in those days, I say, never made up their minds how the election had gone until the returns came in from "old Berks." In those days they had not the telephone or the telegraph. The stage-coach and the Conestoga wagon were almost the sole means of communication. In our State the earliest returns were usually first gathered at Harrisburg, frequently brought there by the teamsters who gathered them up along the route. It is related that on the occasion of one of Jackson's campaigns the teamsters on their way through Harrisburg after the election day were asked, "What are the returns from old Berks?" The answer came: "Nine thousand majority for Jackson and they are voting yet." [Laughter.] Jackson was elected. Certainly the followers of Jefferson and Jackson and the admirers of the "good old times" are obligated to support this bill.

There is another ground on which I ask the unanimous support of the House for this bill, a reason that will commend itself to enlightened men everywhere. "Old Berks" has been eminently a missionary county, evangelizing in all sections of the country from the earliest times.

Mr. VAN EATON. Are there any missionaries there now?

Mr. ERMENTROUT. Plenty of them left. We have sent them to the East and the West, the North and the South, in fine to all points of the compass in this country, and, I may add, the rest of the world. I look at the benevolent countenance of my friend [Mr. MCCREARY] before me, and I see it beaming his acknowledgment of the lasting debt Kentucky owes to "Old Berks" for sending down into the "dark and bloody ground" her son, the noblest pioneer of all, Daniel Boone, to lay the foundations of the great Commonwealth that gave us statesmen like Clay and Crittenden and Breckinridge, himself and the Speaker of this House. I turn to Illinois. "Old Berks" nurtured the ancestors of Abraham Lincoln, whose memory since the grave has made mute the voice of party and buried the bitterness of war is cherished as that of an honest patriot. Those ancestors gave him to Kentucky; Kentucky gave him to Illinois; Illinois, to the country.

I find in Texas, in the person of Judge REAGAN, who has acted a conspicuous part to the annals of the country, a gentleman in whose veins courses the blood of John Andrew Shulze, one of Pennsylvania's German governors, whose home was on the banks of the Tulpehocken. The stubborn honesty of the descendant does not belie the sire whose same quality adorned that high position.

Let my friend [Mr. VAN EATON] hunt up the records of his State. He will find illustrating the history of his State Yerger and others whose names bear the ear-marks of "Old Berks." There is no telling how much of his success as a statesman Mr. HOLMAN, of Indiana, owes to the hundreds of the sons of old Berks living in his district. Perhaps he learned from them his first lessons in economy. Go into Ohio, behold her beautiful, well-proportioned, commodious, neat barns and well-tilled fields; they are the finger-boards of my people. The valleys of Virginia bloom with their thrift and her history with their achievements.

Thus might I go on a whole day and call up names and facts familiar in every Congressional district in the States and Territories of the Union, and I doubt if any one of the Representatives of the same, under oath, could fail to bear testimony to the benefits of the missionary work conferred upon them by the hosts of hardy pioneers and their descendants, who from the earliest times have gone forth from old Berks as it were from a mint of nations. Why, we have the lineal descendants of her children around us here on every hand as Representatives from the States. There is my colleague from Iowa [Mr. STRUBLE]; I am sure he is proud of his Berks County lineage. And there is my colleague from Kansas [SAMUEL RITTER PETERS]; he bears in his middle name most honorable evidence of the same origin.

To be sure, those gentlemen have forgotten to maintain the political faith of their fathers, but this only shows that our contributions to the country have been without regard to party. I might continue this interesting discourse, but I fear that to do so I would be compelled to take in the greater part of the Congressional Directory and a large part of the history of the country. I hope, however, that I have given this House a sufficient statement of the merits of this bill and of the obligations it is under to the district I have the honor to represent to make clear its duty to pass this bill.

Extension of Indebtedness of Pacific Railroads.

SPEECH

OF

HON. BARCLAY HENLEY,

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 5, 1886.

The House having under consideration the bill (H. R. 8318) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862; also to amend an act approved July 2, 1864, and also an act approved May 7, 1878, both in amendment of said first-mentioned act; and to provide for a settlement of the claims growing out of the issue of bonds to aid in the construction of certain of said railroads, and to secure to the United States the payment of all indebtedness of certain of the companies therein mentioned—

Mr. HENLEY said:

Mr. SPEAKER: I did not anticipate that this bill would be reached this morning, because I was advised yesterday that the Appropriations Committee intended to contest the right of way to-day with the Committee on Pacific Railroads and I thought the former would prevail in that contest. I had prepared some memoranda, which, not anticipating this discussion, I have not at hand, from which it was my purpose to address this House. I shall not, therefore, be able to do so with that elaboration that might be desired. But certain observations have suggested themselves to my mind while listening to the speech of the gentleman from Ohio [Mr. OUTHWAITE], which I desire to submit to the House, and I shall consume as little time as possible in doing so.

Now, Mr. Speaker, I certainly have no wish to say anything that savors of the *ad captandum* in noticing the propositions involved in this bill, because I recognize the fact that this is a business proposition and should be disposed of on business principles.

In the first place my very great respect for the chairman of the Committee on Pacific Railroads and the other gentlemen upon that committee constrains me to regard this bill with a great deal more favor than I otherwise would. Still, sir, there are certain great facts in connection with the subject which forbid me to surrender my individual judgment or yield it to the views of the committee.

I am profoundly impressed with the conviction that this measure should not pass, and that judgment is founded upon more reasons than I shall probably have time to express to-day.

I know this also in respect to the bill, and that is a consideration on the other side, that if its provisions so jealously conserve and guard the interests of the Government, it does seem passing strange that these companies, the Union and the Central Pacific, are so friendly to it. So far as my knowledge goes they have rarely favored honest legislation where their interests were involved. I do not know whether that is a factor that should enter into our view of the matter or not; but from the outgivings of certain organs, certain newspapers in this country of notorious tendencies, and from information which has reached me regarding the views of individuals who are to be seen in the corridors of this Capitol in connection with railroad legislation, I confess I am not much prejudiced in favor of the bill; such things do not advance it

greatly in my judgment as being a correct measure. In other words, Mr. Speaker, these corporations who are satisfied with the bill have a record of habitual defiance of law from the hour of their creation up to the present time, or at least up to the time that they were converted to the belief that this is a proper measure—from first to last their record and their career in this country has been one of flagrant and bold insubordination to law; has been one of domination of legitimate authority; one of meretricious control of Legislatures, unlawful interference with popular elections, constant evasion of their obligations, and a persistent intrusion even, in some instances, within the sacred precincts of the forum. And this, sir, has been carried so far as to now constitute a reproach to American civilization and a menace to constitutional government.

Mr. LONG. Will the gentleman specify one instance in which the present administration of the road violates the law?

Mr. HENLEY. I was going to say I would do so with a great deal of pleasure, but I will do it with a great deal of regret (because such a revelation is no pleasure to me) if gentlemen will give me their attention.

Mr. LONG. What does the gentleman refer to? To the Union Pacific?

Mr. HENLEY. I refer to the Union Pacific, the president whereof is Charles Francis Adams.

Mr. LONG. Now will the gentleman specify any instance in which Mr. Adams violates the law?

Mr. HENLEY. Yes; but I can not do it unless the gentleman gives me an opportunity by silence. I must have time to do it in.

Mr. CANNON. Will the gentleman allow me a single suggestion?

Mr. HENLEY. Certainly.

Mr. CANNON. I concede to the gentleman frankly I have not studied this bill as well as I might have done if I had sufficient time. We all have our particular committee work to do. I am in search of light. I have heard the remarks of the gentleman from Ohio [Mr. OUTHWAITE], and I would be glad if the gentleman from California, who has been condemning these roads for general improper action in the past, would state the substantial objections to this bill without reference to the action of the railroads or anybody else in the past, but coming down to the merits of the bill itself, taking the situation as it now is. I wish to say that much before the gentleman continues his remarks.

Mr. HENLEY. I will give to the gentleman from Illinois before I finish what I conceive to be substantial objections, or sufficient objections at all events to impel me to take the action I propose to take. Those objections can not be irrespective of the railroads, however, as the gentleman suggests. It is these corporations, their conduct past and present, that confront us at every turn of this inquiry, and which can not with propriety be ignored in this discussion.

Mr. CANNON. Without reference to the past history of the roads, but looking to the future.

BAD HISTORY OF THE RAILROADS.

Mr. HENLEY. Well, I am going to speak of the past, because, as I said, that is a very pertinent matter of discussion and consideration here. Now, Mr. Speaker, as I have intimated, the fact that this measure is in a degree acceptable to those notorious transgressors of the law does not advance it much in my estimation, but superinduces, in my mind, a very grave suspicion that there is something wrong about it—something, of course, that the Committee on Pacific Railroads are unadvised of; otherwise they would not support it. Some time ago I introduced into the House a resolution for the purpose of instituting an investigation by Congress into the affairs of this company in its relations to the Government and into the truth of certain allegations and rumors that had been rife in the country, emanating from very respectable sources, in respect to the internal management, the administration of this company as to its business connection with the Government.

The committee did not report that resolution, but they reported one as a substitute for it. The substitute of the committee provided for a commission to be appointed by the Secretary of the Interior, and which, unlike my resolution, must pass the Senate before it can become operative; but the object of my resolution, which did not require Senatorial action, was to create a Congressional Committee who should be clothed with power to send for persons and papers, to employ railroad experts and accountants, and to find out among other things where every dollar of the income of these companies has gone, from the time of their organization up to the present hour. Here, for instance, is certain indebtedness alleged to be due from the Union Pacific Railroad Company to certain branch lines; now, I think it is an important thing, in connection with legislation upon this subject, that this House should know whether that indebtedness is genuine or not—in other words, whether it is the result of a contract by the Union Pacific Railroad Company with the Union Pacific Railroad Company, as the contract for the construction of the Central Pacific Railroad with the Contract and Finance Company was simply a contract by the directors of that company with the directors of the same company—in other words, a contract by men in one capacity with themselves in another capacity, by means of which the Government has been defrauded out of millions and millions of dollars. And how we can with proper intelligence legislate on this subject without this information I can not see.

INVESTIGATION NECESSARY.

I desired to know, and I think the people of this country also wanted to know, for example, how many persons in the city of Washington are in the employ of these Pacific railroad companies to-day, and what duties such employés perform, and how much they are paid. I see men around these corridors who have been pointed out to me as being employés of these corporations, and my resolution might elicit some information as to the character of duties or work these men are engaged in, and how much, if any, of the incomes of these corporations is diverted to illegitimate purposes. Mr. Charles Francis Adams himself has said—and I leave the distinguished gentleman from Massachusetts [Mr. LONG], who interrogated me a while ago, to say if that constitutes fair dealing with the Government—Mr. Charles Francis Adams himself has said, as I understand, that the free-pass list of the Union Pacific Railroad Company costs the company $2,000 a day. Is that honesty on the part of the management of this company? And this is the smallest accusation I shall make against this corporation.

Mr. LONG. What is the authority for the gentleman's statement?

Mr. HENLEY. I have seen it stated repeatedly.

Mr. LONG. Where?

Mr. HENLEY. I do not know but that there are gentlemen upon this floor who have more and better information than I have.

Mr. LONG. Where has the gentleman seen it stated repeatedly?

Mr. HENLEY. In newspapers and in periodicals. It is a part of the current history of the country of which no man ought to plead ignorance.

Mr. LONG. Will the gentleman name one newspaper or one periodical on the authority of which he makes the statement?

Mr. HENLEY. Yes, sir; I will furnish the gentleman with an abundance of them. The New York World is one paper in which I have seen the statement, and I can give the gentleman a good many more; there will be no trouble about that. But does the gentleman deny its truth?

Mr. LONG. I do deny its truth.

Mr. HENLEY. On what authority?

Mr. LONG. On the same authority on which the gentleman states it—that it is mere newspaper rumor.

Mr. HENLEY. Will you name one paper that says it is not true? [Laughter.]

Mr. LONG. If the gentleman will allow me——

Mr. HENLEY. I am allowing you, but you do not respond; name a paper.

Mr. LONG. If the gentleman will allow me, I will say to the House that Mr. Adams courts the very fullest investigation. He knows perfectly well who the vampires and manipulators are from whom come these rumors and roorbachs that are designed for the purpose of manipulating this stock in the stock market. His administration has been investigated by the national directors and by the Railroad Commissioner, and he (Mr. Adams) implores Congress to make a thorough, searching, final investigation. All the facts are known in regard to his administration; nothing is secret. Mr. Adams is a constituent of mine, and I want to say to the House that he asks, courts, challenges, urges the fullest investigation that can be made.

Mr. HENLEY. I asked the gentleman from Massachusetts for the name of some newspaper which denied the statement, and the House hears the answer.

Mr. LONG. I deny it on the authority of Mr. Adams.

Mr. HENLEY. On the authority of Mr. Adams, the malefactor in the case if he is guilty—the gentleman denies it on that authority. In other words, Mr. Adams, like others indicted for crime, enters a plea of not guilty. I knew he would. I would if I were in his place. Guilty or innocent, his plea would be the same.

Mr. Speaker, I was speaking of the function of the committee that was sought to be created by the resolution that I introduced, and I mentioned these things as matters of rumor. The gentleman from Massachusetts [Mr. LONG] wants me to indicate where the rumors originated and who should be held responsible for them. Sir, the purpose of the resolution—and this the gentleman seems to lose sight of—the purpose of the resolution was to ascertain whether these multitudinous rumors affecting the integrity of this company and its agents were true or not and finally set the matter at rest. The gentleman from Massachusetts rises here and tells the House that Mr. Charles Francis Adams courts the fullest investigation.

Mr. Speaker, he has a strange way of inviting that investigation for a man who claims to be innocent. I ask if he ever came before the Committee on Pacific Railroads and asked that the committee sought to be created by my resolution should be created. I was before the committee a number of times and never saw him. On the contrary, the understanding has been, so far as the information reaches me, and from newspaper sources and otherwise, that they were not only opposed to that investigation, but were fighting with every agency they had at hand. And if Charles Francis Adams were a wronged and an injured man by these innuendoes, and direct accusations in some instances, if he were

an innocent man, as the gentleman from Massachusetts [Mr. LONG] claims him to be, what would he have done? A resolution was introduced by myself in Congress. It is as follows:

Whereas the Union Pacific Railroad Company was prohibited by the act amendatory of the act incorporating said Union Pacific Company, approved July 2, 1864, from issuing stock unless the same was fully paid for at its par value in money; and

Whereas it is alleged that in flagrant violation of said law the said Union Pacific Company has issued six hundred and ten thousand shares of stock of the par value of $100 per share, equal to $61,000,000, and only twenty-one hundred and eighty shares of said stock was paid for in money, and only $218,000 in money has been received on account of sails of said stock, and certain illegal issues of income, land-grant, and sinking-fund bonds have been made by said company, and, in utter defiance of the law and in fraud of the rights of the Government, said Union Pacific Company has paid out of its earnings more than $52,000,000 in dividends and interest to the holders of said fraudulent stock and bonds, which was enough to have paid its entire indebtedness to the Government; and

Whereas it is alleged that said company, in defiance of the law and in disregard of the rights of the Government, has built and equipped out of its earnings twenty-nine branch roads, and has caused to be issued to itself for said construction and equipment bonds of said branch roads of small value, and stock of said branch roads to the nominal value of $40,000,000, but which stock is wholly without value; and

Whereas it is alleged that $16,000,000 of the said bonds are now pledged by said company to various banks and moneyed syndicates for loan of money, while no provision whatever has been made by said Union Pacific Compay for the payment of its first-mortgage bonds, which bonds amount to $34,000,000, and have a preference over the debt due by said Union Pacific Company to the Government; and

Whereas, by its own reports, the gross earnings of said Union Pacific Company have diminished $3,000,000 in one year, while its expenditures have greatly increased, while at the same time the expense account of twenty-five of their twenty-nine branch roads has been greatly diminished and their earnings greatly increased; and

Whereas it is alleged that said branch roads are supported and fostered chiefly by the business of the main line of the Union Pacific Railroad Company, which pays to said branch lines a bonus in constructive mileage of 1½, 1¾, and 2 cents per mile over and above the regular rate of transportation charged by said line, which rates of constructive mileage, amounting to immense sums of money, are paid out of the earnings of said Union Pacific Company to their branch roads in order to decrease the exhibit of net earnings, and thus decrease the 25 percentage which, under the Thurman act, is due to the Treasury of the United States, which is a violation and evasion of the Thurman act and in fraud of the rights of the Government; and

Whereas it is but just and proper that the railroad built by Government aid should be compelled to be just to the Government, and every abuse in their administration should be corrected, and the just dues of the Government against them be ascertained and collected, and the right and interest of the Government in and to the said branch roads should be correctly ascertained and enforced: Now, therefore,

Be it resolved, That the Speaker of the House is hereby directed to appoint, from the House a select committee of five, which is hereby instructed, with the least possible delay, to institute a rigid and thorough investigation of the books, accounts, system of bookkeeping, and business methods of the Union Pacific Railroad Company; into the manner and methods pursued which resulted in the consolidation of the Kansas Pacific and the Denver Pacific Railroads with said Union Pacific system, and what was paid for said consolidation, and to whom paid, and by what authority two hundred and forty thousand shares of the stock of said Union Pacific Company was issued at the time of and soon after said consolidation, and to whom said stock was issued and what was paid therefor; how much stock in all has been issued by said Union Pacific Company, and how much actual cash money has been paid on account of the issue of said stock; into the manner in which the branch roads of said Union Pacific Company were constructed, who constructed them, and what was paid on account of their construction, who now owns said branch roads and what rights the United States Government has therein; also, the rates of constructive mileage paid by said Union Pacific Company to said branches, how much has been paid out on said account, to whom, and by whom paid, and what proportion thereof is due the Government of the United States; also, to report a plan by which the said company may be compelled to provide for the payment of their first-mortgage bonds, and whether said company has not violated and is not now violating its charter and the acts amendatory thereof, and whether it would be for the interest of the Government that said company should be placed under Government control, with receivers appointed therefor; and also into any and all matters regarding the interest of the Government in said railroads; and for this purpose said committee may, in its discretion, visit such points or places as may be most convenient for the purpose of this investigation, and shall have power to send for persons and papers, administer oaths, employ such expert accountants and stenographers as may be deemed necessary, and make a full and final report to Congress on or before the first Monday of December, 1886, of all matters embraced in this preamble and resolution, or of any abuse of administration on the part of said Union Pacific Railroad Company not mentioned herein that they may deem proper; and the expenses of said investigation shall be paid out of the contingent fund of the House.

There, Mr. Speaker, were a series of allegations which, if true, then Charles Francis Adams and his co-conspirators in these matters should be wearing the striped garb of convicts in some place of penal incarceration instead being free men to-day. We have here these solemn accusations which, if they had been made in respect to the gentleman from Massachusetts [Mr. LONG], or in respect to the gentleman from Texas [Mr. REAGAN] who sits in front of me, or any other man of honor, he would have rushed to the presence of that Pacific Railroad committee and said, "Gentlemen, here are allegations made in the form of a resolution introduced into the House of Representatives of the American Congress affecting the integrity of my company and myself as a man, and I demand these matters shall be investigated."

Mr. HAYDEN. Will the gentleman allow me a moment?
Mr. HENLEY. No, sir.
Mr. HAYDEN. For one moment only.
Mr. HENLEY. No, sir.
Mr. HAYDEN. I should like to say in answer——
Mr. HENLEY. Wait a moment.
Mr. HAYDEN. Only for a moment.
Mr. HENLEY. For what purpose?
Mr. HAYDEN. For the purpose of asking a question.

Mr. HENLEY. I have asked these gentlemen if the Union Pacific Railroad Company appeared before that committee for the purpose of joining with the person who offered this resolution coming from this House in demanding that investigation?

Mr. HAYDEN. Yes; if the gentleman will allow me.

Mr. HENLEY. I ask if that is true; and I will yield for an answer to that question.

Mr. LONG. I will answer.

Mr. HAYDEN. I will answer.

Mr. HENLEY. The gentleman from Massachusetts is not on that committee.

Mr. HAYDEN. I am on the committee, and I should like to answer it.

Mr. HENLEY. Well, answer it.

Mr. HAYDEN. Mr. Adams demands an investigation.

Mr. HENLEY. Why did he not go before the committee and do it?

Mr. HAYDEN. Mr. Adams, after getting the resolution which was introduced by the gentleman from California [Mr. HENLEY], used the following language:

So far as investigation is concerned, your directors invite it, although they think it safe to say there is no corporation in the world the affairs of which during the last sixteen years have been subject to such incessant, searching and wearisome investigation as the affairs of the Union Pacific Railroad Company. The Government has always had five representatives on the board of directors of the company, who have the same access to its books and the same information as to the conduct of its affairs as the directors chosen by the stockholders.

Mr. HENLEY. That is enough.

Mr. HAYDEN. That is the answer of Mr. Adams.

Mr. HENLEY. I decline to yield further, because from the gentleman himself it appears they did not appear before the committee and invite investigation, as honorable men ought to have done.

Mr. RICHARDSON. Permit me to interrupt the gentleman, to say that Mr. Adams did appear before the committee, and it is no violation of the secrets of the committee to say that he did say he would submit to any investigation or to any examination this House in its wisdom might suggest.

Mr. LONG. And other gentlemen concur in that statement.

Mr. RICHARDSON. One word more, if the gentleman will yield to me.

Mr. HENLEY. Yes, sir.

Mr. RICHARDSON. Mr. Adams did not say that he favored an investigation by a commission of experts, nor did he say that he favored one by a committee composed of members of this House, but, as I understood it, he left it entirely to the discretion and wisdom of the House and Congress to make such investigation as it might deem wise in either form.

Mr. HENLEY. That he must do, as a matter of course. He knew he must do that. But the gentleman from Massachusetts insisted that Charles Francis Adams demanded himself, as an injured man, an investigation; and it does not appear that he did. It seems he did appear and did make a statement himself, but that he demanded an investigation or insisted upon it is unknown to me.

Mr. RICHARDSON. I do not want to be put in the wrong by anything that I have said. I did not intend, nor do I undertake, to use the exact language of Mr. Adams. I knew by his manner, and made the statement on that basis, without undertaking to give his language, that he invited an investigation on the part of Congress into his road.

Mr. OUTHWAITE. And the committee have reported a resolution looking to that investigation?

Mr. RICHARDSON. Yes, sir; the committee in its wisdom, or its unwisdom, whichever the gentleman chooses, thought it better to have an examination by a commission of experts. They deem it preferable to an examination conducted by members of Congress; and therefore have instructed a resolution to be prepared and presented providing for a commission of experts to make this very examination contemplated by the resolution offered by my friend from California. The Committee on the Pacific Railroads have instructed me by a unanimous vote to call up that resolution immediately after action shall have been taken upon this present bill.

Mr. DUNN. It is the next resolution reported from the committee.

Mr. HENLEY. As a matter of course the gentleman from Tennessee knows that can not be done except by unanimous consent.

Mr. RICHARDSON. Why not? We have the entire day.

Mr. HANBACK. We have to-day and Tuesday next.

Mr. HENLEY. Why has it not been called up before?

Mr. RICHARDSON. We could not, of course, have taken up both of these together.

Mr. HENLEY. But would it not have been better and more in the order of regular proceeding to have considered the other matter first, to get the information before you act, or initiate a method of getting it? I commend that to the gentleman as a proper system of legislation.

Mr. RICHARDSON. Do you suppose we could have passed that resolution to-day, and got the information we needed in time to pass this bill?

Mr. HENLEY. No, sir; I do not mean that, but you could have passed a resolution thereby formulating a plan by which to obtain the information.

Mr. RICHARDSON. We hoped to get both of these measures through to-day.

Mr. THROCKMORTON. The committee have probably been as active in this measure as the gentleman from California himself.

Mr. HENLEY. Well, I submit to my friend from Texas that I have not been lacking in zeal, and as to who has shown the most activity I leave to others to judge.

It now seems that Mr. Adams sought investigation by telling the committee that it was idle and useless, but that he would submit to it. A wonderful concession to the power of the Government! He sought investigation by arguing that it would come to nothing.

Mr. RICHARDSON. The committee is just as anxious to discover wrong-doing as the gentleman from California himself.

Mr. HENLEY. I do not doubt that, nor do I doubt that Mr. Charles Francis Adams was before the committee and induced some of its members—at all events those who have spoken here to-day—to believe that he was anxious enough for an investigation. But when I have the facts confronting me which I intend to submit to this House, I have no doubt that he did secretly fight an investigation and was anxious to avoid one. That is the position I take.

Mr. LONG. I challenge you to put him to the proof.

Mr. HENLEY. The gentleman from Massachusetts exhibits a great deal of solicitude in respect to the matter now. I did not see this zealous friend who espouses the cause of investigation so warmly now with me in the presence of this railroad committee, saying: My friend is aspersed and maligned, and I demand for him an investigation. I heard nothing of that kind.

And it is the idlest pretense. If Mr. Adams or his company had not desired to shun this inquiry he could have had one without any difficulty.

Mr. HAYDEN. Will you allow me to ask where this resolution came from?

Mr. HENLEY. I can not yield now to the gentleman.

Mr. HAYDEN. I would like to know that.

Mr. HENLEY. Now, I decline to yield further. If I have time before I get through I shall answer, and I hope the gentleman will remind me so I will not forget it.

Mr. HAYDEN. The gentleman need not fear that I will let him forget it.

Mr. HENLEY. I hope you will remind me. Now, sir, here is a brief condensation of some of the history of this company in its business relations to the Government. First, from 1876 to 1884, the Union Pacific Railway Company has paid to the stockholders in dividends over $27,000,000 in defiance of law. I declare here, and this was so adjudicated, that the payment of $27,000,000 was an act of plunder, and was done in defiance of law; and that instead of paying these dividends among the stockholders of the company it should have been appropriated toward the discharge of the indebtedness of the company to these various creditors as well as to the Federal Government, and particularly so as the stock upon which these dividends were paid was illegally issued, no money having been paid thereon, as required by acts of Congress.

Mr. HEWITT. Will the gentleman yield for a question?

Mr. HENLEY. No, sir; I am very apprehensive about the gentleman from New York. He is too talented. [Laughter.]

Mr. HEWITT. I am sorry the gentleman is frightened; I did not know I had made such an impression upon him. It is the first time he has confessed his apprehension.

Mr. HENLEY. It is the first opportunity I have had to confess it; and the first time I have the chance I do it without reservation. [Laughter.]

During this same period, these years from 1876 to 1884, they paid on account of its indebtedness to the Government only $8,587,000, not one-half of the accumulated indebtedness during that period, which had increased at the rate of $800,000 a year or thereabouts. It has sold bonds belonging to the Government on the second mortgage, and from the proceeds redeemed at the rate of 12 per cent. some nine millions of their mortgage bonds not due until 1889.

I will not consume, Mr. Speaker, because there are other gentlemen who want to address the House, any further time in the enumeration of these violations of law on the part of the company, but will ask leave, as intimated heretofore, to print certain statistical matters in relation thereto.

The SPEAKER *pro tempore*. The Chair hears no objection to the request of the gentleman from California.

Mr. HENLEY. Now, Mr. Chairman, I intend to be very candid with the House. I do think—and the idea was intimated by the distinguished gentleman from Iowa [Mr. WEAVER] in a question which he addressed to the gentleman from Ohio [Mr. OUTHWAITE] a short time ago—I do think for myself it is time for the heroic remedy to be applied to this case. Gentlemen shrink in wild affright from the idea of a government proprietorship of a railroad. Well, now, Mr. Chairman, there may be a very Pandora's box of evil and tribulation in that, but I do not believe in it. I know that governments in other parts of the world are proprietors of railroads, and with very great benefit to the people. I am advised the State of Georgia owns a railroad which is so managed that the income from it almost pays the expense of running the State government, or a large part thereof.

Mr. CRISP. If the gentleman permits me, I beg to state to him that his information is very much at fault.

Mr. HENLEY. I am not talking of the reconstruction period, when Bullock was down there.

Mr. CRISP. The State of Georgia owns a railroad, and leases it out for $300,000, which is devoted partly to the support of education. It was found very many years ago when the government of Georgia undertook to run that road itself it was indeed a Pandora's box.

Mr. HENLEY. Well, it leases it for $300,000 per year; that is not bad. That is one way of dealing with it. If I owed my friend from Texas [Mr. THROCKMORTON] a sum of money and I was carrying on a business by means of property on which he had a lien, and if I were squandering the assets and had violated the law, and had shown a disposition to be profligate and improvident, the gentleman would as a matter of course proceed by the interposition of a court of equity and the instrumentality of a receiver, and take charge of my property in order that it might not be wasted or stolen, but be subjected to the payment of honest debts.

That is what any sane man governed by ordinary business considerations would do. And why not pursue some such course in this instance?

GOVERNMENT SHOULD POSSESS OR CONTROL THESE ROADS.

Why not place this property beyond the reach of those who in the past have plundered the Government?

People see, or fancy they see, or assert at all events, that there is some mysterious sorcery, some mighty magic about railroad property and its relations to the Government which should take it out of the ordinary rules that obtain in matters of indebtedness between private individuals. Why is this? Now, I solemnly declare, and I do it with entire confidence, that from the antecedent history of these corporations I do not believe that any law is going to restrain them, I do not believe any law is going to be of any efficacy or of any avail to bring into the coffers of the Government that portion of the revenues of that company which is contemplated by this bill. And I believe, Mr. Speaker, that the only means by which this Government can protect itself to any extent is to take possession of this property through the medium of a receiver and a court of equity. This opinion I express with great deference to the judgment of those differing from me, and with some hesitancy; but at all events of this I am well convinced, namely, that it would be infinitely better to pursue this latter course than to pass a measure like this of doubtful expediency on its face, and which, while its friends claim that it conserves and protects the interests of the Government, yet it has the support of these corporations, which support has in the past never been yielded to an honest measure. This alone, in my estimation, aside from inherent objections, places the measure under the ban of suspicion.

Sir, no one can estimate the power of the myriad instrumentalities that these corporations set in motion to circumvent lawful authority. Laws, ordinances, and constitutions have been but as cobwebs in the pathway of their imperial will. Public officers have been affrighted from their duty by them if honest, and, if not, purchased.

They have trampled on the law in the past, and it seems to be impossible to formulate or place on the statute-book any legal restraint to their rapacity and cunning. For that reason, I think the best thing the Government could do would be to go to work the same as a private individual would dealing with a private individual, take up this property, what there is of it; foreclose, resort to such a remedy as a court of equity might provide; take possession of this property, lease it, if necessary; assume the custodianship of the wreck and the fragments that are left, and see if something can not be realized.

Mr. MILLS. Will my friend from California give me some information? I desire to have information about this. What is the value of all the property—land, road-bed, franchises, everything that is subject to the first and second mortgages? Does the gentleman know?

Mr. HENLEY. I am not prepared to state now with sufficient degree of accuracy to enlighten the gentleman, having, as stated, left my data at home. I will print the information.

Mr. MILLS. This is a business transaction and it seems to me we ought to have possession of all those facts.

Mr. CRISP. I will state to the gentleman from Texas that the Government has no lien on the land grant.

Mr. MILLS. What is the value of the lands unsold?

Mr. CRISP. That should not be estimated in counting the present security of the Government, because the Government has no lien on that.

Mr. MILLS. Could not the Government take control of it by the right it has to amend the act?

Mr. CRISP. Oh, no. It could amend the act in certain particulars, but it could not fix a lien where it did not exist. A lien is a matter of contract.

Mr. MILLS. The charter is a matter of contract, too, unless the Government has reserved the right to amend it.

Mr. HENLEY. Which it has done.

Mr. CRISP. That has all been construed by the Supreme Court; and I submit to the gentleman from Texas there could be found no decision

of any court which would say one of the contracting parties, though it be the Government, could change the time of payment or character of a lien without the consent of the other party.

Mr. HENLEY. Of course it could not impair the obligation of a contract nor create a new one without the consent of parties. But it is also worthy of consideration whether the Government could not institute proceedings whereby a foreclosure of this lien could be had, and if the property is not sufficient to satisfy the first-mortgage lien and that of the Government also, then probably this land grant might be proceeded against as well as other assets of the companies not covered by any lien——

Mr. CRISP. Of course the gentleman understands that any proceeding of that sort would necessarily be deferred until 1898; we, in the mean time, paying out to these companies every year $1,600,000 more, without getting any interest back; because by contract they are entitled to that.

Mr. HENLEY. Now, Mr. Speaker, I have said what I intended to say, and all that I intended to say at present. I do not think this measure ought to pass. I do not think so because I doubt its efficacy to accomplish any useful purpose. It may be that I have miscalculated in this matter; but when I see the chapter in the history of this country that these two corporations have contributed, their intermeddling in politics, their interposition in legislation, their interference in every place they should not be, and their ability, their seeming omnipotence anywhere and everywhere, I have such misgivings as to the binding force, authority, and effect of any law whatever that we may place upon the statute-book to conserve the interests of the Government, that, so far as I am concerned, I shall be constrained to record my vote against this measure. I reserve the remainder of my time.

Mr. WEAVER, of Iowa, was recognized.

Mr. HAYDEN. With the permission of the gentleman from Iowa [Mr. WEAVER] I should like before he proceeds to call the attention of the gentleman from California [Mr. HENLEY] to the question which I put to him a while ago in reference to a certain resolution which he introduced into the House.

Mr. HENLEY. You want that question answered now?

Mr. HAYDEN. I should like to have it answered.

Mr. HENLEY. Mr. Speaker, the gentleman has asked me who it was that drew a certain resolution which I introduced into the House. I asked him to not let me forget that matter and he has complied with my request. What difference does it make who drew that resolution if the allegations contained in it are true?

Mr. HAYDEN. None; only I am anxious to know where it came from.

Mr. HENLEY. Then if it makes no difference that admits the irrelevance of the inquiry. Suppose it was concocted in the penitentiary; suppose the individual who drew it was of the vilest character and inspired by the most infamous motives, yet if the allegations were true——

Mr. HAYDEN. If it was concocted in the penitentiary I have nothing to say. [Laughter.]

Mr. HENLEY. Well, possibly it was. For all I know or care it may have been. I do not know anything about it, nor care anything about it. I do not know who drew it; but I went before the committee and assumed the responsibility of saying upon my honor as a Representative that I believed the statements contained in the resolution to be true, and I say so here now. It makes no difference who drew the resolution, and, with infinite respect to my friend from Massachusetts, I will say to him that there could not be a more idle inquiry than one as to who drew the resolution or as to the motive by which it was inspired. The pertinent thing for him to do was simply to investigate its truth.

Mr. HAYDEN. I thought the gentleman was going to answer my question.

Mr. HENLEY. I say I do not know who drew the resolution. It was placed in my hands, and on reading it over and seeing the facts that were cited in support of the statements made, I could not see how, as an honest man, I could decline to introduce the resolution, and I did introduce it, and have assumed and do assume all responsibility belonging thereto.

Mr. LONG. Will the gentleman state at whose request he introduced it?

Mr. HENLEY. The gentleman is on this floor who placed the resolution in my hands, and if he wishes me to disclose his name, so far as I am concerned, I am perfectly willing to do it. At the same time I say that that is an utterly immaterial question in respect to this matter. I assumed the paternity and authorship of that resolution.

Mr. HAYDEN. If the gentleman will allow me, I will say that I know who gave him the resolution.

Mr. HENLEY. Who was it?

Mr. HAYDEN. It was a distinguished professional philanthropist from New York. Colonel—I shall remember his name in a moment.

Mr. HENLEY. Colonel James?

Mr. HAYDEN. Yes; Colonel James.

Mr. HENLEY. Well, the gentleman does not know quite so much about the matter as I really hoped he did. [Laughter.]

Mr. HAYDEN. Colonel James so testified.

Mr. HENLEY. Colonel James did not so testify. There was one set of resolutions that were introduced in the House and another set which I presented to the committee without introduction; those latter resolutions were given me by Colonel James, of New York.

Mr. HAYDEN. And Colonel James says he would not tell where he got them.

Mr. HENLEY. I do not know anything about that, and I do not care anything about it. It may have been in the interest of stock operations for aught I know or care. All I sought was to ascertain whether these companies had been transgressing the law and squandering the assets of this Government, and it did not matter to me who had prepared the resolutions or what the animus was. What I wanted to know was whether the allegations were true or not. The gentleman from Massachusetts [Mr. HAYDEN] seems to think that his inquiry is pertinent upon the theory that if the man who prepared the resolution was disreputable there should be no inquiry into the truth of the allegations. I presume that even if the gentleman knew they were true, still he thinks no investigation should be made and no step taken because the resolution was prepared by somebody of bad repute.

Mr. HAYDEN. On the contrary, the Committee on Pacific Railroads reported to the House the resolution, which will follow this bill. That shows that they acted upon the matter.

Mr. HENLEY. Very well then; what is all this talk about? It is an idle waste of time.

Mr. HAYDEN. I only wanted to know where the resolution came from.

Mr. HENLEY. And I state that Colonel James gave me the resolution which I presented to the committee, but not the resolution which I introduced into the House. I submitted both to the Committee on Pacific Railroads, and urged them to act upon one or the other. Mr. Speaker, I reserve the remainder of my time.

Mr. HENLEY subsequently submitted the following:

ADAMS'S FLAGRANT OFFENSES.

On the 24th of February, 1886, Mr. Adams appeared before the Committee on Pacific Railroads and made a speech in defense of his company, which, contrasted with his prior utterances on the same subject, constitutes one of the most marvelous pieces of special pleading that ever to my knowledge emanated from any source having the slightest pretension to consistency or truthfulness. His manifest purpose in addressing the committee was, apprehending an investigation, first, to convince the members thereof that any investigation into the affairs of the company would be supererogatory and a mere repetition of what had already been done, and, second, to exercise his persuasive powers upon the proposition that some such measure as the pending one ought to become a law. Let all honest men read and then judge as to the integrity of purpose of this president of a great corporation. In that address he alleges in various ways and with sounding declamation that his company had been ever observant of the law, and says:

> I claim for myself a certain degree of responsibility, and, with full appreciation of what I am saying, I challenge any one to point out in the whole record one single case of evasion by the Union Pacific of its obligations or failure to perform its part of the contract with the Government of the United States. * * * It has acted with scrupulous good faith to the Government.

Now, Mr. Speaker, mark my words. With a full appreciation of what I am saying I declare and am ready to prove the following open, bold, and flagrant violations of the law:

First. I charge, and challenge denial, that Charles Francis Adams and his codirectors on the Union Pacific Board have criminally violated the law in issuing without the consent of Congress $5,000,000 of 5 per cent. collateral trust bonds in April, 1883.

Second. I charge, and challenge denial, that the said Adams and said directors have violated the law in paying the dividends of 1883 and 1884 in the teeth of the existence of a gross floating debt of $13,000,000.

Third. I charge, and I challenge denial, that said Adams and directors have criminally violated the law in placing without the consent of Congress the indorsement of the Union Pacific Company on about $15,000,000 of bonds of the Oregon Short Line Company, entailing thereby an annual loss of some $600,000 to the Union Pacific Company.

Fourth. I charge that the said Adams and said directors have deliberately diverted the assets belonging to the Government lien by using them in anticipating, at a premium of 12 per cent., the third-mortgage bonds not due till 1889, while the debt due the Government is annually increasing at the rate of $800,000.

In the name of justice, Mr. Speaker, and common decency, in the name of American civilization, I ask why is it that no criminal proceedings have ever been instituted against these men? Sir, why this solicitude by this corporation to pass this measure? The solution of that question may be found in the fact that the Union Pacific still has $9,000,000 in its land-grant fund and about $13,000,000 in value of lands left, and they proposed, at the last annual meeting of directors in Boston, to anticipate therewith the payment of some twelve millions of fourth-mortgage bonds, selling at 20 per cent. premium and not due till 1894. These bonds are presumed to be largely held by themselves and friends, and have paid regularly 8 per cent. since 1874.

ADAMS'S GROSS INCONSISTENCY.

The following is also from Mr. Adams's statement to the committee:

Success brought competitors into existence. When the Union Pacific was built, it was believed that it would remain almost in perpetuity the only road across the continent. That was seventeen years ago. Four lines now divide the transcontinental traffic. If the Union Pacific had to rely on that traffic alone it would be a bankrupt concern. It is not bankrupt simply because an auxiliary railroad system has been built up, and to-day the 1,600 miles of original main line are the trunk from which spring out more than 3,000 miles of branches. Those 3,000 miles of branches, due to the foresight and energy of the much-abused men who preceded me in the management of the Union Pacific, have developed the country along the original subsidized lines, and it is these branches and not the subsidized lines which are now to carry the Union Pacific through.

* * * * * * *

I have already referred to that auxiliary railroad system which is now the staff and stay of the Union Pacific.

If Mr. Adams had stated that the Union Pacific road was the staff and stay of the auxiliary roads, he would have been nearer the truth. These roads are all subsidized by the Union Pacific upon the basis of a constructive mileage; and every one of them would be in the hands of a receiver to-day but for the subsidy paid them by the Union Pacific, notwithstanding the foresight and energy of the "much-abused" men who preceded Mr. Adams in the management, as will more fully appear hereafter.

Mr. Adams, willfully or otherwise, misrepresents the value of these branch lines. The table annexed hereinafter, and compiled from the Union Pacific reports, shows that these operated roads, aggregating nearly 2,700 miles, earned in 1885 $1,266,947 less than their interest. And if thereto the annual interest on the collateral trust bonds, created for the benefit of these branch lines, be added, the deficiency is increased to $1,724,757. And all this in spite of the fact that the average passenger rate per mile on the branch lines is 4½ cents against 2¾ cents on the main line. Every discrimination made in their favor, but they can not earn their interest. Let the friends of Mr. Adams reconcile the figures of the Union Pacific report with his statements if they can. One or the other willfully, deliberately misrepresents.

An investigation by Congress should be made into the manner of building thousands of miles of unprofitable railroad. Why, with a continual deficiency of income from this source, does there exist an unceasing desire to build more? Who, since 1878, have planned and built these roads and profited by them? Have they been the directors personally or as a construction company who have contracted with themselves as Union Pacific directors, to their profit and the Government's loss?

Sidney Dillon, a railroad builder, the representative of Jay Gould, ex-president of the Union Pacific, is still the president of eight proprietary lines. How many more sinecures are there, and who hold them?

While upon this subject it will be well to show what Mr. Adams said about some of the men whom he now says are "much-abused." Several years ago he made the relations between the Credit Mobilier to the Union Pacific the subject of careful investigation, and gave the following account of them:

The Union Pacific was built by an organization known as the Credit Mobilier, which received for so doing all the unissued stock, the proceeds of the bonds sold, the Government bonds, and the earnings of the road; in fact all its available assets. Its profits were reported to have been enormous, and they made the fortunes of many, and perhaps of most, of those connected with it. Who then constituted the Credit Mobilier? It was but another name for the Pacific Railroad ring. The members of it were in Congress; they were trustees for the bondholders; they were directors; they were stockholders; they were contractors; in Washington they voted the subsidies, in New York they received them. Upon the plains they expended them, and in the Credit Mobilier they divided them. Ever-shifting characters, they were ubiquitous; now engineering a bill, now a bridge. They received money into one hand as a corporation, they paid it into the other as a contractor. As stockholders, they owned the road; as mortgagees, they had a lien upon it; as directors, they contracted for its construction; and as members of the Credit Mobilier, they built it. What is the community to pay for it? The line from Chicago to New York represents now but $60,000 to the mile, as the result of many years of inflation, while the line between Omaha and San Francisco begins life with the cost of $115,000 per mile. It would be safe to say that this road cost considerably less than one-half this sum—the difference in the price paid for every vicious element of railroad construction and management, costly construction entailing future taxation on trade, tens of millions of fictitious capital, a road built on the sale of its bonds and with the aid of subsidies, every element of real outlay recklessly exaggerated, and the whole of it some future day to make itself felt as a burden on the trade which it is to create.

According to the Wilson committee, its frauds and evasions of the provisions of its charter; its issue of vast amounts of stock without the payment of any money thereon; its dividends by means of the Credit Mobilier of money raised from the sale of subsidy and first-mortgage bonds and of the bonds themselves; its bribery of a Government director to certify to the completion of a section of the road in advance of its completion; it bribery of Congress in order to secure the passage of the act of 1864; its tortuous methods for the purpose of concealing its frauds, and by which a great many were effectually concealed, fully justified, in the opinion of the committee, the abrogation of the charter of the company. As a part of these frauds, and supplementing them, were Mr. Ames's briberies of members of Congress to stand by him provided these frauds should be inquired into or the company be interfered with, and for which a committee of the House of Representatives, of which he was a member, unanimously recommended his expulsion from it. History does not furnish a similar example of bad faith, avarice, and turpitude. The windup of all was that the charter of the company was not repealed, although the Wilson committee asserted unanimously that there were adequate grounds therefor, from the frauds committed by the company.

UNDER GOULD'S CONTROL.

From the time of his election as director there has been but one power in Union Pacific whenever it was for his interest to exert that power, and from that time all the leading officers of the company were the facile instruments of his will. Should any restlessness show itself on the part of any of the old directors it was enough for Gould to hint at the possibility of a new parallel line. Possessed of supreme power, it was his policy, in view of ulterior objects, to use it leniently and with deference to the wishes and feelings of others, his power being no less supreme from being usually held in reserve. At the same time he flattered them by taking most of the leading directors of the Union Pacific into the direction of some twenty companies which he controlled, including the Western Union Telegraph Company, and gratified their cupidity by occasionally throwing to them a portion of his spoils. Gould entered the Union Pacific with a majority of its stock in his name or subject to his control. His purpose was to get two or three times the price at which he purchased it. This could only be effected by compelling the company to declare dividends, and he forced it to do so, beginning early in 1875, the rate for that year being 6 per cent.

The foregoing blistering denunciation by Mr. Adams was said in the exercise of an independent, untrammeled judgment, giving to the public full and authentic information upon a subject of absorbing interest upon which he had bestowed much labor and time. The spoliations, villainies, and scandals of this company had become so vast and audacious that their repute had extended beyond the confines of our own country and was coextensive with the limits of Christendom. Friends of free government looked with apprehension if not with dismay upon the situation. Corruption, under the malign inspiration of Oakes Ames and his co-conspirators, had penetrated to almost every department of the Government. Now I have given a quotation of what Mr. Adams *then* said concerning these matters. And what does he *now* say?

Wonderful metamorphosis! He steps forward and attempts to unlock the stocks wherein his own judgment and that of mankind had pilloried in everlasting shame Ames and his fellows, and becomes not only the apologist but the eulogist of them. A few years ago, speaking of Ames, he says, "History does not furnish a similar example of bad faith, avarice, and turpitude." Time passes by; no new light is shed upon the matter. On the contrary, everything then stated has since been "graven in the adamant of history."

But changes have taken place. Mr. Adams now comes before a Congressional committee in the capacity of president of and stockholder in the Union Pacific; and lo! the result! Talk about the transmutations of history, and the prodigies of the "tooth of time and razure of oblivion!"

In a few short years, from being "an example of bad faith and turpitude," without precedent in history, Ames becomes and is described by Mr. Adams as being a man of "wonderful energy," who "did his work in a way natural to him;" as being one in whom the "good largely predominated;" and much more to the same effect.

In another part of his address, the malodorous Credit Mobilier, for which a short time ago no epithet was too fierce or objurgatory, now becomes a theme of fragrant reminiscence that comes over his senses—

Like the sweet sound,
That breathes upon a bank of violets,
Stealing and giving odour!

He says, "To the average mind unfamiliar with the subject it represents something vague, terrible, scandalous. It has become a mere cant name. In point of fact, it was a mere ordinary piece of financial machinery through which the work of building a railroad was done."

And this is the man who only a few years since lashed himself into a virtuous fury over the iniquities of this same Credit Mobilier, and by pen and tongue make this continent ring with his merciless, unsparing denunciation.

He says, "The good largely predominates in Oakes Ames." The casuist and the moral philosopher will strike an insoluble problem in the attempt to say what predominates in Charles Francis Adams. He apparently expects his latest utterances to consign to oblivion all prior statements. He suggests an aspect of tergiversation and smug respectability for which neither history nor fiction can furnish a prototype or parallel.

Again, in the same address, he says:

The bond matures. At its maturity we owe the Government over $50,000,000. That we can pay the Government $50,000,000 down on the day the bond matures is out of the question. We wish to renew a part of it. In the renewal we are prepared to give the Government as security everything we own in the world. We are prepared to give it not only the original security but the additional security of that entire auxiliary system which we have built up. In return, we ask the Government to treat us, not as a usurer, but as a partner.

In the first place it has been shown already and will be hereafter that the new securities proposed to be given are worthless, and that the securities of the branch roads are owned by the officers of the Pacific railroads as individuals. Undoubtedly if the extension bill is passed prompt payments will be made under it for a time, but only until the branch lines can be made self-sustaining.

MALADMINISTRATION.

Another thing I call the attention of the House to—illustrating the rare business capacity with which the management has been conducted: This company, not content with prior ventures in constructing hundreds of miles of railroad, propose, it seems, to build 600 miles more; or, to put it more correctly, some one selected by it will build and the Union Pacific will then take the road, as has been done heretofore. To show the probable outcome of this scheme I beg to submit an analysis of the branch lines and their operations during the year 1884, which I take from their own report. I commend to the country the prayerful study of the following table.

Table showing earnings of branch lines of Union Pacific Railroad Company for the year 1885.

	Miles.	Surplus over interest.	Deficiency to meet interest.
Colorado Central Railroad Company	327		$36,586
Denver and Boulder Valley Railroad Company	27		19,100
Denver South Park Railroad Company	330		321,000
Echo and Park City	32		15,200
Georgetown, Breckenridge and Leadville	8		19,740
Golden Boulder and Caribou	6		3,063
Greeley and Salt Lake	54		82,659
Junction City	88		14,664
Kansas Central	108		127,455
Laramie and North Park			2,406
Lawrence and Emporia	31		50,199
Montana Valley		$13,015	
Omaha and Republican Valley	237		117,375
Omaha, Niobrara and Black Hills	115		50,504
Oregon Short Line	610		336,100
Salina and Southwestern	36		13,268
Salt Lake and Western	58		40,979
Solomon Railroad	57	4,224	
Utah and Northern	462		16,649
	2,636	17,239	1,266,947

The foregoing table shows that in 1885 two railroads of 57 miles earned $17,000 more than interest while seventeen railroads of 2,579 miles earned $1,267,000 less than their interest, or a net loss of the latter amount to the Union Pacific in operating its branch lines.

This is a sad revelation of business incapacity or knavery. Now, if this company were honest in its professions, and in good faith intended to respond to its obligations, why does it not turn over as collateral to the Government the $9,000,000 of the land-grant fund and the proceeds of its future sales of land, which may amount to about $13,000,000 more? That would give evidence to a skeptical public of a quickened conscience on the part of these officials and would sound like business.

These are the much-vaunted securities fully enumerated in the Pacific Railroad Committee's report, pages 9 and 10, and which cost the Union Pacific forty-five millions, and yet do not earn their interest by one and a quarter millions. To what extent do these afford additional security, more especially when all the good bonds of the above even that earn anything are hypothecated, and those that could be turned over to the Government are valueless.

To my mind there seems ample ground for a grave apprehension that this extension is only sought to give this corporation still further opportunity of continuing its former tortuous practices of defrauding the country, and when the Government shall finally come into possession of the road, as I believe under the bill it ultimately will, it will have been stripped of its assets and we will only have a second lien on a roadbed and rails from Omaha to Ogden, upon which there will be a first mortgage of nearly forty millions. One other thing occurs to me. As an instance of the way the directors of the Union Pacific meet the legitimate claims of the Government may be mentioned a claim for mail transportation, just decided by the United States Supreme Court.

In 1884 the Government claimed of the company $2,000,000 for mail transportation. It characteristically met this plain demand of justice by a counter-claim of the same amount. This counter-claim was baseless as decided by the Supreme Court and was only set up to delay for a time at least the payment. These facts came to the knowledge of the Senate Judiciary Committee, and a report by that committee was prepared to President Arthur, stating that the company was evading the discharge of its obligations under the Thurman act. This report was only kept from publication by the payment into the United States Treasury of about $728,000 by the Union Pacific, and the promise to suspend further dividends.

Mr. MILLS, of Texas, has asked me for the value of the road-bed, franchises, lands unsold, &c. I will reply:

The mileage is ..... miles	1,832
Its average net earnings are about	$9,000,000
Its full interest charges about	6,000,000
Bonds preceding Government lien, about	40,000,000
Interest on same, about	2,500,000
Surplus earnings over interest on first mortgage	3,500,000
It owes the Government	33,539,512
Annual interest on same	2,012,370
Unpaid interest due the Government, including what has been offset by Thurman act	15,167,214
Good securities in land fund, about	8,500,000
Value of unsold lands, about	12,000,000

Here we have a debtor that earns annually $3,500,000, after paying from its net earnings the interest on its first-mortgage bonds, out of which it should pay the annual interest due the Government of $2,012,370. Instead of doing this, it has carefully paid the interests on all subsequent bonds, and allowed the Government interest to drift until balance due for back interest now amounts to $15,167,214, leaving a total due the Government of nearly $49,000,000.

Thus, while the annual payments recommended by this Pacific Railroad Committee only amounts to $1,840,000, the interest on the face of the debt is $2,012,370, while the interest on $49,000,000 is $2,940,000. Moreover, by some new system of arithmetic, this $1,840,000, which does not meet the annual interest alone, is, in the course of seventy years, to pay off both principal and interest.

Mr. Speaker, it has been openly asserted by one of the friends of this bill that the lands of the Union Pacific were not by this bill subject to the Government lien.

As a condition the Government has after the first mortgage a claim to all assets, including lands, and I am not sure that the Government mortgage does not even precede the land bonds as a lien on the lands, yet I know it does precede the sinking-fund bonds, which really have no claim on the lands.

The company has already redeemed the bulk of the outstanding land-grant bonds from the proceeds of the sales of lands, redeemed them at a large premium before maturity, and the directors at their last annual meeting in Boston resolved to use some $9,000,000, now in hands of the land-fund trustees, to anticipate the sinking-fund bonds not due till 1894. These bonds have paid 8 per cent. and sell at 20 per cent. premium, and in reality have no standing as a mortgage lien, being an extension of the income bonds.

Is it right that bonds behind the Government lien should be paid in advance out of assets covered by the second mortgage? Will the committee answer that? Will they tell us why the lands and land funds have been expressly omitted from the additional securities enumerated by this bill as to be turned over to the Government?

What securities does the Union Pacific own that it can turn over to the Government? Why has not one of the committee specified them? I will answer for them. They can not do it. The Union Pacific owns no securities that are valuable that are not already hypothecated. The committee has been deceived and misled. I defy them to name any such securities. The hired attorney of the Union Pacific road, when he testified that the road held thirty-odd million dollars of stock and bonds, knew that all the good bonds, some $12,000,000, were hypothecated to secure the collateral-trust bonds.

Of what value is the $6,058,000 worth of Oregon Short Line Railroad stock, that cost the Union Pacific $605, when that road falls short of earning its interest annually by $500,000, and in February, 1885, earned $6 less than operating expenses? Or of what value is the $4,816,400 worth of Utah and Northern stock, that does not earn its interest, and cost only $675,000?

Gentlemen of the committee, give us a list of these additional securities!

The Union Pacific road seeks an extension for more opportunity to plunder. That road proper is not yet bankrupt; but the branch lines are. They are the suckers that draw from the earnings of the main line, in spite of passenger and freight discrimination in their favor. The statement of their earnings shows that for 1885 some 2,700 miles of branch lines earn one million and one-quarter less than their interest—more than the Government subsidy for that period. Bear in mind also that this deficit in interest has been paid by the Union Pacific Railroad Company promptly to the bondholders of these branch-line bonds; but the Government subsidy has not yet been paid, although six months overdue. This is a specimen of the manner in which this road meets its obligations to the Government. I assert again that not the exactions of the Government but the unprofitableness of the branch lines has reduced the Union Pacific to its present condition. The Union Pacific Railroad proper is rich. Its net earnings in 1880 were $11,730,536; in 1881, $11,625,038; in 1882, $10,356,966; in 1883, $10,594,658; in 1884, $8,941,909, and in 1885, $8,404,676. Its average interest charges per year, including all taxes, are about $6,000,000, leaving an average of $3,000,000 per year to meet Government requirements and for stockholders. It has, besides this profitable business, $9,000,000 in the land fund and $13,000,000 in lands; and instead of specifically turning these good securities to the Government this most upright and respectable management proposes to keep them to continue the policy of redeeming at fabulous premiums bonds not due till 1894, presumably held by their own friends. A fine piece of financiering; anticipating debts at premiums of 20 per cent. not due for ten years, and this while they are borrowing at this very moment in the open markets nearly five millions on their notes, and owe their employés $2,828,000, making preferred creditors of the third and fourth mortgage bondholders, and allowing the Government and their railroad employés to wait.

Oh, most honorable and upright management! By outrageous and unlawful dividends, by corruptly building and indorsing unprofitable railroads, by creating a monopoly that by its outrageous rates defeated the object of the original grant, it has exhausted the patience of the nation. As a creditor, the Government should dictate the terms of an entension, and now while the property is solvent should secure itself, not by running the road, but by simply insisting that the anticipation of bonds not due till 1894 should cease; that the moneys, &c., now held in the land fund and the proceeds of all future land sales should be turned in to the Government as part payment on account. This would secure $22,000,000, or 40 per cent. of the debt, beyond peradventure.

Make void the guarantees of the Oregon Short-Line bonds, and, in fact, let the branch lines be run by their bondholders and not make good

their deficiencies at expense of the Union Pacific; draw up an extension bill with these provisions, with annual payments to the Government of about $1,800,000, and in twenty-five years these payments, with the proceeds of $22,000,000 from lands, &c., will settle in full with the Government, and leave to the stockholders annually 2 per cent., and after payment of the debt leave them a road that can earn its 5 to 7 per cent. honestly and fairly. I prophesy if the present extension bill is passed that the Government will get its semi-annual payments for a few years until all the valuable assets are disposed of, till the road is carried further toward bankruptcy by the operation of these railroad cliques, who saddle it with unprofitable branches. Then, when it is stripped and made bankrupt, the Government with a claim of fifty millions will hold a second lien on road-bed and rails alone from Omaha to Ogden preceded by a first of $40,000,000.

The policy of C. F. Adams, jr., and his predecessors, since 1878, in building these unprofitable branches have ruined the stockholders, and were they wise, they would dismiss him and his fellows and investigate as to who have profited by these constructions, and how colossal fortunes have been amassed by nearly all the railroad managers and directors. I speak advisedly when I say that Mr. Adams deceives both the stockholders and the Government. His professed respectability only makes his false statements more criminal. As I understand the facts and the law, he and his fellow-directors have been guilty of its criminal violation, and my earnest efforts shall be directed to the end that its fullest punishment, both fine and imprisonment, be inflicted upon them. The law is no respecter of persons, and its majesty should be vindicated against its violator, even if a respectable railroad president, as readily as against an humble railroad employé. The shameless immunity from the penalties of their offenses thus far that these men have enjoyed suggests the poet's words:

> Plate sin with gold,
> And the strong lance of justice hurtless breaks,
> Arm it in rags, a pigmy's straw doth pierce it.

I have already stated that the free-list of the Union Pacific amounted to $2,000 a day. The personal representative of C. F. Adams, jr., from Massachusetts has seen fit to question and deny that statement. My authority is Mr. Adams himself given before the Senate Commerce Committee in the Forty-eighth Congress.

Mr. Adams is not a good authority. He claims the branch lines are the principal support of the main line, while the official reports show that seventeen out of nineteen branch roads do not earn their interest, some not even operating expenses, and taken all together fall over one and one-quarter millions in earning their interest charges. Mr. Adams, in a letter of December 8, 1885, to the present Government directors, claims he does not advocate any plan of extension; yet he is found in Washington advocating this measure. He denounces the Thurman act; yet it has produced the Government $10,000,000 since 1878. He says the railroad since its enactment has had no policy; yet the road has built 3,000 miles of branch roads and paid out some twenty millions in dividends to stockholders—evidences of a pretty vigorous policy to enrich the latter by dividends and its directors by railroad construction jobs.

Mr. Adams speaks of the promptness with which the Union Pacific has met its engagements to the Government, and we find it requires two years of litigation to obtain a settlement of nearly $2,000,000 due for mail transportation for 1880 to 1884, and not yet paid. Part due six years ago and not yet paid, with the Thurman act in force! The subsidy due January 1, 1886, $1,200,000, not yet paid, and the Thurman act in force! No wonder the advocates of the Union Pacific are anxious to rush the extension bill through, for section 13 repeals the Thurman act and leaves a wronged Government without redress.

The friends of Mr. Adams must expect that his constant misrepresentations must affect our opinion of his veracity. They must also expect that his constant anxiety to build additional branch lines, thus adding increasing drains on the revenues of the main line, must also lead us to doubt his ability or his integrity.

Let the friends of Mr. Adams examine his statements in the light of the official returns of the road. Let them not emulate the blind confidence of the Marine Bank directors in the respectability of their president, who only awoke to find the bank ruined, their president in prison, and themselves barely escaping the latter fate for criminal negligence.

Who are guilty of violating the statute of 1873 and who are participating in the construction of branch railroad lines, which eat the substance of the main line?

This is the same corporation that in 1878 had its notorious president, Jay Gould, occupy a conspicuous seat in the Senate to witness, as he had expected, the defeat of the Thurman bill.

Mr. Speaker, I shall now conclude. It is pertinent for me to drop one word of admonition to this House, and particularly to my Democratic friends. A contest is now impending in this country, the possible result of which can not be contemplated without a shudder of apprehension by every patriot in the land. That conflict is between constitutional government upheld by the people on the one side and the malign power of monopoly on the other. Long we have had premonitions of it—but to-day the signs of the times dissipate doubt—it is now with us, and ever watchful constituencies have their eyes upon us. In my judgment the passage of this bill will be received as another evidence of the invincibility of corporate power in these Halls, and this I say without in the smallest degree impugning the honesty of purpose of those supporting it. I think the most interesting and instructive chapter of our political history is that relating to the contest of the dauntless Jackson in 1836 with the powers of monopoly. It is something I love to dwell upon. It was then that Jackson aroused the people to their danger in a message that rang like the pealing notes of a clarion from end to end of the continent.

In terms that penetrated like arrow from bow, that clove their way through sham defense and sophistry and every intervening objection to the very heart of the people, he told them that their dearest rights and liberties were menaced by the great monopolistic power of the day—the United States Bank. The bank had a capital of $35,000,000 and controlled an indebtedness of $70,000,000.

If thirty-five millions affrighted with their power the heroic soul of the intrepid Jackson what shall we say of the danger from the hundreds of millions of capital represented by the Pacific Railroads and their tens of thousands of employés and agents?

Mr. Speaker, this bill ought not to pass.

Civil Service Rules.

SPEECH

OF

HON. WILLIAM WALLACE BROWN,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 12, 1886,

On the bill (H. R. 8074) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1887, and for other purposes.

Mr. BROWN, of Pennsylvania, said:

Mr. CHAIRMAN: The pending bill is replete with surprises. Nothing in it is to me a greater surprise than the proviso to the appropriation for the Civil Service Commission. To those only moderately enthusiastic over civil-service reform there is something startling in it; but to such an one as George William Curtis—assuming that he believes his own utterances—there must be in it a revelation. It is the most disingennous indirection yet appearing among the assaults of the Democracy upon the civil-service law. Though the provision lacks the courage of a repealing clause it proclaims a purpose to nullify the law. It reads as follows:

Provided, That this appropriation shall be available only when the rules of the Civil Service Commission are so framed as that the names of all applicants for official appointment from any one State, found duly qualified on examination and without regard to age, shall be sent to the head of a Department or other officer charged with making an appointment.

From this large number of course it will not be difficult to select Democrats enough to fill all vacancies and a non-partisan civil service will remain only in the imagination of the Mugwump.

By the provisions of section 1753 of the Revised Statutes, "the President is authorized to prescribe such *rules* and regulations for the admission of persons into the civil service of the United States," &c. There is no authority given anywhere in the law that charges the civil-service commissioners with the duty of making rules. They are made and framed and changed by the President, and by the President only. By the second section of the act of January 13, 1883, which defines the duties of the commissioners, it is provided "that they are to aid the President, *as he may request*, in preparing suitable rules," but nowhere are they charged with the power to make such rules, or even assist in making them unless requested so to do by the President. The duty and the power, therefore, of making the civil-service rules are lodged in the President. And yet, sir, this provision, in violation of the rules of the House, and in keeping with the manifest purposes of its majority to nullify the civil-service rules, declares that unless the commissioners "change the rules" they must starve. This, sir, is not even honorable coercion. If the proviso had been attached as a condition-precedent to the payment of the President's salary the coercion would have had the virtue of directness. When, however, it is aimed at the commissioners, it adds to the offense of coercion that of deception. It is made manifest by this plan that the Democracy has not the courage to attack the President of the United States, but musters the valor to charge upon his civil-service commissioners.

Only one gentleman on the other side has had the boldness to name the person intended to be snubbed by this proviso. I need not say that that gentleman is my colleague, and I need not tell which of my colleagues. He is well known to the House and the country, and was aptly described by my friend from Ohio [Mr. GROSVENOR] "as the leader

of one of the antagonistic branches of the majority branch of the House [laughter], and the gentleman upon whom we on this side of the House rely to prevent the other side of the House from committing any mischief in the country." [Laughter.] This gentleman, so well described, comes boldly into this discussion and in vigorous English says:

I say that the power of legislation rests here; that the one man to whom I have referred has undertaken to legislate and to deprive Congress of that power which should be lodged only here. I speak with deliberation, and I want the Executive of this Government to hear what I have to say on this subject. [Applause.] * * * I affirm that the representatives of the people have been deceived and cheated, have been deprived of rights which * * * they ought to have defended in behalf of the people who sent them here as their representatives.

My colleague [Mr. RANDALL] did not, it will be seen, charge the President with being a usurper, but such he is if he has invaded legislative functions. For my part I hesitate not to say the President has not overreached his duty in this regard. To do less than he has done would be to neglect the constitutional requirements of his office. He has the power under the law to change these rules just as it is intimated they should be changed in this proviso. Because he has not seen fit so to change them it is here proposed to strip him of his discretion. I have no doubt my colleague thinks the President has undertaken to do what he expected he would not do when he stumped the country in his behalf. It is, no doubt, disappointing to him, for he was estimating results from the ordinary Democratic standpoint. It was doubtless in his expectation that the President did not mean what he said, and that, true to the general expectation of the hungry Democracy, he would manipulate the civil-service law in such a way as to be no let to any Democratic expectant of an appointment. It is now apparent that the President means to keep faith with the people. Hence the irrepressible conflict between the Executive, the Higginses, and the House of Representatives.

It is my opinion that in this fight the House and Higgins will come out ahead; not probably through the operation of the proviso under consideration, because it is not likely to keep its place in the appropriation bill, but by pushing their friends into places without even a change of civil-service rules. If under the rules as at present constructed it is possible to procure out of seventy-five appointments seventy-two of the political friends of the head of a Department, I think by the end of another year he will be able to stretch the rules enough to get through the other three. Slowly but surely the power to hold in check the oncoming tide is giving way, and the President must either "fall in with the procession" or go into history as a President without a party.

Oleomargarine.

SPEECH

OF

HON. ROBERT M. LA FOLLETTE,

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 2, 1886.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 8328) defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine—

Mr. LA FOLLETTE said:

Mr. CHAIRMAN: I have waited till the close of this discussion hoping that gentlemen whose eminent abilities and long service give them the prerogative to instruct us on constitutional questions would present to this body fully their views and the authorities upon those questions, to the end that we should be aided in our work here and that the same should become a part of the record of this legislation.

It has been from the first maintained by the enemies and apparently conceded by the friends of this measure that it must masquerade through the House as a bill to raise revenue, and that no other constitutional defense can be found for it.

I have noticed that those who favor a tax so high as to practically prohibit the manufacture of oleomargarine, as well as those who favor one so low as to barely recompense the Government for its supervision, although in either case no revenue could possibly be collected, have, when pressed by the sharp questioning of the gentleman from Georgia [Mr. HAMMOND], been driven to take refuge behind the lines of the bill. When asked if either a prohibitory tax or one just paying the collecting would yield revenue, of course answer is made that it would not. When asked if we need an increase in revenue at this time, answer is made that we do not. When asked whether it is a proper use of constitutional power to levy a tax when revenue is not needed, answer is made that it is not. Then, driven to extremes, it is said that "this appears to be a revenue bill, that it will go out as a revenue bill, that it will have to be interpreted as a revenue tax, and that the motives of members can not be questioned."

While this may answer the forms of lawful legislation, it is nevertheless a pretty severe strain on the conscience. And, sir, if there is any other constitutional warrant which primarily may move in laying a tax other than the naked purpose to raise revenue it is important that it be asserted in this discussion and with any authority supporting it made a part of the history of this proceeding.

It has to me seemed singular that the arguments made against this measure, and in no instance disguised, should not have renewed the contest along the line dividing protection and a tariff for revenue only; but the friends of the American system have apparently seen in this issue no call for application of the principles to which they are committed. And yet all the arguments which have been advanced against the constitutionality of this bill during the discussion are the same that have always been made against protective and prohibitory duties.

The gentleman from Georgia [Mr. HAMMOND] cited as one of the principal authorities supporting his view of the unconstitutionality of this measure a portion of Mr. Webster's speech against the tariff, delivered at Faneuil Hall in 1820, long before he changed his views on that subject; and the argument of the distinguished chairman of the Judiciary Committee [Mr. TUCKER] in his speech against this bill a few days ago was exactly in line with that which has always been advanced against protective and prohibitory duties.

Compare the summation of the argument against this use of the taxing power which Mr. Story gives in section 963 of his work on the Constitution, as the views of the strict constructionist, with that of the gentleman from Virginia in the speech referred to. The one says, "The power to lay taxes is a power exclusively given to raise revenue;" the other says, "Congress has the power to lay the tax on oleomargarine" (but for what purpose?) "to raise revenue." The one says, "When revenue is wanted for constitutional purposes the power to lay taxes may be applied; but when revenue is not wanted it is not a proper means for any constitutional end;" the other says, "Can you use that as a weapon to destroy some industry that is not within your power, merely because you have that weapon to use, for the purpose of raising revenue?" Both would concede that incidental benefits might lawfully go with the tax, but both would contend that the right to lay the tax could never be exercised for any other purpose than to raise revenue, no matter how much that purpose might be for the common defense and general welfare.

And so I say that the argument offered here to show the unconstitutionality of this bill is the argument which has always been made when the use of the taxing power was employed primarily for purposes other than revenue. In applying to this question the same reasoning on which rests the constitutional authority for all protective tariff, and thus invoking at least half of the great names of history to its support, I have the sanction of high constitutional authority. Mr. Story, as I have quoted, says in his chapter on the "Power of Congress to tax," that though the argument which he gives for and against the constitutional authority to tax for other purposes than to raise revenue is given as applied to the protection of manufactures, still, as the learned author himself says, "the argument is equally applicable to all other cases when revenue is not the object."

If it be true, then, that we do not at this time need to increase our revenues, and if it be likewise true that the primary object of this bill be not to gather revenue, the question addressed to the legislative conscience is, Has Congress the authority to tax primarily for purposes other than revenue?

I turn directly to section 964, Story on the Constitution, and though instead of asserting dogmatically his own views on this controverted question he gives the best reasoning upon both sides, I think no lawyer on this floor can read it all without coming to the conclusion that the opinion of the able commentator himself was that the power there given to tax can be exercised in any way for the common good.

Mr. HAMMOND. That is, on the commerce clause.

Mr. LA FOLLETTE. No, sir; it is not on the commerce clause. I am reading from chapter 14, the title of which is "Taxes," and which is devoted exclusively to the consideration of the clause:

Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States.

The learned commentator devotes most of this chapter to the consideration of the question to which we seek an answer. Has Congress the power to tax for purposes other than revenue? Admonishing us not to commit the fallacy of the gentlemen who oppose this bill and assume the very point which must be proved—that is, that the power to lay taxes is limited to revenue only—he says:

It will not do to assume that the clause was intended solely for the purpose of raising revenue, and then argue, that being so, the power can not be constitutionally applied to any other purposes. The very point in controversy is whether it is restricted to purposes of revenue. That must be proved and can not be assumed as the basis of reasoning.

The language of the Constitution is: "Congress shall have power to lay and collect taxes, duties, imposts, and excises." If the clause had stopped here and remained in this absolute form, there could not have been the slightest doubt on the subject. The absolute power to lay taxes includes the power in every form in which it may be used, and for every purpose to which the legislature may choose to apply it. This results from the very nature of such an unrestricted power. *A fortiori*, it might be applied by Congress to purposes for which nations have been accustomed to apply it. Now, nothing is more clear, from the

history of commercial nations, than the fact that the taxing power is often, very often, applied for other purposes than revenue.

It is often applied as a regulation of commerce. It is often applied as a virtual prohibition upon the importation of particular articles, for the encouragement and protection of domestic products and industry; for the support of agriculture, commerce, and manufactures; for retaliation upon foreign monopolies and injurious restrictions; for mere purposes of state policy and domestic economy; sometimes to banish a noxious article of consumption; sometimes as a bounty upon an infant manufacture, or agricultural product; sometimes as a temporary restraint of trade; sometimes as a suppression of particular employments; sometimes as a prerogative power to destroy competition and secure a monopoly to the Government!

If, then, the power to lay taxes, being general, may embrace and in the practice of nations does embrace all these objects, either separately or in combination, upon what foundation does the argument rest which assumes one object only, to the exclusion of all the rest; which insists, in effect, that because revenue may be one object, therefore it is the sole object of the power; which assumes its own construction to be correct because it suits its own theory, and denies the same right to others entertaining a different theory?

Mr. Story nowhere lays it down that the power to tax is general, but he says the limitations are found in the same clause of the Constitution. The exact extent of this limitation as construed by the commentator, in the language of section 922, where he sums up his conclusions on the proper grammatical construction of this clause, is as follows:

A power to lay taxes for any purposes whatsoever is a general power; a power to lay taxes for certain specified purposes is a limited power; a power to lay taxes for the common defense and general welfare of the United States is not in common sense a general power. It is limited to those objects. It can not constitutionally transcend them. If the defense proposed by a tax be not the common defense of the United States, if the welfare be not general, but special or local, as contradistinguished from national, it is not within the scope of the Constitution. If the tax be not proposed for the common defense or general welfare, but for other objects, wholly extraneous (as, for instance, for propagating Mahometism among the Turks or giving aids and subsidies to a foreign nation to build palaces for its kings or erect monuments to its heroes), it would be wholly indefensible upon constitutional principles.

In other words, the reading which he says seems supported by the best reasoning, and that which he maintains throughout his commentaries, is that—

Congress shall have power to lay and collect taxes, duties, imposts, and excises [in order] to pay the debts, and to provide for the common defense and general welfare.

And then continuing the reasoning says:

Is raising revenue the only proper mode to provide for the common defense and general welfare? May not the general welfare, in the judgment of Congress, be, in given circumstances, as well provided for, nay, better provided for, by prohibitory duties, or by encouragements to domestic industry of all sorts?

If the common defense or general welfare can be promoted by laying taxes in any other manner than for revenue, who is at liberty to say that Congress can not constitutionally exercise the power for such a purpose? No one has the right to say that the common defense and general welfare can never be promoted by laying taxes except for revenue.

[Here the hammer fell.]

Mr. TUCKER. If I can be recognized I will yield my time to the gentleman from Wisconsin [Mr. LA FOLLETTE].

Mr. LA FOLLETTE. I thank the gentleman.

Mr. Chairman, in further support of the view that Congress has the constitutional right to tax for purposes other than revenue, I would call the attention of the House to the following words, found in an exhaustive report from the Committee on Manufactures, made May 23, 1832:

To pay the debts of the United States was the first of the objects for which by the Constitution of the United States the power to lay and collect taxes, duties, imposts, and excises was conferred upon Congress; to provide for the common defense and general welfare was the second object; and these expressions, broad and comprehensive in their import, far from being without meaning in the intention of the founders of the Constitution, embraced the great purposes for which the Constitution itself was formed. They are introduced in that solemn preamble, by which the whole people of the United States, speaking in the first person, "We, the people of the United States," announce the great purposes for which they do ordain and establish this Constitution; they are emphatically repeated in the eighth section of the first article, containing the grants to Congress of power; and they are not only grants of power but trusts to be executed, duties to be discharged for the common defense and general welfare of the Union; to provide for that common defense and general welfare were obligations imposed upon the organized body upon whom the power was conferred of laying and collecting taxes, duties, imposts, and excises for effecting the purpose—obligations not less imperious than that of paying the debts of the Union. To provide for the common defense and general welfare is the duty, the irremissible duty of the Congress; the power to levy duties, taxes, imposts, and excises is the means with which they are invested for the execution of the trust. The non-user of the power is a violation of the trust—a violation as culpable as would have been the neglect or refusal to levy taxes for the payment of the public debt. That the intention of the people was to confer the power in great amplitude is apparent not only from the greatness of the purpose to be accomplished and from the generality of the terms in which the power is conferred, not only from the emphatic repetition of the terms in which the objects of the Constitution are announced in the preamble, but from the anxious use of all the words by which the contributions of taxation can be levied—taxes, duties, imposts, and excises.

The argument which denies the power of Congress to levy duties for the protection of domestic manufactures pronounces unconstitutional two of the first acts by which Congress exercised their powers—acts among the most memorable, among the most beneficent exercises of power which have rendered the Constitution itself a blessing to the nation. It expunges from the Constitution the grant of power to provide for the common defense.

The above language from this able report does not mean, as has been contended by the opponents of this bill, that Congress can levy a tax so as to discriminate against certain articles only when revenue is needed. It means that Congress has constitutional authority to lay a tax for the general welfare even though there be not the slightest necessity for revenue, as is shown by the following paragraph from the same report:

To pay the debts of the nation was an object of more immediate urgency than even that of providing for the common defense. It was to enable the nation itself to do justice to others. To provide for the common defense was the discharge of a debt which the nation owed itself—a debt of wider scope, of deeper import, of more permanent duration. The power of levying money to pay the debts was a power limited by the consummation of its object. The power of contracting further debts was conferred by another grant. The exercise of these powers would, in its nature, be occasional and temporary; that of providing for the common defense was permanent and unceasing, a debt still paying, still to owe, and limited in its duration only by that of the existence of the nation itself. The payment of the debts is about to be consummated. The power of levying duties, taxes, imposts, and excises for that purpose is about to be extinguished in its own fulfillment. There being no debts to be paid, the power of levying taxes for their payment will for the time cease to exist; but that of providing for the common defense will remain, not merely unimpaired but acquiring fresh strength and more impressive weight from the accomplishment of the nation's liberation from debt, swelling and expanding with the increase and expansion of the population and wealth to be defended, and destined to enlarge its dimensions and gather accumulating weight and intensity to a period coeval with the destined existence of the Federal Union.

The author of this report was John Quincy Adams. As might have been expected, it called down upon him the denunciation of those narrow constructionists of the Constitution who assumed then as now that the power to tax for the general welfare meant to tax for revenue only with incidental protection.

The Congressional Librarian informs me that the masterly defense of the position taken in this report, made by Mr. Adams subsequently in a letter to Mr. Speaker Stevenson, July 11, 1832, could only be found after several days' search in an old copy of the National Intelligencer. Such an exhaustive exposition, from such a source, on the construction of this clause of the Constitution ought to be rescued and put in enduring form; and as the whole argument is directly applicable to this discussion I shall append the entire letter to my remarks when published in the RECORD.

Although Mr. Cooley in his work on Constitutional Principles is authority against the use of the taxing power, except for purposes of revenue, we find in his recent work on taxation the following:

On the other hand, one purpose of taxation sometimes is to discourage a business and perhaps to put it out of existence without any idea of protection attending the burden. This has been avowedly the purpose in the case of some Federal taxes.

Mr. STRUBLE. And he cites authorities.

Mr. LA FOLLETTE. Yes, sir; he cites Veazie Bank *vs.* Fenno; but I am bound to say that the opinion of the court in that case, standing alone, may seem scarcely broad enough to warrant Mr. Cooley's general conclusion.

But in the license-tax cases (5 Wall., 462) the court said:

The power of Congress to tax is a very extensive power. It is given in the Constitution with only one exception and only two qualifications. Congress can not tax exports, and it must impose direct taxes by the rule of apportionment and indirect taxes by the rule of uniformity. Thus limited, and thus only, it reaches every subject and may be exercised at discretion.

Chief-Justice Marshall, in McCulloch *vs.* State of Maryland (4 Wheat., 316), says that—

The power to tax involves the power to destroy.

And in Collector *vs.* Day (11 Wall., 113) we find the Supreme Court giving precisely the same construction to the case of Veazie Bank *vs.* Fenno that Mr. Cooley gives on the page from which I have just read in the following language:

But we are referred to the Veazie Bank *vs.* Fenno in support of this power of taxation. That case furnishes a strong illustration of the position taken by the Chief-Justice in McCulloch *vs.* Maryland, namely, "that the power to tax involves the power to destroy.

If, then, the power to tax involves the power to destroy when given without limitations, and if the only limitations fixed by the Constitution is "to pay the debts and provide for the common defense and general welfare," then does it not follow that the tax even when laid to destroy might be for the general welfare, and if so would it not be clearly constitutional?

But it has been said in this discussion that "we can not do indirectly what we have not the authority to do directly, that we have no express authority to prohibit and therefore we can not rightfully use any other power to prohibit." But if we have granted to us a power which by its very nature, as the Supreme Court say, involves the power to destroy—that is, to prohibit—and if, at the same time, there is given with that power an express direction that we shall use it to accomplish the general welfare, and if it manifestly appears that by using this power which involves the right to destroy, if necessary, to obey the mandate to provide for and secure the general welfare, are we then, I ask you, doing anything by an indirection? Are we then acting without authority? Indeed, are we not obeying the Constitution and performing strictly and within its very terms the trust committed to us?

In the practices of this Government from the beginning has not this very construction been, I ask you, adopted in practice? Hamilton in his report on manufactures in 1791, said: "That of duties equivalent to prohibitions there are examples in the laws of the United States," and he advised the further application of the same principle. So, too, Jefferson, in 1793, recommended in his report on commercial restrictions the use of the same power within narrower limits—nevertheless the direct application of the same principle. Of Mr. Jefferson's expressed views John Quincy Adams said:

That Mr. Jefferson had no doubt of the power of Congress to protect the ma-

tive interests not only by taxation, but by prohibition, has been amply proved, and particularly by one of his messages to Congress.

Probably in the whole history of this people no more liberal construction was ever made of this clause than that given by President Jefferson in the acquisition of Louisiana. Mr. Adams tells us that upon the passage of the act taking possession of Louisiana and for the government thereof this very paragraph of the Constitution was cited by Mr. Rodney, of Delaware, a distinguished lawyer and statesman, and the ardent friend and supporter of Mr. Jefferson's administration, as containing the grant of power by which Congress was authorized to make the acquisition. In this instance the object of laying a tax of fifteen millions was not primarily to get revenue to meet the expenses of Government, but was first and foremost for the common defense and general welfare.

Here, though accomplished by one and the same act, it became necessary first to create by the power, given in this clause a necessity for revenue, before there could be any right, in the narrow view, to lay the tax; and this power of providing for the common defense and general welfare moved first in the mind of the legislator, drawing after it as secondary that which it is now claimed on the other side must be the prime essential to any legislation before the tax is laid.

If the repeated enactment of laws under the construction of the Constitution contended for by these eminent authorities and their ready acceptance and approval by the people can give interpretation to a particular clause, this question is in that sense *res adjudicata*.

Should it be claimed that protective and prohibitory taxes, such as have been laid from time to time since the adoption of the Constitution, must find their warrant in the clause giving Congress the power to regulate commerce and not in the clause we are considering, then to claim this is to claim that under the power to regulate commerce you have the right by implication to use the taxing power for another object than revenue; for an object which must prevent revenue being derived; but that under the clause giving directly the power to lay taxes you can only lay them to raise revenue. Is that satisfactory reasoning to any gentleman here? Employing the exact language given in Story:

If Congress may, in any or all of these cases (in cases where laid to prohibit), lay taxes, then, as revenue constitutes upon the very basis of reasoning no object of the taxes, is it not clear that the enumerated powers (as the power to regulate commerce) require the power, to lay taxes to be more extensively construed than for purposes of revenue? It would be no answer to say that the power of taxation, though in its nature only a power to raise revenue, may be resorted to as an implied power to carry into effect these enumerated powers in any effectual manner. That would be to contend that an express power to lay taxes is not coextensive with an implied power to lay taxes; that when the express power is given it means a power to raise revenue only, but when it is implied it no longer has any regard to this object.

And Mr. Adams, in the letter to Mr. Speaker Stevenson, before referred to, touching the power to lay protective or prohibitory taxes, says:

So far as I am able to judge of the force of language the derivation of the power, from the duty to provide for the common defense and general welfare, is more direct, more immediate, less needing a winding staircase of argumentation to come to the result than its derivation from the power to regulate commerce.

There is, then, gentlemen, both strong reasoning and high authority to say that the power to tax is the power to tax whenever it subserves the general welfare.

But you say this is a dangerous power. Is it then more dangerous, if this power to tax for the general welfare is claimed as a right, than is the power (which gentlemen concede we have) to tax ostensibly for the purpose of raising revenue, but with the real purpose of literally taxing out of existence? In either case the only remedy lies in the relation of the legislator to his constituents. And in adopting the broad language, placing the power to tax in the hands of Congress for the high purpose of the general welfare—the common good—under the wise system of frequent revision by the people through the recurring elections, was not the safest check, guard, and protection provided which human foresight could devise?

Resting on the broad ground that Congress has the power to tax for the general welfare, the objection which has been made that this measure, seeking in part as it does to protect the people from a fraudulent and unwholesome article of food, is an interference with the so-called police power of the States ceases to exist.

Instances are not wanting where the authority of the State and Federal powers overlap each other in accomplishing the objects of government. Because the police powers of the State may be employed within the State to subserve the interests and well-being of its citizens, it has never been held that the General Government could not in the exercise of other and different powers delegated to it accomplish the same results for the whole people.

If Congress in the exercise of some of its lawful powers, such as that to tax or to regulate commerce, happens to accomplish the same results which States might accomplish by the police power, it can not be maintained that it is excluded from using the powers delegated to it by the Constitution. And because it effects the same or better results in dealing at the same time with the same subject by no means makes the exercise of the power it employs a police power. The character of the power is not changed because the result it secures is the same as that which the State attempts to secure by a different power.

To construe the authorities as laying down any other doctrine is entirely to misapprehend their meaning. In the License-tax cases (5 Wall., 462) Chief-Justice Chase says:

That the recognition by the acts of Congress of the power and right of the States to tax, control, or regulate any business carried on within their limits is entirely consistent with an intention on the part of Congress to tax such business for national purposes.

The question then which presents itself to every man here is, Will this measure minister to the general good, to the national welfare? If its benefits are merely local and special and not general, then we have no warrant, no right to enact it into a law. These reasons address themselves to the legislative judgment exclusively, our judgment being ever subject to approval or disapproval, to stand or fall before that great tribunal, the people of this country.

Nearly one-half of all the people of this country are engaged in and directly dependent upon agriculture. The vital forces of every other business, I care not what its character, are drawn from and nourished by it. From the standpoint of economics purely and upon the strictest business principles the interests of agriculture are the interests of this Government. No other pursuit so universally and profoundly concerns every other citizen of the Republic—no other calling known to civilized man, where so entirely and completely the interests of one is the interest of all.

There are other considerations which are worthy the thought of those charged in part with the duties of government. Favored by the character of our institutions, almost all of the farm land in this country is held and owned by the men who cultivate it. Ownership of soil means ownership of home, and I tell you, that government whose people build and own their own homes, lays broadest and deepest its foundations and bargains most surely and happily with time. Such homes, no matter how humble, are pledges of the perpetuity of the nation. Our little modest homes scattered over this land, reared by those who live in them, are the pillars of strength which lift this government above other nations of the civilized world. And it is well for us to remember here as elsewhere that the poorest home is just as great an element of strength to the state as the costliest mansion. To the state, to the government, there is no difference.

Now, sir, these rural homes are built on small margins. They are maintained only by industry and frugality. Every factor of strength and support about them is important to comfortable, decent existence.

Sir, I know something of life upon the farm; I know the value of the little things in the economical system, in the sparing, cautious management practiced there. I know how the small things are used to fill up and round out the seasons as they go. There is little that can be safely spared.

I know, sir, the vital, the absolutely vital importance of the dairy to the maintenance not only of the home comforts, the sweetening of the home life, but its great value to that which makes the home possible—the farm itself. It is the one important element in almost the only system which can be adopted upon the small farms to sustain their soil and preserve their producing properties. To foreclose the farmer from this essential branch of his business is to greatly narrow the limits of his industry, lessen the number of farm products, and force overproduction in the few produced with all its consequent disasters to commerce and trade.

It is too late in this discussion to go into figures, nor is it necessary. The dairy interest and all that it carries with it is in a distressing condition. It has been driven to the wall and is to-day fighting for a place to stand. It is set upon from all sides by an unseen foe. It is struck from behind. It is taken in ambush. It can make no defense.

Ah! but you say, "This is competition, and are you going to apply the taxing power to settle differences of competition between domestic industries?" I answer that is not the question presented here. We face a new situation in history. Ingenuity, striking hands with cunning trickery, compounds a substance to counterfeit an article of food. It is made to look like something it is not; to taste and smell like something it is not; to sell for something it is not, and so deceive the purchaser. It follows faithfully two rules: "Miss no opportunity to deceive;" "At all times put money in thy purse." It obeys no laws.

The evidence, undisputed, is that there enters into its composition a large number of substances which singly, or in combination, are unwholesome, poisonous, and either directly or indirectly destructive of human life.

It is no longer a question with the citizen anywhere, from ocean to ocean, whether he would prefer to eat it. He is forced to eat it. This monstrous product of greed and hypocrisy makes its way into the home and onto the table of every consumer. It is as powerful and irresistible as vicious ingenuity can make it. It is as pitiless as a plague. It wants only one thing: it wants your money—it does not care for your life.

Talk about competition! Why, gentlemen, stop and think! There can be no competition except where there is rivalry. Competition implies two or more persons or things or employments—two or more entities—each with an individuality, a character, an identity of its own, in common strife for the same object. But there can, from the very

nature of things, be no competition between a substance and its counterfeit. The sole object in making one substance in imitation of another, for purposes of sale, is to avoid competition.

It is time that this idle talk about interference with the competition of two industries should cease. The purpose of this bill is to insure competition. Here is a villainous device for making money lawlessly and subtilely, eating the heart out of an industry which is to this Government what blood is to the body. It is not only striking prostrate the agricultural industry, but it accomplishes this by cheating and defrauding the balance of the people—the great body of consumers out of both money and health. It spares no one.

All legislation attempted by, or within the reach of the States is impotent to deal with this monster. If there was ever a time in the history of this Government when the essence of the great protection principles should be applied—when this body was solemnly commanded to use its delegated powers for the general good, this is the hour.

I shall vote for this bill.

APPENDIX.

Letter of John Quincy Adams to Mr. Speaker Stevenson, July 11, 1832,

To ANDREW STEVENSON, *Speaker H. R., U. S.*

HALL OF THE HOUSE OF REP'S., U. S.
Washington, 11th July, 1832.

SIR. In the ordeal of burning plough shares between which it is the destiny of every public man in this country to wind his way, it has often been my fortune to be unjustly charged with holding latitudinarian doctrines upon questions relating to the extent of the powers of Congress under the constitution of the U. S. These charges have been repeated since the report which I was permitted by the Committee on Manufactures to make in their name, to the House of Rep's. They were repeated by a gentleman from Va., (who was himself a member of the Com. on Manufactures,) at the moment when the report was presented to the House. They have been since in substance, repeated on the floor of the House by the Chairman of the Com. on Ways and Means, by another member of Virginia, and a member from Alabama, all in eloquet and well considered speeches. The gentleman from Virginia (Judge Bouldin) argued against it, and cited the authority of Mr. Madison as adverse to it. The gentleman from Alabama, (Mr. Lewis) cited also the authority of Mr. Madison, as conflicting with my opinions, on which he commented with some severity and great ability. The array of names and of numbers on the floor against my opinions was sufficiently appalling, had there not been an appeal to the authority of Mr. Madison to sustain the adverse political creed. Nor has that name been thus resorted to in the House alone. I have seen in public prints a letter from that eminent citizen to yourself. published, as it is intimated, by way of antidote to the supposed bane of the latitudinarian principles of my report.

It was my intention, before the final passage of the Tariff bill, and in the event of its passage, often painfully doubtful in my anticipation, to address the House at some length upon the principles by which I had been governed in the performance of the duties which you had assigned to me, by placing me at the head of the Committee of Manufactures, and in explanation of the part which I have taken in the preparation and modifications of the bill, as well as in its progress through the two Houses of Congress. From this purpose I was first deterred by my unwillingness to trespass upon the patience of the House, by the infliction upon them of a long speech at the close of a tedious debate, and ultimately, by the application of the previous question, immediately after the second eloquent invictive of the Chairman of the Committee of Ways and Means.

Had I persevered in the purpose of thus addressing the House, all the topics of debate upon which that member, as well as the members from Virginia and from Alabama, had largely expatiated in their speeches, would naturally have been reviewed and found subjects of respectful animadversion. The principles which I had believed fundamental to the inception and consummation of the great compromise, which it was obviously the object of all sober-minded to accomplish in the adjustment of the Tariff—the plans for the reduction of the revenue, proposed by the Committee of Ways and Means, and by the Committee of Manufactures of the Senate—the rights of the agriculture and manufactures of the North and West, and Centre to protection, the wrongs and sufferings of the South, and particulary the distresses and depressions of the State of Alabama, the novel and marvellous maxim of political economy, that export pays the duty upon import—the relative portions of the burden of existing taxation actually borne by the Southern section of the Union, and by the Northern section—and the relative degrees of protection enjoyed respectively by them, must, necessarily, have passed in review. Some of these topics are irritating and altogether uncongenial to my nature. Others, and indeed most of them, had no bearing upon the bill under consideration by the House. I was rejoiced to be relieved from the necessity of discussing them. There is now every prospect that the Tariff Bill will pass; and it remains only for those who have contributed to its enactment, to await, with anxious hopes, its operation the several great interests affected by it, and its acceptance in the minds of the people.

It is not, however, to the Tariff Bill, or to any of its provisions, that I would now invite your attention and that of the public. It is to a principle of Constitutional Law asserted in the Report of the Committee of Manufactures which accompanied the introduction of the Bill to the House. The principle asserted is, that the power of Congress to protect the Manufactures and domestic industry of the Country, by taxation, is contained in the article of the Constitution which authorizes Congress to lay taxes, duties, imposts, and excises, to pay the debts and to provide for the Common defence and general welfare of the Union. This is the position which has been most earnestly controverted upon the floor of the House, and in opposition to which the authority of Mr. Madison has been so frequently and so confidently invoked.

If there be one living man to whom this country is indebted for greater and more eminent services than to any other, it is James Madison. If there be one living man to whom I am under greater, and more impressive personal obligations than to any other, it is the same individual. It is impossible for me to hear his name mentioned but with sentiments of reverence and affection. His confidence has been among the most precious consolations of my life. The opinions of Mr. Madison are to me, therefore among the highest of human authorities. But will the gentlemen themselves, who appeal to his authority for refutation of my opinions with regard to the constitutional power of Congress to levy taxes, duties, imposts, and excises, for the protection of domestic industry; will they subscribe to the opinion of Mr. Madison himself in affirmance of the very same power? Will the gentleman from Virginia, will the gentleman from Alabama, will you yourself call on the name of James Madison for authority, to resist the conclusion drawn by me, that the power of Congress to protect domestic industry by taxation upon foreign industry in competition with it, follows by necessary implication from the power of taxation expressly granted to provide for the common defence and general welfare; and when Mr. Madison himself insists that the protecting power is granted in the same identical authority to tax, coupled with that of regulating commerce, will you abjure and renounce the very oracle to which you have just resorted for truth? You have doubtless all read the two letters of 18th Sept. and 30th Oct. 1828, to Mr. Cabell, and is it possible that after reading them and meditating upon their contents, there should remain a scintilla of doubt upon your minds with regard to the lawfulness of the power? There is certainly none upon mine. If you appeal to Mr. Madison as authority, you must submit to his authority. You cannot, at the same moment, and before the same tribunal, demand judgment in your favor, and take a plea to the jurisdiction in one and the same cause. The authority of Mr. Madison upon this question is against you; clearly and unequivocally against you. Not merely the authority of his name, but authority illustrated by lucid argument—by impregnable demonstration. With regard to the letter to you which has been blazoned forth to the public, as a refutation of the position taken in the recent Tariff Report, presented by me to this House, I must say that I cannot find a single point upon which the doctrines of the two papers come in collision with each other. The position against which the argument of Mr. Madison's letter contends is, that the words common defence and general welfare contain a substansive and indefinite grant of power. That opinion has been, it seems, entertained by some persons, and you thought it expedient to obtain in conversation, and afterwards in writing, the opinions of Mr. Madison adverse to it.

Now I for one, disclaim, utterly disclaim, ever having advanced or entertained any such opinion. The words, far from containing a substantive and indefinite grant of power, contain no grant of power at all. The grant of power is in the preceding words, to levy taxes, duties, imposts and excises. The power granted is of taxation, ample in extent, and varied in all its forms, with an exception afterwards of taxes upon exports—the common defence and general welfare are the purposes for which Congress are required to provide, in the exercise of the granted power of taxation; so is the payment of the debt. That is no grant of power. It is one of the purposes for which the power of taxation is granted to provide for the common defence and general welfare, is another.

The general tenor of the argument in Mr. Madison's Letter is, to be sure, that the words common defence and general welfare, are "harmless words;" but in no one passage does the writer affirm that they are words without meaning. He gives a highly interesting chronological statement of their introduction, and of the alternate adoption and exclusion of them, at the several stages of progress in the formation of the Constitution; and he traces them very satisfactorily to the articles of Confederation. But no analogy between the two instruments can possibly lead to the conclusion that the words were equally inoperative in both. In the Confederation, the power of taxation was not granted with them, it was withheld; and in consequence of that very privation, Congress had not the power either to pay the debts, or to provide for the common defence and general welfare. In the Articles of Confederation, the words were coextensive with the powers of Congress to authorize the expenditure of money. They are in the 8th article of that compact, and read thus: "All charges of war, "and all other expenses that shall be incurred for the "Common defence and general welfare, and allowed by the "United States in Congress assembled, shall be defrayed out of a common Treasury, which shall be supplied by the several States," &c.

This was no grant of power but it recognized the power of the United States in Congress assembled, to allow all charges of war, and all other expenses that should be incurred for the common defence or general welfare. It did not define by whom or by whose authority the expenses should be incurred, but it admitted a discretionary power in Congress to allow them; and thus far made Congress the exclusive judges of the allowance of all expenditures incurred for the common defence or general welfare. Whether the words were harmless or not depended upon the discretion and patriotism with which the Congress should exercise their power of allowing the expenses incurred. To incur, and allow expenditures, they were words of no trivial import—but the power of raising the money, reserved to the Legislatures of the States, rendered all the rest abortive. The power of Congress to call upon State Legislatures for supplies, was like that of Glendower to call spirits from the vasty deep. The obligation of the State Legislatures to furnish the supplies was perfect upon paper. It was a dead letter in fact.

If the words common defence or general welfare were harmless, it was because they were useless. They were impotent alike for good or for evil; not assuredly for want of high and significant import in themselves, but because that import was annulled by the denial of the power of raising funds to defray the expenses incurred. Yet as harmless the words in the articles of confederation might be, it is to be inferred from much of the argument in Mr. Madison's Letter, that they were often used or abused as conferring upon the Confederation Congress, a substansive and indefinite power. He cautions you very earnestly against taking the practice of that body for the expositor of the articles of that Confederation, and with great justice. The exercise of undefined, and it might be added, of unlicensed authority was habitual with them, precisely because every power and authority granted to them was so encumbered, and trammelled, and shackled with exceptions and negations, and reservations, that it could scarcely ever be exercised to useful purpose without overleaping some constitutional obstacle. A man who should order a coachmaker to construct for him a carriage with three wheels, and interdict the fourth, for fear that it might driven over, and crush to death casual passengers in the street who might cross its way, would give an accurate representation of this Union, under the articles of Confederation. The body of the coach was well made—the frame of the carriage, whipple-trees, axle-trees, pole and three wheels, all made with the best materials, and by the most skillful workmen; but the fourth wheel was wanting, for fear of running over passengers in the streets. I admit, therefor, that the practice of the confederation Congress is not to be adopted as the best expositor of its lawful powers. Still less is their exercise of authority to allow expenses incurred for the common defence and general welfare to be construed as indicating that they held those words to be without meaning. But there are two things which give to the same words in the constitution of the U. S. a significancy far otherwise energetic, than that which they possessed in the articles of confederation. The first is their annexation to the expressly granted POWER to lay and collect taxes, duties, imposts, and excises; and the second, is the introduction in the same connection of those most emphatic words TO PROVIDE FOR. In the articles of confederation, the bearing of the words common defence or general welfare is *retrospective*, having reference to the allowance of charges and expenses *incurred*. In the constitution, they are *prospective*, coupled first with command of the purse, the power to levy taxes, duties, imposts, and excises; and secondly, with a great and solemn *duty* to be performed *to provide* for the common defence and general welfare.

It is the DUTY of Congress to provide for the common defence and general welfare; a duty equally imperative with that of paying the debts of the Union; and is it competent for Congress to discharge themselves from this great and paramount duty to the people, by the mere allegation that these are all harmless words, partly adopted from the articles of confederation, without meaning there, and to be construed as without meaning in their new and transferred condition? I have distinctly said that I do not hold the words common defence and general welfare in the constitution, to contain a grant of substansive and indefinite power, or indeed of any power at all—but as expositors of the purpose for which Congress are expressly enjoined TO PROVIDE, and for enabling them to provide for which they are armed with the power of taxation in almost all its forms: and so understanding them, I believe it would be very imperfectly descriptive of their character, to denominate them harmless words, and a very inadequate estimate of their import to consider them as merely auxillary to other *enumerated* powers.

Yet, I disclaim again, explicitly and utterly disclaim, the imputation of considering those words as containing either in themselves, or in their connection, with the right to tax expressly granted, and with the duty to provide for expressly enjoined, a grant of unlimited power. It does not appear from the letter of Mr. Madison, what was the special controverted object of legislation, with reference to which you had resorted to his opinions for the solution of your doubts. His recurrence to the charter, granted by the confederation Congress to the Bank of North America, and to the argument of Mr. Wilson to educe the authority to grant the charter from the nature of the Union, seems to indicate that your inquiries were specially directed to the power of chartering the Bank of the U. S. I never considered the power of chartering the bank, as contained in this paragraph. For, even if a bank should be indispensably necessary for the common defense and general welfare, as I believe it to be, still the power here granted is merely a power of taxation, and to grant a charter of incorporation is not to lay taxes, duties, imposts, or excises. Before the acquisition of Louisiana, and its annexation to the Union, I did consider this taxing, power, injunction, and exposition of purposes, as sufficient, together with the treaty-making power, *for the acquisition of the Territory by purchase*, but not for exercising the powers of government over the inhabitants, nor for annexing them to the Union. At the session of Congress specially called by President Jefferson upon the occasion of the conclusion of that negotiation, which commenced on the 17th of October 1803, I first took my seat as a member of the Senate of the U. S. An accidental detention on my way to the seat of government, by illness in my family, prevented me from taking my seat until the 21st of that month. The advice and consent of the Senate to the ratification of the treaties had been given the day before.

Had I been present I should have voted in favor of the ratification; I had no doubt of the power to conclude the treaty. I did vote and speak in favor of the bill making Appropriations for carrying the treaties into execution. It was entitled An "Act authorizing the creation of a stock to the amount of eleven millions two hundred and fifty thousand dollars, for the purpose of carrying into effect the Convention of the 30th of April 1803, between the U. S. of America and the French Republic, and making provisions for the payment of the same." But I voted against the bill "to enable the President of the U. S. to take possession of the Territories ceded by France to the United States by the treaty concluded at Paris on the 30th April last, and for the temporary government thereof." (See Bioren's U. S. Laws, Vol. 3, p. 562, both those Acts.)

My speech on the bill authorizing the creation of the stock, may be found in the fourth vol. of Elliott's Debates and illustrations of the Federal Constitution, p. 258, and it points out the distinction upon which I voted for one of those bills and against the others. I had no doubt of the Constitutional power of the President, with the advice and consent of the Senate, to make the treaty, and to acquire the Territory; nor the power of Congress to borrow and appropriate money for payment of the purchaser, to take possession of the territory, to dispose of it, and to make all needful rules and regulations respecting it; but the second section of the Act enabling the President to take possession, was in the following words: "And be it further enacted, That until the expiration of the present session of Congress, unless provision for the temporary government of the said Territories be sooner made by Congress, all the military, civil, and Judicial power, exercised by the officers of the existing government of the same, shall be vested in such person and persons, and shall be exercised in such manner, as the President of the United States shall direct, for maintaining and protecting the inhabitants of Louisiana, in the free enjoyment of their liberty, property, and religion."

By this section the absolute powers of a king of Spain over the people of Louisiana, were vested in the President of the United States. I believed that the Constitution had not authorized Congress to confer upon the President such powers, and voted against the bill as unconstitutional. Mr. Jefferson signed the bill, as President of the United States, and assumed and exercised the powers vested in him by it. At the same session of Congress, an Act, was passed [24 Feb., 1804, Bioren's U. S. Laws, p. 569] for laying and collecting duties on imports and tonnage, within the ceded Territories. An act erecting Louisiana into two Territories, and providing for the temporary government thereof, (U. S. Laws, Vol. III, p. 603, 26th March, 1804,) and several others, exercising all the powers of taxing and legislation, over the people of Louisiana, and conferring upon them the rights and privileges of native citizens of the United States. Against all these acts I voted, as may be seen by the records of yeas and nays in the Journals of the Senate. I was under a sincere and conscientious conviction that the Constitution of the U. S. had conferred upon Congress no authority to enact those laws.

Mr. Jefferson, however, sworn as he was to support the Constitution of the U. S. and to take care that the laws should be faithfully executed, did, as President of the U. S., sign all those acts, and did assume and exercise all the powers conferred upon him by them. In the debate in the House of Representatives upon the constitutional power of Congress, to consummate the acquisition of Louisiana, Mr. Rodney expressly cited this identical article; the power to lay taxes, duties, imposts, and excises, to pay the debts, *and provide* for the *common defence* and *general welfare*, as containing the neccessary grant of power. I did not subscribe to the doctrine. I believed an amendment to the Constitution indispencibly neccessary to legalize the transaction; and I further believed the free and formal suffrage of the People of Louisiana themselves were as neccessary for their annexation to the Union as those of the People of the United States. I made a draft of an article of amendment to the constitution, authorizing Congress, to annex to the Union the inhabitants of any purchased territory; and of a joint resolution, directing that the People of Louisiana might meet in primary assemblies, and vote upon the question of their own union with the United States, of both these experiments, had Mr. Jefferson had the courage to make them, the result was as certain as the diurnal movement of the sun.

But Mr. Jefferson did not dare to make them. He found Congress mounted to the pitch of passing those acts, without inquiring where they acquired the authority; and he conquered his own scruples as they had done with theirs. I was aware that by a very liberal construction of this extensive power of taxation to provide for the common defence and general welfare, together with what was called the sweeping clause, the last paragraph of the section the power to make all laws necessary and proper for carrying into execution all the other powers vested by the constitution in the Government of the U. S.; the whole transaction of purchasing and annexing Louisiana to the Union, might be fairly brought within the pale of the constitutional powers of Congress. The peaceable purchase of Louisiana for a sum of money, was, under the circumstances of the time, a strict and judicious performance of the duty to provide for the common defence and general welfare. A province bordering upon our own territories, covering a surface equal in dimensions to the whole domain of the Union, interlocked with our own soil, by more than one of the mightiest floods that traverse the Western Hempshire, and capable of bearing and breeding a population to be numbered by hundreds of millions, had passed from the imbecile caducity of Spain into the hands of the Conqueror of the age, in the swelling tide of his fortune. He had destined his new possessions to be the seat of a *military colony*, and at the very moment when he transferred his acquisition to the happier destinies of association with the North America confederacy, he had twenty thousand of his veteran warriors embarked at a European port, under the command of another soldier of fortune, then his lieutenant, since more permanently aggregated than himself with the circle of sceptered kings, and waiting but for a wind to waft them to the mouths of the Mississippi.

To tax the people of the U. States to the amount of fifteen millions of dollars, had it been for the single purpose of buying off the prospects and perils of such a neighborhood, would certainly have been a very wise and fortunate measure to provide for the common defence and general welfare; but the legitimacy of *this* exercise of Power, should carry with it as incidental consequences, the power of investing the President of the U. S. with all the despotic authority of a King of Spain; that it should imply the power of absolute legislation over a foreign nation; of holding in subjection a foreign people; taxing them without their consent, and fettering them into freedom, appeared to me to be inferences so transcendent, so inconsistent with the whole character of our institutions, so certainly unforeseen and uncontemplated by the convention which had prepared the constitution, and by the people who had adopted it, that I could not bring my mind to the conclusion that this clause of the constitution could be susceptible of such latitude of construction.

I opposed pertinaciously, by speech and by vote, the passage of all those acts. The debates of the Senate were not then regularly reported, and of my opposition, which was earnest and incessant, even to importunity, no record now remains excepting upon the Journals of the Senate. It will there be found, that on the 25th of Nov., 1803, I moved for the appointment of a committee, "to inquire whether any, and if any, what further measures might be necessary for carrying into effect the treaty between the U. S. and the French Republic, concluded at Paris on the 30th of April, 1803, whereby Louisiana was ceded to the U. S.," with leave to the committee "to report by bill or otherwise." This motion was laid on the table for consideration till the 9th of Dec., when it was rejected. When the motion was under consideration, I stated to the Senate my motive for making it, my full conviction that an amendment to the constitution was indispensable for the annexation of Louisiana to the Union, and for the admission of its inhabitants to the rights and privileges of citizens of the U. S. That the consent of the people of La. was equally necessary; and I read the drafts which I had prepared, of an amendment to the constitution, and of a resolution for taking the free vote of the people of Louisiana, which I proposed submitting to the Committee, if the Senate would indulge me by appointing one.

No attempt was made to answer my reasoning, but my motion was rejected. Before offering the resolution, I had twice called upon Mr. Madison, then Secretary of State; had expressed to him my own opinions upon the constitutional points, and the wish that measures to the effect of removing the difficulties should be introduced into Congress, by some leading friend and supporter of the Administration. At our first interview, I left him under a doubt whether this course of proceeding would be taken by the administration or not; and I told him I should not move in the matter, if any friend of the administration would undertake it. At the second meeting he informed me that no such measure would be proposed on the part of the Administration, and it was in consequence of this information, that I made the motion in Senate for the appointment of Committee. The Administration, and its friends in Congress, had determined to assume and exercise all the powers of government in Louisiana and all the powers for annexing it to the Union, without asking questions about their authority. On the 10th Jan., 1804, I offered to the Senate the following resolutions:

"1. Resolved, that the People of the U. S. have never in any manner delegated to this Senate the power of giving its Legislative concurrence to any act for imposing taxes upon the inhabitants of Louisiana without their consent.

"2. Resolved, That by concurring in any act of Legislation for imposing taxes upon the inhabitants of Louisiana, without their consent, this Senate would assume a power unwarranted by the constitution and dangerous to the Liberties of the People of the United States.

"3. Resolved, That the power of originating bills for raising revenue, being exclusively invested in the House of Representatives, these Resolutions be carried to them by the Sec. of the Senate: That whenever they think proper, they may adopt such measures as to their wisdom may appear necessary and expedient for raising and collecting a revenue from Louisiana."

At the time when I offered these Resolutions, the act for laying and collecting duties on imports and tonnage within the territories ceded to the U. S. by the Treaty of the 30th April 1803, between the United States and the French Republic, and for other purposes, (Bioren's Laws U. S. Vol. 3, p. 369) was in discussion before the Senate, I strenuously opposed and voted against that act, in all its stages on the sole ground that it transcended the constitutional powers of Congress: But as the mere record of votes by yea's and nay's, could not show the principle upon which my votes were given, I offered these Resolutions, well knowing that they would not be adopted, but for the purpose of putting upon record my solemn protest against the assumption and exercise by Congress of such unconstitutional powers. A Letter from Mr. Jefferson to Dr. Sibley has been recently published written in June 1803, after he had received the Louisiana Treaties, in which he clearly and unequivocally expresses the opinion that an amendment to the constitution would be necessary to carry them into execution. Yet without any such amendment to the constitution, Mr. Jefferson, did, as President of the U. S., sign all those acts for the government and taxation of the People of Louisiana, and did exercise all the powers vested in him by them.

Now sir, as the Letter from Mr. Madison to you, upon which I am commenting, has been avowedly published as a refutation of the opinions contained in the report of the Committee on Manufactures, bearing upon the duty enjoined upon Congress in the constitution, by means of taxation, to provide for the common defense and general welfare, as authority for the protection of domestic industry; and as in the newspaper which I have before me, that letter is introduced with a declaration by its publisher, that it completely overthrows the heresy which Mr. Adams has advocated in his Report," I now call upon you, in the face of the nation, to state by virtue of what *enumerated* power in the Constitution of the U. S. Mr. Jefferson did, as President of the U. S. sign and then as the Chief Executive Magistrate of the Union, carry into effect, the acts of Congress, of which I here subjoin the titles, and the dates upon which they received his sanction.

1. An act to enable the President of the U. S. to take possession of the territories ceded by France to the U. S. by the Treaty concluded at Paris on the 30 of April last, and for the temporary Government thereof, 31 Oct 1803.

2. An act for laying and collecting duties on imports and tonnage within the territories ceded to the U. S. by the Treaty of the 30th of April 1803, between the U. S and the French Republic, and for other purposes—24th Feb. 1804.

3. An act relating to the recording, registering, and enrolling of ships or vessells in the District of Orleans—Feb. 25th 1804.

4. An act to providing for the expenses of the civil Government of Louisiana, 26th Mar. 1804.

5. An act erecting Louisiana into two territories and providing for the temporary government thereof 26th Mar. 1804.

If you can discover in the constitution of the U. S. the shadow of an enumerated power, other than these "harmless words," and this repudiated sweeping clause, delegating to the Congress of the United States the power to enact those laws, and to the President of the United States the power to sanction and then to execute them, you will confer upon me a high obligation by pointing it out. By what process the mind of Mr. Jefferson was operated upon, between the month of June when he declared in his letter to Dr. Sibley his opinion that an amendment to the constitution was necessary to consummate the acquisition of Louisiana, and the 31st of Oct. when he signed the first of these acts, has never been made know to the world. That he willfuly and deliberatly violated the constitution of the United States and his official oath to *preserve protect* and *defend* it. I never have felt myself justified in believing, nor am I willing to believe it now. To that supposition there is this alternative, and if there be another, I solemnly demand of you, and of every other surviving friend of Mr. Jefferson

and of his reputation with posterity, to set it forth. The Alternative is, that Mr. Jefferson did *pro hac vice*, adopt the principle of liberal construction to the grant of powers in the constitution. That he concurred in the exercise of the power of taxation upon the people to the amount of fifteen millions of dollars, to provide (by the purchase of Louisiana) for the common defence and general welfare of the Union and that, after having completed the purchase, he was warranted in giving his sanction to all laws necessary and proper to carry the whole transaction into execution, however identified such laws might be with the principles of an absolute monarchy, and however irreconcileable with the fundamental principles of our republican institutions.

I have stated that upon the passage of this first act and for taking possession of Louisiana, and for the temporary *government thereof*, through the House of Representatives, this very paragraph of the Constitution was cited by Mr. Rodney, of Delaware a distinguished lawyer and statesman and then an ardent friend and supporter of Mr. Jefferson's administration, as containing the grant of power by which Congress was authorized to make the acquisition of Louisiana, I have said that by giving this construction an easy and natural, but very liberal construction to that paragraph, and calling to its aid the sweeping clause, the purchase of Louisiana, and all the laws of Congress enacted for carrying it into full execution were strictly constitutional. And I will now add, that from and after the close of the first session of the eight Congress—that is, from the 27th of March 1804—I have so considered, and do so consider them. It was not the construction which from the conclusions of my own judgment I had given to that paragraph.

I had, through a long and interesting session of Congress, resisted and opposed the application of that construction to measures which in all other respects had my hearty approbation. That construction was, however, practically given, by large majorities of both Houses of Congress, and by Mr. Jefferson, as President of the U. S., in the enactment and execution of the five statutes of which I have given you the titles and the dates. That construction was acquiesced in by the People of the United States and by the People of Louisiana, and thereby, controlling my own judgment, became to me thenceforth a part of the fundamental constitutional law of the land. And hence in the years 1819 and 1821 I contributed, in the official station which I then held, without scruple or hesitation, to the conclusion of the Florida Treaty, and to the enactment of Laws precisely similar, with reference to that province and to its inhabitants, which I had resisted and opposed with regard to the province of Louisiana, and its people in 1804.

But the construction of the Constitution having thus been practically and definitely settled with regard to transactions of such import as the acquisition, government, and annexation to this Union, of a Territory equal to that of the whole Confederated republic before, I was left no longer at liberty to apply a narrow and contracted analysis of language to those "harmless words," which had conferred upon a President of the U. S. the despotic powers of a king of Arragon and Castile. I never did draw the inference—and I ask, in this respect, not to be misunderstood—I never did draw the inference from this succession of facts, and settlement of principles, that these words conveyed to Congress a substantive and "indefinite power," but I did draw the inference that as declaratory of the purposes for which the power of taxation was granted and as subsidiary to the duty enjoined upon Congress to provide for the common defense and general welfare, they were words efficacious in themselves and needing no further specification of enumerated power to give them life and significancy. The substantive and definite power granted, is the power to levy taxes, duties, imports, and excises.

The duty enjoined upon Congress for the performance and fulfillment of which they are authorized to exercise this power, is to provide for the common defense and general welfare. Far from being a grant of indefinite power, these are themselves defining words; they *limit* the exercise of the powers of taxation in this respect to the object of providing for the common defense and general welfare; but they extend the lawful exercise of the power to all objects fairly and reasonably coming under the denomination, adapted to the *common defense and general welfare*. Now, the acquision of Louisiana by purchase, and the enactment of all laws necessary and proper for carrying that measure into execution, by fair and sound reasoning, without violence to language or abuse of terms, might be included in the obligation of Congress to provide for the common defense and general welfare. And I aver for the purpose of meeting and refuting your contradiction—if you shall think proper to contradict the assertion—I aver that there is in the Constitution of the United States no other enumerated grant to Congress which could authorize them to enact the five statutes of which I have given above the titles, and which were enacted at the first session of the Eighth Congress, 1803–1804.

If then the Eighth Congress, with the sanction of Mr. Jefferson, as President of the United States, did practically give an exposition to these words so comprehensive as to embrace within the pale of the constitution, all the acts of Congress by which the acquisition of Louisiana and its annexation to the Union were consummated, the same principle is of right applicable to the exposition of the same words in all parallel cases and no one can deny that the protection of domestic industry against foreign competition and against the hostile spirit of rival commercial legislation, is as faithful a performance of the obligation to provide for the common defence and general welfare as was the purchase of Louisiana.

Such, sir, is the foundation of the reasoning upon which, in the report of the committee on manufactures of the House of Representatives upon the tariff, it is affirmed that the power of Congress to protect the domestic industry of the country, by taxation upon the competition with it, of foreign industry, is granted by the power of taxing to *provide* for the common defense and general welfare. I add that it is much more clearly included in this grant of power than the purchase of Louisiana and its consequent series of legislation, was so included. How strictly this power of protecting the native interest by countervailing legislation, is included in the requisition to Congress to provide for the common defense and general welfare, is signally illustrated by the following paragraph of the speech of Mr. Huskisson, to the British House of Commons, delivered on the 12th of May, 1826, upon the state of the navigation of the United Kingdom. Speaking of the British Navigation laws, he says:

"I am bound to say that those regulations are founded on the first and paramount law of every state, the highest ground of political necessity, PROVIDING FOR OUR OWN SAFETY AND DEFENSE." Here, sir, the very words of our constitution, employed as a direction to Congress, for the exercise of the granted power of taxing, are used by Mr. Huskisson as constituting the foundation of the whole system of the navigation laws of Great Britain; and the coincidence of the language used in the two cases is the more emphatically demonstrative of the power of Congress implied in the injunction, as it is very certain Mr. Huskisson used the words without reference to the constitution of the United States, of which there is in the same speech abundant evidence that he was wholly ignorant.

If, then, there is any essential discordance between the principles of constitutional law asserted in the report, of the committee of manufactures, with reference to the words common defense and general welfare, and the doctrines maintained in the letter of Mr. Madison to you, it is not because the report asserts or implies, that these words "convey to Congress a substantive and indefinite power." The reports contains no such assertion—no such implication.

Nor, if the object of the argument in Mr. Madison's letter is to prove that these words are not competent to authorize Congress to charter a bank, can there be found in the report any heresy to which they can attach for controversy or reflection. The author of the report has never asserted, nor does he believe that the power to charter a bank is contained in this particular grant, but he has no doubt that if in providing for the common defense and general welfare, Congress should find it necessary to levy taxes, duties, imposts and excises, to administer the finances of the country by means of a bank, the power, the duty and the purpose thus combined, would justify them in the establishment of such an institution. The general power to charter a bank must be derived from other grants.

If, however, by the denomination of "harmless words," applied to the terms common defense and general welfare, or, if the chronological tracing of the genealogy, through the stages of their progress in the constitutional convention, back to the articles of confederation, the purpose of Mr. Madison's argument is to shew that these words associated as they are in the constitution with the grant of power to tax and with the injunction of Congress to *provide* for, have no more vital efficacy than they had in the articles of confederation, where separated from the power of taxation, disburthened from the obligation to *provide*, they were confined to the exercise of an authority to settle accounts for expenses and charges incurred, then with the most perfect deference for the opinions of Mr. Madison, the reporter of the Committee of Manufactures, is constrained to dissent from them.

That the words were not in the articles of confederation themselves deemed altogether harmless, is proved by the consideration, that the power of the United States in Congress assembled, to ascertain the sums and expenses necessary for the defence and welfare of the United States, or any of them, was one of the substantive powers which they were interdicted from exercising, unless with the assent of nine States. The power granted to the Confederation Congress was to ascertain the necessary sums and expenses; and so substantive, though not indefinite, was that power deemed, that its exercise was prohibited, unless with the assent of nine States. The power granted to the Constitution Congress, is to levy taxes, imposts, and excises, and the duty enjoined upon them, is to provide for the defence and welfare of the Union, by the expenditure of the moneys levied.

In the Articles of Confederation, it was a substantive specific grant of power, in which the words defence and welfare, as indicating the purposes for which the power might be exercised, were so far from being thought harmless, that they warranted the expenses which Congress were authorized to ascertain, and so substantive, and so far from indefinite was this grant of power considered, that it was classed in the same paragraph with the powers of engaging in a war, of granting letters of marque and reprisal in time of peace, of entering into treaties or alliances, of coining money, of regulating the value thereof, of emitting bills, of borrowing money on the credit of the United States, of appropriating money, of agreeing upon the number of vessels of war to be built or purchased, or upon the number of land and sea forces to be raised, and of appointing a Commander-in-chief of the Army or Navy. For the exercise of any one of these powers the Articles of Confederation make the assent of nine States indispensable.

The terms defence and welfare, in this case, though unaccompanied by the epithets common and general, must be understood as of the same import as they bear in the Constitution, connected with them. They are the exponents of a definite specific power, as well in the Articles of Confederation as in the Constitution of the United States. In the Articles of Confederation it was a power to ascertain expenditures necessary for the specified objects, and the abuse of the power was foreclosed, by requiring a majority of two-thirds of the States for its exercise.

In the Constitution it is a power to tax the People, granted to Congress, with the injunction to provide for the common defence and welfare, by the expenditure of the proceeds of taxation. It is as specific and definite as the other injunction, to pay the debts of the Union with the proceeds of the same taxation. It is a grant of power to Congress, like the other general grants to the same body, and is not one of those requiring more than a majority of the two Houses, with the sanction of the Executive, for its exercise.

The extent of the power conveyed to Congress by this grant, is undoubtedly dependent upon the construction given to them "to provide for the common defence and welfare." It is a question of more or less, and the opinion that they contain no intrinsic meaning, appears to me as erroneous as that which assigns to them indefinite and arbitrary power.

I have shown that Mr. Jefferson and the eighth Congress, practically gave to them by their acts for consummating the acquisition of Louisiana, a more enlarged construction than I deemed admissible. A construction, however, sustained by the acquiescence of the people, and in which I have therefore acquiesed. Before the acquisition of Louisiana, I should have held the power granted, to Congress in this paragraph amply competent to provide by taxation upon foreign competition, for the defence of domestic industry. Since the extension given to the constructive power by the Louisiana purchase Legislation, I have considered that power enlarged to the comprehension of all objects as clearly adapted to the common defence and welfare, as the purchase and annexation to this Union of Louisiana.

Indulging Mr. Jefferson and the eighth Congress in their liberality of construction to this paragraph, necessary to bring within the pale of the Constitution, the Statutes which they did enact and execute, to consummate the acquisition of Louisiana, I can not consent that they should then step back and say, we have adopted the latitudinous construction for an object specially suited to our interests and purposes, and now we will return to the doctrines of rigid construction. The acquisition and annexation to the Union of Louisiana was an achievement of great importance to the common defence and welfare of the Nation, and I will not deny that by its magnitude it warranted the application of a very liberal principle of construction to the powers of Congress for effecting it.

But I can not allow that Mr. Jefferson, as President of the United States, but at the same time a citizen of a Southern slave holding State, should adopt a broad and liberal construction of the terms, in which power had been delegated to him, for the accomplishment of one set of measures, transcendently advantageous to the Southern and Slave holding interest, and then retreat upon a narrow and niggardly construction of the same terms, to deny the power of Congress to protect the manufactures of the North, of the Centre, and of the West from foreign rivalry and competition.

That Mr. Jefferson did so, it is not my intention to affirm. That he had no doubt of the power of Congress to protect the native interest, not only by taxation, but by prohibition, has been amply proved, and particularly by one of his messages to Congress, an extract from which was read by me to the House of Representatives in the course of the debate upon the Tariff bill yet under the consideration of Congress, Mr. Madison doubts as little as Mr. Jefferson, and his letter to you, of which you have permitted the publication to refute the supposed heresy divulged in the Report of the Committee on Manufactures, proves by its date that it was written by him for no such purpose. The substantial argument of Mr. Madison's letter is, that the terms common defence and general welfare do not convey a grant of substantive and indefinite power. So say I.

Mr. Madison says that the power of Congress to protect domestic, by taxation upon foreign, industry is implied in the power to regulate commerce. So say I. And I add that it is also contained in the grant of power of taxing *to provide for the common defense and general welfare*. In both cases the power is implied. It is a constructive power—and so far as I am able to judge of the force of language, the derivation of the power from the duty to provide for the common defence

and general welfare is more direct, more immediate, less needing a winding staircase of argumentation to come to the result, than its derivation from the power to regulate commerce.

The publication apparently by your authority, of a private letter from Mr. Madison to you, with the avowed purpose of affixing the brand of heresy upon a principle asserted by me in a document prepared in discharge of a public duty assigned to me by yourself, will, I trust, be a sufficient apology to you and to the public, to warrant my addressing you in this manner, rather than upon the floor of the House.

I am very respectfully, sir, your servant and fellow-citizen,

JOHN QUINCY ADAMS.

The Labor Question.

SPEECH

OF

HON. RALPH PLUMB,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 11, 1886,

On the bill (S. 1637) to legalize the incorporation of national trades unions.

Mr. PLUMB said:

Mr. SPEAKER: The bill before us authorizes any association of working people having branches in two or more States or Territories of the United States, and formed for the purpose of aiding its members to become more skillful and efficient workers, the promotion of their general intelligence, the elevation of their character, the regulation of their wages and their hours and conditions of labor, the protection of their individual rights in the prosecution of their trade or trades, the raising of funds for the benefit of sick, disabled, or unemployed members or the families of deceased members, or for such other object or objects for which working people may lawfully combine, to so organize and combine for their mutual protection and benefit.

Such organizations have the right to sue and be sued, to plead and be impleaded, to grant and receive, in their corporate or technical names, property, real, personal, and mixed, and to use said property, and the proceeds and income thereof, for the objects of said corporations in their charters defined.

Such organizations have, moreover, power to make and establish such constitutions, rules, and by-laws as they may deem proper to carry out their lawful objects, and the same to alter, amend, add to, or repeal at pleasure.

These organizations are national, with power to define the powers and duties of all their officers and prescribe their mode of election and terms of office.

This bill, having passed the Senate, was referred to the Committee on Education and Labor of this House, and being called up by the chairman of that committee and passed by the House without a division needs no support from me; but having prepared some remarks on the subject of labor, I avail myself of the order of the House to place them on record here.

The provisions of this bill, Mr. Speaker, have my hearty approval, and I hail it as a step in the direction of a great and needed advancement of the interests of labor in this country.

Mr. Speaker, I am not surprised that the labor question should occupy so large a place in the public mind. The agitation upon this subject is universal. All ranks and conditions, from the laborer at his toil to the Executive of the nation, are studying the question with a view to reaching a correct conclusion as to the extent of the interests involved and the proper course to be pursued in dealing with them.

This must be regarded by every careful student of the progress of the human race toward a larger liberty as a cheering evidence that the great Republic in which we live is preparing to take one of the most important steps in history. The step to which I refer may well be termed the third in the grand march of the Republic. The first was national independence; the second, national unity and the abolition of chattel slavery; the third and impending step, the emancipation of labor.

Sir, it is not enough that we are at last able to say, "Slaves can not breathe our air, they touch our country and their shackles fall," the genius of our institutions, the spirit of our great charter, as well as every principle on which our Government is framed, forbids that we stop short of that perfect equality before the law which is the declared birthright of all.

The power to labor and the necessity for it came to man as a part of his inheritance, and both testify that the bequest was of priceless value. At every step of his development from infancy to age, and from weakness to strength, every individual feels the impulse of these forces, and by these alone he achieves for himself whatever of success justly belongs to him.

To each individual labor is his capital, and it is his own, not another's. By it he supplies his necessities and administers to his ever-increasing wants. If there be those who are dependent upon him, from the fruits of his labor he supplies their needs. Whatever is his just proportion of the expense of the Government which protects him, he contributes from his own labor. Not a human being on earth has the right to take from the laborer unjustly a single dollar of wealth earned by him.

None of these propositions deserve mention here because they are new, but only to point out the fact that laboring men comprehend these principles, and are inquiring whether things as they now exist show that they as laborers have what actually belongs to them or not.

Sir, we are told that five hundred thousand Knights of Labor have banded themselves together for the purpose of elevating themselves, and for the further purpose of securing to themselves all that as laborers they are justly entitled to; and this movement fills many with alarm lest anarchy and misrule are about to come upon us, and some even talk as if we must needs have a stronger form of government, a larger army, and more guns to keep down these laboring men. For one, I not only have no such fears, but I rejoice that there is such an organization in this country. These men are not the enemies of order; they understand full well the value to them of a republican government based on the principle of justice as ours is. These very men are its sure defense in every time of trial and need. They must not be confounded with those who follow the red flag of the commune—they are not the bomb-throwers and incendiaries by whom the streets of our cities have been barricaded and our brave policemen murdered; they have as little sympathy with such as has any man on this floor, and none would rejoice more than the Knights of Labor, if I understand them aright, to see every communist returned to those European countries from whence they came and to the custody of those governments by whose oppression they have been made enemies of all government.

The Knights of Labor are men who work in our mines and factories, on our railways, and in our mills and shops, at the furnace, on the farm, and in every department of manual labor. They are organized, and they have a right to be organized, nay, more, they are under the necessity of organizing, for in no other way can labor in the present condition of affairs secure its just rights.

A half-century ago organized capital was comparatively but little known, especially in the employment of labor; but the ushering in of a new era—the era of invention—brought on by the scarcity of labor and the multiplication of human wants in a country of boundless resources like our own and among a people in whom the inventive faculty was thereby largely developed, has conspired to create a radical change in the relation between capital and labor. Machinery was made by which the power to produce was increased to such an extent that it necessitated the employment of aggregated capital by corporations.

This change of conditions from those in which the individual made an article and sold it to the individual who consumed it, to the present, in which nearly every kind of business is now carried forward by corporations wielding aggregated capital, has been so universal and sweeping that the organization of laborers of all kinds became a necessity.

Mr. Speaker, I know full well that there are here and there corporations that carefully consider and protect the interests of their employés, but, sir, it is useless to insist that the general manager of organized industries will, as a rule, concede fair compensation to operatives at the expense of dividends; the operative must be in a condition to insist on a fair divide, and that he can not do standing alone.

But, Mr. Speaker, it is insisted by some that the laborer is well paid, that never in history in any country has the laboring man had wages so high or enjoyed so many comforts as in the United States to-day. I will not dispute the statement, but I insist that the question is not whether the past has not been worse for labor than the present, but whether the present is what it ought to be. The typical American does not look to the past for satisfaction; he dares to inquire for what is now just, and to demand it; and if there be one who more than another is justified in such demand it is the man who works.

It has somehow come to be assumed, Mr. Speaker, that capital is superior to labor, and that in the adjustment of questions arising between them the interests of capital must be conceded as of paramount importance; but the fact is, and must be recognized, that labor is above capital. In this connection, I beg leave to quote the words of Lincoln, uttered in 1865:

> There is one point with its connections, not so hackneyed as most others, to which I ask brief attention. It is the effort to place capital on an equal footing with, if not above labor in the structure of the Government.
>
> It is assumed that labor is available only in connection with capital; that nobody labors unless somebody else owning capital somehow by the use of it induces him to labor. This assumed, it is next considered whether it is best that capital shall hire laborers and then induce them to work by their own consent or buy them and drive them to it without their consent. Having proceeded so far it is naturally concluded that all laborers are either hired laborers or what we call slaves. And further, it is assumed that whoever is once a hired laborer is fixed in that condition for life.
>
> Now, there is no such relation between capital and labor as assumed, nor is there such thing as a freeman being fixed for life in the condition of a hired laborer. Both these assumptions are false, and all inferences from them are groundless.
>
> Labor is prior to and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital and deserves much higher consideration. Capital has its rights, which are as worthy of protection as any other rights. Nor is it denied that there is, and probably always will be, a relation between labor and capital producing mutual benefits. * * *

Again, as has been already said, there is not, of necessity, any such thing as a free hired laborer being fixed in that condition for life. Many independent men everywhere in these States a few years back in their lives were hired laborers. * * *

No men living are more worthy to be trusted than those who toil up from poverty, none less inclined to touch or take aught which they have not honestly earned.

These, Mr. Speaker, are the words of that great President of the Republic who was inspired to proclaim liberty to four millions of laborers who were held as slaves, and who in every act and word from his youth in obscure poverty, to his untimely death in the very pinnacle of greatness and power, was the laborer's stanchest friend.

Mr. Speaker, that labor is above capital, that it is the producer of all forms of wealth, let a few facts be submitted to prove: The Tenth Census gives the number engaged in 1880, in productive labor, and the same proportion shows that of our present population fifteen millions are engaged in gainful avocations. These, it must be remembered, include agriculturists, manufacturers, iron and steel workers, glass-blowers, miners, artisans, railroad employés, and every kind of workingmen.

Now, let us suppose that these persons have employment two-thirds of the time, or say two hundred days in each year, at an avearge wage of $2 per day, and you have a total of $6,000,000,000 of labor earnings in one year in the United States, which is probably far below the actual facts. Then, to understand the tremendous significance of these figures, imagine if you can the consequences should this motive power on which human existence absolutely depends cease for one year. Why, sir, it would be like an eclipse of the sun or the cessation of the earth's revolution. Doctors and lawyers, preachers and teachers, State Legislatures, and even the United States Congress might be dispensed with for a twelvemonth and the nation would survive, but human labor is of such vital importance to society that it must bring its daily blessing to us all—it must save or we all perish.

THE PRESENT CONDITION OF LABORING MEN.

Mr. Speaker, it is useless to deny the existence of widespread discontent among laboring men—a feeling of unrest so general and so real as to challenge anxious scrutiny as to its actual cause. Why is it, we may well inquire, that in a land so full of natural productions of both soil and mine, so replete with all the rich gifts with which nature has blessed our own wide domain, a country in which neither the early nor the late rains are withheld, and where the genial sun brings to perfection in their season every variety of food for both man and beast, there are so many thousands of unemployed laborers, so many who are at their wit's end for a sure way to obtain a supply for the daily wants of themselves and those dependent on them?

Is it because our people lack the enterprise to engage in diversified industries, or is it because we have no ingenuity in devising methods by which nature's forces can be made to lighten toil? Sir, whatever may be the source of the trouble we are considering, it can not be maintained that the land in which we live is from barrenness the cause.

WHAT THEN IS THE CAUSE?

Let the countless millions possessed by the comparatively few answer the question. Sir, the number of very rich men now on the stage compared with fifty years ago is to the thoughtful a suggestive fact. I remember well that in my boyhood the wealth of Stephen Girard, of Philadelphia, was estimated to be $4,000,000, a sum the contemplation of which filled the minds of that period with amazement at its colossal proportions; and yet, Mr. Speaker, $4,000,000 is a sum counted as a small fortune by the rich men of this country to-day, hundreds of whom count their millions by scores.

Let me be understood. I am not here to charge the men of large fortunes with being bad men; they have exhibited by their energy, perseverance, and shrewdness their capacity to avail themselves of the favorable circumstances which have surrounded them, men no worse nor better than the countless multitudes of less fortunate ones; but what I desire to point out is that while wealth has been produced on a scale justified by the vast resources and rapid development of our country for some cause it has found its way into the hands of the few.

HOW HAS THIS BEEN DONE?

The contest between labor and capital has not been an equal one, and for the following reasons:

1. The laboring man has not hitherto fully comprehended the power and importance of labor either to himself or to society. Taught to consider labor a curse, it has been accepted as such, and endured with no hope of escape from its weary burden. He has but recently begun to awake to a comprehension of the true dignity of labor and of his own responsibility as a laboring man. In no previous period in history and in no other country but this has labor enjoyed so grand an opportunity to assume its true position as a leading force in civilization.

2. Labor has not been organized for its own advancement and defense. Organization, combined action, the gathering together of numbers, of elements of strength, has come to pervade almost every department of human effort save that of labor.

3. Organizations wielding capital under corporate powers have taken advantage of labor. In conferring corporate powers on organizations such wholesome and just restraint as should have been provided for by State and national legislation has been overlooked—I will not say for a purpose—and the consequence has been damaging to the interests of the public in general, and particularly of labor. Why, Mr. Speaker, these corporations have claimed that they were persons in such a sense that the corporate powers conferred on them were so sacred and omnipotent as to put them beyond the control of the very powers by which they were created.

Acting under these unjustifiable assumptions corporations, and especially railroad companies, have thrust into the channels of business an alarming amount of stocks that have neither cost nor real value—a fiction, in fact, as baseless as the fabric of a vision. To illustrate the proposition just made, here is a railroad which has been constructed at an actual cost of $30,000 per mile, including rolling-stock and terminal facilities. Now, we find that this road is a really needed facility for the travel and transportation of the country through which it is laid, and no right-minded man wishes its projectors anything but good returns for the actual investment made. In times of general prosperity, when all kinds of enterprises are being pushed forward, when labor is fully employed and wages are good, everything moves off smoothly and with satisfaction to all.

But during all this time the law of things is at work and is bringing to its inexorable test every value, whether real or fictitious, that has been placed either on the railroad in question or the articles it transports. It turns out at length that the railroad of which we are speaking has been bonded for all that it would cost to reproduce it, and that in addition thereto there has been issued in shares a sum equal to what it would cost to build another road with equal facilities for business. These shares are held probably by innocent purchasers who expect their dividends to be paid as certainly as the holder of the bonds expects his interest. This railroad, it must be borne in mind, is run and managed by a company which has had conferred upon it strong corporate powers. It has a board of directors and executive officers chosen for their supposed ability to make the property pay interest and dividends on, if not double its actual cost, certainly double what it would cost to reproduce it.

Meantime agricultural products and manufactured articles, together with the output of the mines, which constitute the bulk of freight for the railroad we are considering, have become lower in price, and for that reason the owners of the freight ask a reduction of transportation rates. Enough remains of competition among railroads, in spite of all pooling arrangements, to secure a material decrease in freight rates, and in consequence the business qualities of railway managers are taxed to their utmost to work out the conundrum of making the property earn enough to pay dividends on twice its value.

Now, Mr. Speaker, in what way does the manager of this corporation try to keep up the double payment expected of him? Why, sir, he turns his whole effort to a reduction of expenses, which, in the main, means a reduction of the wages of the men by whose skill and labor the railroad is made to do its work. He enters upon this business in the name of a corporation that can not sympathize with human wants. Looking through only corporate eyes, he sees an overcrowded labor market, and is easily persuaded that it is right to avail his principals of the necessity which impels men in their need to accept of wages totally inadequate to supply their wants.

Now, Mr. Speaker, who can not see that the laborer, standing alone and without the aid of organization, would be powerless to resist any demand that the corporation might make, and who can tell to what straits he might thus be driven?

Here, Mr. Speaker, the trouble begins. This opens the pandora box from which has sprung more of the depression that has prevailed throughout the country than from any other one cause. The mistake has been made of supposing it possible to depress labor without injuring manufactures, commerce, and in the end capital itself.

THE REMEDY.

Mr. Speaker, is twofold—first, from the action of the laboring man himself, and, second, from the action of the Government in his behalf; and from these two sources there must come a complete triumph of the right and a great gain to all.

The first to consider is the action of the laboring man.

God has ordained that man shall be the arbiter of his own destiny. If he achieves results worthy of his superior nature, it must be done through persistent and well-directed effort; he must win for himself the crown that he must wear. The man of labor needs to understand this, and to accept in its full force the utterance of the world's greatest philosopher, "Whatsoever a man soweth that shall he also reap." The conditions of his success are vigilance in maintaining the rights of labor coupled with industry, sobriety, and economy. Government can not legislate these qualities into his possession; they must be acquired by his own effort, and all that the true man demands is fair protection while he wins his own way.

But, sir, in thus winning his way it is the right of all men to combine with each other, if by so doing greater results can be achieved. It is the right of the capitalist to combine with others to carry through enterprises which promise good returns. The manufacturer and the commercial man enjoy the same privilege; in fact, combined effort is in-

dispensable to material progress and a high civilization, and whoever seeks to deprive the man of labor of the benefits of combined organized effort is unwilling to concede to others what he claims for himself.

Co-operation is only a form of combination, and it is, in my opinion, one of the most effective methods by which labor can secure to itself a fair share of the wealth produced.

Co-operation will secure to those who labor under it profits now enjoyed by others, but to be successful there must be a full exercise of those noble qualities of mutual confidence and trust which belong to no particular class. It will, moreover, tend to fasten in the minds of all who participate in it more accurate knowledge of business and higher ideas of individual responsibility. By co-operation labor will avail itself of the benefits of labor-saving machines, and to labor this benefit justly belongs. In short, it is in the power of labor through co-operation in production and distribution to make capital its faithful servant.

This brief statement of what must devolve on labor brings us to discuss the other source of remedy—the Government.

Mr. Speaker, I am not unmindful of that class of philosophers who maintain that the true functions of government are exhausted when it has so far acted as to become a persistent police force which effectively preserves the property of the citizen from being stolen and his life from being taken by the lawless; that all else is better achieved by the individual himself, and that in the end the best results will be attained by surrendering every individual member of society to that law which is called "the survival of the fittest." This philosophy would expose labor to the same competition as cotton and wheat are subjected to, and as a result it must often occur that the laborer may be obliged to accept a wage so low that the loss of employment for a short period in consequence of sickness or any other misfortune must make him a pauper.

Sir, I protest against such a division of the proceeds of labor. The poorest born of all who toil have a right to more than will keep them from the poor-house. They have a right to accumulate and to pass on from the condition of dependence to independence; and I maintain that in our rich country under our institutions hopeless poverty should be confined to the imbecile, the intemperate, and the sluggard.

The proper function of government is to protect the weak and restrain the strong, that all may have a fair chance in fighting the battles of life. The mission of the Republic is to make its millions of citizens equal before the law—none so weak as to be forgotten or neglected by it, and none so strong as to defy its power.

Sir, this law of "the survival of the fittest" applies to nations as well as to individuals; and, sir, the only condition upon which it is possible for our Government to survive is that we faithfully adhere to the principles of liberty, fraternity, and equality upon which it was founded.

It is well, Mr. Speaker, for Congress to pass laws legalizing arbitration, providing for labor organizations, shortening the hours of labor, and, if you please, maintaining as far as possible the payment to Government employés of a fair wage; but, sir, I submit that all these enactments fall far short of reaching a true solution of the labor question. Sir, there are other and more far-reaching measures which should be adopted as the policy of the Government, and these measures the men of labor in this country study and comprehend.

The true Knight of Labor asks for no special privileges; a fair deal is all he wants. He wants less of honeyed phrases and more legislation in the interest of the whole people.

He wants an ample currency of gold and silver and Treasury notes issued by the Government and endowed by it with all the functions of money.

He wants a system of internal improvements carried steadily forward that shall serve the interests of agriculture, manufactures, and commerce.

He wants protection to American manufactures, to the end that labor may be diversified and employed.

He demands that the laws against the importation of contract laborers and foreign paupers be rigidly enforced.

He asks that we build our own ships from the products of our own mines and forests, in our own workshops, to the end that we may not only be a free but an independent nation.

He asks that a liberal expenditure of money be made to aid in carrying the mails and manufactured articles of our citizens to such countries as are contiguous to our shores, where such articles are in demand, to the end that our exchange of commodities with those countries may give additional employment to labor and enhance the prosperity of all our people.

He asks, moreover, that law and order be maintained; he has no sympathy with the incendiary, the dynamiter, nor the communist, and is in favor of settling labor disputes by arbitration instead of a resort to strikes, which are his last and least desirable means of redress.

He claims that labor has as good a right to be organized under law as capital; and to show the necessity of such organization he points to the corporations under which railways, banks, manufactories, land companies, and cattle companies have carried on their operations and have grown rich, in many instances, as they believe, at the expense of labor; and for this legal organization of labor this bill provides.

He asks that the public domain be placed beyond the power of such land-grabbers as have for years been engaged in unlawfully obtaining titles to large areas of the best lands, to the end that the actual settler only shall have for himself a home for his own tillage, and not for speculative purposes.

In short, he asks that the legislation of Congress shall recognize the fact that in its grand march forward the Republic has safely passed the crisis of internecine war and has entered upon an era of peace, and that now and henceforth the tremendous power of the millions of our laboring men may be so directed as to promote the prosperity and happiness of all.

The present House of Representatives has passed an arbitration bill. The Senate has sent here this bill to provide for the legal organization of laboring men, which, when passed by this House, will, with the arbitration bill, be steps in the right direction.

We have before us another bill for the organization of a department of industries, to be presided over by a secretary who is to have a seat in the Cabinet. To this department it is proposed to confide the interests of agriculture, commerce, manufactures, and labor, with a commissioner for each, and through which correct statistics can be promptly furnished for guidance in required legislation. These are all important measures, which I trust may become laws that may prove effectual aids in securing to productive industry its appropriate influence in the councils of the nation.

Mr. Speaker, I will close by repeating that I am not alarmed by the agitation of the labor question; it is an agitation legitimate and inevitable. It is impossible to determine at this time the precise manner in which the great questions involved will be finally settled, but, sir, it is safe to assume that in the end labor will be exalted to its true position among the forces which move society forward. Whether labor be intelligent or not it produces all the wealth that exists; but with intelligence the laborer will not only produce wealth, but will wield it for his own advancement and for the happiness of all.

Sir, I look upon the organization of labor with intense interest. It has, it seems to me, come to lead the nation in taking that great step in the onward march to a higher and better civilization in which the masses, the wealth-producers, the tax-payers, the musket-bearers, are to make their full impress on the policy of the Government. It is a new departure; nothing like it has been done in the past. In no previous period and in no other government have the conditions for success been furnished as is the fact here and now. This exaltation of labor to its rightful position is a necessary sequence to the abolition of slavery—it is the emancipation of labor itself. A fearful responsibility rests upon the leaders of the labor movement; they need intelligence and virtue; they need wisdom and forbearance; they must have unfaltering devotion to principle; and with these qualities the struggle will not be long-continued, nor the victory uncertain.

Oleomargarine.

SPEECH

OF

HON. WILLIAM WARNER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 28, 1886.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 2328) defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine—

Mr. WARNER, of Missouri, said:

Mr. CHAIRMAN: I have carefully examined the provisions of the bill under consideration. The remarks of the gentlemen who urge its passage with so much zeal and eloquence have received my earnest attention. We are conjured to pass this bill for the relief of the languishing agricultural interest of our common country. Eloquent word painters have held up to us the picture of the farm, once the home of prosperity and happiness, now desolated by the ravages of oleomargarine. The gentleman from Wisconsin [Mr. PRICE] makes the startling announcement that the manufacture of this vile compound caused "three hundred thousand milch cows" to be slaughtered in Chicago last year, while the gentleman from Illinois [Mr. HOPKINS] exclaimed:

The baleful results of these frauds (oleomargarine and butterine) are seen everywhere among the farmers and dairymen. Mortgages are being placed upon the farms. The once fine herd of cows, the pride of the farmer, is lessening in numbers. * * * The proprietors and managers of the creameries and butter and cheese factories are failing and making assignments for the benefit of their creditors. An almost complete prostration and stagnation of the dairy interest of the country is inevitable unless Congress comes to their relief.

The relief asked is the passage of this bill; it is the panacea for all the ills that now afflict the agriculturist of the land.

Representing as I do on this floor three of the most fertile counties

in the United States, I am the friend of all legitimate legislation in their interest. Yet, sir, without questioning the honesty of the gentlemen who advocate this bill, I am constrained to believe that in their zeal they drew largely on their imagination for their facts, and have no warrant in the Constitution for the remedy they propose. The distinguished Representative from New York [Mr. HISCOCK], in answer to the argument that the legislation proposed is in violation of the Constitution, says:

Do gentlemen tell us that in enacting this taxing law we are violating the Constitution? Well, Mr. Chairman, if we are I will take my part, and I hope you will take your part in violating the Constitution in voting for the passage of this bill.

To what extremities are the champions of this proposed legislation driven when their leader is compelled to make such a declaration? Mr. Chairman, let me express the wish that neither you nor I will violate the Constitution upon the ground that one class of our citizens may derive a benefit at the expense of another or for any other reason. Be not deceived—the farmers, the bone and sinew of this country, do not ask that you or I violate the Constitution established by the fathers, even though the dairy interests of the land may be benefited thereby.

I, for one, do not believe in the doctrine that the end justifies the means. Nor am I here in my representative capacity the blind follower of any man. Therefore I can not go with the gentleman from New York [Mr. HISCOCK] in following the beck and nod of my distinguished colleague from Missouri [Mr. HATCH]. That I may do that gentleman [Mr. HISCOCK] no wrong, let me quote his language:

Whenever the Committee on Agriculture wish to change any of the provisions of this bill I shall, for one, vote with them, and I propose in voting to stand by this bill, letter by letter, line by line, section by section, until I receive a sign from the chairman of the committee.

Greater faith in a leader than this hath no man. Should he be like the children of Israel who looked in vain for a sign, how then will he and the faithful vote? Let me congratulate my colleague. He has a distinguished and unquestioning disciple—one that only awaits a sign to come or to go.

It is the plume of Missouri that is followed blindly and trustingly by the distinguished son of New York. I should feel proud of the honor thus conferred upon my State could I feel assured that my colleague was not being used as an instrument to crush out an industry in our country for the express purpose of building up another. Be this as it may, being a new man, accustomed to voting for what I believe to be right and against what I believe to be wrong, holding myself responsible alone to my conscience and my constituents for my vote upon this bill or any amendment thereto, I must most respectfully decline to join those who stand with my friend from New York, however much I may and do admire him, in looking toward my colleague for a sign before giving my vote. [Laughter and applause.]

Mr. Chairman, it is my purpose to notice some of the arguments that have been made during this discussion as to the wholesomeness of the product called oleomargarine. Not being a chemist, never having analyzed oleomargarine to find out its constituent elements, I must rely upon the opinions of those who are recognized authorities upon such questions. As the result of my own investigations I know practically nothing as to the wholesomeness or unwholesomeness of oleomargarine, and I trust I may be pardoned for saying that I know just as much as many of the gentlemen who have been talking so learnedly and displaying so much knowledge of chemistry on this question. [Laughter.]

One gentleman [Mr. HISCOCK] says: "You can, and they do, in the main, manufacture it (oleomargarine), so that it is a little less than poison." Not satisfied with that definition, he adds, "I amend my remarks and strike out 'little less than;'" so that leaves it as manufactured, poison pure and simple. He is not satisfied even by branding it as poison, but goes on to say it has "collected in it the germs of all the diseases which afflict animals; * * * it is absolutely a poison in the human stomach, freighted with disease, freighted with death." He does not enumerate the animals that are used in the manufacture of oleomargarine; it is left for the gentleman from Wisconsin [Mr. PRICE] to enlighten Congress upon that question. He charges that "offal from the butcher shops, the decayed and decaying carcasses of the stock-yards, and dogs killed because suspected of being affected with rabies, are being worked up into the oils and fats that go to make up the infernal compounds."

These are but samples of, may I say, reckless assertions that have been made time and time again by the friends of this bill during the discussion. I might retort if I would that the gentlemen making these assertions know as little of the constituent elements of oleomargarine as did the "scarlet woman of Babylon of the immaculate conception." To such desperate straits are the advocates of this bill driven that they brand citizens engaged in the manufacture of oleomargarine—the men who conduct the great packing-houses of our country—as thieves, counterfeiters, and robbers. Some of these men I have the honor of knowing, and here hurl back the base slander and say that they are the equals in morality, integrity, and in everything that goes to make up a good citizen with any member upon this floor. No man would have the temerity to make such a charge against these gentlemen in the community in which they live; but if any one should he would be saying what every man, woman, and child in that community knew to be untrue. Yes, Mr. Chairman, each of them could truthfully exclaim against such charges—

> And if thou sayest I am not peer
> To any lord in Scotland here—
> Lowland or highland, far or near,
> Lord Angus, thou hast lied.

I trust I shall be pardoned this digression, but, sir, I feel I could not have said less.

Let us return to the "infernal compound," to use the language of my friend from Wisconsin. How are we to determine whether or not it is deleterious to health; whether or not it is freighted with disease and death; whether or not when it is taken into the human stomach it takes with it all the diseases which animal life is heir to; whether or not it is a poison pure and simple? All of these and more have been charged. What is the evidence in support of the indictment? Let us as legislators try if by searching we can ascertain the truth without regard as to which side of the controversy controls the most votes. In the investigations of this question let us apply two tests: our own observations of the effect of oleomargarine upon the human system; and, secondly, the opinions of those who are recognized as the best authority upon the wholesomeness of all food products.

It is asserted, and not denied, that the annual consumption by the American people of oleomargarine is 200,000,000 pounds, nearly 600,000 pounds a day. The popular impression is that a deadly poison, "freighted with disease, freighted with death, having collected in it all the germs of disease which afflict animals," when taken into the human stomach in sufficient quantities produces death. Certainly, if the oft-repeated assertions of the friends of this bill are to be believed, there is no longer any room for a reasonable doubt as to the deadly quality of this poison, commonly called oleomargarine. The quantity consumed by this people is sufficent to kill every man, woman, and child in the nation if the compound is "as black as painted." Either the assertions of the gentlemen are groundless, or our people "bear charmed lives."

Many of the champions of this bill seem to mistake invective and denunciations for arguments, bald assertions for facts, and to be governed by prejudice rather than reason. The facts are that our people are not killed or diseased by this food product called oleomargarine. It is not a poison, but a wholesome substitute for butter. If it is a poison as charged, and consumed in such large quantities by our people, is it not strange that our death rate compares most favorably with that of all other civilized countries? The tables on mortality do not show an extra death.

The low death rate in this country is considered to be due to the comparative absence of overcrowding and the more general and equable distribution of the means of supporting life, including especially the abundant food supply of good quality for all classes of people.—*Compendium of Tenth Census*, page 1706.

This legislation proposes by imposition of exorbitant licenses and levy of prohibitory taxes to strike down one of the articles that enters into the "food supply" of our people regardless of the fact as to whether it is wholesome or unwholesome, not for the purpose of cheapening any food product, but for the avowed purpose of protecting another interest and advancing the price of another food product.

I subscribe fully to the doctrines, each industry of America is for all, all American industries for each, but American industries against the world. [Applause.]

I will not give my vote to array one industry of my country against another, to tax one industry out of existence that another may put money in its pocket, however worthy or honorable may be the industry thus sought to be benefited.

Sir, let us now consult acknowledged authority as to the constituent elements of that food product commonly called oleomargarine. It resembles butter, and is used by many for butter and as butter. The gentleman from New York [Mr. HISCOCK] says: "It is not within the power of any man unless he has scientific attainments and brings analysis or the microscope to bear upon it [oleomargarine] to distinguish the poor article, the poison, from the good."

It is my purpose to produce for the consideration of this House the testimony of Prof. Henry Morton, president of the Stevens Institute of Technology, in Hoboken, N. J., a man of national reputation as a scientist. In his sworn testimony, given in a case in the northern district of Illinois, he says:

For more than twenty years the greater part of my time has been devoted to the study of subjects of chemistry and physics, involving constant experimenting in their lines.

That is, chemistry and physics in connection with the practical application of these sciences to the industrial arts. He further testifies:

When the artificial butter or oleomargarine first made its appearance in this country I was interested in it from a scientific standpoint, and also because my opinion was asked professionally as to the possibility and means of discriminating it from natural butter, or detecting it or determining its amount when mixed with natural butter. This led me to a long series of experiments on natural butter, various fats, and different specimens of oleomargarine. * * *

Q. State fully what improvement having in view the utilization of fatty substances for food purposes is described in said letters patent and recited in the claims thereof.

Professor MORTON. The essence, as I understand it, of the Mége invention described and claimed in these patents, consisted in the production of a fatty

substance having the constituency and essentially the constituents of natural butter, this being obtained from the ordinary animal fats by a treatment which may be naturally divided into steps or stages. The first of these consisted in rendering the animal fat under such conditions of cleanliness and temperature, as secured a pure fat free from membranous or like animal matter, and also from any of that peculiar odor well known as characterizing ordinary tallow. The second stage consisted in the removal from this pure and sweet rendered fat of the greater portion of the stearine which it contained, thereby leaving its composition, as to its main constituents, identical with that of natural butter. This second stage in the process was conducted by allowing the melted fat to cool gradually to a temperature of about 86° to 98°, thereby causing the stearine to crystallize, and so separate itself from the other constituents of fat throughout the mass.

By pressure in cloths this separation of the stearine was completed, the stearine remaining in cloths, while the fatty matter freed therefrom ran through and was collected separately, producing a material which, as I have said before, as regards its main constituents, is essentially identical with butter. The preparation of this material, now known as oleomargarine oil, having been described, the Mége patent further directs how this shall be treated, mechanically and otherwise, so as to produce a product which not only as to its general constituents, but as to all its constituents, shall be identical with natural butter, the only difference being a slight difference in proportion of those constituents which chiefly affect the flavor of natural butter. This last-mentioned stage in the process is affected by an agitation of the oleomargarine oil with milk, cream, or similar aqueous fluid, by which a permanent solid emulsion is produced.

* * * * * * *

Q. Prior to the discovery of Mége, what were the methods of rendering fatty substances for the various uses in the arts and for domestic purposes, which are known to you as a man of science, from the descriptions contained in the literature relating to the subject, or of which otherwise you have knowledge?

A. The most general and all but universal method, was to heat the fat more or less, thoroughly cleansed and broken up or comminuted beforehand, to a temperature above that of boiling water, which would drive off the water contained in the membranes inclosing the fat, and thus cause them to shrink and crack and allow the fat to escape, the shrunken or dried membranes being known as "cracklings." Occasionally the fat, together with water, was placed in a closed vessel and heated to a temperature much above that of boiling water, under which conditions the superheated water attacked and dissolved the delicate membranes, and so liberated the proper fat. Where, as in the case of perfumers, it was desirable to obtain a fat specially free from strong or offensive odor, it was customary to break up or pulverize the crude fat to a great degree, and then exercise great care in applying the heat, so as to render the fat at a low temperature. But even in this case it would appear the heat employed was fully up to that of boiling water.

Q. What effect has the employment of comparatively low and comparatively high temperatures in the rendering of animal fats upon the character and qualities of the contents of the membraneous cells containing a homogeneous mixture of the constituents of fat?

A. If the fat is rendered at a comparatively low temperature, and yet with rapidity, so that it is not kept too long in contact with the membraneous matter, the contents of these cells, as so extracted, will be entirely free from the peculiar flavor familiar to all as that of tallow. If, however, a temperature high, as compared with this, is employed, this tallowy flavor will be communicated to the contents of the cells; and if the rendering is conducted at yet higher temperatures, so that portions of the membrane and even of the fat are decomposed, a very strong empyreumatic or burnt flavor will be communicated to the rendered fat or extracted contents of the cells. * * *

Q. State what, chemically considered, are the identities and differences between oleomargarine oil obtained from the rendering of animal fats by the process described in the said Mége patent and the constituents of dairy butter made by the ordinary processes from cream of milk?

A. Both alike consist of oleine, margarine, and stearine in equal proportions, in either case. That is, the proportion of each of these ingredients in the oleomargarine oil is the same as in natural butter. In natural butter there is, however, a small amount of fatty body, analogous to the others, but yet quite distinct in many respects, known as butyrine. There is also in natural butter a certain amount of casein and minute quantities of several other proximate principles derived from the milk. All ordinary butter also contains a varying amount of water, and usually a portion of salt. One of these, except perhaps a little salt, would be found in the oleomargarine oil.

Q. State whether, chemically considered, the butter product obtained by the process described in the said Mége patent is the same or different from the butter product obtained by the usual processes from the cream of milk; and in what particular, if any, the two products are distinguishable from each other as articles of food?

A. The butter product described in the Mége patent, which is, of course, a different thing to the oleomargarine oil to which I have just referred, is qualitively in all respects identical with natural butter; that is to say, all the substances found in natural butter are likewise found in the butter product of the Mége patent. But there is a slight difference in the proportionate amounts of some of them. Thus, while the oleomargarine and stearine will be found in like amounts in both materials, there will be less butterine and probably also less casein in the product of the Mége patent. The amount of water and salt, however, will usually be the same in each. As articles of diet, I should not say there was any difference except as to the question of delicacy or richness of flavor, in which the best dairy butter will surpass oleomargarine butter, while oleomargarine will in turn surpass lower grades of dairy butter.

Permit me now to call attention to the evidence in the same case of Professor Charles F. Chandler, professor of chemistry in the academic department and in the school of mines of Columbia College, in the College of Physicians and Surgeons, and in the New York College of Pharmacy, and who was for fifteen years connected with the health department of the city of New York, at first as its chemist and for eight years as its president. Even the gentleman from New York [Mr. HISCOCK] must acknowledge the high standing of Professor Chandler, and will not, I assume, contend that his opinions and evidence are not entitled to the highest credit. Professor Chandler says:

I was educated as a chemist at Harvard College and at the universities of Goettingen and Berlin, and attended the regular courses of lectures at the universities on general chemistry and upon the chemical arts. Since 1857 I have been engaged as an instructor of young men preparing to become professional chemists, and I have constantly had charge of chemical laboratories in which my students had been engaged in experimental study. It has been my duty to go over the whole field of theoretical and applied chemistry; and at the College of Physicians and Surgeons I am obliged to give a course of lectures on the chemical arts at the school of mines. For many years I was editor of the American Chemist, and I was the chemical editor of Johnson's Encyclopedia. I have also been frequently called upon to make chemical investigations for manufacturers, and have frequently been consulted and given evidence in patent litigation.

Q. State fully what experience you have had in the investigation of the preparation, properties, and constituents of fatty substances, with a view to their utilization in the useful arts?

A. As I grew up in New Bedford the treatment of fatty bodies, especially whale and sperm oil, was the first chemical industry that I became familiar with, and this seemed to create a special interest in the chemistry of the fats. From my connection with the health department of the city of New York, it has been my special duty, for the last dozen or more years, to pay particular attention to the various establishments in the city which are devoted to the treatment of the fats, and which are consequently liable to send out offensive odors. I was an expert in the famous Tilgham litigation with regard to the fatty acids, and I have been personally familiar with the chemistry of oleomargarine and artificial butter ever since the first sample prepared in this country was manufactured in my laboratory.

Q. State whether and, if at all, to what extent you have investigated by analysis or otherwise oleomargarine, or artificial butter made from oleomargarine?

A. I have frequently investigated both the oleomargarine and the butter made from it. The first experiment in this country was made in my laboratory, if I remember right, in 1872 or early in 1873, and I have visited repeatedly factories in which either the oleomargarine or the artificial butter from it, or both, were manufactured. I have also conducted experiments at various times on this subject both in my laboratory and in the factories.

In speaking of the discovery of Hippolyte Mége, the celebrated French chemist, in the treatment and utilization of fatty substance for food purposes, that the French people might be supplied with a wholesome and cheaper substitute for dairy butter, Professor Chandler says:

Mége, from a course of inductive reasoning, made the brilliant discovery that bovine fat could be converted outside of the animal into a sweet, inoffensive, palatable article of human food—a discovery which has revolutionized the industries which depend upon the utilization of bovine fat or beef suet. The reissued letters patent, and the description contained therein, exhibit the processes which Mége invented for reducing his discovery to a practical industry. In carrying out his invention he seeks to secure three separate and distinct results:

I. To extract from the adipose tissues in the animals the fatty substances, free from the peculiar and offensive odors and taste which had heretofore invariably characterized them as prepared by the previously known processes.

II. To divide the fat thus obtained into two portions, one of which, namely, the stearine, should be harder than the original fat, while the other, the oleomargarine, should be softer and more fusible, and should possess the peculiar consistency of the butter fat obtained from the milk of the cows.

III. To convert this oleomargarine into a product having all the physical and chemical properties of dairy butter.

In carrying out his invention he secures the first object by thoroughly disintegrating the fat, subjecting it to a slightly elevated temperature, and at the same time submitting it to the action of gastric juice. To secure the second result he cools the molten fat to such a point as to cause the stearine to crystallize out in solid particles which are separated from the still liquid oleomargarine by straining under pressure. This oleomargarine he then converts into artificial butter by incorporating it, while still liquid, with milk and cream, adding a certain quantity of mammary tissue and coloring matter, and working the product after it has been solidified between rollers.

Mr. Chairman, I do not flatter myself that I shall change the preconceived opinions of any member of this House who has determined to pass this bill "letter by letter, line by line, sentence by sentence," as it came from the hands of the Committee on Agriculture, unless a sign shall be given by the distinguished chairman of that committee to the contrary. The testimony of this distinguished chemist, as well as that of others of scarcely less eminence, established the fact beyond controversy that what is commonly known as beef suet can be converted outside of the animal into a sweet, inoffensive, palatable article of human food. What are the principal constituents of animal fats? What is the condition and how contained in the living animal, and what change in their physical constitution occurs after the death of the animals? Let Mr. Chandler answer.

The principal constituents of animal fats are the three simple fats, stearine and palmatine, which are both solid at ordinary temperature, and oleine, which is liquid at ordinary temperature. In the older works on chemistry, and in the literature and patents relating to the discovery and invention of Mége, the term margarine is generally employed instead of palmatine, and in my deposition I shall therefore drop the latter term. In the living animal the fat is in a molten condition, being liquid at blood heat. It is contained in little cells composed of a thin membrane which are held together in masses by coarser membranes and which are penetrated in every direction by blood vessels, the whole constituting what is called the fatty or adipose tissues of the animals. After the death of the animal, when the temperature has fallen from a blood heat to the ordinary temperature of the atmosphere, the fat in the cells solidifies or chills, and the whole adipose tissue after its removal from the animal is known as beef suet.

Chemically considered, the identities and differences between oleomargarine obtained from animal fats and the principal constituents of dairy butter made by the ordinary processes from the cream of milk is thus described by Mr. Chandler:

The oleomargarine, after it has been separated from the stearine, is composed in greater part of exactly the same simple fats as the dairy butter, namely, olein, stearine, and palmatine (margarine).

The dairy butter, however, contains, in addition to these, a small proportion of other simple fats which are not contained in oleomargarine. The chief and most important of these is butyrine.

The dairy butter also contains caseine, coloring matter, salt, and water.

Chemically considered, the artificial butter contains each and every one of the constituents found in dairy butter and the two exhibit the same degree of hardness and the same texture. The only chemical difference between them is found in the proportion of the less abundant simple fats, which I mentioned in my last answer, of which buttyrine is the characteristic example. Dairy butter contains a somewhat larger proportion of these minor constituents than does the artificial butter.

As an article of food the artificial butter is in all respects essentially identical with the dairy butter, and the two are not distinguishable from each other in ordinary use. It may be said, however, that the artificial butter does not exhibit the high flavor of the best grades of dairy butter. On the other hand, the artificial butter does not exhibit the peculiar taste and odor which usually characterizes the lower grades of dairy butter and which render them so offensive to the cultivated taste of consumers.

In 1880 the Legislature of the State of New York requested the board

of health of the city of New York to investigate the subject and report whether in its opinion the butterine is a wholesome article of food. In response to this resolution the board of health, after a careful and exhaustive investigation, stated "that in its opinion there is no sanitary objection whatever to the unrestricted manufacture and sale of this substance."

In support of the unqualified opinions given by Professors Chandler and Morton, indorsed by the leading boards of health of the principal cities, I wish to cite the result of the investigations of other chemists of undoubted probity and unquestioned scientific attainments, men whose statements are entitled to full faith and credit.

Professor George F. Baker, of the University of Pennsylvania, stated:

In practice, the process of manufacture, as I have witnessed it, is conducted with care and great cleanliness. The butterine produced is pure and of excellent quality, is perfectly wholesome, and is desirable as an article of food.

Professor Charles P. Williams, analytical chemist, late director and professor Missouri school of mines, State University, gives the following:

In respect to its chemical composition it is fairly the equivalent of the best quality of dairy butter. I will add further that owing to the presence of a less quantity of volatile fats the keeping qualities of the oleomargarine butter are far superior to those of the dairy products.

The testimony of Dr. Henry A. Mott, of New York, analytical and consulting chemist, is that:

Having been acquainted for the past six years with the process of the manufacture of the product called oleomargarine butter or butterine, and having made numerous microscopical and chemical examinations of the product, I am clearly of the opinion that the product called oleomargarine butter is essentially identical with butter made from cream; and as the former contains less of those fats which, when decomposed, render the product rancid it can be kept pure and sweet for a much longer time.

The opinions expressed by the foregoing eminent scientist are fully sustained by the opinions by Professor S. C. Caldwell, of Cornell University; Professor S. W. Johnson, of Yale College; Professor C. A. Greasurman, of the Massachusetts Agricultural College. Their statements are set out in full in the four hundred pages of printed evidence in the case of The United States Dairy Company *vs.* Benjamin Shoeman *et al.*, in the United States circuit court for the northern district of Illinois. A careful perusal of the voluminous evidence in that case might serve at least to demonstrate to the same of the chemist on this floor, how little the chemist and scientist, who are not members of this House, know as to whether the food products, known to the commercial world as oleomargarine and butterine, are noxious or innoxious. Yet I trust gentlemen who have talked so learnedly about these products, calling them "infernal compounds," "bull butter," made from the decaying carcasses of "dogs killed because suspected of being affected with rabies," "poisons freighted with disease and death," will forgive the chemist whose opinions I have quoted and may cite, because they differ from them. They have never been members of Congress, therefore "forgive them, they know not what they do."

Let me give other instances. Professor J. W. S. Arnold, of the medical department of the University of New York, in speaking of the manufacture of oleomargarine butter or butterine, said:

That I have seen and tasted at the factory each and every ingredient employed; that I have made thorough microscopical examinations of the materials used and of the butter; and I consider that each and every article employed in the manufacture of oleomargarine butter or butterine is perfectly pure and wholesome; that the oleomargarine butter differs in no essential manner from butter made from cream; in fact, the oleomargarine butter possesses the advantage over natural butter of not decomposing so readily, as it contains fewer volatile fats. In my opinion, oleomargarine is to be considered a great discovery, a blessing for the poor, and in every way a perfectly pure, wholesome, and palatable article of food.

Professor W. A. Atwater, of the Wesleyan University at Middletown, Conn., gave his opinion in the following strong language:

A consideration of the materials used, the process of manufacture, and the chemical and microscopical character of the butterine seems to me to justify the following statements: As to its qualitive composition, it contains essentially the same ingredients as natural butter from cows' milk. Quantitatively, it differs from ordinary butter in having but little of the volatile fats which, while they are agreeable in flavor, are, at the same time, liable to rancidity. I should, accordingly, expect butterine to keep better than ordinary butter.

The best evidence within my reach indicates that just such is the case. The butterine is perfectly wholesome and healthy, and has a high nutritious value. The same entirely favorable opinion I find expressed by the most prominent European authorities—English, French, and German—who are unanimous in their high estimate of the value of the "Mége discovery," and approval of the material, whose production has thereby been made practicable.

Mr. BEACH. What is the date of that statement?

Mr. BROWNE, of Indiana. What has that to do with it?

Mr. BEACH. It has a great deal to do with it.

Mr. WARNER, of Missouri. The evidence contained in the four hundred printed pages which I hold in my hand was taken in 1881.

Mr. BEACH. They made it purer then than they do now.

Mr. WARNER. The remark of the gentleman would indicate that such eminent chemists as Professors Chandler and Morton if called upon now would give different evidence. It is strange that no word to the contrary is produced from either of these learned scientists. The admission is that the oleomargarine made up to and including 1881 was all that these chemists claim for it. To break the force of that admission we are informed by the gentleman from New York [Mr. BEACH] that "they made better then than now." Is not the contrary of that assertion true?

The fact is that the manufacture of oleomargarine has reached that point when the product looks like butter, tastes like butter, smells like butter, and answers all the purposes of butter. It competes to-day with dairy butter in the markets of the world. Were it not so this legislation would never be demanded. Yet the gentleman from New York [Mr. BEACH] demands later evidence than that given in 1881. I will try to accommodate him. He and his colleagues from New York represent the largest dairy interest in the United States. In 1882 the Legislature of the State of New York enacted stringent laws furnishing ample protection against fraudulent imitations of dairy butter or the sales of such imitations as genuine. These laws require that every person who shall manufacture for sale, or offer for sale, or export any article in the semblance of butter, not the legitimate product of the dairy, must distinctly and durably stamp on the top and side of every tub, firkin, or package, the words, "oleomargarine butter."

Notwithstanding this legislation oleomargarine butter was manufactured in that State, stamped and branded as such, sold in the open markets as oleomargarine and continued to compete with dairy butter. People bought and ate it knowing what they were buying and eating. Then the dairy interest of that State demanded additional protection against this rival. Accordingly, in 1884, the Legislature of New York, passed a law by its terms prohibiting the "manufacture out of any oleaginous substances, or any compound of the same, other than that produced from unadulterated milk or cream, * * * designed to take the place of butter or cheese produced from pure, unadulterated milk or cream of the same;" also forbidding the sale or offer for sale "of the same as an article of food." The rest of the section excepts "skimmed-milk cheese" from its operations, and subjects to severe punishments by fine and imprisonment "whoever violates the provisions of this section." Early in 1885 one Marx was arrested charged with a violation of this law. It is but fair to assume that the dairy interest of that State was active in the prosecution. I now cite from evidence in that case as given by the learned judge who delivered the opinion:

On the part of the defendant it is proved by distinguished chemists that oleomargarine was composed of the same elements as dairy butter. The only difference between them was that it contained a smaller proportion of fatty substance known as butterine; that this butterine exists in dairy butter only in a small proportion—from 3 to 6 per cent.; that it exists in no other substance than butter made from milk, and is introduced into oleomargarine butter by adding to the oleomargarine stock some milk, cream, or butter, and churning; and when this is done it has all the elements of natural butter, but there must always be a smaller per cent. of butterine in the manufactured product than in butter made from milk. The only effect of the butterine is to give flavor to the butter, having nothing to do with its wholesomeness; that the oleaginous substances in the oleomargarine are substantially identical with those produced from butter and cream. Professor Chandler testified that the only difference between the two articles was that dairy butter had more butterine; that oleomargarine contained not over 1 per cent. of that substance, while dairy butter might contain 4 or 5 per cent.; and that if 4 or 5 per cent. were added to oleomargarine there would be no difference; it would be butter; irrespective of sources, they would be the same substances. According to the testimony of Professor Morton, whose statement was not questioned or controverted, oleomargarine, so far from being an article devised for the purpose of deception in trade, was devised by a French scientist who was employed by the French Government to devise a substitute for butter. (People *vs.* Marx, 99 New York Court of Appeals, 382.)

Testimony was also given in that case that "oleomargarine butter was precisely as wholesome as dairy butter." This evidence was given in 1885. Is that late enough for my friend from New York [Mr. BEACH]? In 1883 the committee on health of the State board of Massachusetts, composed of gentlemen it is fair to presume of intelligence and integrity, after a thorough investigation, report as to oleomargarine:

When well made it is a very fair imitation of genuine butter, being inferior of the best butter, but much superior to the low grades of butter too commonly found in the market. So far as its influence on health is concerned, we can see no objection to its use. * * * As to its prohibition by law, the same law which prohibited it should also prohibit the sale of lard and tallow, and, more especially, all low-grade butters, which are far more injurious to health than a good sweet article of oleomargarine.

* * * * * * *

The use of substitutes for butter seems to be steadily on the increase in this country. When good butter is at from 40 to 50 cents per pound, it has passed beyond the means of persons in moderate circumstances, and they have the choice of three things—to do without, to use poor butter, or to use some substitute.

To the gentleman who has made the assertion on this floor that this food product is made out of the "decayed and decaying carcasses of the stock-yards and dogs killed because suspected of being affected with rabies," let me commend the following extract from the same report:

A great deal has been said in regard to the poor grade of fats from which the oleomargarine is made. Any one making such assertions in regard to the fats is simply ignorant of the whole subject. When a fat has become in the least tainted it can no longer be used for this purpose, as it is impossible to remove the odor from the fat after it has once acquired it.

The leading manufacturers of oleomargarine in this country court the most rigid investigation both as to the manner of making and the character of the product produced by them. They claim, and their claim is supported by undisputed evidence, that they are engaged in a legitimate industry; that they manufacture a food product wholesome in every respect which is used as a substitute for butter. There is no hidden mystery in its manufacture. They tell you how it is made, and give its constituent elements. They manufacture and sell it for

what it is. P. D. Armour, of the great packing-house of Armour & Co., in his sworn statement, tells you how and of what oleomargarine and butterine are made in his establishment, which is one of the largest in the world. His affidavit is as follows:

STATE OF ILLINOIS, *Cook County, ss:*

Philip D. Armour, being first duly sworn, deposes and says that he is a resident of the city of Chicago, in the State of Illinois, and that he is a member of the firm of Armour & Co.

Deponent further says that said firm of Armour & Co., in the course of their business, makes and sells oleomargarine and butterine, and that this deponent knows of his own knowledge the materials and the methods used by said firm in the making of said products. They are as follows:

METHODS OF MANUFACTURE.

The fat is taken from the cattle in the process of slaughtering, and after thoroughly washing is placed in a bath of clean, cold water and surrounded with ice, where it is allowed to remain until all animal heat has been removed. It is then cut into small pieces by machinery and cooked at a temperature of about 150 degrees until the fat in liquid form has separated from the fibrine or tissue; then settled until it is perfectly clear. Then it is drawn into graining vats and allowed to stand a day, when it is ready for the presses. The pressing extracts the stearine, leaving the remaining product, which is commercially known as oleo oil, which, when churned with cream or milk, or both, and with usually a proportion of creamery butter, the whole being properly salted, gives the new food product, oleomargarine.

In making butterine we use neutral lard, which is made from selected leaf lard in a very similar manner to oleo oil, excepting that no stearine is extracted. This neutral lard is cured in salt brine for forty-eight to seventy hours at an ice-water temperature. It is then taken and, with the desired proportion of oleo oil and fine butter, is churned with cream and milk, producing an article which, when properly salted and packed, is ready for market.

In both cases coloring matter is used which is the same as that used by dairymen to color their butter. At certain seasons of the year, namely, in cold weather, a small quantity of salad oil made from cotton seed is used to soften the texture of the product, but this is not generally used by us.

Deponent further says that no other material or substance except as above stated is used by Armour & Co. in making oleomargarine or butterine.

Deponent further says that he has read the statement made in a report of the Committee on Agriculture to the House of Representatives purporting to give the materials used in making oleomargarine and butterine, and he says that none of the materials or substances therein enumerated are used by Armour & Co. in making said products or either of them except as herein stated.

Deponent further says that he has read a letter dated May 19, 1886, signed Armour & Co., Swift & Co., George H. Hammond & Co., N. K. Fairbank & Co., and Samuel W. Allerton, a copy of which is hereto attached, and he says that the same is the letter of the parties whose names are attached thereto, and that the statements therein made so far as the same relate to Armour & Co. are true and so far as they relate to the other parties signing said letters, he upon information believes them to be true.

And this deponent further deposes and says that no ingredient is or ever has been used by said firm of Armour & Co. in the manufacture of said oleomargarine and butterine which is in any way injurious to health.

PHILIP D. ARMOUR.

Subscribed and sworn to before me this 22d day of May, 1886.

[SEAL.] EVERETT WILSON, *Notary Public.*

Dr. Cyrus Edson, food inspector of the New York board of health, and Dr. O. C. De Wolf, health commissioner of the city of Chicago, give evidence as follows:

CHICAGO, *May* 15, 1886.

GENTLEMEN: It gives us pleasure to say to you that we have recently visited your factory at the Union Stock Yards, in this city, and thoroughly examined the whole process of the manipulation and manufacture of butterine and oleomargarine. We cheerfully testify that we consider the products cleanly, palatable, and wholesome food products, containing nothing injurious or detrimental to health, but, on the contrary, cheap and desirable substitutes for the medium grades of dairy butter.

Yours, respectfully,

CYRUS EDSON, *M. D.*
OSCAR C. DE WOLF, *M. D.*

MESSRS. ARMOUR & CO., *Chicago.*

The board of health of the State of Illinois says:

ILLINOIS STATE BOARD OF HEALTH,
OFFICE OF THE SECRETARY,
Springfield, Ill., May 17, 1886.

GENTLEMEN: While engaged in an official investigation with regard to the slaughtering of beef at the Union Stock Yards, accompanied by Dr. Cyrus Edson, food inspector of the New York board of health, and Dr. O. C. De Wolf, health commissioner of Chicago, recently, I witnessed your process for the manufacture of oleomargarine and butterine. By what I saw I am convinced that it is conducted with the most scrupulous cleanliness; that nothing in the manufacture or the materials used is detrimental to health, and that the products are wholesome.

Very respectfully,

JOHN H. RAUCH, *M. D.*

TO ARMOUR & CO.

The opinions expressed by our chemist are fully concurred in by the leading scientists of England, France, and Germany, to which countries this product is largely exported and eaten by their people as a cheap and wholesome substitute for butter. Germany, although she has quarantined against the American hog, finds no fault with oleomargarine butter. A few years since the butter interest of Great Britain made the attempt to restrict the sale in that kingdom of this food product which we exported to that country in large quantities. Dr. Fairplay, the recognized authority in England on sanitary questions and the healthfulness or unhealthfulness of articles of food, then a member of the House of Commons, gave it as his unqualified opinion that oleomargarine butter was wholesome and that its introduction into the kingdom was a blessing to that class of citizens who were unable to purchase butter that was fit to use at the prices asked for it in the market. The result was that the bill restricting the sale of oleomargarine was defeated by a decisive majority.

There is no longer any question that oleomargarine can be and is manufactured as a cheap and perfectly wholesome substitute for butter. Suet, natural lard, coloring matter the same as that used in choice dairy butter, sometimes a small quantity of salad oil, such as you use every day on your table, and salt, these form oleomargarine when properly made, and in fact, as made by the large establishments. They are healthy, and so is the product compounded of them. Oleomargarine may be foul, butter may be rancid and dirty. The fact that one manufacturer perpetrates a fraud by making a foul substitute for pure oleomargarine, and sells in the market for butter, can not justify a tax in its nature prohibitory as to all. Oleomargarine does not depend upon butter for its value, it is of itself healthful and of use. It has been aptly stated that "oleomargarine is no more artificial or manufactured than is butter. A cow secretes milk, from this cream is extracted, then follows churning, salting, washing, coloring, pressing, the result is butter. An ox secretes fat, from this margarine is abstracted, churned, salted, washed, colored, and pressed, the result is oleomargarine; from equally healthful animals equally healthful products result." Even the gentleman from New York [Mr. BEACH] is driven to this statement:

Is artificial butter deleterious to public health? If we are to believe the testimony of the expert chemists who have investigated the subject, it is not. * * * In the absence of any well authenticated case of injury to public health a loss of life from the use of artificial butter, although millions of pounds have been consumed, it would be unsafe to legislate on the subject upon the ground that we are going to protect the public health. I think the sooner we abandon that position the better. It is not tenable. The weight of fact and opinions is against it.

Thus this learned Representative from a strong dairy district flies in the face of his colleague [Mr. HISCOCK] on this side of the Chamber, who declared that this vile compound was poison, pure and simple, freighted with disease and death.

When such learned doctors disagree, who shall decide? The gentleman [Mr. BEACH], the duly appointed Moses to lead his followers out of the wilderness of doubt, exclaims:

If we are going to legislate upon the subject, let us take a position upon which we can stand and from which we can not be driven.

This is the advice of the sage, the chosen leader. They have been compelled to retreat from position after position; his suggestion is, "Let us choose one that is impregnable. Such a position," he gravely adds, "will be found in the proposition that the people are deceived and defrauded in the sale of the spurious article." How deceived? Is it that when they purchase what they believe to be dairy butter they receive oleomargarine? That is a fraud? The purchaser has a right to know what he is purchasing. If he does not want oleomargarine he should not be deceived into purchasing it under the belief that he is purchasing dairy butter, although it may look, taste, and smell like dairy butter, and, in fact, may be as good. The purchaser is entitled to his likes and dislikes.

Some men there are love not a gaping pig;
Some are mad if they behold a cat;
As there is no firm reason to be rendered
Why he can not abide a gaping pig;
Why he, a harmless necessary cat.

So the purchaser has a right to complain when he does not receive the identical thing he bargains for. He may not be able to render a "firm reason." He is not compelled to; he may say, "It is my humor; so I can give no reason, nor will I."

The tastes, the prejudices, and even the superstitions of the purchaser and consumer are to be respected.

We know that all metals, leather, woolens, woods, all textures, surfaces, and fabrics are or have been imitated. The false is sold for the true; the imitation for the imitated. The universability of the practice does not diminish but increases the fraud. It is no answer to say that the imitated can not be told from the genuine, the false from the true, or that it answers the same purpose. Honesty and fair dealing demand that every article shall be sold for what it is. Food adulterations is one of the crying evils of the age. To remedy these evils and secure honesty and fair dealing between citizen and citizen is a consummation devoutly to be wished for. There is no remedy for these frauds whether in the sale of foul oleomargarine, rancid butter, or any other article save through and by the police powers of the States.

The police powers of a State in a comprehensive sense—

Says Mr. Cooley—

embraces its whole system of internal regulation by which the State seeks not only to preserve the public order and to prevent offenses against the State, but also to establish for the intercourse of citizen with citizen those rules of good manners and good neighborhood which are calculated to prevent a conflict of rights and to insure to each the uninterrupted employment of his own, so far as is reasonably consistent with like employment of the rights of others. (Cooley's Con. Lim.)

The police powers of the State is an authority conferred by the American constitutional system upon the individual States through which they, and they alone, are enabled to adopt such laws as shall prevent the commission of fraud, violence, or other offenses against the State, and to secure the health and property of the citizen. It is a recognized principle that the National Government can not, through any of its departments, invade the reserved rights of the States. No one will question these propositions. To return to the position of the gentleman from New York [Mr. BEACH], which in substance is, that as oleomarga-

rine is sold for dairy butter, such a sale being a fraud upon the purchaser, therefore it is claimed Congress has the right to pass this bill to render the perpetration of such a fraud impossible. Strange doctrine! I had thought that such legislation could alone be had through the State Legislature. In this opinion I am fully supported by the Committee on the Judiciary of this House in an able report on bills similar to the one under consideration. They say:

The questions submitted by these bills to this committee are of great importance and involve the fundamental principles of the Constitution.

For our purpose the evil consequences to the regular producer of butter or any other article by the permission of a product by the spurious competitor, and even the results to health of the people, may be conceded. The contention is not as to the existence of the disease, but what is the remedy and by what authority is it to be applied.

Your committee does not think that the evil complained of can finds its remedy from what Congress can do, except as hereafter stated. The legislation, if proper, must be sought from the States.

No grant of power to Congress in express terms or by fair inference from express grant can be found which would authorize any law by Congress to prevent the production of anything by a person in a State of the Union. Congress may have some power over production in the District of Columbia, or where its power of exclusive legislation extends, or in the Territories. But the power to forbid the production of butter, or wheat, or tobacco in a State will scarcely be asserted by any one.

Questions which concern the production of the soil or otherwise, the health and well-being of the people of the State, belong to that large class which, for want of a better name, has been termed the police power.

The powers of Congress refer to the foreign relations of the State, to their relations *inter se*, and do not pass within the confines of that interior life which constitutes the being and the civilization of a commonwealth. These are subjects for State legislation. A stranger to these local interests and internal concerns, under our system, must not intermeddle with them.

The evil to result from the exercise of the power as to oleomargarine is not seen by one who looks only to the extermination of the unwholesome product, but dairymen would readily perceive it if the power were directed against the production of butter. The question then of power is the primary one.

The concession will be made by most constitutional lawyers that Congress can not directly forbid the production of this or any other article in a State.

Again they say:

The judicial decisions have never impinged upon the power of each State to control the right of its citizens as to food, clothing, &c., under what is called its police powers, and the right of Congress to enact anything like sumptuary laws for the States is nowhere granted, was expressly refused by the convention (3 Mad. Papers, 1369, 1370), and has never been seriously claimed in this first century of our constitutional history.

Can it be believed—

Said Mr. Jefferson—

that under the jealousness prevailing against the General Government, at the adoption of the Constitution, the States meant to surrender the authority of preserving order, enforcing moral duties, and restraining vice within their own territory? * * * Such an intention was impossible, and such a licentiousness of construction and inference, if exercised—

He claims—

would endanger the foundations of the Union. (Jefferson's Works, volume 7, page 297.)

It has remained for a Democratic committee headed by a Jeffersonian Democrat [Mr. HATCH] in a latter-day Democratic House to question the powers of the State in matters of police regulations. Sir, conceding the power of Congress to enact legislation such as is contemplated in this bill, which I deny, I have prepared an amendment that will tear the mask from oleomargarine, if it is true as asserted, that it has been masquerading under the name and guise of dairy butter.

I read the amendment for the information of the committee, and give notice that at the proper time I shall offer it. It provides—

That nothing in this act shall be construed to apply to the manufacture, sale, or offer for sale of any substance known as oleomargarine which shall be shown before the same is sold or offered for sale, to the satisfaction of the Commissioner of Internal Revenue, under such rules and regulations as he may adopt, to be wholesome as an article of food, and what it purports to be, as shown by the marks and brands thereon.

And further, that the constituent elements thereof, separately and combined, are in no way deleterious to health: *And provided further*, That said substance, known as oleomargarine, shall be put in packages marked and branded as provided in this act. Any manufacturer, wholesale or retail dealer, or other person who shall knowingly manufacture, sell, or offer for sale any such substance as oleomargarine for butter, or as butter, or without the same being put in packages plainly marked and branded as in this act provided, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not less than $100 nor more than $5,000, or by imprisonment not exceeding five years, or by both such fine and imprisonment.

Will any gentleman seriously claim that this new food product when shown to be wholesome, marked and branded so that it enters into an honest competition with other food products in the open market, shall be unjustly discriminated against because it cheapens the price of dairy butter? Is it competition and not fraud that you seek to suppress? If so, is not your bill a fraud, a false pretense? Is it not masquerading as a revenue bill when its purpose is not revenue, but a usurpation of the police powers of the States to the end that one industry may be stricken down in order to advance the price of dairy butter in the market? Assuming the fact, which can not be successfully controverted, that oleomargarine when properly made is a cheap, wholesome article of food, then I submit that this amendment should be adopted.

This bill does not pretend to tax oleomargarine because of any fraud in its manufacture or sale, upon the ground that it is unwholesome. It is taxed solely because when made it may be in imitation or have the semblance of butter. The nearer its approach to butter the more obnoxious it is to the taxing powers of the Government. In what that imitation or semblance shall consist the bill does not attempt to define.

SEC. 2. That for the purposes of this act certain manufactured substances, certain extracts, and certain mixtures and compounds, including such mixtures and compounds with butter, shall be known and designated as "oleomargarine," namely: All substances heretofore known as oleomargarine, oleo, oleomargarine-oil, butterine, lardine, suine, and neutral; all mixtures and compounds of oleomargarine, oleomargarine-oil, butterine, lardine, suine, and neutral; all lard extracts and tallow extracts, and all mixtures and compounds of tallow, beef-fat, suet, lard-oil, vegetable-oil, annotto, and other coloring matter, intestinal fat and offal fat made in imitation or semblance of butter, or when so made calculated or intended to be sold as butter or for butter.

We have shown that oleomargarine, as known to the trade, when properly made, looks, tastes, and smells like butter, having essentially all the elements of butter. The better the oleomargarine the nearer the resemblance. When a food product, made from any of the ingredients named, has the resemblance or semblance of butter, then it must pay a tax of 10 cents a pound under whatever name or for whatever purpose the same may be sold or used.

Its sin is in its semblance of butter. The fact that it is a desirable article of food, that it may never have been "calculated or intended to be sold as butter or for butter," does not relieve it from the payment of the tax. The product may be marked oleomargarine or axle-grease, if you please, and may have been calculated and intended to be sold as such, yet it must pay the tax if its ingredients unfortunately by the laws of nature give it even the semblance of dairy butter. "Semblance" in what? In form, figure, taste, smell, or in any or all of its component parts. This measure should be entitled a bill to prevent either the manufacture or sale in the United States of any cheap, wholesome food product as a substitute for butter made from milk, if the substitute bears in any respect a semblance to butter.

Again, if when made oleomargarine is "calculated or intended" to be either sold as butter or for butter, then it is liable to this tax which is not for revenue. If it has the semblance of butter, and may be used either on the table or in the kitchen for any of the purposes for which butter is used, then it must pay the tax of 10 cents a pound, for it is calculated to be "sold as butter or for butter." It may by its marks and brands be always distinct from butter, yet it may have the semblance of butter and by nature be fitted for many of the uses of butter. The tax is levied upon the product if, when manufactured from any of the ingredients named, it has the semblance of or may be calculated to take the place of butter in any of its uses. Fraud is not a feature essential to the tax. The evil aimed at is not that the product is in any way injurious to public health or morals. Competition is the evil aimed at, the increase of the price of butter the remedy to be advanced. The dairy must be indiscriminately—the good with the bad—the wholesome with the unwholesome. These are some of the iniquitous features of the attempted legislation.

Where, sir, is the constitutional warrant for this measure? I am told that it is a revenue bill within section 8, Article I of the Constitution:

The Congress shall have power to lay and collect taxes, * * * to pay the debts and provide for the common defense and general welfare.

Taxation by the very meaning of the term implies the raising of money for the public uses, and excludes the raising of it for private objects and purposes. It is true that of all powers conferred upon the Government that of taxation is the most important and at the same time most liable to abuse. "This power," says Justice Miller, "can as readily be employed against one class of individuals and in favor of another, so as to ruin one and give unlimited wealth and prosperity to the other, if there are no implied limitations of the uses for which the power may be exercised." That learned jurist then adds:

To lay with one hand the power of the Government on the majority of the citizens, and with the other to bestow it upon favored individuals to aid private enterprise and build up private fortunes, is none the less robbery because it is done under the forms of the law and is called taxation.

Let me, sir, commend the language of the learned justice of the Supreme Court of the United States to this House. Mr. Cooley, in his work "Principles of Constitutional Law," thus defines the limits of taxation under the Constitution of the United States:

Constitutionally a tax can have no other basis than the raising of revenue for public purposes, and whatever governmental exaction has not this basis is tyrannical and unlawful.

The spoliation of the few for the benefit of favored individuals is unwarranted, although done in the name and under the forms of law. This is not legislation; it is spoliation under legislative forms. Here, sir, I again cite from the exhaustive report of the Committee on the Judiciary made to this House on the 22d of last April:

It remains to inquire whether oleomargarine or any other product may be subjected to an internal-revenue tax. If the power to lay taxes (Constitution United States, Article I, sections 8 and 9) involves the power in Congress to select any article for excise or other tax, as seems to be now settled by the practice of the Government (and no doubt properly so settled), then the right to tax oleomargarine is undoubted.

But your committee are constrained to add that this is a revenue power. The right "to lay" is conjoined with that "to collect taxes," and the right to lay and collect is conjoined with the purpose "to pay the debts and provide for the common defense and general welfare." The power is conferred in order to the duty imposed on Congress. It is a trust power and becomes a right only when used for the purpose in view. The tax is the means to the end, and is only legitimate and rightful when needful for the end.

To use the tax when needless for revenue merely to strike down a product or an industry is to abuse a constitutional trust; and while the power may be com-

ferred, the right to use it in such case can not be asserted. All power under our system is trust power; to use it for the trust makes it a rightful power; to use it *diverso intuitu* is wrongful perversion and abuse of power, and is contrary to the Constitution. In other words, as Congress can not forbid the production of an article in a State by direct legislation, it can not use a power conferred for another purpose to destroy and prevent such production. To do by indirect means what it could not do by direct legislation would be an unworthy evasion of constitutional limitation, which can not be sanctioned by an enlightened construction of the Constitution. It is true that in such case the judicial power may not be able to declare such taxation void, because the judge dare not look into the intents of the legislator's breast, but the legislator who so abuses his trust and wrongfully misuses power can not avoid responsibility to his own conscience, bound as it is to support the Constitution; for by personal introspection he will find his motive not to be a tax for revenue to the Government, but a tax as a means of destruction to the product subjected to it; that is, tax used as an instrument of destruction and not as a means of revenue.

The propositions laid down in that report, in my opinion, are supported by the entire and uniform weight of judicial authority. That Congress by the arbitrary, I might say tyrannical, exercise of the taxing powers may crush or weigh down one domestic industry for the purpose of protecting another domestic industry, none will question; but that it may rightfully do so, none, I apprehend, will have the temerity to claim. "The power to tax," says Chief-Justice Marshall, "involves the power to destroy." Admitting the power, he condemns the unwarranted exercise of it. He adds: "To carry it (*i. e.* the power) to the excess of destruction would be an abuse, to presume which would banish that confidence which is essential to all government."

Does not this bill carry the taxing power to the "excess of destruction?" I know of no case from the foundation of our Government where Congress has placed a tax upon one domestic industry for the purpose of building up another. Certain it is that no instance has been cited by the friends of this new departure in protective legislation. The Agricultural Committee, in their report, cite as a case in point Veazie Bank *vs.* Fenno (8 Wallace). In that case Chief-Justice Chase, in delivering the opinion of the court, says:

> It can not be doubted that under the Constitution that the power to provide a circulation of coin is given to Congress. * * * Having thus in the exercise of undisputed constitutional powers undertaken to provide a currency for the whole country, it can not be questioned that Congress may, constitutionally, secure the benefit of it to the people by appropriate legislation. To this end Congress has denied the quality of legal tender to foreign coins, and has provided by law against the imposition of counterfeit and base coins on the community. To the same end Congress may restrain, by suitable enactments, the circulation as money of any notes not issued under its authority. Without this power, indeed, its attempts to secure a sound and uniform currency for the country must be futile.

It is upon the dictum in that case that the committee relies.

There was and could be no such principle involved in that case as is invoked by the bill under consideration. The Congress, in the exercise of undisputed constitutional power, undertook to provide a sound currency for the whole people. Here there is an attempt to tax the manufactured product of one class of our citizens that the manufactured product of another class of our citizens may be advanced at least a like amount per pound. There is and can be no analogy between the cases.

Chief-Justice Waite, in commenting on the Veazie Bank case, says:

> As against the United States a State municipality has no right to put its notes in circulation as money. It may execute its obligations, but can not, against the will of Congress, make them money. The tax is on the notes paid out—that is, made use of as a circulating medium. Such a use is against the policy of the United States.

Is it against the policy of the United States to permit any article to come in competition with butter if perchance it has the semblance of butter and the effect of that competition is to cheapen the price of butter?

It is claimed in argument that oleomargarine can be made for 7 cents a pound, and therefore the dairyman can not successfully compete with it. What is the remedy proposed to equalize this competition? It is by taxes and licenses to increase the actual cost of this food product to 19 cents a pound. It is the cheapness of this food product and not its unwholesomeness that is the cause of its offending. Advance its actual cost of production to 19 cents a pound, leave its quality as now or even reduce its grade, and the dairy interest will be satisfied. It is the price, and not the quality, that is to be advanced. If this product is a cheat, a fraud, a counterfeit injurious to the public health or morals, then the proper authority, the States, should prohibit its manufacture and sale—the General Government should not go into partnership with a cheat, a fraud, a counterfeit. If its manufacture or sale is a crime against society, Congress—if it assumes jurisdiction—should stamp it out by fines and penalties. Would you tax counterfeit money? Would you issue a license to parties to deal therein? The legislation proposed by this bill demonstrates that you do not regard it as either a fraud, a cheat, or a counterfeit, but that its cheapness and wholesome quality render it a dangerous rival to butter made from cream; therefore the necessity for this legislation.

Yet gentlemen tell us this is a revenue bill. Do we need more revenue? Is it desirable to collect more taxes to increase the surplus in our overflowing Treasury? The Committee on Ways and Means, whose duty it is to provide for raising revenue, have made no recommendation that the revenues should be increased. No branch of the executive department of the Government has asked it. The distinguished chairman of the Committee on Ways and Means [Mr. MORRISON] says:

> I can not but think this bill is here under false pretenses and therefore I shall vote against it.

The eloquent, earnest, and persistent advocate of this legislation, Mr. BAYNE, frankly states:

> I do not anticipate any troublesome amount of revenue from this measure. We do not want revenue.

He pleads guilty to the charge "that the bill is here under false pretenses." Why is the bill here in the livery of the taxing power of the Constitution if revenue is not wanted? The tax it levies, the licenses it imposes are extraordinary and unusual. They are purposely placed so high in the hope that the oleomargarine industry can never pay them, thus forcing its product out of this country and into a foreign market, for when exported it pays no tax.

Sir, if gentlemen are sincere in their oft-repeated declarations that they only want this food product marked and branded and sold for what it is, why not place the tax and licenses at a figure to accomplish that purpose? No one will deny that 1 cent a pound with nominal licenses, such as are imposed on dealers in beer and tobacco, would be more than sufficient. Yet every effort to either lessen the oppressive tax or diminish the exorbitant licenses is stubbornly fought by the so-called friends of "honest butter." Their votes do not strengthen their declarations. They talk one way and vote the other. One cent a pound would yield a revenue of more than $2,000,000 annually; but a 1-cent tax would not sufficiently advance the price of butter in the market—it would not shut out oleomargarine properly made, marked and branded as a competitor. This result would not be the end sought by the promoters of this bill.

Yet these gentlemen set themselves up as the champions of the consumer. He is to be protected they tell us. How protected by being compelled to pay 10 cents a pound more for every pound of butter or oleomargarine he eats. He may be unable to see wherein he is protected—it is a disguised blessing. If oleomargarine can be manufactured and sold under the burdens laid upon it by this bill, it is at last the consumer that must pay the tax. It is estimated that the license and tax will increase the cost of this food product 12 cents a pound before it reaches the table of the consumer; this he must pay. If oleomargarine is driven out of the market, which is the purpose of this bill, then the inevitable result is that the consumer must pay more for every ounce of butter that goes upon his table. Neither the dairy nor the oleomargarine factory are run as matters of philanthropy but for gain. If, notwithstanding the heavy taxes and licenses imposed upon it, the product of the oleomargarine factory, by reason of its wholesomeness and desirability as an article of food, can successfully compete with the product of the dairy, then the gains of the former will not be diminished, while the profits of the latter will be greatly enhanced at the expense of the consumer. This bill is not to furnish a better food product, but a dearer one.

It was Colbert, I think, the celebrated finance minister of Louis XIV, who is reported to have said: "That the act of taxation consists in so plucking the goose (*i. e.*, the people) as to procure the largest quantity of feathers with the least possible amount of squealing." This so-called revenue bill is designed to so pluck the goose that the least possible amount of feathers (*i. e.*, revenue) shall be obtained with the largest possible amount of protection to the dairy interest. "The purpose of this bill," says its logical and frank advocate [Mr. BAYNE], "is to protect the dairyman and the consumers, and I, as a protectionist of all the industries of the country, gladly welcome our new friends." Then casting an admiring glance upon my colleague [Mr. HATCH] and his Democratic followers in ecstasy he exclaims: "I am glad to observe the accessions to the ranks of the protectionists which the promotion of this measure is evolving." By the process of evolution the free trader is the convert of this false, mistaken, and dangerous idea of protection.

The principle of this bill is no more like protection than the prince of darkness is like the angel of light. In the past all legislation looking to the protection of American industries and American labor from foreign competition with the half-clad and half-fed pauper labor of the Old World has received the merciless maledictions of my distinguished and eloquent colleague [Mr. HATCH] from every stump in the State of Missouri, while on the other hand, in my feeble way, I have fought for the dignity of American labor and for the protection of American industries against the world, only to find myself snowed under by those who followed the free-trade plume of my friend [Mr. HATCH]. I have no doubt but when the fervor following sudden conversion shall have lost some of its zeal he will see the error of his ways and settle down as a consistent protectionist. Let me say to my colleague that in his effort to strike down or cripple one industry of our common country that another may prosper the more abundantly, he can not expect the support of those who understand the underlying principles of protection.

Sir, the manufacture of oleomargarine is one of the great industries of this country. When the product is wholesome, marked and branded, it is entitled to the same protection as any other industry. It is estimated that 200,000,000 pounds of oleomargarine butter are manufactured annually in this country. This is made largely from pure oleo extracted by an ingenious method discovered by a celebrated French chemist. Its manufacture enables our great packing-houses, that slaughter largely the beef for the world, to pay from two to three dollars a head more for each bullock purchased than they could if the suet taken from the an-

imal could only be worked up into tallow, as done before this discovery. Can any good reason be given why this part of the animal should not be thus utilized, or that when so utilized it should be discriminated against by being compelled to pay an unjust tax? That people use it as a substitute for any other article of food certainly is no reason for such action.

The agricultural interests of the country are as much interested in the price they get from their cattle and hogs as they can be in the price of butter. But, sir, the taxing of an industry because those engaged in it are in the minority and for the benefit of another industry that is in the majority can not be justified in any country where the rights of the citizen are respected. If the taxing power is to be invoked for the benefit of those who represent the most of power or political influence then shall we have returned to the condition of the Middle Ages when nobles were exempt from taxation because they were nobles and the common people were taxed because they were villains or bondsmen; "when Jews were assessed because they were not Christians, and Catholics because they were not Protestants."

This is class legislation. Each industry that is strong in political influence will demand protection against its less influential competitor. If when the weaker competitor in the market offers a cheaper substance in the "semblance of" or capable of being used or applied to the same purposes as those of his stronger rival, then his substance is to be taxed for the benefit of the stronger. Such a prostitution of the taxing power of the General Government, a power given for its maintenance and preservation, would, in the language of Jefferson, tend "to break up the foundation of the Union."

There is no proposition more firmly settled than that it is one of the fundamental rights and privileges of every American citizen to adopt and follow such lawful industrial pursuits as he may see fit.

There is and can be no question as to the lawfulness of the pursuit of manufacturing and selling oleomargarine having the semblance of, and calculated and intended to be sold for, butter. This is acknowledged in this bill by proposing to tax and license the manufacture and sale. It will not be claimed, none have the temerity to do so, that the business you propose to license is unlawful or immoral, or that the product you propose to tax is unwholesome or injurious to the public health. The tax is levied, the license imposed because a large and very respectable portion of our citizens demand such action to protect an industry in which they are engaged. The language of the supreme court of New York in a recent case in passing upon the constitutionality of a law of that State prohibiting the sale of oleomargarine is worthy of our consideration and approval:

> Who will have the temerity to say that these constitutional principles are not violated by an enactment which absolutely prohibits an important branch of industry for the sole reason that it competes with another and may reduce the price of an article of food for the human race?
>
> Measures of this kind are dangerous even to their promoters. If the argument of the respondent in support of the absolute power of the Legislature to prohibit one branch of industry for the purpose of protecting another with which it competes can be sustained, why could not the oleomargarine manufacturers, should they obtain sufficient power to influence or control the legislative councils, prohibit the manufacture or sale of dairy products? Would arguments then be found wanting to demonstrate the validity under the Constitution of such an act? The principle is the same in both cases. The numbers engaged upon each side of the controversy can not influence the question here. Equal rights to all are what are intended to be secured by the establishment of constitutional limits to legislative power and impartial tribunals to enforce them.
>
> Illustrations might be indefinitely multiplied of the evils which would result from legislation which should exclude one class of citizens from industries, lawful in other respects, in order to protect another class against competition. (People vs. Marx, 99 N. Y., 387.)

If the principle contained in this bill is recognized by Congress, its result will be the arraying of one industry against another, placing the weaker at the mercy of the stronger. It will not be a "survival of the fittest" of the competing industries, but a survival of that which is supposed to control the greater influence at the ballot-box. A short time since the National Butchers' Association held a meeting in my State. They have a supposed grievance against the shipment of dressed beef from the great West to the East. This now industry has sprung up in the last few years. It has rapidly increased. The following table will show its growth from 1880 to 1884 inclusive:

	1880.	1881.	1882.	1883.	1884.
	Tons.	Tons.	Tons.	Tons.	Tons.
To New York	.....	.....	2,623	16,365	94,955
To Philadelphia	.....	.....	448	8,601	12,815
To Baltimore	.....	.....	579	4,158	4,282
To New England, including Boston	15,680	75,259	89,150	116,747	121,015
Total	15,680	75,259	93,110	145,871	173,067

It is estimated that over 200,000 tons were shipped in 1885. This innovation has diminished the price of the stall-fed ox of the East, but it has increased the price of the Western steer, giving to the people of the Atlantic seaboard cheaper beef. Kansas City and Chicago supply New York and other Eastern cities with their dressed beef. This enterprise gradually but surely shut up a majority of the small slaughter-houses of the country, necessarily throwing many butchers out of employment. The cry against this Yankee innovation but a few years since was nearly as great as that now raised against oleomargarine. Charges were then made against this industry by those who knew nothing of what they were talking about equal, if possible, in extravagance to many of the charges made against the oleomargarine manufacture during this debate. It was asserted that the people of the seaboard were being poisoned by the diseased meats shipped from the West; that cattle afflicted with "Texas fever," the "black-leg," the "big jaw," and every other disease that the bovine kingdom is heir to, were being slaughtered and their poisoned carcases shipped in refrigerating cars as dressed beef to the East. Prejudice at length gave way to reason. The people of the Atlantic seaboard have learned that the West gives them better beef than they ever had before and for less money.

Nevertheless the butchers complain their business has been disturbed. They are unable to compete with the big packing houses. They should come to Congress and demand that a tax of 10 cents a pound be levied on all dressed beef shipped from the West to the East. This in the name of protection. The shipment of dressed beef gave an additional impetus to the business in the packing houses of Chicago and Kansas City, the great live-stock centers of the United States. The 60 pounds of suet taken from each animal had either to be tried into tallow or manufactured into oleo, from which a pure, wholesome substitute for butter is made. The value of the steer was enhanced to the farmer $2 or more if the suet was manufactured into oleo, making an advance in the cattle received at Kansas City in the last seven years of $8,448,466. This amount was paid to the farmer in excess of what he would have received had not the suet of the animal been utilized.

It is urged that our foreign market for natural butter is ruined by the export of oleomargarine. In the last three years we exported $13,838,913 worth of oleomargarine, while in the same period we only exported $9,685,072 worth of butter.

It was manufactured, sold, and exported as oleomargarine. The people of England and other countries look upon it as a blessing, furnishing as it does a cheap, wholesome substitute for natural butter. Gentlemen claim that the butter market is paralyzed by the exportations of oleomargarine. Yet one of the purposes of this bill is to increase the exportations of that product. It is expressly provided that it shall pay no tax when removed from the manufactory for the purpose of export. They would have this for a product furnished the consumer in England at 12 cents less a pound than to the consumer of our own country. To insure this result the foreign manufacturer, if he ships his oleomargarine to our shores, is taxed 15 cents a pound. Oleomargarine made in the United States intended for use here is taxed 10 cents a pound to protect dairy butter, foreign oleomargarine is taxed 15 cents a pound to protect the home production; this is double-barreled, back-action protection.

Mr. Chairman, there are some other features of this strange bill that I desire to notice briefly, and I am done. If it should become a law an army of additional office-holders will of necessity be created. It clothes the Commissioner of Internal Revenue with unusual and autocratic powers. His decree as to what substances, extracts, or compounds are to be taxed is made final. His construction of the law is conclusive. From his decisions, however arbitrary or tyrannical, there is and can be no appeal. He is given more than kingly powers, and the principle "that the king can do no wrong" is freely recognized.

The due process of law by which a citizen may be deprived of his property under this bill is the will of the Commissioner. I do not share in the blind confidence as to the infallibility of that officer. His powers are not restricted to the product that is made taxable. He may by his agents invade the dwelling, the store, the shop, the dairy, the manufactory in any State in the Union, and if any oleomargarine intended for human consumption be found therein which in his opinion contains ingredients deleterious to the public health, he is invested with plenary power to forfeit such product to the United States. Subject to the limitation that the citizen is granted the right to come to Washington and get the decision of a board composed of the Surgeon-General of the Army, the Surgeon-General of the Navy, and the Commissioner of Agriculture, the decision of that board is a finality on that class of cases.

In that case it is not essential in order for the Commissioner to exercise the police powers of the States that the oleomargarine is intended or calculated to be sold as butter; if in the opinion of the Commissioner it is intended for human consumption in any manner, the evil eye of the Commissioner may forfeit it to the United States. He is constituted the special guardian of the morals and health of the States. If this can be done as to oleomargarine, why then can not Congress invest the Commissioner with like powers as to all articles of food or clothing, found in any State, which in his opinion are deleterious to the public health?

The States are no longer to be trusted with their police powers; they are to be turned over to an officer or board designated by the General Government. What warrant is there in the Constitution for this monstrous doctrine? In conclusion let me call the attention of the House to section 19 of this bill, which may be called the informer's section. Sir, I had hoped that the day of the informer was past and that his nefarious occupation was gone; that he was never again to be privi-

leged to disgrace our courts with his perjury that he might share in the fines and forfeitures assessed against his victim. I had hoped that the informer, a name and occupation detested by all honest men, would never again be rewarded under the forms of law for his crimes. To secure his reward the professional informer is ever ready, if deemed necessary to obtain a conviction, "to swear without mercy and without end." This creature who pollutes the fountains of justice with his perjury is of foreign origin and flourishes best where the rights of the citizens are disregarded most. I am surprised that a committee of this House should report a bill resuscitating the professional informer with "ravening maw."

I would not place the property or liberties of the citizen at his mercy. Yet this bill gives one-half of the fines and forfeitures to the informer. That part of the nineteenth section I apprehend will be stricken out, whether the distinguished chairman of the Agricultural Committee "gives the sign," or not.

Mr. Chairman, I am not unconscious of the powerful influences back of this bill; yet, entertaining the opinions that I do of such legislation, I should be recreant to my duty and unworthy of the constituency I represent upon this floor did I not vote against this measure.

Protecting Public Lands.

SPEECHES

OF

HON. JOSEPH M. CAREY,

OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

June 28 *and* 29, 1886.

The House being in the Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9478) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1887, and for other purposes, the pending paragraph being, "for the protection of public lands from illegal and fraudulent entry or appropriation, $90,000"—

Mr. RYAN. I yield to the gentleman from Wyoming [Mr. CAREY].

Mr. CAREY said:

Mr. CHAIRMAN: It is with reluctance that I occupy the time of the committee in relation to the subject under discussion. My excuse is that the questions involved are of the greatest importance to the people of my Territory.

In this bill it is proposed to appropriate $75,000 to prevent depredations on the public timber, $90,000 for the protection of public lands from fraudulent entries, and but $50,000 for public surveys; in other words, $50,000 only is to be appropriated for surveying the public lands in all of the land districts of the United States, when it will require alone for the support of the surveyors-generals' offices, including salaries, &c., during the next fiscal year, $130,000. Such a policy is poor economy.

The estimates made for public surveys for the next fiscal year require an appropriation of $300,000. This amount should be appropriated. The lands in the Western States and Territories should be surveyed as rapidly as possible. The deputy surveyors should be paid a sufficient amount per lineal mile to enable them to properly mark and establish each corner with large and permanent stone monuments. These items of appropriation in this bill are in the line of the legislation which is now contemplated by Congress with reference to the public lands; that is, to wipe out the opportunities for the rapid settlement of the West, especially the settlement of the arid regions in the central part of the continent.

DISPOSITION OF THE PUBLIC LANDS.

It is true as asserted that a very large portion of the public domain has passed away from the control of the General Government. The millions of acres with which the United States has parted title are owned, occupied, and being cultivated and developed by the citizens of the Republic. No wiser disposition of these lands could have been made. But it may be instructive to inquire into the system under which the Government has transferred this large acreage. By an examination of the statistics it will be found that the Government, since its organization, has disposed of about 600,000,000 acres of land. Nearly 70 per cent. of this amount has been disposed of or granted away to corporations, States, and individuals, not to settlers.

The principal items are—

Grants to railroad companies, 169,000,000 acres; under swamp acts to the States, 74,000,000 acres; under the graduation act, 27,000,000 acres, of which the people of the State of the gentleman from Indiana [Mr. COBB] received some of the benefits; under the praiseworthy acts giving bounty land to the soldiers and sailors who have fought in the wars of the nation, 61,000,000 acres; under the several acts for the promotion of education, 74,000,000 acres; under various acts to encourage internal improvements, 30,000,000 acres. By a further examination it will be discovered that under the homestead, pre-emption, timber-culture, and desert-land laws less than 30 per cent. of the lands disposed of by the Government have been entered. These figures do not justify the statement so often made on this floor and in the public press that the lands of the Government have been absorbed or are being rapidly absorbed under the land laws of the United States which require the acts of an individual to make the entry.

DESERT-LAND LAW.

A great deal is said of the abuses which have arisen under the desert-land law. This law has been in force for nine years, and less than 3,000,000 acres of land have been entered under its provisions, of which less than half a million of acres have been patented. Assuming that half a million of acres should be patented each year under this law, it would require nearly sixty years to dispose of as much land as the Government sold under the graduation act at 12½ cents to $1 per acre. It would require more than one hundred and fifty years to dispose of the same amount of land under the desert-land law as has been given to the States under the swamp-land acts, and would require over three hundred years to sell as much under the desert-land law as has been given to aid in the building of railroads. Of the 700,000,000 acres of the public domain, exclusive of Alaska, remaining under the control of the United States, probably 450,000,000 acres are arid, none of which would produce a crop without irrigation.

The acreage can only be approximated. The vast area is west of the one hundredth meridian. It has been said that it would make a solid body 1,000 miles wide by 1,500 miles long. It comprises the Territories of Montana, Idaho, Utah, Wyoming, Arizona, and New Mexico, and the States of Colorado and Nevada, and parts of the Territory of Washington and the States of Kansas, Nebraska, California and Oregon. Population is already spreading over this country. Emigration from the great States of the East in great numbers has already reached the Rocky Mountains. Great canals and water ways are being constructed for the reclamation of these lands. In my Territory, under the stimulus of the desert-land law, nearly $1,000,000 has been expended during the past three years in the construction of irrigation works.

These improvements are not only expensive to construct, but require a large outlay of money annually for repairs and management. It is estimated that it costs from five to twenty dollars an acre to cut the necessary canals and to construct other works required to successfully reclaim arid lands. It is not probable that the General Government will ever undertake to reclaim these lands or to directly assist in their reclamation. The voting of money for public improvements is as unpopular to-day as it was once popular. The lands must be reclaimed by private enterprise. I do not believe that Congress can be too liberal in its legislation for the disposition of these lands, if liberality in this regard will induce the citizen to undertake the construction of such works as will make it possible to grow corps in the arid regions.

Professor Powell in his report of the arid region says:

> The arid region is the great Rocky Mountain region of the United States, and it embraces something more than four-tenths of the whole country, excluding Alaska. In all this region the mean annual rainfall is insufficient for agriculture, but in certain seasons some localities, now here, now there, receive more than their average supply. Under such conditions crops will mature without irrigation. As such seasons are more or less infrequent, even in the more favored localities, and as the agriculturists can not determine in advance when such seasons may occur, the opportunities afforded by excessive rainfall can not be improved.
>
> The limit of successful agriculture without irrigation has been set at 20 inches (of annual rainfall) that the extent of the arid region should by no means be exaggerated; but at 20 inches agriculture will not be uniformly successful from season to season. Many droughts will occur; many seasons in a long series will be fruitless; and it may be doubted whether on the whole agriculture will prove remunerative.

It is estimated that 90 per cent. of the entire cost of reclaiming arid lands consists of the labor. The size and number of the water ways can only be imagined when it is stated that there must be distributed through such means during each growing season over each acre of land reclaimed and cultivated an average depth of from 10 to 16 inches of water.

PAST POLICY OF THE GOVERNMENT WITH REFERENCE TO THE PUBLIC LANDS THE WISEST ONE.

You should consolidate all of the legislation proposed by this Congress with reference to public lands and label it "An act to prevent the settlement of the Northwest, the central West, and Southwest." That country is growing, it would appear, too rapidly for the East. The policy adopted by the United States in the past that the public lands should be disposed of not for revenue but in such a manner as to encourage their settlement and development has proven to be the wisest of statesmanship. The results of legislation best determine whether such legislation was wise. If you should go back fifty years and inquire into what has been accomplished under the land system of the United States, what has been done for the people of the nation through land grants and under settlement laws, I believe every one of you would say that had you been in this Hall half a century ago as legislators and could have turned over the leaves of the future and have seen the results that would follow, you would have voted for the legislation that has been so productive of good, but which to-day is so strongly condemned.

No other class of legislation enacted by Congress has done more for the American nation. Under the liberality of this system, the great empire west of the Alleghany Mountains has been settled and made

possible. Under the same system the States and Territories west of the Mississippi River are on the high road of progress. Unless Congress has time to study the whole question carefully and make laws applicable to the new condition of things in the arid regions the present laws should be permitted to stand and the Executive should see that the land officers not only interpret the laws righteously but most liberally. With such favorable conditions, the eight great Territories would soon be prepared for admission as States into the Union.

GROWTH OF COUNTRY WEST OF MISSOURI RIVER.

Bear with me while I call attention to the settlement of a country with which we all have much knowledge. I speak of the country principally west of the Missouri River, north of the Indian Territory, south of British America, and east of the main range of the Rocky Mountains.

Take Kansas first, as the base of the column, a State conceived and born amid many tribulations. The days of her youth were so full of trouble that her history during this eventful period is an important chapter in the nation's life. The first four years of her Statehood brought upon her all the calamities of a civil war. She suffered as a border State. She had in 1864 barely 160,000 population, only $50,000,000 of wealth, and not a mile of railroad within her borders, and able only to spend a few thousand dollars for school purposes. To-day Kansas has nearly one and a half millions of population, five hundred and fifty millions of wealth, 5,000 miles of railroad. The State expended last year for educational purposes alone two and a half million of dollars. She has expended during her short life as a State nearly $30,000,000 for the education of her youth. The value of her farm products during that time has been sufficient in amount to pay two-thirds of the national debt. Her growth and her present greatness were made possible by a liberal land system.

Let us go a little farther north and look at Nebraska, the Territorial sister of Kansas. In twenty years her population has increased from 100,000 to 800,000 souls. Her wealth from $60,000,000 to $350,000,000. She has within her borders 3,000 miles of railroad. Her public institutions would do credit to a New England State. Her growth has been made under the public-land system of the United States.

Colorado, with less than 40,000 population in 1870, has grown to be a State of a quarter of a million of people. She has more than two hundred millions of wealth; 3,000 miles of railroad. The energy of her people and the development of her domain show she was fully prepared and entitled to become the first State admitted in the second century of American Independence.

But glance at that great domain which is yet without actual representation in either end of this Capitol, the people of which have not been permitted to be heard in their plea for Statehood on this floor at this session.

Need I say I refer to Dakota? With one-half million of people, with hundreds of millions of wealth, with enough miles of railroad within her borders to reach from Boston to San Francisco, with good public institutions and an excellent school system in operation in every portion of her borders, she stands forth in her glory as the strongest argument in favor of the past land legislation.

Last I come to my own Territory, the least because she is the youngest. I feel it an honor to live within her borders and to be one of her people. She was carved out of the sage brush country in the arid regions in the heart of the great American desert. She had only a few thousand resident population in 1869, the date of her organization; she has to-day nearly 75,000 population. She has eighty millions of wealth, and by the end of the present year will have 1,000 miles of completed railways. She supports one hundred and twenty schools, the most of which are open for nine months in the year, by direct taxation under a system compelling every child to attend school. Vast enterprises have been undertaken by her people. The young blood, buoyant spirits, energy, and genius of her population are rapidly overcoming the difficulties which at one time appeared insurmountable so far as her settlement was concerned.

The five political divisions named make a grand column to bear testimony to the statesmen who inaugurated the land system of the United States. No monument can be more prominent and more enduring than the history and growth of the country described under the direction of the pioneers, encouraged by the liberal land laws.

If you will bring together all of the statistics of Kansas, Nebraska, Colorado, Dakota, and Wyoming, you will find that there is to-day in these States and Territories more free population, more wealth, and greater possibilities than could be found in the thirteen original States after they had adopted the Constitution under which we live.

Against the the cry repeatedly made that foreign lords and princes have absorbed much of the public domain in the countries named, I need but say that the native-born population bears the ratio of at least 7 to 1 to those of foreign-born, and that the number of the latter class who do not hasten to become good and patriotic citizens of the Republic is too trifling to take into account.

The percentage of the property owned by those of royal blood is too insignificant to be used by a politician as a bugbear to frighten even a most ignorant constituency. The property is owned and controlled by those who desire to be known by no higher title than that of American citizens. [Applause.]

Wednesday, June 30, 1886.

Mr. CAREY. Mr. Chairman, I move to amend by striking out the last word of the paragraph.

Mr. Chairman, during this entire session I have listened to the abuses which have been heaped upon the men who are engaged in the cattle industry in the Western States and Territories, and thus far no man has on this floor defended this class of people. I am familiar with the men who are engaged in that business in an area of country at least 600 miles wide and 1,000 miles long. I am personally acquainted with very many of them. I have had the honor to be a member and the presiding officer of probably the largest active stock-growers' association in the world. This association represents at least one hundred millions of wealth invested in cattle, horses, and sheep in the arid regions of the United States. The members of this association come from twenty-five States and Territories.

The men who conduct this business are just as honorable and upright, have as much business honor, love their country just as well as the members of this House. They have as high a regard for the sanctity of an oath as either of you. They would no sooner attempt to induce others to commit perjury than would honest men elsewhere.

Having cast my first vote in the district now represented by the honorable chairman of the Committee on Appropriations [Mr. RANDALL] I soon thereafter went West, and have spent about all my manhood there. I have been and am acquainted with the men of that country. If I went to that country an honest man, I am just as honest now as I was then. Association with the people in the West does not make men dishonest; it makes them more ambitious, more energetic, and more patriotic. The men who go West are representatives largely of the industrial classes from all of the States of the American Union. We have men there from the plow, from the workshop, from the counting-room, from the colleges, and from the mines. They are the offspring of your own households, and whether they come from the plantations of Georgia, from the tobacco fields of Virginia, the mines of Pennsylvania, the factories of New England, or the farms of Illinois they are equally welcome.

The pioneers of my country are intelligent, energetic, honest American citizens. Nothing good has been said of them. Sensational reports are the basis of your judgment so far as this people is concerned. A few years ago some villain, or wag, probably the latter, put a notice on a fence-post, somewhere I think in Kansas, threatening to shoot off the top of the head of any man who might break down the inclosure. This notice has been the subject for many newspaper articles and the text for demagogic speeches without number. I have heard nothing on this floor that is good of the people of the great live-stock country in the West. I have ridden over thousands of miles of that Western country. I have stopped and read the kind of notice that I hold up in my hand. This notice, you will see, is on heavy card-board, of a bright color, at least 8 inches wide and 16 inches long, printed in letters so large that he who runs may read. [Applause.]

[Here the hammer fell.]

Mr. CANNON obtained the floor and said: Mr. Chairman, I yield to the gentleman from Wyoming.

Mr. CAREY. I thank the gentleman from Illinois on behalf of my people for his kindness.

Several MEMBERS. Read the notice.

Mr. CAREY. This notice is in the following words:

NOTICE.

All persons are hereby notified that this fence is not erected as a barrier to any party or parties who may wish to enter this inclosure for any legitimate purpose, settlement by pre-emption, or otherwise, the owners merely requesting that entries be made through one of the numerous openings.

I defy any man to produce any testimony except that of liars and perjurers to show where any man has been prevented from settling on any section of land in my Territory where he has had a right to settle, by any combination of cowboys or cattle-men.

Mr. Chairman, we speak of the "iron age," the "golden age," and various periods in the history of the world. This present age, I believe, will be spoken of as the age of demagogism.

A MEMBER. The "age of brass."

Mr. CAREY. There are men who belong to a party for a day. They sit upon a plank which they call a platform, always well oiled with some "ism," on which they can slide from one party to another. If it best suits their purpose they can be members of the Greenback party, of the anti-national-bank party, or of the labor party to-day, and to-morrow they can slide over into the ranks of a dominant political party and make earnest claim that they are in good standing in its ranks. It is this class of men who are trying to get up a new "ism;" and to-day their attacks are constant and repeated upon those who happen to be engaged in the stock industry in the Western States and Territories. Their motto is, "Down with cattle-kings, cattle syndicates, and cowboys."

Farming and cattle-growing are so closely allied that both are classed as agricultural pursuits. Both are very honorable and necessary industries, and each is worthy of the greatest encouragement. To raise cattle, horses, and sheep on the plains is just as respectable, no more so, as to plow and harrow the ground and grow corn in the Wabash Valley.

The country needs more beef. While the annual supply of grain and other farm products is so great that it scarcely pays to cultivate, the facilities for producing sheep and beef become less each year. The ratio of the production of corn, wheat, barley, and oats to the population becomes greater each harvest. The ratio of beef supply to the population is less than before the civil war and must become less each year. Everything we wear is cheap. The necessary articles that go upon our tables are as a rule very low in price with the exception of beef, which is so expensive whether on the table of the rich or the poor that it is indeed entitled to be classed as a luxury.

The statistics show that 30 per cent of all the beef sold in the great distributing markets of Kansas City, Saint Louis, and Chicago comes from the country west of the Missouri River. So important a part does that country play in the beef supply of the nation, that it is stated in the report of the Bureau of Animal Industry for 1885 that should this supply be cut off it would produce a beef famine in the United States. It is estimated that the steers brought from the plains and mountains to be fattened and prepared for the Eastern markets consumed not less than 5,000,000 bushels of surplus grain for which there was no market in the States of Missouri, Kansas, Nebraska, and Iowa, during the last year.

GRANGERS AND "COWBOYS."

I want to state to the members of this House that there is no clashing between the farmers and cattle-men in my country. The broad gates of her plains stand wide open, inviting every class of people to come and make therein homes for themselves and their families. We only hear of difficulties existing there when we read the speeches and the newspaper articles that are prepared in the East. I want to say further to you that the cowboy of the Eastern newspaper is largely a creature of the imagination. The men who work with and take care of the cattle on the plains known as "cowboys" are young men, the sons for the most part of farmers of the Eastern, Western, and Southern States. They are a brave and generous class of young men. No sailor or soldier was ever more faithful in performance of duty than the "cowboy" of my country. During the past fifteen years I have known hundreds and hundreds of them, and I do not believe that you can find among any class of men engaged in any employment in the East fewer dishonest men than among that class of men in my country that we call "cowboys." They are too fond of fair play to interfere with any class of settlers. They come from too intelligent a class to be made the dupes of their employers if their employers should attempt to use them for dishonest purposes. They live a free and generous life, and as they grow older drift into other pursuits. In my country it is not a disgrace to be called a "cowboy."

In the Territory of Wyoming, wherever there is a valley that can be cultivated, a good class of farmers are settling it and are receiving a most hearty welcome. The pioneers of Wyoming, whether you class them as cattle-men, cowboys, or grangers, will compare favorably with any class of men who ever went to either one of the States of the great West to better their condition in making homes for themselves and their families.

It comes with poor grace from the gentlemen in the States east of the Mississippi River to cast, by exaggerated statements, reflection upon the reputation of the men who have gone west of the Missouri River as settlers.

The people of Wyoming until 1878 were not safe with their lives or property in any section of that Territory. The cattle-men had to go well armed to protect their lives and their property from tribes of savages that were fed and clothed and supplied with the best improved arms by agents of the General Government. These cattle-men have made life and property as safe in that Territory as it is in any State in the Union. They have assisted in every worthy enterprise. Go among them and see what they have done and you will praise and not condemn them. You should not forget that the pioneers from the day of Braddock's defeat have had to fight and conquer every foot of soil west of the Alleghany Mountains.

I have no doubt land frauds have been committed in every year since this Government commenced to dispose of its lands, but the per centage of frauds after all have been so small that they are scarcely worthy of consideration. I say to the gentleman from Indiana [Mr. HOLMAN] that I believe there were more frauds committed under the swamp acts in the State of Indiana than all the frauds that have ever been committed under the pre-emption, desert-land law, and timber-culture laws west of the Missouri River. This is equally true of most of the States that received lands under the swamp act. A frog pond or a puddle of water was sufficient out of which to make four sections of swamp land. [Laughter.]

Mr. RANDALL. In those days land was entered at one dollar and a quarter an acre.

Mr. CAREY. Yes, sir. But if you take the figures you will find that nearly 75,000,000 of acres were given to the States under the swamp-land acts. Florida alone obtained 15,000,000 of acres, Illinois 3,000,000, Indiana 1,300,000, Louisiana 8,000,000, Michigan 7,000,000, Missouri 4,000,000, Wisconsin over 4,000,000, and so on through the list. Congress has been so generous with her lands in the past that you can at least afford to be just, so far as the settlers of the day are concerned. If your constituents will not permit you to be generous to these people, since they have gone from your own home, you will at least see that they have fair play, and that the laws which affect them are not interpreted for their persecution.

Mr. HOLMAN rose.

Mr. CAREY. I am only given five minutes and I can not yield.

The West is not understood; the population moves rapidly forward, and a great rush at a land office to enter lands is at once interpreted as an evidence that great frauds are being committed. The lands are without value until the settler makes them valuable. The more people come the more valuable each tract becomes. As soon as a country has arrived at a certain condition of settlement every man that has the right to enter land is anxious to avail himself of the privilege which is his under the law. I believe that in ninety-nine out of every hundred entries made the intention to comply with the law in every respect is an honest one.

The Rocky Mountain region is but little known by the people of the East. The lands open for settlement there are not like the lands the Government sold and gave away, which had only to be tickled to produce a crop. Each acre of arid land requires hard work to turn it into a productive field. I quote the following extract from the Salt Lake Tribune:

It is a sadly comical spectacle to see the American Congress undertake to handle the desert-land question. Members approach the question with a vague fear that the country will discover how little they know of the business, but in a day or two they are declaring with a mighty pathos against the policy which is so swiftly transferring the public domain in vast blocks to greedy land speculators. If the spectacle is sadly comical in Washington it would be a comically sad one to see one of those eloquent members compelled to make a living from 640 acres of desert land. What new ideas he would obtain if put to the test; how his respect for the public domain would break down; how he would change his views; how much his pocket would be depleted and his brain expanded by a year's trial of reclaiming desert land. With what pertinacity these men of the East assume that if Western people are not out and out thieves, they are at least playing for unjust advantages.

Notwithstanding the many difficulties, through the energy of our people the country in the Rocky Mountains is making rapid strides forward.

Two weeks ago I read a letter saying a new town site had been surveyed on the North Platte River, Wyoming, in advance of the building of the Wyoming Central Railroad; that I should see in the establishment of the post-office that the name given the new town was the one selected by the people. The next mail brought an application for authority to authorize the organization of a national bank in the new town with $100,000 of paid-up capital. In the same mail came an eight-page newspaper which had been printed in the town which had wisely been christened "Douglas."

Mr. Chairman, two public men have lived in this century who were pioneers in the truest sense of the word. Each left humble homes, one in the North, the other in the South, and went to what was then the far West to better their condition. Representing different schools of politics, they became great leaders of men and parties. Their eloquent tongues were ever heard and their votes were always given in favor of liberal land laws and generous treatment of the people of the West. Their names will be known and revered as long as this Government shall last—I speak of Clay and Douglas. [Applause.] So deeply has their history been impressed on the hearts of the pioneer classes that almost every Western State and Territory has honored towns and counties with their imperishable names.

The land legislation must become as important in the future as it has been in the past. While I stated in my remarks yesterday that this Government had disposed of 600,000,000 acres most wisely, I have no hesitation in saying it will require broad and liberal laws to dispose of the 700,000,000 acres, including Alaska nearly 1,100,000,000 acres, remaining. Under the present land laws patents should be issued to those who are entitled to them, and every advantage should be afforded to those who settle the lands or by irrigation works make their settlement possible. Governor Warren, of Wyoming, in his report to the honorable Secretary of the Interior, ably says on this subject:

While presenting the case of necessary aid for pioneer and *bona fide* settlers, I most respectfully recommend that the rules and regulations respecting the proving up upon public lands be generously and leniently applied, if the applicant be working in good faith. While fraud should not be tolerated, nor fraudulent land entries permitted, the deserving applicant should receive every assistance and prompt issuance of United States patent for his land.

The settler, presumably poor, grows poorer in ready money while making the necessary improvement upon his land, in order to obtain title, and he is often compelled to borrow money to get his start, buy live-stock, implements, seed, &c., and with his patent to his land and consequent good security to offer, he can borrow money at living rates, when if delay in title occurs he is compelled to pay ruinous rates of interest until his entire plant is sacrificed. If special land agents are to be employed to inspect each entry, and the land under it (and there should be no objection to that), the number of such agents should be greatly increased, to the end that inspection may immediately follow final proofs. And the force where these patents must issue from should also be so increased that patents could immediately follow final proofs and favorable report of special agents.

Many a settler is compelled to leave his claim immediately upon final proof in order to earn by day or monthly labor sufficient means with which to continue improvements until his land is productive, and to support his family, and the inspector who visits his claim during this period of semi-abandonment might very naturally, and honestly enough, do the absent settler an injustice.

The Navy.

SPEECH

OF

HON. GEORGE D. WISE,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 18, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8975) making appropriations for the naval service for the fiscal year ending June 30, 1887, and for other purposes—

Mr. WISE said:

Mr. CHAIRMAN: I did not propose to occupy the attention of the House during the pendency of this bill, preferring to wait until that for the increase of the naval establishment shall have been reached. But as it is possible, if not probable, that that measure may not receive consideration during this session, I have come to the conclusion to submit what I have to say in reference to it at this time.

I will not follow the honorable gentleman from Iowa [Mr. HEPBURN] in the discussion of the issues of the war. I regret exceedingly that my friend from Alabama [Mr. WHEELER] furnished him the occasion. During the consideration of this bill making appropriations for the naval service for the fiscal year ending June 30, 1887, he has detained this House for nearly two hours with a revival of the memories of our civil conflict. No good can and much harm may result from attempts to rekindle the passions and prejudices of that unhappy period.

I have looked into the Congressional Directory and find there——

Mr. HERBERT. I hope the gentleman will not discuss that question.

Mr. WISE. No; I am not going to do it. I find in the Congressional Directory a brief sketch of his life, in which it is stated that he was in the military service of the United States during the civil war. I do not question its accuracy, as it is to be presumed that the facts were furnished by himself. I do not doubt that he was a soldier of credit and renown, and have no disposition to depreciate his services, but I do not believe that such sentiments as have been uttered by him will receive the approval of his fellow-citizens in Iowa.

This morning I received a communication from the Grand Army of the Republic, which I will insert in the RECORD, not having time to read it. It is an appeal to the representatives of the South on this floor to vote in favor of increasing the pensions of the wounded and disabled soldiers of the Union Army. In this we are assured that the brave defenders of the country stopped fighting when the war was concluded. To their honor, be it said, the people of my section have seldom heard from their lips bitter reproaches and revilings, and have often been cheered by their kindly acts. Generosity and magnanimity are characteristic of the truly brave.

HEADQUARTERS UNITED STATES MAIMED SOLDIERS' LEAGUE,
1202 *Chestnut Street, Philadelphia, Pa., June 18, 1886.*

DEAR SIR: The traditional generosity and kindliness of the Representatives of the South has had no firmer admirers on the roll of their countrymen than the old soldiers of the war who stopped fighting when the war was concluded. Among these old soldiers, the men who lost legs and arms in the line of duty, have always joined heartily in admiring those time-honored characteristics. These men are at present as a class suffering severely from the effects of their wounds and physical debility. Their wants and necessities now appeal to your feelings of humanity to concede a small advance in the rates of their pensions as provided for by Senate bill No. 2056. This bill passed the Senate unanimously; and in their behalf we feel it to be due to you as a Representative to personally ask your support of the measure granting an addition of $6 per month to this class of your countrymen.

President: John Stewart, U. S. Grant Post, No. 5, Grand Army of the Republic, Philadelphia.

Vice-presidents: B. F. Widdecombe, Post No. 45, Grand Army of the Republic, Phœnixville, Pa.; Isaac R. Martindell, Post No. 6, Grand Army of the Republic, Germantown, Pa.

Secretaries: A. G. Rapp, Post No. 2, Grand Army of the Republic, Philadelphia; James M. Magee, Post No. 12, Grand Army of the Republic, Roxborough, Pa.; William A. Ganster, Post No 45, Grand Army of the Republic, Phœnixville, Pa.

Representatives: Benjamin F. Robb, Post No. 6, Grand Army of the Republic, Germantown, Pa.; Francis A. Osbourn, Post No. 2, Grand Army of the Republic, Philadelphia.

Treasurer: J. H. R. Story, Post No. 2, Grand Army of the Republic, Philadelphia.

Hon. GEORGE D. WISE.

I will say now and here as my response to that appeal, pensions for the brave soldiers who received wounds or incurred disabilities in the service of their country; contempt for those who malign and spitefully use us.

The gentleman from Iowa has sought many occasions during this Congress to make flings at the men of the South. He knows that we are constrained to silence. In dismissing this subject I commend to his careful consideration the words of the old soldier "who stopped fighting when the war was concluded," and the imitation of their example. Brave and honorable men never strike a prostrate foe. I do not know what part he bore in the Union Army except as I find it written in the Congressional Directory.

Mr. JOHNSTON, of Indiana. I hope the gentleman will not feel constrained, as he has stated, but will talk just as he feels.

Mr. WISE. The gentleman may rest assured that I will utter my feelings and thoughts without reserve. When I used the expression "that we are constrained to silence" I meant that we are not going to fight over again the issues of the civil war. I repeat, I do not know what part the gentleman from Iowa bore in that conflict, but it is certain that there are upon his person no scars as evidence of the fact that he ever led a desperate charge, and, judging from his conduct here, I do not think that he ever will.

Mr. HENDERSON, of Iowa. Will the gentleman allow me a word?

Mr. WISE. Yes, sir.

Mr. HENDERSON, of Iowa. The gentleman may bear no scars, but I will say to him that no soldier from Iowa was ever more in the front where scars could have been received than my colleague.

Mr. WISE. I do not know anything about where the gentleman was.

Mr. HENDERSON, of Iowa. But I ask, in view of the fact I have stated, that no slurs be cast upon my colleague.

Mr. WISE. I take his history as written by himself, and surely the biographer can not be said to have been unfriendly——

Mr. WARNER, of Missouri. General Grant bore no scars.

Mr. DORSEY. Nor Phil. Sheridan.

Mr. PERKINS. And the same may be said of many other gallant officers as well.

Mr. WISE. There is no occasion to pursue the subject further. Yesterday my honorable friend from Connecticut [Mr. BUCK], while commenting upon the statement of the gentleman from Alabama [Mr. HERBERT] that the appropriations for the naval service for the next are considerably less than those for the current fiscal year, said that the difference is more apparent than real, and undertook "to show that, so far from there being a less amount appropriated in this than in the bill of last year, there is really more if we take into consideration the recommendations of the new-ship bill." In this connection he called attention to the fact that certain items are included in the bill for the increase of the naval establishment which might have been embraced in this.

I did not understand him to assert that it was improper to have placed them where they are, and I do not suppose that he meant to allege that the Committee on Naval Affairs, or its chairman, intended thereby to mislead the House or the country. He is too fair and liberal to indulge in imputations of that character. But his purpose seems to have been to prevent us, as he stated it himself, from making use of the transfer of items "as being in the line of economy." The chairman has told him that he has "never said we propose to appropriate less than was appropriated last year, taking the two bills together," this and that for the construction of new ships.

So far as I am concerned I will take this occasion to say that I am in favor of liberal appropriations for the Navy, and do not care whether this carries more or less than former bills.

When assisting in its preparation I was actuated by no other consideration than to give enough to make the Navy useful and efficient, and I will go as far as any member on this floor to add to and increase it. But I call attention to one fact not mentioned by him, that since 1868 more than seventy-five millions have been expended to build and maintain a navy, and we have nothing to show for it. I do not allude to the annual appropriations for the naval service, but, in addition to them, seventy-five millions have been expended on the construction, repair, equipment, and ordnance of vessels during the last twenty years, and we are without a ship to compare with some in the navies of other nations. In the language of the Secretary of the Navy, this vast sum "has been substantially thrown away."

Mr. GOFF. Since what year does the gentleman refer to?

Mr. WISE. Since 1868.

The statement is contained in the annual report of Secretary Whitney. I do not wish to arouse partisan feelings or prejudices, and therefore will not stop to fix the responsibility for this condition of things. I will content myself with the simple statement of facts, and leave the country to judge whether the necessity exists for other and better methods of administration.

The rehabilitation of the Navy and the revival of our merchant marine are subjects of paramount importance and should receive earnest and careful consideration. There is a close connection between them, and in dealing with the one it is not out of place to give some thought to the other.

By the encouragement of our ship-building and ship-owning interests and the development of a flourishing mercantile marine we would provide an efficient and powerful naval reserve from which to draw in times of peril and danger. We would thus secure not only a large commercial fleet, easily convertible upon occasion into ships of war, but what is of equal if not greater importance, a band of trained, disciplined, and experienced sailors.

In dealing with these subjects we should endeavor to rise above those considerations which usually influence our actions as members of political organizations, and recognize the duty to place the country in a con-

dition of defense and provide facilities and protection for our vast and increasing commerce.

The people of the United States, with singular unanimity, are in favor of inaugurating a policy of naval and commercial progress, and all efforts directed to the accomplishment of those objects will receive their hearty approval. In this connection I will say to my political friends, who constitute the majority of this House, that they will be held responsible for any failure to satisfy the just expectations of the people. In my humble opinion we can not do anything which would contribute more to secure for us the continuance of the confidence and support of our constituents than the pursuit of these objects with intelligent zeal.

We must have a navy for the defense of our seacoast, if not for aggression for the support of American policy in matters where foreign governments are concerned, and for the security and development of our commerce. We can not expect to have either a mercantile or a belligerent navy so long as we shall continue to depend upon foreign ships for the carriage of our exports and imports. The fact stares us in the face that the monopoly of our foreign carrying trade is enjoyed by ships which do not float the American flag; but from this it must not be inferred that our commerce is inconsiderable. On the contrary, it is immense, and steadily increasing, amounting annually to more than $1,500,000,000. But the share of it carried in American vessels has steadily decreased since 1840 until it has reached the point of constituting a very small per cent. of the aggregate.

During the second session of the Forty-seventh Congress a joint select committee was appointed "to inquire into the condition and wants of American ship-building and ship-owning interests, and to investigate the causes of the decline of the American foreign carrying trade, and to suggest any remedies which might be applied by legislation," &c. In the able report submitted by this committee the astounding statement is made that little more than 15 per cent. of our exports and imports were carried in American vessels during the year 1882. I have not the statement for the present year, but am satisfied that a less per cent. is carried now.

Mr. FELTON. It is less—only 14 per cent. and a fraction.

Mr. WISE. It is less, the gentleman says. Formerly the shipping interests of the country were second in importance only to agriculture.

To exhibit to the House and the country its past and present condition, and to convey some idea of the necessity for the immediate application of vigorous measures to arrest, if possible, the speedy progress of decay, I insert here the following figures, for each semi-decennial year since 1840, relating to American shipping, taken from the report referred to:

Years.	Tonnage in foreign trade.	Tonnage in coastwise trade.	Value of exports and imports.	Per cent. carried in American vessels.	Per cent. carried in foreign vessels.
1840	762,838	1,176,694	$231,227,465	82.9	17.1
1845	904,476	1,223,218	231,901,170	81.7	18.3
1850	1,439,694	1,797,825	330,037,038	72.5	17.5
1855	2,348,358	2,543,255	536,625,366	75.6	14.4
1860	2,379,396	2,644,867	762,288,550	66.5	33.5
1865	1,518,350	3,381,522	604,412,996	27.7	62.3
1870	1,448,846	2,638,247	991,896,889	35.6	64.4
1875	1,515,598	3,219,698	1,219,434,541	25.8	74.2
1880	1,314,402	2,637,686	1,613,770,633	17.4	82.6
1881	1,297,035	2,646,011	1,675,024,318	16.0	84.0
1882	1,259,492	2,873,638	1,567,071,700	15.5	84.5

The year 1855 marked the "inception of the period of decay and retrogression." Prior thereto only a few iron steamships for ocean trade had been constructed, and our foreign commerce was carried principally in wooden sailing vessels. It was then that iron began to take the place of wood in the construction of ships for purposes of ocean transportation, and steam to be used for their propulsion instead of sails. Up to this time, having cheaper materials for ship-building than any other maritime nation, we were able to enter into competition for the foreign carrying trade upon terms more favorable than those which now confront us.

I have not the time, Mr. Chairman, to pause to search for the causes of this decline and decay. Nor would the inquiry be in harmony with my present purpose, which is to call attention to the necessity of providing means for national defense and to urge early and favorable consideration of the bill for the increase of our naval establishment.

In this connection it will be interesting to state briefly what has been done in recent years toward the construction of a navy. In June, 1881, Secretary Hunt detailed a number of experienced and accomplished officers to consider and report upon the need of appropriate vessels in the service. This advisory board confined its deliberations to the consideration of providing means for "the present exigencies of the Navy," and made no recommendations concerning the types of vessels to be built for the defense of the country in time of war, having determined that they were not within the scope and intention of the order by which it was created.

In the report, submitted November 7, 1881, this board expressed the opinion that seventy unarmored cruisers were required to perform efficiently the work of the Navy, "for surveying, deep-sea sounding, the protection and advancement of American commerce, exploration, and the protection of American life and property endangered by wars between foreign countries." In addition to these, they decided that a pressing necessity existed for the construction of a limited number of rams and torpedo vessels, to provide the means for the defense of the country in the event of a sudden emergency.

I insert here a summary of the number, class, type, and cost of the vessels recommended to be built immediately:

Two first-rate steel double-decked unarmored cruisers, having a displacement of about 5,873 tons, an average speed of 15 knots, and a battery of four 8-inch and twenty-one 6-inch guns; cost $3,560,000.

Six first-rate steel double-decked unarmored cruisers, having a displacement of about 4,560 tons, an average sea speed of 14 knots, and a battery of four 8-inch guns and fifteen 6-inch guns; cost $8,532,000.

Ten second-rate steel single-decked unarmored cruisers, having a displacement of about 3,043 tons, an average sea speed of 13 knots, and a battery of twelve 6-inch guns; cost $9,300,000.

Twenty fourth-rate wooden cruisers, having a displacement of about 793 tons, an average sea speed of 10 knots, and a battery of one 5-inch and two 60-pounders; cost $4,360,000.

In addition to these cruisers, it was recommended to build five steel rams of about 2,000 tons displacement and an average sea speed of 13 knots; cost $2,500,000.

Five torpedo gunboats of about 450 tons displacement and a maximum sea speed of not less than 13 knots, and one heavy powered rifled gun; cost $725,000.

Ten cruising torpedo boats, about 100 feet long, having a maximum speed of not less than 21 knots an hour; cost $380,000

Ten harbor torpedo boats, about 70 feet long, having a maximum speed of not less than 17 knots per hour; cost $250,000.

The conclusions of this, the first advisory board, reached after careful and laborious investigation of the subjects submitted for its consideration, were communicated by the Secretary of the Navy to Congress at its next session. This intelligent effort on the part of the Department in the direction of inaugurating wise measures for the rehabilitation of the Navy has from time to time been supplemented by Congress, but not, in my humble judgment, to the extent demanded by its importance.

In the naval appropriation bill approved August 5, 1882, authority was given to build one each of the first two types enumerated, and the Secretary of the Navy was empowered and directed to organize a board of naval officers and experts, whose duty it should be to advise and assist him in all matters relating to their construction. This "naval advisory board" was organized November 13, 1882, and as the result of their advice and the recommendations of the Secretary of the Navy based thereon Congress provided in the naval appropriation bill approved March 3, 1883, for the construction of the steel cruiser of not less than 4,300 tons displacement (Chicago) already specially authorized by the act of August 5, 1882, and in addition provided for two steel cruisers of not more than 3,000 nor less than 2,500 tons displacement each (Boston and Atlanta), and one dispatch boat of 1,500 tons displacement (Dolphin). On the advice of said board the larger cruiser authorized by the act of August 5, 1882, was omitted.

From a recent letter addressed by the Secretary of the Navy in response to a resolution of the House calling for information concerning the progress made in the construction of these vessels it appears that their hulls and machinery are well advanced toward completion, but that their armament may be delayed "partly by the unavoidable difficulties attending the execution of the work and partly by the lack of sufficient appropriations."

By an act approved March 3, 1885, Congress authorized the construction of four additional vessels, two cruisers of not less than 3,000 nor more than 5,000 tons displacement, one heavily armed gunboat of about 1,500 tons displacement, and one light gunboat of about 800 tons displacement. As to these we have been informed in the communication from the Secretary referred to that the plans of none of them have been completed, but that satisfactory progress has been made, and the construction of all of them can be commenced within three or four months.

After this brief sketch of legislative and departmental action in the direction of providing new ships, let us turn to the official register to see what we have. It exhibits a beggarly account. In the list of serviceable vessels, propelled by screws and paddles, we find one first-rate, ten second-rates, nineteen third-rates, and five fourth-rates. In addition to these we have fourteen fourth-rate ironclads, all requiring more or less repairs to make them serviceable, and one under sentence of condemnation, and twelve wooden sailing vessels. The five new double-turreted monitors, although launched, are awaiting appropriation for completion.

This is the American Navy, with the exception of several receiving ships, unfit for further sea service, two torpedo rams, and a few fourth-rate tugs. The Secretary of the Navy in his annual report to Congress tells us that—

It is questionable whether we have a single naval vessel finished and afloat at the present time that could be trusted to encounter the ships of any impor-

tant power—a single vessel that has either the necessary armor for protection, speed for escape, or weapons for defense. This is no secret; the fact has been repeatedly commented upon in Congress by the leading members of both parties, confessed by our highest naval authorities, and deprecated by all.

We are without ships for offense or defense; and as to our fortifications, they are practically useless and incapable of resisting the attacks of modern artillery. We are surrounded by the naval stations of Great Britain, the most powerful maritime power in the world, and possessing the largest facilities for the construction of vessels of every kind, the material, the plant, the shops, the tools, the appliances, "and, what is equally important, the experience resulting from the constant production of such work." In England the keels of one hundred fighting ships of the best types could be laid at once and speedily completed.

I find in a report submitted by the honorable gentleman from Pennsylvania [Mr. RANDALL] from the Commission on Ordnance and Gunnery a statement by a member of the firm of William H. Wallace & Co., iron merchants of New York, that—

There is not to-day in the United States a plant capable of producing armor-plate of the thickness, the width, the length, the weight, and quality demanded by the navies and for the fortifications of to-day.

We are far behind in iron-ship building, and are without experience in the production of guns of the largest caliber. With these facts staring me in the face, I can not agree with the statement made here in April last by my honorable friend from Indiana [Mr. HOLMAN] that the country "was never in as perfect a condition of defense as it is now."

We are certainly not prepared to enter upon an aggressive policy should an occasion arise, nor are we for defense should we be attacked by any first or even second rate power. Such is our geographical position, such our resources and numerical strength as to insure immunity from attack by land.

Although our standing Army is insignificant, there is an innumerable host of disciplined and trained soldiers ready to respond to any call for the maintenance of the rights, the protection of the interests, and the defense of the honor of the country. The danger lies in the direction of fleets and squadrons, heavily armored ships with terrible armaments. A million of soldiers with the best equipment could offer no resistance to these. We have a long line of seacoast (5,700 miles in extent), and we are without the means of defending it.

Mr. Tilden, one of the ablest of our living statesmen, in a letter addressed to the Speaker of the House, says:

The property exposed to destruction in the twelve seaports—Portland, Portsmouth, Boston, Newport, New York, Philadelphia, Baltimore, Charleston, Savannah, New Orleans, Galveston, and San Francisco—can not be less in value than $5,000,000,000. To this must be added a vast amount of property dependent for its use on these seaports. Nor does this statement afford a true measure of the damage which might be caused to the property and business of the country by a failure to protect these seaports from hostile naval attacks.

They are the centers not only of foreign commerce, but of most of the internal trade and exchanges of domestic productions. To this state of things the machinery of transportation of the whole country has become adapted. The interruption of the currents of traffic by the occupation of one or more of our principal seaports by a foreign enemy, or the destruction of them by bombardment, or the holding over them the menace of destruction for the purpose of exacting contribution or ransom, would inflict upon the property and business of the country an injury which can neither be foreseen nor measured.

It will not do to say that no danger threatens, and give as a reason for the refusal to provide the means of defense that we are safe from attacks by foreign powers. It is true that at present we are upon terms of amity with all the nations of the world, and there are no specks upon the horizon to give warning of a coming storm.

But the maintenance of a naval establishment sufficient for the assertion of our rights is the first step toward the preservation of friendly relations with other nations, and the best guarantee against aggression. We remove danger to a greater distance by being in a state of preparation, and prolong the period of peace by being ready for the emergency of war.

Our naval establishment should be on a scale adequate for the defense and security of our vast interests, and commensurate with the importance and dignity of the Republic. Of the necessity for its increase there can be no doubt. I am convinced that it ought to precede the reduction of revenue, and that this work should be entered upon at once.

There are those who weary our ears with discourses upon the necessity for the practice of economy. While opposed to wasteful extravagance and to appropriations for unnecessary objects, I do not hesitate to commit myself unreservedly to a policy that embraces within its scope the welfare and prosperity of the country. With a surplus of revenue in the Treasury, the present time is peculiarly favorable for placing the country in a condition of security and for providing the agencies to enable its Government to command respect in all its dealings with foreign powers.

This is a period of universal depression, and there are thousands of idle mechanics and laborers watching and waiting for the opportunity to earn bread for themselves and families by the sweat of their brows. In every section of the Union are heard the mutterings of their discontent. The disorders which have appeared are the natural offspring of enforced idleness. By providing for this great national necessity we would do much to relieve them from hard and oppressive conditions and bring cheer and comfort to thousands of American hearts and homes. The iron and steel industries would receive a new impetus, and the inventive genius of our people would be stimulated to renewed activity. As the result of the pursuit of an intelligent policy in the direction indicated we would soon be independent of foreign countries for the supply of the agencies and means of national defense.

The importance of this subject was fully realized by that old patriot, Andrew Jackson, as early as 1842, in a private letter addressed to a gentleman who was then a distinguished member of Congress, in which he uses the following language:

The Navy ought to be increased, and the necessary fortifications for the defense of our large commercial cities, our ship-yards, and arsenals. Beyond this fortifications are useless on such extended sea-coasts as ours, and the revenue arising from our public lands ought to be applied to the increase of our Navy, and finishing our necessary fortifications, instead of bribing the people by distribution to create the necessity of taxing them to fill a bankrupt Treasury.

Until the question of the relative capacity of resistance of defensive armor for ships and the penetrating power of modern artillery shall have been satisfactorily determined it may not be wise to add largely to our naval establishment. But I am satisfied that we should not pursue the policy of inaction and remain in our present condition.

In all the wars in which our country has been engaged the Navy has borne an important and conspicuous part. Upon no other theater of action have American skill and valor been displayed to greater advantage than in the handling and fighting of our ships. The brilliant achievements of its Hulls, Porters, Perrys, and Decaturs on ocean and lake, and a long line of worthy successors, have illustrated its worth; their services and sacrifices, worthy to be commemorated in song and story, commend it to favorable consideration, and should make it an object of peculiar pride.

During our civil conflict we entered upon a new era of naval warfare, and it is not likely that we shall witness a repetition of such engagements as those between the Constitution and Guerriere, the Wasp and the Frolic, the United States and the Macedonian. Those brave old ships, which once walked the waters like things of life and beauty, bearing our banners so proudly, would be useless to-day. They could not be trusted to engage in combat with a modern vessel of war, and could not withstand for a moment the fire of modern artillery. This was abundantly demonstrated when the Congress and Cumberland were attacked in 1862 by the confederate war steamer Virginia. They were able to make but feeble resistance to their powerful competitor, and although their broadsides were delivered with precision and vigor, they produced little or no effect upon the armored sides of the Virginia.

I pause to pay a passing tribute to the brave commander and gallant crew of the Cumberland. They refused to surrender, and went down firing their guns. They laughed death to scorn in broadsides and cheers, and when the dark waves, crimsoned with their blood, closed over the Cumberland, the flag of the Union was still at her peak.

The occurrence teaches that the agencies of one era are not sufficient for the emergencies of another, and that we should not neglect to keep pace with the march of improvements in naval architecture.

Special Taxation to Pay Pensions.

SPEECH
OF
HON. SILAS Z. LANDES,
OF ILLINOIS.
IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 24, 1886,

On the report of the Committee on Rules proposing an amendment to Rule XXIII, as follows:

"*Resolved*, That it shall be in order, when any general bill or proposition to increase the rates or amounts of pensions, or to grant pensions to persons not previously entitled thereto by law, is under consideration, to amend the same so as to provide by taxation or otherwise for the payment thereof; but no such amendment shall be in order unless the net revenue provided for shall be thereby set apart for the sole purpose of paying such increased pensions."

Mr. LANDES said:

Mr. SPEAKER: I hail the proposition to amend Rule XXIII as proposed as the beginning of an effort to apply a principle that will finally result in the emancipation of the people of this country from the most unjust and unequal system of taxation that ever oppressed any people. I am contemplating results beyond those which may flow from the adoption of this amendment.

From the debate that has taken place on this proposition I am convinced the intention is to add the machinery of an income tax as a rider to the proposed pension legislation, by means of which the necessary money can be raised to pay the obligations created. Why not pass these bills first, and afterward pass the income-tax law? I favor this mode of proceeding. I am so heartily in favor of the income system of taxation that I shall, at the risk of seeming a little premature, submit some remarks in favor of it. But before doing so I shall offer

some reasons why I am so anxious to see these pension bills enacted into law. The Congressional convention which assembled in my district a few days ago adopted a resolution favoring the repeal of the arrears limitation. This action accords with my individual views and is my command in the premises. I am in favor of liberal additional pension legislation so pressingly demanded by every sense of justice.

The Republican party, having practically had control of all national legislation since 1861, failed signally to enact just laws granting pensions to a very large proportion of our late soldiers who are most deserving of help from the public Treasury. This duty is now pressing upon this House, and I most sincerely hope that before we adjourn justice will be done to the old veterans heretofore unprovided for. We have now pending a bill to pension maimed and crippled soldiers; also a bill known as the Blair bill (Senate, No. 1886); also a bill to repeal the arrears limitation. All of these have my hearty approval, and I hope to see them enacted into law.

I want to see the Blair bill stripped of the amendments recommended by our Committee on Invalid Pensions and enacted into law just as it came to us from the Senate. We owe this to the soldiers as an act of justice as well as an act of gratitude. Our solders have not, in my judgment, received fair treatment as compared with the bondholders and other favored and privileged classes, as I shall briefly attempt to show, and it is high time we Democrats should apply our doctrine of equal rights and fair dealing to the end that justice may be done to a long neglected, most deserving, and patient class of men. Suppose these men had hesitated as long before responding in 1861 to the call to arms as the Republicans have in granting them their just rights, what would have been the result? Sir, when the war of the rebellion was inaugurated and the confederate hosts were being mustered within a few miles of this capital, a call was made to two classes of our people, one to take the musket, and charging through the red rain of battle, drive the confederates into submission or perish in the attempt, and the other to furnish money to equip the Army for effective service. Both classes responded, and by their joint effort this matchless Republic has been saved to us in its integrity.

How have these two classes been treated during and since the war? Let us see. The men who did the fighting, who bore the deadly brunt of battle, whose relentless persistence and dauntless courage won the victory, and a part of whom are still waiting, and have been patiently waiting for twenty years, with broken constitutions and disabled bodies resulting from that service, for the enactment of the just pension laws now contemplated, were paid in a currency depreciated 50 per cent. below gold value. What of the class who furnished the neccessary money? Have they been waiting twenty years for the enactment of laws giving them just recognition? Have they not received an interest pension? Let us see. June 30, 1866, the bondholders held $2,381,530,000 interest-bearing bonds, for which they paid a currency worth only 50 cents in gold on the dollar. These bonds were then, and are now, exempt by law from every kind of taxation. The men who did the fighting are taxed in a most burdensome manner. Why this invidious distinction?

The Republican Congress in 1869 enacted a law making these bonds that cost the holders 50 cents on the dollar (coin value) payable in coin, worth 100 cents to the dollar. Thus by a monstrous crime, a wanton and cruel act of spoliation of the rest of the people, the value of these bonds was doubled and still untaxed. The fighting soldier, paid in a depreciated currency, has not been made whole in this respect, and is still waiting for a pittance to compensate him for actual loss of vital force while serving his country, being continuously taxed on every article he wears and uses in his struggle to keep the wolf from the door.

I ask again, why this invidious distinction? These bondholders have been paid in interest $2,274,275,844, while the soldiers have been paid in pensions during the same time $830,000,000; in other words $1 in pensions to the soldiers and $3 to the bondholders. I would call attention to another fact that stands out against the tax-burdened people of this country. There seems to be some mysterious alchemy within the power of these bondholders. Republican legislation has given them some magical power, as great as that possessed by Aladdin's lamp, by means of which they are enabled to swell their claims against the people in a ratio greater than that by which they are paid off. Behold the result of this power as revealed in the following statement:

At the close of the war we owed the bondholders in round numbers, $2,381,530,294, which could have been paid then, if due, with less than 1,000,000,000 bushels of wheat at its lowest New York market price, which was $2.40 per bushel. We have paid this debt down to $1,210,-600,000 in round numbers, and it will now take at its lowest market price in New York, about 1,350,000,000 bushels of wheat. In other words, it will take about 350,000,000 more bushels of wheat to pay the balance of the amount we owe the bondholders now than it would have taken to have paid them at the close of the war. We have paid almost one-half the original debt and $2,274,275,844 additional as the interest; adding the interest paid to the principal paid, we find the people have paid out of their earnings to the bondholders up to this time, in round numbers, $3,445,000,000.

The people are poorer by just that amount, and find that it will take more of their property now to pay out than ever before. Twenty years the people have been paying, and as they sold their produce to pay this debt year after year, they fondly hoped it was being reduced. The people can only pay the remainder by producing something to sell, and out of the proceeds of their produce the money must be realized. Oh, the power of money! The secret is, that under Republican legislation the bondholders have the power to increase the value of the remainder of the bonds they hold, compared with the value of produce, in a greater ratio than the amount is reduced by payments made.

The farmers and laborers, including those soldiers able to work, must make the property that being converted into money will pay this debt. After twenty years of toiling and paying they find themselves out of pocket over $3,000,000,000, and as compared with their ability to pay the burden has increased hundreds of millions of dollars. Behold, therefore, how Republican legislators have provided for the bondholder class, while the other class, the fighting soldiers, are waiting, many in the poor-houses, and many more while waiting have dropped into paupers' graves. The bondholders have been munificently treated, while the defenders of the old flag have been deceitfully cheated with promises.

It seems that the money in the Treasury amounting to over $200,-000,000 is reserved there by virtue of laws enacted by the Republican party, and that it can not now be reached for the payment of additional or increased pensions. It further appears that an effort has been made by Mr. MORRISON, of the Committee on Ways and Means, to report favorably a bill releasing part of this reserve, and that other members of that committee, including Mr. HISCOCK, of New York, have signed and reported to this House a protest against such action, and that this line of policy is likely to be pursued by the other side of the House, and by the Senate. I do not believe in keeping this great sum in the Treasury. The money belongs to the people and should be in their hands. So far as they are concerned it might as well be buried in the sea as to be locked up in the strong vaults of the Treasury.

The country will be better off, the Government just as rich, if we repeal these laws of restraint, release this money from limbo and set it free to circulate among those who own it. Trade will improve, enterprise will be stimulated, and the idle and anxious laborers employed in remunerative occupations. I would pour it out among the people through the pockets of the old soldiers who are to be beneficiaries under the proposed pension legislation, and I believe the country will respond with a quickened prosperity. But as the shadow of a Republican Senate falls across the pathway to these results, we must turn elsewhere to find the money needed to satisfy the demands of the proposed legislation.

We have the statement of the honorable chairman of the Committee on Ways and Means that we can not expect a surplus much greater than $30,000,000 for the next fiscal year, and that this is the only fund that we can look to with which to pay additional and increased pensions. It will take $100,000,000 to pay all the demands that ought to be paid the first year under the repeal of the arrears limitation and the Blair bill. How is the money to be raised? Not by adding additional burdens to the overtaxed people, whose substance has already been filched away, and now swells the plethoric treasury houses of Eastern millionaires.

These burdens must be lightened—in fact lifted from the necks of the farmers and laborers of the country and laid on those who are more able to bear them. I therefore do not hesitate to say we ought to impose an income tax; a tax upon the accumulating interest, rents, and profits of the rich people and rich corporations of the country. It will not touch the principal of the vast capital nor vast estates of the rich manufacturers and monopolists who own four-fifths of the wealth of the country, but reaches for a small percentage of the incomes they gather annually from the toiling millions of people. In the city of New York alone the railroad, telegraph, express, and canal companies will pay in dividends for the year ending June 30, 1886, an amount now estimated at $260,000,000, being so much net profit, or income, for the year. The interest on United States bonds, dividends by banks and manufacturing companies will swell the amount to over $300,000,000 per year. Why not tax this income with the same propriety that the earnings of the farmer and wage-workers are taxed by the indirect and unseen operation of the tariff law?

I am in favor of an income tax because by it we may reach the profits of these great railroad, telegraph, and canal companies, and other monopolies that annually rob the people of hundreds of millions of dollars. Congress has the indisputable constitutional right to regulate commerce, domestic and foreign. Yet great railroad corporations are permitted even now, heartlessly and with an unsparing hand, to exercise the equivalent of this power and levy tribute at will on the agricultural productions of the land. The actual cost in cash of all the railroads is less than three and one-half billions of dollars, but to represent which stocks have been watered and bonds issued to the amount of $9,000,000,000. Rates on the freight and passenger traffic have been fixed at a scale to earn for the holders of this inflated and false valuation at least 10 per cent. net. As was aptly said by the gentleman from Arkansas [Mr. DUNN]:

They take the country's note for $3 to every $1 invested, and they collect interest on the whole amount. Cheap as transportation seems to be in this country, if it were brought down to the basis of legitimate earnings on the money

actually invested, it would be one-half of what it is to-day and yet pay a liberal remuneration on the capital invested.

As it now is these roads, on an average, pay back to the owners their full cost every three and one-half years. They earn on an average nearly $3,000,000 per day the year round, leaving out of the count Sundays and legal holidays, and every dollar comes off of the farmers and laborers of this country. These great corporations do this by usurping and exercising the taxing power, levying tribute with a limit bounded only by their own cupidity and avarice.

I would lay the strong hand of the law on these gigantic corporations, and compel them to contribute of their unconscionable earnings so mercilessly wrung from the farmers and wage-workers, a just proportion to the revenues of the Government, out of which we would be able to pay liberal pensions to all deserving soldiers without burdening the already overtaxed farmers and laborers.

I favor an income tax, because by it we may reach the protected manufacturers who have grown opulent, powerful, and plutocratic under the operations of the protective-tariff system by plundering with an unseen hand the farmers and laborers of the country. Availing myself of the latitude allowed, I will allude to some of the evidence of wrong and robbery suffered by the many for the benefit of the few. I shall be brief. Let me observe, however, if we tax the soldiers to raise the money to pay them pensions it amounts to a mockery, while if we tax the rich it will add nothing to the burdens of the soldiers, farmers, and laborers, and every dollar received will be a help, in fact, not to the soldier element alone but to all the people. When we reflect, therefore, that we must raise additional revenues to pay increased and additional pensions, either by an income tax or by tariff taxation, it becomes a vital question to the soldiers and the citizens which shall be adopted.

A protective-tariff law practically means a law transferring to the hands of manufacturers within the United States the power to levy taxes (under the present law to the extent of 47 per cent. on the value of their goods) for their own gain on all the people who consume their goods. Not one dollar collected by this mode of taxation goes into the public Treasury. But if a foreign manufacturer brings his goods here to sell, the people who buy from him pay into the public Treasury the same rate of taxation that the domestic manufacturer is authorized to exact for his own gain. Therefore, as the United States is the greatest manufacturing nation on the earth, and as the domestic or home manufacturers sell to our people more than six times the quantity of goods that the foreigners do, it follows that of all the money exacted by tariff taxation, counting the cupidity of the home manufacturer to impose the full power of the law, $1 goes into the public Treasury and $6 into the pockets of the home manufacturers.

The power thus conferred on the manufacturers enables them under our present law to sell goods to the people for an average of 47 per cent. more than they are worth, and this is the protection afforded them and this is exactly what protection means. The pretense for this protection one hundred years ago was to help our manufacturers to make a beginning, as they were new and had no experience, and their business was called the infant industry. Now the false pretense is, to enable our manufacturers to pay wage-workers double the price for labor that they claim is paid in England. The force of the statement made by my distinguished colleague [Mr. MORRISON] some time ago can be appreciated. He said:

> Whoever buys a nail, a hoe, an ax, a yard of cloth, or spool of thread in all the tens of thousands stores and shops where merchants sell their wares, meets there the tax-gatherer, taking taxes for the Government or bounty for the manufacturer.

The average tariff for 1789 was 8½ per cent.; for 1792, 13½ per cent.; for 1826, 37 per cent.; for 1861, 43 per cent.; and now over 47 per cent. Thus the growing power of the manufacturers to obtain legislation in their interest is marked. To-day instead of being infant industries, these manufacturers represent giant industries, the greatest on earth. So great has their power grown that they said to one hundred and forty of the people's representatives in this House the other day, "You shall not even consider the question of reducing our power to tax the people." The infants have grown to giants; the giants have turned on the people and defiantly say, "We are your masters." And it is true, and they obtained and for the last twenty years perpetuated their power by false pretenses, false prophesies, and deceitful methods.

I shall refer to one or two of these pretenses. In 1870, on this floor, the distinguished leader of the protectionists [Mr. KELLEY] said: "Keep your duties high enough to induce other men to build furnaces and rolling-mills, and before five years you will find American iron cheapened to the level of the markets of the world, and that without a commensurate reduction of wages." (Appendix to the Congressional Globe, volume 1, page 208.) Five, ten, yes, sixteen years have passed, and furnaces and rolling-mills have been built in Virginia and Alabama and other places, and has time proven the truth of Mr. KELLEY'S promise? Let us see. Steel rails are selling for $34.50 in our market, in England for $17, or less than one-half, and nearly the same ratio of difference is maintained in the price of iron of all kinds. Behold your honored prophet!

In the same speech the same honorable and honored leader explained very fully how a high protective tariff tax would "create a home market for the grain of Iowa and Illinois and the other States whose farmers complain that they have no market for their grain."

While the honorable gentleman was speaking the wheat of these farmers was selling for $1.90 per bushel in New York, while it is now worth but 84 cents per bushel in the same market. Again, in 1882, under a law made for that purpose, a "tariff commission," consisting of nine members, was created to investigate all questions, &c., "so far as the same may be necessary to the establishment of a judicious tariff or a revision of existing tariff upon a scale of justice to all interests."

This commission reported to Congress that after taking and considering much testimony it "sought to present a scheme of tariff duties in which substantial reduction should be the distinguishing feature. The average reduction in rates * * * at which the commission has arrived is not less on the average than 20 per cent., and it is the opinion of the commission that the reduction will reach 25 per cent." The revision proposed by this commission was enacted into law because the commission represented it would reduce the rates at least 20 per cent. The rate in 1882, which was to be reduced 20 per cent., was a little over 42 per cent. What is the result? Instead of a reduction we find it increased from an average of 42 per cent. to an average of 47 per cent. Behold your false prophets! They live by deception, and rob you with the assurance that it is doing you good. Thus by false pretenses and fraud have protectionists maintained themselves.

The two marked and distinguishing features are an increase in the rate of taxation and in the discrimination against the poorer class. On the finest broadcloth, worth in the markets of the world $3.50 per yard, is imposed a tax of 50 per cent. This is for the rich. On cheap diagonal goods, worth 45 cents per yard, is imposed a tax of 180 per cent. This is for the poor; and so the schedules all discriminate. We have had a protective tariff for twenty-five years, and let us see where the money of the country is. It is estimated that there are $1,571,000,000 in the United States.

Greenbacks	$346,000,000
National-bank notes	310,000,000
Silver dollars	215,000,000
Subsidiary silver	75,000,000
Gold coin and bullion	625,000,000
Total	1,571,000,000

Massachusetts according to her population is the greatest manufacturing State in the Union. Her soil is perhaps the poorest but her people have in the savings-banks $274,000,000, and are increasing the amount by over $12,000,000 annually, and this is not all the money that is in that State. Massachusetts has about one-third of the entire cash of the United States, and one-thirtieth of the population. If there are five people to each family in that State, then if the deposits in the savings-banks were divided equally among the families, each would have $685, estimating the population at 2,000,000. If we divide the $1,571,000,000 equally among 60,000,000 of people, we have a little over $26 to each person; if we divide the $274,000,000 in the savings-banks of Massachusetts equally among her 2,000,000 people, each will have $137. The same ratio holds in the other manufacturing districts. We have the statement of the honorable member from New York made the other day that "there is near $600,000,000 in the savings-banks, trust, loan, and mortgage companies of New York alone," while the gentleman representing the Pittsburgh district of Pennsylvania [Mr. BAYNE] boastingly stated that in one bank in that city were deposits amounting to $9,000,000. A protective tariff therefore undeniably puts, in twenty-five years, an average of $685 to the credit of every family in Massachusetts, and an average of near that amount as a debt upon every farmer in the West. Add the deposits of Massachusetts to those of New York, and we have the grand total of $874,000,000, or $100,000,000 more than one-half of all the money in the country in two manufacturing States. Now, add to this $238,630,815 in gold and greenbacks which are in the vaults of the national banks, as shown by a statement recently issued from the Treasury Department, and we can see where $1,112,630,815 of the people's money is; leaving less than $500,000,000 for the people, a large proportion of which is locked up in the United States Treasury. These are some of the results of protection.

Such is the contrast between the financial conditions of the people protected, on the sterile soil and barren, bleak hills of Massachusetts, and the people who are taxed to afford this protection, living in a country blessed by Heaven with a soil unsurpassed on the earth for its fertility and abundant harvests. In proportion as manufacturers are protected they grow rich, and in proportion as they grow rich the farmers and laborers grow poor. The census statistics show, from statements made by the manufacturers of the Eastern States themselves, and I doubt if they told the whole truth, that in Massachusetts they made a clear profit of 29 per cent. on their capital, in Pennsylvania 30 per cent., and in Maine 28 per cent. What do the farmers make on their invested capital, counting out the value of the labor of themselves and families?

The power of money in the hands of such a plutocracy as has been created and fostered by Republican legislation was admirably described on this floor the other day by that distinguished Massachusetts Republican, Mr. LONG, when he said:

> My experience and yours is that capital takes care of itself, under whatever circumstances. Come gold or silver, come high rates or low rates, come boom or panic, come inflation or contraction, it eludes danger and improves oppor-

tunity. It is selfish, Argus-eyed, potential. I mean that capital which is so especially obnoxious to-day to public sentiment, and which is the selfish equipment of the plutocracy.

Plutocracy is the word. It embraces bondholders, national bankers, railroad, telegraph, telephone, and canal magnates, and the protected manufacturers. They have the greater part of the money, and they own four-fifths of the entire wealth of the country. Under Republican legislation they have been allowed to exercise control of such part of the taxing power as they wanted, which they have used in such manner that they reap where they have not sown. "Their incomes are plethoric with never-ceasing accretions. The golden streams that flow toward their doors continue with ever-increasing volume. Their tables are loaded with costliest wines and the luxuries of all lands. Their pathway through life is strewn with earth's choicest flowers." What a contrast with the condition of farmers and laborers! Who dares say it is wrong to tax the more than princely incomes of these plutocrats, to raise money to pay additional pensions and for general governmental purposes.

I am opposed to protecting one class of our people at the expense of the others. I am opposed to a protective-tariff tax at the state our manufacturing interests have arrived, being the greatest manufacturing country in the world, manufacturing goods in a single year worth $5,370,000,000, while the products of English manufacturers reach but $4,000,000,000. I think protection to such a gigantic enterprise is a ridiculous thing, and a cowardly crime against the people at whose expense it is maintained. It is a deceptive, indirect, unseen, insidious, and undemocratic method of taxation, by which the protected class is enriched by plundering all others. And the people who have borne this burden are restless, and will not continue to bear it without retaliation.

I will not warn these Eastern plutocrats with such a threat as the distinguished leader of the Iowa Republicans made on the floor of the House the other day when he said, "The Western country demands and will have protection—by argument if need be, but by war if necessary. I retract not a word." (Speech of Mr. HENDERSON.) But I will say I think you are trampling too hard upon the necks of Western farmers and laborers; your increasing exactions are being yielded up to you with greater reluctance, with greater pain. As you give your thumbscrews another and another turn, under the macerating crush of your tariff machine the golden blood-drops still trickle into your unsatisfied hands; but with each turn the life-blood of your victim quickens as it leaps from the heart to the extremities, throbbing hot, angry protests against your refined cruelty. Beware how you further pluck a suffering people, or you may drive them from the attitude of remonstrating to the act of retaliation, or to something worse.

The oppressed are numerically stronger than you are. In this country majorities can rule. Suppose the wheat-growers adopt your theories and arguments and demand substantial protection to the depressed industry of wheat-growing, to the end that wages may be increased to the farmers and farm hands. They could, in justification, quote Mr. KELLEY, who in 1870 laid it down as a truism that "he who advocates protective duties pleads the cause of the American laborer," and the burden of his argument is that we must protect American labor against the pauper labor of Europe. With greater force the farmers and farm laborers can point out that they are in direct competition with the pauper labor of India. The price of wheat is fixed by the market in free-trade England; the farmers must take a free-trade price in a free-trade country in competition with wheat raised in India where laborers work for 8 cents per day and board themselves. Hear what Consul Shaw says:

> Coolly laborers will work for from $3.89 to $4.38 a month, and provide their own food and lodging. In remote agricultural districts good labor is obtainable as low as $2.50 per month, including food, or a little over 8 cents a day.

Suppose the farmers come, saying protect us from this pauper labor by paying us a bounty of 47 per cent. ad valorem (a little less than the rate at which you are protected) on every bushel of wheat we export. We have precedents from the First Congress down to the present time. A bounty was paid to New England fishing vessels for many years, and as early as 1799 the Fifth Congress enacted that on all provisions salted within the United States and exported "there shall be allowed and paid 25 cents per barrel, to be paid by the collector of the district from which the same shall be so exported without deduction or abatement." Here is the precedent, and the constitutional warrant is as strong now as it was then, and the necessity for such bounty to the wheat-grower more pressing now than it ever was to any class. How can you answer such demand? It is a business proposition. There is no politics in it.

All can join in the demand who raise wheat or work on farms. It will not be long, good masters of Pennsylvania, New York, and New England, if you do not reduce your rate of taxation with which you now oppress the people, until you will hear a cry coming out of the West, deepening in ominous tones like a troublous, invading sea, swallowing the earth—the cry of a mighty people driven to desperation by your relentless injustice, oppression, and spoliation. You may gaze on the gleaming splendor of your colossal and ill-gotten wealth while you listen to the ominous and thundering voice of your millions of victims demanding that "private extortion must yield to public right, selfish interest must yield to the general good, and each individual's manhood must be left free, unhindered, and unhelped by Government to work out its own destiny," or that you give them also protection from the pauper labor of India by a bounty on all they produce for export. Then you can make ready to unlock the plethoric treasuries containing the booty of protection to the strong hand of a just law reaching for a fair proportion of the necessary revenue of this Government, not only to pay pensions but for other governmental purposes.

In contemplating the financial poverty and deep distress of the people of the splendid West, and the splendor and opulence of the people of sterile New England, I call to mind the familiar lines of Goldsmith and to which I invite attention:

> Ye friends to truth, ye statesmen, who survey
> The rich man's joys increase, the poor's decay,
> 'Tis yours to judge how wide the limits stand
> Between a splendid and a happy land.

Let us avert the irrepressible conflict by doing justice to all; let the burdens of government only rest on the people and be borne without discrimination. A tariff for revenue only is democratic and just. Reduce tariff taxation and the distress prevailing in the West will disappear, and contentment will take the place of discontent. All we ask is equality before the law. Let us pass these pension bills and follow them by an income-tax law and we will do our duty, merit and receive the gratitude of the waiting tens of thousands of the soldiers, and the applause of constituencies who will be greatly benefited by the distribution of millions of money that is otherwise gone from them forever.

Geological Survey.

SPEECH
OF
HON. A. J. WARNER,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Monday, June 28, 1886,

On the bill (H. R. 9478) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1887, and for other purposes, and particularly the item providing for the Geological Survey, &c.

Mr. WARNER, of Ohio, said:

Mr. SPEAKER: By a provision carried through the House on an appropriation bill in the Forty-sixth Congress, and which became a law, the several separate geological surveys then in progress were consolidated under one management, in order, it was claimed, to secure better direction, save duplication of work, and lessen the expense of geological surveys.

Prior to this act there had been several independent surveys, each directed to certain districts in the Territories or to specific objects, as the Wheeler survey, the Hayden survey, the Powell survey, and a survey by Clarence King, under the direction of the Chief of Engineers, I believe. These surveys were more or less independent, and, if not in conflict, did not work together as one survey or have a common purpose. I have never doubted the wisdom of the consolidation of these several surveys, and I believed at the time that it would lead to more uniform and better work at less cost, and it certainly ought to.

But instead of the work being confined to a geological survey proper, it has been extended so as to include almost everything from economic and descriptive geology to statistics of production and other matters that have no direct relations whatever to geology proper, and apparently entered upon for no purpose but to extend and magnify the importance of this bureau, increase its patronage, and spend the public money.

Originally the several surveys referred to were limited to the scientific examination of unexplored fields in the Territories, to examinations and reports upon mining regions, and the delineation of the geological structure of these districts. These surveys have been of great value, not only for what they have contributed to economic geology, but for their extension of our knowledge of the stratigraphical geology of the Rocky Mountain regions and the range and extent of our great mineral deposits in the regions west of the Missouri.

The continuation of this work upon a well-organized plan, and its extension beyond the limits originally prescribed, will have my support. But as it is being carried on the cost has gone on increasing until it is out of all proportion to the value of the work done. The scope of the work, too, has been enlarged so as to include things that do not belong at all to the domain of geology. What has geology to do with the work of a blast-furnace, or the production of pig-iron, or the making of Bessemer steel, or of clay pipes, any more than with the number of hens' eggs laid or the quantity of meat product of the country? It does not require geologists, at high salaries, to gather such information. The gathering of statistics of production and trade belongs to other fields entirely, and ought not to be brought into a scientific sur-

vey of the stratification of the earth's crust or the relation of mineral deposits to other formations.

Again, Government work ought to be rigidly restricted to those fields which private enterprise could not as well develop or to which it is not adequate. Private enterprise would not and could not undertake to minutely examine a whole continent and describe its stratigraphical features and the location and relation of mineral deposits. Nor is private enterprise likely to gather from wide areas the material requisite for a right solution of important questions in paleontology, important in their bearing on stratigraphical and economic geology as well as on the ultimate solution of the order of development of life on the globe.

But when a geological survey carried on at public expense has done this work, has examined the field, gathered and reported the facts, and supplied the material, that is as far as it should go. The love of science, ever growing, is sufficient to prompt a full discussion of geological theories and the order of development of vegetable and animal life on the globe.

The public treasure should not be used to enable a few favored persons, sometimes mere tyros in science, to acquire cheap reputations at public expense. There is danger that science itself, in the long run, may suffer by being taken entirely under the wing of the Government. The great geological discoverers, the Werners, the Suttons, and Lyells, the men who worked out the great geological problems and founded this grand science, were not pampered pets of governments, but great students who for the love of truth and the interest they felt in the grand problems which this new-born science raised devoted their lives to its study.

The work by Government, in my opinion, should be limited to the study of stratigraphical and economic geology, and to the collection of material in paleontology.

The theoretical discussion of all geological questions should be left to scientists interested in them.

To what extent topography and topographical mapping ought to be carried may be a matter on which opinions will differ. In my opinion a general outline of the topography of the country is all that should be undertaken.

True meridian lines should be laid down and properly marked by reference points. The main features in the physical outlines of the country might be delineated and levels determined, but the proposition to map the real estate of the country so as to indicate boundary lines between farms and to make such lines conform to true meridian lines, is simply absurd.

I have seen it proposed to produce in thousands of sheets maps of this character. Such maps, if made and offered to the public, would not sell for what paper pulp unspoiled by ink would be worth. They would simply go to swell the pile of useless rubbish that is annually ground out at the Government Printing Office, and which nobody reads or looks at and which is not worth the time to read. I have somewhere seen among the reasons given for detailed topographical maps that by them railroads might be located. This is foolish and on a par with a good deal of what has been recommended. What railroad engineer would locate a railroad by a map? Topographical maps, when railroad engineering was carried on, as it is feared a good deal of this geological work is now carried on, simply to spend money, were sometimes made, but no practical engineer makes such maps now or uses them.

The criticism which has been justly made to the method of conducting the Geological Survey by the present director, is its great cost as compared with the limited amount of really valuable work. What is there to show for the $400,000 appropriated last year? It has most of it gone for high salaries and highly paid employés—highly paid for what they really do. Some of it, I am credibly informed, for salaries where almost no services at all are performed. Twenty thousand dollars of it has gone to pay rent for offices luxuriantly furnished in this city. This is almost one-fifth of the entire sum paid by the Government for rents in Washington and three or four times as much as offices for any other Government office costs. Who fixes these rents I do not know, but it is an item which shows how and where the money goes.

Again, the fixing of salaries and the number and grade of employés should not be left at the discretion of one man.

It is too great a power of patronage and too great a power to spend the people's money without a more direct and binding responsibility than now exists.

Indeed the criticism on the management of the Geological Survey is applicable in a greater or less degree to other scientific bureaus, especially the Signal Service and Coast Survey.

What is manifestly most lacking all through is good administrative control. Scientific men owe it to themselves, and they owe it to the country, and more than all to science itself, to see to it that when money is appropriated for scientific work, that it should be spent in a way to secure the best possible scientific results. As things have been going it would bankrupt the country to supply all the money the engineers, the architects, and the scientists would like to use.

This brings me to what I believe has become a necessity if we are to continue these various classes of scientific work, and that is the formation of a department with one capable administrative head, into which department should be gathered all these several bureaus, such as the Agricultural Department, the Geological Survey, the Coast Survey, the Fish Commission, the Naval or National Observatory, the Bureau of Labor, the Bureau of Education, the Bureau of Statistics—to be enlarged, perhaps, to a bureau of statistics of production, trade, and commerce, the Signal Service, and, perhaps, the office of the Architect. This department might be called the department of science and instruction. But whatever it may be called, it would be a department of great importance and would call for the best administrative talent in the country to properly manage it. At the heads of the several bureaus should be men skilled in the line of duties pertaining to each respectively.

Until such a department is organized and these separate bureaus brought into more reciprocal relations, and become better directed, I have little hope of any great improvement in the mode of carrying on the various works; and, for one, I shall favor limiting appropriations until we can be assured that money appropriated for scientific work will be wisely spent and not wasted on useless work or bestowed on favorites for personal reasons rather than for valuable services performed.

The Late Senator Miller.

REMARKS

OF

HON. WILLIAM S. HOLMAN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 19, 1880.

The House having under consideration the following resolutions, submitted by Mr. MORROW, of California—

"*Resolved*, That the House of Representatives has received with great sorrow the official announcement of the death of JOHN F. MILLER, late a Senator from the State of California.

"*Resolved*, That the business of the House be now suspended, that opportunity may be afforded to members to give expression of the sentiments they entertain for the life, character, and public services of the late Senator MILLER, and the loss sustained by the country in the death of so able and faithful public servant.

"*Resolved*, That at the conclusion of these tributes to his memory the House stands adjourned"—

Mr. HOLMAN said:

Mr. CHAIRMAN: JOHN F. MILLER, late a Senator of the United States, was a native of Indiana, and it seems proper that the voice of that State should be heard in this public expression of sorrow for his death. Mr. MILLER was of Virginia descent. His ancestors were Virginians. His father emigrated from that venerable Commonwealth to the then new State of Indiana, where JOHN F. MILLER was born and educated, enjoying, as I have been informed, such educational advantages as are common to the young men in a comparatively new settlement. His father and mother were eager to furnish him every opportunity that their circumstances would permit. He studied law under favorable conditions, entering upon the practice of that profession at an early age. In 1860, for the first time, so far as I am informed, he became prominent in the politics of the State, but before that time had visited California and practiced his profession in that State. No political contest in the history of Indiana was ever of more interest than that of 1860.

An unusually large number of young men came to the front who identified themselves with the fortunes of the Republican party, then in its early vigor. The great question soon to involve the nation in war was arresting the attention of all men, and gave unusual animation, anxiety, and earnestness to that contest throughout the whole Union, but in no State more than in Indiana. Mr. MILLER was elected to the senate, I think, from the county of Saint Joseph, at that time one of the strong young counties of Indiana. I was then a member of this House, and residing remote from his section of the State my knowledge of Mr. MILLER was slight; I only knew him as one of the promising young men who had just entered public life. He occupied in the senate a position with a number of young men of unusual ability, some to become known in arms and civil affairs.

He was not specially active or prominent in the current business of that body, for, from the time the senate to which he was elected assembled, the hurrying, remorseless events which were soon to involve the land in the misfortunes of civil war were arresting the attention and filling the minds of all men. When the tocsin of war was sounded he resigned his position in the senate and hastened into the Army of the Union without a moment's hesitation. Enough was known of Mr. MILLER at that time to warrant the belief that, if life were spared him, he was entering upon a brilliant career. The gentleman from Ohio [Mr. GROSVENOR] has rehearsed in eloquent terms his honorable and heroic record in the Army. I will not dwell upon that record. The gentleman from Ohio, his comrade in arms, has well and ably presented the leading events of that honorable record, but I can testify that the

hopes of his friends were fully realized in his honorable career in the Army.

Entering the Army as colonel of the Twenty-ninth Regiment of Indiana Volunteers, with the manly and gallant deportment and those qualities and sentiments of honor, courage, and prudence which secure respect, confidence, reputation, and distinction alike in civil and military life, Mr. MILLER, rapidly rose to the rank of brigadier-general and a higher grade by brevet for heroic deportment in battle. He attained that hign position not by any favoritism, but by the force of character and qualification and capacity for military affairs. After the war was over Mr. MILLER, having previously resided for a short time in California, returned to that State. I think the last time I saw him in the city of Indianapolis was shortly before he left Indiana for California. I then saw that the man of 1860 had grown in every respect. Possessed of very fine social qualities and marked energy of character, he was then displaying that broad capacity, especially for business affairs, which afterward, even more than his career in politics, seems to have distinguished his life.

About the year 1870 Mr. MILLER came to this capital in connection with legislative matters affecting the State of his adoption—enterprises on the Pacific—the State which then seemed even more dear to him than the great State from which he had emigrated. While in Washington I saw him frequently. He called on me as an Indianian. He frequently appeared before one of the committees of the House of which I had the honor to be a member, and I was still further impressed with the scope and breadth of the views which he entertained and expressed touching the great interests of the Pacific coast. He saw clearly the magnitude of the resources to be developed there in the then early future; he comprehended the situation thoroughly, and seemed prepared and qualified to enter into all the great enterprises of the Pacific coast with the energy, hopefulness, and confidence which had marked his character in earlier life; so that, from the observations I made of Mr. MILLER at that time, I was not at all surprised when, soon afterward, he became prominently identified with the political as well as business affairs of the State of California.

His election to the Senate of the United States seems to have been the result of the confidence inspired by his intelligence, force of character, capacity, and patriotism. His career in the Senate is known to the country. He died in comparatively early life, at the period, perhaps, when most public men have but fairly entered upon the real usefulness of a public career. The death of an eminent and useful citizen connected with public affairs at such a period in life before the weight of age has rested heavily upon him, is always a melancholy event, to be deplored not alone in the home circle or the State of his residence but by his whole country.

It would have been strange if the career of Mr. MILLER had not been a marked one. His abilities were of a very superior order. From my earlier acquaintance with him I should not have thought that he would be as eminent in statesmanship as in the field of business and affairs. He seemed to me to possess the capacity of comprehending in their widest extent, as well as in their minutest details, the great affairs of business, the enterprises that make and open opportunities, that create great industries, that develop a great and prosperous community.

His capacity and powers as seen by me were of that character, rather than such as give men prominence in politics or statesmanship. He did not seem to me to be a man who would engage earnestly in political contests and rise to eminence by devotion to the principles and fortunes of a political party, but one who would achieve reputation and distinction in business enterprises and commercial affairs. He entered the Army, as I inferred from what I knew of his views, not so much by any special antagonism to the institutions of slavery, the cause of that fearful contest, as by devoted attachment to the Union, a sentiment that filled the hearts of the young men of Indiana.

The men who migrated to Indiana from Virginia and others of the older States were in many instances strongly anti-slavery in their sentiments, but the great mass of the young men of that section of the country who rushed forward to support the tottering fabric of the Union were influenced more by a living sentiment of devotion to the Union of the States than by any settled convictions as to whether slavery should be abolished or not. The preservation of the Union of the States inspired them. The motive seemed then sufficient to inspire the grandest heroism, but how much grander now than even then!

In later years, however, as I inferred from a brief conversation with him on the Pacific coast last summer, his views had become much more confirmed and positive upon political subjects, and he seemed to cordially and heartily indorse the principles of the great party with which he had been associated from early life. And yet he seemed to me more a man of business and affairs than a politician or statesman.

I can only add, Mr. Speaker, that the death of a man of his broad views, his capacity for affairs, his devotion to country, is a great misfortune to the whole Union, and that in no one of the great sisterhood of States will the expression that will be made by this House, and has been in the Senate (so appropriate to the loss of so great a citizen), of appreciation of the qualities which made JOHN F. MILLER eminent, honored, and distinguished alike in war and in peace, find a larger body of earnest sympathizers than in the State which I have the honor in part here to represent.

The Surplus in the Treasury.

SPEECH

OF

HON. PERRY BELMONT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886,

On the joint resolution (H. Res. 126) directing the payment of the surplus in the Treasury on the public debt; to which several amendments were offered.

Mr. BELMONT said:

Mr. CHAIRMAN: The integrity and wisdom with which the affairs of the Treasury Department have been managed during the past sixteen months have contributed largely to the confidence undoubtedly existing throughout the country in President Cleveland's administration. I can not see, therefore, why the House should adopt a resolution withdrawing from that Department a discretionary power which has not been abused and which in practice has proved to be absolutely necessary for the proper protection of the credit of the Government—a power to be regulated by commercial laws and requirements, and which can not be safely subjected to political interference.

Protests have often been heard in this House against the power of the national banks. Why, sir, the national banks would be mere pigmies compared to the Treasury Department of the United States as a bank of issue, with both Houses of Congress acting as a board of directors, limiting and controlling its issues and reserve. As a Democrat, looking to the future of the party, I can take no part in promoting any action in this House having such a tendency, and I shall therefore vote against the resolution.

A resolution very similar in character was presented for the consideration of the Senate in 1882 by a Republican Senator (Mr. PLUMB, of Kansas). It was as follows:

That the Secretary of the Treasury shall use all of the funds now held in the Treasury for the redemption of United States notes in excess of $100,000 000 in the redemption of the bonds of the United States, such redemption to be made in not less than three installments; and the said sum of $100,000,000 so left in the Treasury shall not be increased or diminished except in the redemption of United States notes.

The unwisdom of that resolution seems to have been effectively pointed out at the time. Nor have I heard in the present discussion any answer to the letter of Secretary Manning of February 13 last, which I will ask to have read:

TREASURY DEPARTMENT, *Washington, D. C., February* 13, 1886.

SIR: I have received a copy of the following proposed joint resolution respecting surplus revenue, now under consideration in your committee, and upon which you do me the honor to request my opinion:

"Joint resolution directing the payment of the surplus in the Treasury in excess of $100,000,000 on the public debt.

"*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That whenever the surplus or balance in the Treasury, including amount held for redemption of United States notes, shall exceed the sum of $100,000,000, it shall be, and is hereby, made the duty of the Secretary of the Treasury to apply such excess, in sums not less than $10,000,000 per month during the existence of any such surplus or excess, to the payment of the interest-bearing indebtedness of the United States payable at the option of the Government."

The language of this resolution is such as to include in the "surplus or balance in the Treasury" the amount held for redemption of United States notes. This is in no sense a surplus, but is set apart and appropriated as a minimum security and reserve for the redemption and payment of $346,681,016 of United States notes which have been issued, both of which are specifically promised in the act of March 18, 1869 (R. S., 3693). This reserve, amounting to $100,000,000, should, of course, be held above all possibility of an encroachment like that which my distinguished predecessor, Mr. McCulloch, in his last annual report (page 33), was constrained to exhibit and deplore.

The resolution now before us requires that there should be at no time a surplus in the Treasury available for the general needs of the Government to exceed $10,000,000, and that when this sum is reached it should be immediately paid upon the public debt.

After nearly twelve months' experience in the conduct of this Department, and forecasting, as well as I am able, future requirements of the Treasury, as now defined by existing laws, and as they may be affected by legislation yet to come, and considering the course of future receipts, which are liable to influence from many causes, such as the fluctuation of imports, the prolonged depression of trade, and the marketing of more or less of our agricultural products abroad, I can not now foresee a state of things which will make it prudent to limit the surplus reserve in the Treasury to a sum ranging from nothing to a maximum of $10,000,000.

The legislation now before Congress relating to pensions will, if perfected, increase the demands upon the Treasury to an amount which it is impossible to exactly estimate; and a late decision of the Supreme Court subjects the Government to the repayment of duties collected, the aggregate of which is large but altogether indefinite. These things are mentioned to remind the committee that neither the calls upon the Treasury nor the exact time that such demands must be met can be precisely foreseen.

It would seem to follow, as a business proposition, that if the Government is to maintain its credit, in the sense of being prepared to meet all just demands, which are impossible of ascertainment in advance, there should be a reasonable sum laid by or kept on hand for that purpose.

Respectfully yours,

DANIEL MANNING, *Secretary.*

Hon. WILLIAM R. MORRISON,
Chairman Committee on Ways and Means.

One argument advanced in favor of this resolution is that it will pre-

vent "improvident and wasteful expenditures." That is a meritorious object, but, in my judgment, this is not the proper way to attain it. It is an unwise plan for Congress to reduce the Treasury reserve to the danger point for the purpose of controlling its own expenditures. Another reason assigned for the passage of the resolution is that it will save one or two millions a year in interest.

The fact is that the Treasury Department has quietly and unostentatiously saved more than double that amount during the last fiscal year by the prudence with which it has administered its own affairs. I have received a statement, which I will ask to have appended to my remarks, which shows in detail that, notwithstanding an increase in expenditures for construction and repairs of public buildings of nearly half a million there has still been a net decrease of $4,600,000 in the expenditures of the Department for the fiscal year 1886 as compared with 1885. In view of these considerations I think the country can safely leave to the Treasury the discretionary powers with regard to the reserve fund which it has hitherto wielded with such admirable judgment and prudence.

Comparative statement of certain expenditures of the Treasury Department for the fiscal years ended June 30, 1885 and 1886.

Object.	1885.	1886.	Increase, 1886.	Decrease, 1886.
Salaries, offices of Treasury Department	$2,055,878 09	$2,921,668 73	.....	$134,189 36
Contingent expenses, Treasury Department	111,084 86	105,779 24	.....	5,305 62

Net decrease for 1886	.....	.....	.....	4,601,214 27

The Public Lands Question and a Defense of the Commissioner of the General Land Office.

SPEECH

OF

HON. THOMAS R. COBB,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES.

Monday, June 28, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9478) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1887, and for other purposes, the pending paragraph being:

"Protecting public lands: For the protection of public lands from illegal and fraudulent entry or appropriation, $90,000"—

Mr. COBB said:

Mr. CHAIRMAN: The public lands question is one of great importance to the whole country. Its importance is not confined to any particular section or locality. Any citizen, or foreigner, who has declared his intention to become such, may go and settle upon any of the unoccupied public domain, and, upon compliance with the provisions of law, which are easy, can acquire a title to 160 acres of land for a home for himself and family.

This is the object and purpose of the homestead, pre-emption, and timber-culture laws. They were enacted in order that people too poor to acquire title by purchase might secure homes.

As to how far the object of these laws has been accomplished, it is now my intention to discuss.

In the early disposition of our public lands but little fraud was committed. The poor man who needed a home, and was not able to purchase one, moved his family to some part of the public domain not previously occupied, made a selection, and then settled down. He then commenced to improve the land so selected, with an honest intent of making it his future home, and he continued to reside upon it and add to the improvements until a strict compliance with the law was had, when he was entitled to a patent from the Government.

In those days there were but few attempts made to acquire title by fraud.

After the war, however, the spirit of speculation began to manifest itself among our people, and capitalists and others turned their attention to the public domain for speculative purposes; and as the laws for acquiring title to the public lands were not enforced by the party in power during the twenty years succeeding the war, the "greed for gain" led men to commit all kinds of fraud in their endeavors to acquire title to the people's lands.

Corporations, syndicates, and all kinds of combinations of individuals were formed, possessing large capital, for the purpose of acquiring, and who did acquire through every conceivable method, the title to large tracts of the best public land in the West. To evade the public land laws these combinations of men and capital have resorted to fraud and perjury in a most notorious manner.

Emboldened by such examples, private individuals have also embarked in the fraudulent acquisition of title to public lands with a zeal for gain, no matter what means are employed, that is astonishing. Indeed the fraudulent acquisition of our public lands seems to be looked upon by many as a legitimate business.

Millions of acres of our best agricultural lands have been absorbed in this way, to say nothing of the vast areas of land granted by Congress to railroads and other corporations. This condition of affairs has continued until it is estimated that we now have only about 7,000,000 of acres of public lands left for settlement for the homeless.

These speculators in the public lands, alarmed lest Congress may "rise in righteous wrath" at their atrocities, keep constantly in their employ an able array of legal talent as well as a subsidized press.

They have able attorneys in this city, and their paid agents can even be found during the sessions of this House in the lobbies endeavoring to influence legislation which may pertain to the interests of their employers.

The present administration has been exercising its power in driving the "cattle-kings" from the public domain, where, under the past administration, they had been allowed to occupy millions of acres of land, preventing the settler from a discharge of his rights under the law by driving him and his family off whenever he might seek to locate.

The Public Lands Commissioner, General Sparks, having had during the present administration the public lands under his control, has, with great credit to himself, exerted extraordinary energy and diligence toward the preservation of the public domain as a heritage for the homeless.

For his loyalty to his duty, the Commissioner now finds himself assailed by every "cattle-king," every "land-grabber," every fraudulent speculator in the public lands throughout the country.

The amendment now offered by the gentleman from Nebraska [Mr. LAIRD] proposes to strike out the $90,000 contained in the bill to be used by the Commissioner in employing agents to protect the public lands from the illegal and fraudulent acts of the rings and speculators, thus effectually rendering the Commissioner powerless to prevent fraud and keep the lands for those for whom it was intended. These agents are sent out to the various sections of the public lands; they go fully instructed and schooled in their duties by the Commissioner. It is one of their duties to examine into and report to the Commissioner all cases of fraudulent entries of land which they may be able to discover, taking the affidavits of witnesses to the facts which they file with their reports.

It has been insisted upon this floor, and I presume it will be done again, that there has been but little fraud, if any, committed in the entry of the public lands, and that therefore these agents are unneces-

sary. I now propose to show that there have been outrageous frauds perpetrated in the acquirement of title to the public lands and that they are now being committed.

In view of this fact I am surprised at the gentleman from Nebraska [Mr. LAIRD] moving to strike out this appropriation, since these frauds exist in his own State and under his notice, and in his own district.

Mr. LAIRD. Will the gentleman from Indiana permit me to ask him a question?

Mr. COBB. My time is limited. If I have any time left after I have finished my statement I will be glad to yield to the gentleman for the purpose he requests.

I propose now to read from the reports of these agents, who were selected not only by the present Commissioner but by his predecessor under the Republican administration—the latter, especially, ought to satisfy my Republican friends on the other side of the House. In connection with these reports are also found the affidavits of witnesses to the statements they contain. In many cases the affidavits of entrymen themselves admit fraud, perjury, and subornation of perjury.

I read now from the report of Inspector A. R. Green, who is a Republican. His report bears date of November 3, 1884. He says:

Generally speaking, I believe that fraudulent entries of the public lands include a large per cent. of the whole number, excepting possibly cash entries.

The idea prevails to an almost universal extent that, because the Government in its generosity has provided for the donation of the public domain to its citizens, a strict compliance with the conditions imposed is not essential. Men who would scorn to commit a dishonest act toward an individual, though he were a total stranger, eagerly listen to every scheme for evading the letter and spirit of the settlement laws, and in a majority of instances, I believe, avail themselves of them.

Our land officers partake of this feeling in many instances, and if they do not corruptly connive at fraudulent entries, modify their instructions and exceed their discretionary powers in examinations of final proof. This is especially the case with entries under the timber-culture law.

* * * * * * *

I have traveled over hundreds of miles of land in Western Kansas, Nebraska, and central Dakota, nearly one-fourth of which had been taken under the "timber-culture act," without seeing an artificial grove even in incipiency, and can scarcely recall an instance in any one day's travel where the ground had been more than scratched with the plow for the purpose of planting trees.

* * * * * * *

As to the proportion of land entered under the timber-culture act that is not improved as required by that act, I give it as my opinion that in Kansas, Nebraska, and Dakota the proportion is 90 per cent. to 10 per cent. of *bona fide* and possibly successful cultivation.

* * * * * * *

A more vicious system of fraudulent entries has been successfully practiced by and in the interest of cattle-men and stock corporations. If the law had been enacted solely for their benefit it could scarcely have been more successful.

I have been told that entrymen engaged in this character of frauds seldom make a pretense of plowing or planting trees, or complying in any particular with the law. My own observation confirms this statement, and I believe it to be true. This is largely the case in Colorado, Dakota, Montana, Nebraska, and New Mexico, where immense stock ranches have been established and all the valuable grass land and water has been secured. This system also obtains to no inconsiderable extent in Kansas, I believe.

The method is simple, effective, and infamous.

I have had occasion to inquire into its details somewhat in the examination of land offices in connection with charges of collusion on the part of the officers.

A "cattle-king" employs a number of men as herders; "cowboys" is the popular designation for them. The herd is located on a favorable portion of the public lands, where grass, water, and shelter are convenient, and each herder is expected and required to make a timber-culture entry of lands along the stream. These entries often very nearly if not quite occupy all the watered lands in a township and render the remainder undesirable for actual settlement or farming purposes.

Thus an entire township, and frequently a number of townships together, are dominated by an interest the most inimical possible to ordinary agricultural operations and a development of the country. If a *bona fide* settler has located in advance of the cattle-man he is either bought off or scared off. I found one case where the evidence showed conclusively that *bona fide* entrymen had been driven from the lands they desired to acquire by a party of men brought from a distant part of the State, who did not know the description of the lands they filed on until it was furnished by the man in whose interest the lands were being taken, and who furnished the money for the entry fees.

As regards the unlawful fencing of public lands, the evidence is of the most positive and convincing character. It is notorious that extensive inclosures of this kind have been made in Nebraska in the vicinity of North Platte, and south of there at inconsiderable intervals all the way to and into the Indian Territory, including large areas of the States of Nebraska, Colorado, and Kansas. There are doubtless other similar unlawful inclosures, but I speak of those with which I am familiar.

These inclosures occasionally included settlements, and the stock companies have in some instances bought the settlers' improvements and amicably induced them to leave. In other cases, bloody feuds have been originated, of which there could be but one result, and that against law and justice.

The effect of such domination upon immigration and settlements is the worst that can be imagined.

The best lands, and practically all the waters, are controlled by men who have no interest in the development of the country, evade taxation, and in many cases owe no allegiance to our laws and Government. They have abundant physical power always at hand to enforce their schemes of spoliation and set the local authorities and people at defiance.

Settlers avoid such localities as they would districts stricken with a plague, and the tide of immigration turns back to publish and magnify the evil.

I now read from the report of Special Agent Webster Eaton, dated Duluth, Minn., October 28, 1884:

Thus it will be seen that there have been over four thousand three hundred final entries of this kind made, to say nothing about the cash entries and entries at public sale; and I know that there are less than one hundred actual settlers living upon any of these lands in this land district who make a living by farming, or who are trying to make a living in that way, and although I have made diligent inquiry during my stay of over one year in this place I have yet to find one person who is making a farm or trying to make a farm upon a pre-emption claim. Therefore I think I am fully warranted in saying that less than one-thirtieth of the claims taken in the Duluth United States land district are taken for actual settlement.

Less than one-tenth of the land entered in this way is now in the hands of the original claimants, and most of it is considered worth less than 10 cents an acre for agricultural purposes, and after the timber is taken off the land is looked upon as worthless, and men are not plenty who will pay the taxes upon this land for it. Nearly all of the land taken in this manner has been taken for extensive lumber firms in different parts of the State.

This shows the fraud committed under the pre-emption law upon the timbered land in Northern Minnesota. The timber in this region is pine, and it is a fact that lumber companies have obtained and acquired title to large bodies of these lands through fraudulent entries. I demonstrated how this was done in my report made to the House in favor of the bill repealing the pre-emption, timber-culture, and desert-land laws, which passed the House on a full vote by more than four to one. I then said:

Whole townships of the public domain have been acquired under this law by capitalists who do not reside within hundreds of miles of the land, and never did. They have secured them through paid agents in their employ, who receive so much for their services when they make the proof necessary to entitle them to a patent from the Government, and assign their claims to their employers. This is done, of course, through perjury and subornation of perjury. For each one of these agents or claimants is required to make settlement on the pre-emption claim under the law, and he must make oath before the register or receiver of the land district in which the lands are situate, on which he claims to have settled for the purpose of pre-empting, and that he has never had the benefit of any right of pre-emption; that he has not settled upon and improved such land to sell the same on speculation, but in good faith, to appropriate it to his own exclusive use, and that he has not directly or indirectly made any agreement or contract in any way or manner with any person whatsoever by which the title which he might acquire from the Government of the United States should inure in whole or in part to the benefit of any person except himself. And yet it is well known that this oath is daily taken by parties who make it under contracts such as we have indicated above. They file with the register of the proper land district their declaration, make their proof, affidavit, and payment required by the law, and receive their title, and transfer the same to the parties with whom they made the contract before they attempted to make the pre-emption.

The people demand the passage of this bill repealing these odorous laws under which so much fraud has been committed, and those who stand in the way of this repeal will be held accountable by the country.

Mr. Thomas W. Jaycox, special agent at Aberdeen, Dak., in his report of October 25, 1884, says:

In my opinion, not more than 30 per cent. of the land in this district entered under the provisions of the pre-emption and homestead laws is occupied by actual settlers. The practice largely prevails of immediately abandoning the land when cash entry is made for the same. Fully 75 per cent. of the entries made under the provisions of the pre-emption laws are made for speculative purposes, and not for a home and for cultivation. The claimants mortgage their claims for as large a loan as they can procure upon the land, then make a homestead filing, move in town, return to the East, where they came from when they entered the land, or offer the same for sale, when it is purchased by non-resident speculators. The result in either case is the same—the land is left unoccupied.

I am of the opinion that 90 per cent. of the entries that are made under the provisions of the timber-culture act are made purely and simply for speculation. The entryman when he makes the entry intends to relinquish the land at the end of three years at the farthest, when the relinquishment will be worth from $200 to $500. I am of the opinion that very few timber-culture entries will be proved up under the provisions of the timber-culture act. They will be turned into pre-emptions or homesteads, and pass out of the hands of the speculators as soon as it becomes troublesome to comply with the law.

William Y. Drew, agent at Wichita, Kans., says, in his report of November 26, 1884, that—

In some cases stock-raisers have had their employés prove up on lands on which their stock was ranging, and as fast as one batch would get through another batch would be employed, and in that way quite a large amount of the public land would be gobbled up. In some cases that have come under my observation the parties who it is claimed proved up on the land were never known or heard of in the vicinity, but the improvements made on the land have been done by parties who afterward obtained the land, and presumably hired the entryman just at the time proof was to be made to make the required affidavits. In other cases I believe that the entryman was a myth, and that the proof papers and deeds of the land were made out in the notary's office, fictitious names attached for both principal and witnesses, and acknowledgments taken by the notary as though the parties had actually been present.

There are other cases where parties made a business of proving up lands under different names, apparently for the purpose of obtaining from $50 to $100 by mortgage more than the land cost them.

Some parties have fenced in large bodies of the public lands through which a water course is flowing, and by themselves and their employés have proved up the land adjoining the water course. They claim not to interfere with settlers going into the inclosures, but as their cattle are running at large inside the settler can not raise a crop without he goes to the trouble and expense of fencing in the tract he claims, and then there is always more or less trouble in other ways between the settlers and herders in regard to keeping gates closed and getting settlers' cattle mixed with the cattle belonging to the stockmen. It is reported that two men (father and son) were killed in Barber County by herders on account of leaving the gates open while going to land they were claiming inside the inclosure.

A. F. Ely, in his report from Pueblo, Colo., October 25, 1884, says:

As to the land entered in the Pueblo land district of Colorado, I have not sufficient knowledge or information to enable me to give any correct information. I can state that in the survey of the Arkansas Land and Cattle Company's inclosure we found no inhabitants inside of it except one or two near Granada and three or four near Holly Station, and this inclosure contains over 600,000 acres of land, and, as I am informed, all of the water privileges in it have been pre-empted.

W. H. Goucher, agent, San Francisco, Cal., says in his report of November 17, 1884:

I would estimate that but 5 per cent. of the entries made under the timber-culture and desert-land laws are in good faith and with the intent of accomplishing the purposes contemplated in those acts. Ninety per cent. of all the entries under these laws made in this district were filed within the past two years. As the requirements of the laws during such period are preliminary to the object intended, especially as to the timber-culture act, no estimate can be made as to the proportion of such entries as are really improved by planting

and cultivating trees. My estimate of 5 per cent. is based on the number of entries that are relinquished and the general tone of the settlers from conversations, &c.

As a rule, it is safe to assume that the entries made under the desert-land law in the Los Angeles district are for the purposes of speculation, for the reason, as I have before stated, that owing to prior appropriation of the water it would be almost impossible to procure the necessary water to reclaim such lands, even if the entryman was honest in his intentions. During the year 1877, shortly after the passage of this act, a large number of desert entries were made in this district of which not 2 per cent. have been reclaimed, as contemplated in the act.

T. H. Cavenaugh, Olympia, Wash., says in his report dated November 8, 1884, in regard to the condition of thepublic land question in that Territory, that—

I am convinced, from examination and investigation, that 90 per cent. of the homestead and pre-emption entries made within the territory named herein are made solely for the timber growing thereon, and because such lands are ready sale. By making use of the pre-emption and homestead laws the entrymen save in purchase of tract the difference between $2.50 and $1.25 per acre, which swells the profits when sold.

The fraudulent methods of obtaining title to the public domain have not been confined entirely to our own people.

The manner in which many of these titles have been acquired has gone abroad and foreign capitalists, through their agents in this country, have acquired title to more than 20,000,000 of acres of our public land, much of which has been effected by means of the grossest frauds.

In order to show the methods used by foreigners in acquiring title, I will refer to the Estis Park cases in Colorado. There a large quantity of the public domain, amounting to several thousand acres, was fraudulently entered at the instance of the agents of the Earl of Dunraven, and the Commissioner states that not a witness was produced on the day of hearing to sustain the entries, and that the affidavits of numerous citizens of that locality were overwhelming in character against the entries.

But it is said by those who would see these frauds continue, that the reports from which I have read were made over two years ago, and that the frauds therein cited do not exist now. To prove the fallacy of this assertion I refer to a letter written by the Commissioner of the General Land Office on the 19th of June, 1886, in which he says:

In many cases the agent furnishes the affidavits of the claimants themselves, in which they swear to their own and their associates' illegal and fraudulent acts. One agent alone within the last four or five months has transmitted to this office the affidavits of entrymen in eighty-three cases in which they admit that they never saw the lands and that they were hired by the agents of the speculators to make the entries.

And the same letter contains another very important statement. It is as follows:

It will be seen that out of the 2,591 cases reported and examined 2,223 have been shown to be fraudulent. Of the 368 suspended cases a large proportion have also been shown to be of such character as to require further investigation

The foregoing does not include many hundreds of cases where entries have been canceled for fraud developed in contest proceedings between private individuals.

And this shows also the great amount of labor which is being done by the General Land Office.

It is unnecessary for me to read further. The reports are all on file in the General Land Office with hundreds of others, together with the affidavits of witnesses substantiating all I have said in reference to fraudulent land entries. That these things have been done there is no question; that men have perjured their souls and led others to do so in their endeavors to acquire wealth by robbing the people is equally indisputable.

The bitter attack made the other day by the gentleman from Nebraska [Mr. LAIRD] on the Commissioner of the General Land Office was totally uncalled for. In his remarks on that occasion the gentleman made use of the following:

The Land Commissioner is running a vendetta against the best interests of all the territory beyond the Missouri River. * * * He is backed by a band of hireling spies, and is trying to unsettle the land and titles of half the continent and drive the peaceful possessors of the soil, supposed to be the common heritage of the people, forth from their homes, to the end that he may pose as a reformer and drink the paid flattery of his gang of spotters, spies, and poisoners of the tenures of the settlers of the West.

This is very strong language to use against an officer of the Government, and especially should not have been used unless the facts in the case clearly substantiate and confirm the charges. In justification of the Commissioner I freely assert that he has done nothing in the administration of his office which in any way makes room for such an invective or rather abusive tirade as was directed toward the Commissioner by the gentleman from Nebraska.

I think there must have been some peculiar reason, some hidden motive resting in the mind of the gentleman from Nebraska which encouraged him to hurl such "dire and dreadful thunderbolts" at the Commissioner of the General Land Office. Filled with admiration, possibly, at his great fluency in command of language on that occasion, the gentleman to-day has treated us again with an entertainment of a somewhat similar character.

I now request the attention of the House, and especially the gentleman from Nebraska [Mr. LAIRD], to what I am about to say, for I think I can in some degree explain why the gentleman has assumed his very aggressive attitude. The gentleman in his remarks to-day read a letter or petition setting forth the imaginary grievances which the writer thinks might befall the people of the McCook land district, which lays in the district represented by the gentleman from Nebraska, by reason of the orders and rulings of the Commissioner of the Land Office; and also in his remarks the gentleman from Nebraska took occasion to say that there had never been any frauds committed in his district against the public-land laws.

I have here the reports of two special agents who were sent into the McCook land district at different times by Mr. McFarland, a former Commissioner of the Land Office, with instructions to examine into some cases arising out of entries made at that office and to report as to whether there was any fraud connected with them. In connection with the reports I have also the affidavits of witnesses. I do not care to take up the time of the House to read the evidence, but will read a carefully prepared summary of the whole:

It appears from evidence on file that on or about the 12th of June, 1883, Hon. JAMES LAIRD and one Kelley visited the country along the Stinking Water Creek, in Nebraska, in company with a surveyor and had fifteen or twenty tracts, containing 160 acres each of Government lands, located by survey with a view to entry. The tracts referred to embrace all the water in that vicinity and thereby control the range over a large body of public land.

The party returned to McCook after completing the survey and furnished a description of the lands to one Galen Baldwin, who thereafter acted as the agent for a party of men who were from that time known and designated as the "Laird outfit" or "Hastings party." One Hulbert claimed to have first hired the same surveyor to locate the lands for himself and friends and procured a plat from him describing each tract. The plat, however, was afterward ascertained to be incorrect. The surveyor, however, appears to have furnished a correct plat to the "Laird outfit."

On the morning of June 15, 1883, Hulbert and his associates went to the land office and asked the register the privilege of examining the official plats, which request was denied for the reason that they were not subject to inspection until 9 o'clock, the hour for opening the office for business. They also notified said officer that they wanted to make entries and asked to be advised so that they could get in their applications as soon as the office was opened for business. They stationed themselves at the most convenient position for that purpose and shortly afterward Hulbert tendered his application, which was rejected because, as alleged by the register, it lacked five minutes of 9 o'clock by the office clock, although it appears to have been that hour by the railroad time.

It was observed that twelve or thirteen men, headed by their attorney, one Strobuck, were also in the land office waiting to make entries. Strobuck had previously been seen examining the official plats, although this privilege was denied Hulbert.

Shortly after the rejection of Hulbert's application, as above stated, Strobuck offered the homestead application of one of his clients and it was at once received and allowed. He then presented homestead applications for his other clients, one after another, and they were all allowed. The men were sworn in in a body and were called for that purpose from the outside of the crowd.

In the mean time Hulbert was insisting he was the first applicant and urging the allowance of his entry, but he was told by the register to keep still, and his application was not received until all of Strobuck's clients had procured their entries. One of these men was a brother of James Laird, and they were all from Hastings, Nebr., which is about 160 miles east of McCook, and 200 miles east of the lands in question, and they were known and designated as "Laird's outfit," or "Hastings's party."

The description of the lands were evidently obtained through JAMES LAIRD who had previously had them surveyed and the parties acted in concert with each other and filed their applications for lands they had never seen. Several of these men also made timber-culture entries of lands in the same vicinity. The parties were business men of Hastings, the home of JAMES LAIRD, and vicinity, and were well known to the register. Among them was a cashier and large stockholder in a bank, a loan agent, two or three merchants, and as many intelligent clerks.

The whole proceeding at the local office was treated by the claimants as a huge joke; one inquiring of his companion where the land was; another said, "damn the land; I don't ever expect to see it."

Mr. LAIRD. Will you allow me to say something about that?

Mr. COBB. Yes, sir. I am reading from the report. I am not saying whether it is true or false.

Mr. LAIRD. You are reading from the report of a liar in the employ of your commission.

Mr. COBB. I am simply reading a summary of the report. I am not saying whether it is true or false, as I have already stated. I am neither indorsing its truth nor denying it. The affidavits are on file, proving these facts, affidavits of men whose good character I presume the gentleman from Nebraska will not deny.

I proceed with this summary:

These facts are shown by Inspector Green's report and affidavit accompanying the same. Green says that "I have no doubt that the register and receiver were aware of the fraudulent nature of these entries; but whether they permitted them through a desire to accommodate an influential political friend (meaning JAMES LAIRD) or because they were in some manner the beneficiaries I do not know; but I am satisfied it was not through ignorance of their duties in the case."

This is the evidence taken by Green, backed by Agent Coburn, both being sent out, as I have already stated, by Commissioner McFarland to investigate the facts.

Mr. TOWNSHEND. What are Coburn's politics?

Mr. COBB. Republican. They were both Republicans. I read further from the summary of the evidence:

Special Agent Coburn, who also investigated the cases, says that "it is a matter beyond question that such a friend as is before alluded to had taken a warm interest in the Hastings party." The "friend" before alluded to was clearly JAMES LAIRD, and he is described "as an influential political friend of the local officers." They were recommended for appointment to their respective positions by Mr. LAIRD, and he is shown by his letters on file to have taken a very warm interest in them as well as in the "Hastings party." He also made a strenuous effort to have Green removed after he made his report. Both Green and Coburn were Republicans and made their reports to their superior officers, who were also Republicans.

Mr. LAIRD. That is a falsehood; and your statement that there is such a letter of mine on file is a falsehood.

Mr. COBB. I did not say that.

Mr. LAIRD. The statement in that report is that there is a letter of mine on file.

Mr. COBB. I did not say so.

Mr. LAIRD. But the report says it.

Mr. COBB. Well, the proof shows it.

Mr. LAIRD. I beg pardon, the proof does not show it.

Mr. COBB. Well, you and the proof seem to differ. I am not going to have any controversy about it myself.

Mr. LAIRD. Well, it is a falsehood. I never said a word about it one way or the other.

Mr. COBB. Well, the proof shows it.

Mr. LAIRD. The proof does not show it.

Mr. COBB. It does.

Mr. LAIRD. It does not.

Mr. COBB. Well, it does not make any difference to me whether you deny it or not. I now proceed with the summary:

The "Laird outfit" commuted their homestead to cash upon proof showing continuous residence on the lands and valuable improvements, they being witnesses for each other in their final proofs.

Does the gentleman deny that?

Mr. LAIRD. It may be supposed that I know something of what I am talking about.

Mr. COBB. I don't care what you know. The evidence is on file. I do not wish the gentleman to interrupt me. There is enough evidence on file to satisfy him if he will read it, and if he has not read it he had better not be talking about the honesty and integrity of other people. I proceed with the evidence.

Hearings were afterward ordered and had for the purpose of determining the facts as to the invalidity of the entries. The evidence submitted shows that the claimants were residents of and engaged in business at Hastings and personally attended to their business during their alleged residence on the claims; that their improvements were of little or no value, and were made by Galen Baldwin above referred to; that they never lived on the land, and that the entries were made for the purpose of controlling the water rights and cattle range in that vicinity and with no intention of acquiring homes.

Does the gentleman deny that? If he does the proof is overwhelming against him?

Mr. LAIRD. You will hear what the gentleman denies when he gets the floor.

Mr. COBB [reading]:

It appears in brief from all the evidence that JAMES LAIRD was the instigator of and leader in this great fraud; that the lands were surveyed under his direction; that at the opportune moment, and evidently in pursuance to a preconcerted plan, his brother and other friends were at the local office acting through a common agent in a scheme to enter the lands he had selected; that the local officers, who were appointed on his recommendation used their official positions to advance the scheme and to give them the prior right over others who had the better right, and that the same officers afterward allowed the final entries solely upon testimony of the parties themselves, when they must have known that such testimony was false.

It was a bold fraud attempted to be accomplished through political influence over the Government officers and without any pretense of compliance with law.

The entries made by the parties from Hastings on the day of the opening of the office at McCook are believed to be as follows, namely:

HOMESTEAD ENTRIES.

No. 3. Harry E. Randall, SW. ¼ sec. 1, T. 6 N., R. 36 W.
No. 5. August Schmidt, SE. ¼ NW. ¼ and NE. ¼ SW. ¼ and lots 2 and 3, 31, 7 N., 36 W.
No. 6. James B. Wallace, E. ½ SE. ¼, 3, and S. ½ SW. ¼, 2, 6 N., 36 W.
No. 8. John H. Clark, E. ½ NE. ¼ and E. ½ SE. ¼, 35, 7 N., 36 W.
No. 9. John G. Ballard, SE. ¼, 32, 7 N., 36 W.
No. 10. Arthur Williams, S. ½ SE. ¼, 2, and E. ½ NE. ¼, 11, 6 N., 36 W.
No. 11. W. F. Schultheiss, NE. ¼, 12, 6 N., 36 W.
No. 12. Alonzo W. Laird, NW. ¼, 12, 6 N., 36 W.
No. 13. Hans M. Oliver, S. ½ NW. ¼ and lots 3 and 4, 3, 6 N., 36 W.
No. 14. O. H. McNeill, S. ½ NW. ¼ and lots 3 and 4, 1, 6 N., 36 W.
No. 15. Frank Stine, lots 3 and 4, sec. 4; lots 1 and 2, sec. 5, 6 N., 36 W.

TIMBER-CULTURE ENTRIES.

No. 8. Abraham Yeasel, S. ½ NE. ¼ and lots 1 and 2, sec. 4, 6 N., 36 W.
No. 9. Alonzo W. Laird, SW. ¼ 32, 7 N., 36 W.
No. 10. Hans M. Oliver, W. ½ SE. ¼ and E. ½ SW. ¼ 3, 6 N., 36 W.
No. 11. Simon Kelley, SE. ¼ 32, 7 N., 36 W.
All of the above entries dated June 15, 1883.
Of the homestead entries the following have been commuted to cash, namely:

CASH ENTRY.

No. 237. Alonzo W. Laird, February 6, 1884.
No. 238. John H. Clark, February 6, 1884.
No. 235. O. H. McNeil, February 19, 1884.
No. 290. August Schmidt, March 11, 1884.
No. 291. James B. Wallace, March 11, 1884.
No. 440. Hans M. Oliver, May 27, 1884.
No. 441. Arthur Williams, May 27, 1884.
No. 442. W. F. Schultheiss, May 27, 1884.

Upon reference to the plats it will be seen that the tracts lie along the banks of the stream known as the "Stinking Water" for several miles.

It is hardly necessary to remind the House at this late day that in that region these valleys are the favorite points of the stockmen, and the lands are coveted for the water which they afford and for the reason that their possession renders the adjoining sand hills and plateaus useless to others, and thus secures an ample range without cost. The Commissioner, Mr. Sparks, has decided against these entries, and this accounts for the opposition against him of the gentleman from Nebraska [Mr. LAIRD].

The gentleman from Nebraska also read an article from the Omaha Herald which criticised Commissioner Sparks.

Without desiring in any way to imitate the gentleman from Nebraska, I find it quite seasonable to also read you quite an interesting little article which has considerable bearing upon what I have been referring to. It happens to be a clipping from the same newspaper referred to by the gentleman from Nebraska—the Omaha Herald. I also will add a short clipping from the Omaha Bee.

I read as follows:

CLEANING THE AUGEAN STABLES.

Seven or eight months ago the Herald printed a very complete *exposé* of the pre-emption methods of Mr. JAMES LAIRD (member of Congress by the grace of Republican voters) in the Stinking Water district.

This week Commissioner Sparks ordered the cancellation of the fraudulent claims.

The world moves. The Stinking Water having been purified, ho for the slaughter-house!

To the above all honest men, irrespective of party prejudice, must say amen. It was a corrupt effort on the part of the cattle-kings and land-grabbers' syndicates to gobble up the best of Uncle Sam's domain, inasmuch as they covered with fraudulent entries the most valuable, the water-laved lands of the district. That the claims were based on fraud even the land officers must have known, as well the day the entries were made as they do to-day, upon their cancellation, the difference being that under Republican rule it was impossible for an honest settler to get a fair and impartial hearing, while the Democratic administration gives to each and every honest homesteader the full protection to which he is entitled.

[From the Omaha Bee.]

"The cancellation of Mr. JAMES LAIRD's Stinking Water claims is an 'old settler' from Sparkville."

I deem comment unnecessary upon the newspaper articles which I have just read. Coming from the gentleman's own State, I am inclined to believe that some importance and credit should be given them.

According to the gentleman's own statement there was fraud intended in the Stinking Water entries, for he indicates that there was a struggle between the Laird party and the Hulbert party as to which might be the first to make the entries and "gobble up" this land along the Stinking Water for some 12 or 13 miles in the gentleman's district. He says that it was a race between rascals, and I quite agree with him.

Mr. LAIRD. Will the gentleman from Indiana allow me to correct him just there?

Mr. COBB. I am only giving the gentleman's own statement.

Mr. LAIRD. I trust, Mr. Chairman, that neither the gentleman from Indiana nor any other gentleman on this floor will undertake to denounce me or the men who are spoken of here as rascals. They are as clean and honorable as you can produce here or elsewhere——

Mr. COBB. Be careful; do not make any charges.

Mr. LAIRD. The gentleman need not undertake to threaten me.

Mr. COBB proceeded:

This is what the proof shows. The Commissioner seems to have been quite careful in investigating the case. He sent Agent Green, who seems to have fully investigated it and made report July 6, 1883. Afterward Agent Coburn was sent out. His investigation fully supported Green's report. He reported October 13, 1883.

Mr. LAIRD then addressed the House, and

Mr. COBB replied as follows:

Mr. Chairman, in stating this case a few minutes ago when occupying the attention of the House I stated that I knew nothing personally of the facts and would only state what the evidence shows which is on file in the General Land Office. I have done so, and it seems to have annoyed the gentleman. Whether these gentlemen who made these fraudulent entries are honest men or not, as asserted by him, I will not now discuss. I have presented the record, which speaks for itself.

Mr. LAIRD again interrupted.

Mr. COBB. I did not make any threats against you and you must not make any against me.

Mr. LAIRD. I am not going to make any charges that I can not sustain. The gentleman does not frighten me.

Mr. COBB. The gentleman does not frighten me either, but he must be careful in his statements.

Mr. LAIRD. Then don't you make any unfounded accusations.

Mr. COBB. I have not made any charges, founded or unfounded. I have confined myself strictly to the facts as proven.

Mr. LAIRD. I hope the gentleman will do so.

Mr. COBB. Then I hope the gentleman will permit me to proceed without further interruption. I shall attempt to do the gentleman full justice.

Notwithstanding the data I have presented, which strikes me as being extremely strong and conclusive, the gentleman denies that there is fraud in the entry of the public lands and has the boldness to denounce the Commissioner, when it is evident that it is going on in his own State and in his own district, and even he himself stands charged with being implicated in the committal of these very frauds.

A system of fraud is constantly going on wherever public lands are to be found. The Commissioner informs us that such is the case and his statements are substantiated by the reports of the special agents engaged in the detection of fraud and finally by thousands of letters from the honest citizen who resides in the vicinities of these appalling infringements on the rights of the people, and yet the gentleman says it

is not right and proper to make an appropriation of money so that the Commissioner may employ aid to assist him in the enforcement of the law. I deem it extremely expedient that this appropriation be made and that this House should sustain the Commissioner who is making such splendid efforts in preventing the spoliation of the people's property.

I now desire to call the attention of the House to another case. I read in the RECORD of June 25 a letter which Senator PLUMB, chairman of the Committee on the Public Lands of the Senate, read and commented upon. It is as follows:

"[W. S. Tallant, clerk of district court, Nelson County.]

"LAKOTA, DAK., *June* 18, 1886."

After a little introductory paragraph, which it is not necessary to read, the writer says:

"The special agents of the Land Office have been causing almost every settler here trouble and expense, which they can not afford, and not doing the Government any good. Now, I speak from personal knowledge when I say that I do not think that any part of the public domain has ever been proved up with better intent and a better compliance with the laws. Yet we are told that ninety-nine out of every hundred proofs made will be canceled.

"I can cite you my own case for one. I made a homestead entry on June 26, 1884, and moved on the land June 27, 1884, and made proof in October, 1885"—

Procured evidently in that case under what is called the commutation clause of the homestead law, which provides that a person who has made an entry under the homestead law may change his entry to a pre-emption entry at any time after six months, and instead of getting the land for nothing, as he otherwise would at the expiration of five years, by paying a dollar and a quarter an acre for it, getting a final-entry certificate at the time he makes his payment and his proofs—

"having when I proved up 40 acres broken and cropped, and a good house thereon. Since that date I have built a barn that will cost me about $500 and have had the whole claim broken up and gotten ready for crop next year. I also have another claim which joins my homestead on the west, giving me 320 acres, all of which is now broken up and ready for crop, out of which I have in crop on the land this year about 170 acres, and have buildings on the land that altogether cost me nearly $2,000. Every cent that I have made for the last three years has gone on the place, and I have refused at least half a dozen offers to sell at good figures.

"Now at this late day comes a special agent and says that he has reported my homestead for cancellation for the reason that I am not now living on the land.

"But I am keeping men there to work the place for me, and it is the only land that I own in the world, and I have had to undergo great hardships to get these claims and have acted in every way in good faith and intent.

"Yours, &c.,

"W. S. TALLANT."

This letter is calculated to play upon the sympathy of those who read without a knowledge of the facts. Doubtless the Senate was very much grieved when this letter was read, and I must confess that my sympathy was ready to go out toward the writer. On inquiry, however, I discovered that this man, Walter S. Tallant, was clerk of Nelson County, Dakota, land attorney and notary public, and resided in Lakota, said county, &c. The record shows that he stands charged with subornation of perjury and of willfully procuring the making of pre-emption cash entries which are fraudulent as shown by the subsequent affidavits of the entrymen themselves and other evidence now on file in the General Land Office. The examination of the case has not been entirely completed, but enough has been disclosed to satisfy our curiosity.

The disclosures are as follows: The filings made by the entrymen who testify against Tallant were made in township 151 north, range 62 west, adjoining the eastern boundary of the Devil's Lake Indian reservation and in the Grand Forks land district. Cash entries Nos. 10300, 10078, 10086, 11239, 10144, 10442, 10309, as made by Florence L. Waite, James H. Andrews, Frank M. Payton, George W. Price, William L. Bailey, John Hofer, and Joseph Hofer. It is disclosed by the individual affidavits of these parties, filed in connection with the reports of Special Agent Travis Rhodes, that they made their entries in the interest of Tallant, either personally or who was acting as the agent of William Tallant, of Chicago, and others. The pre-emption cash entries Nos. 10146, 10130, and 10308, as made by Walter S. Tallant, William Tallant, and John Olsson, and also homestead entry No. 8515, all have been investigated, and the summary of the evidence in the cases discloses the fact that said Walter S. Tallant not only engaged in the promotion of fraud but was, as well, guilty of unprofessional conduct respectively as attorney, clerk of the court, and as notary public.

Such is the character of some of the persons who are assailing Commissioner Sparks. I believe that the great body of the complaints made come from such individuals as Tallant, because they are aware that the Commissioner is endeavoring to frustrate their attempts to acquire title in opposition to law. Many more cases such as I have illustrated can be had, but I think the cases cited are sufficient to show the expediency of this appropriation.

I have here also letters from citizens living in every State and Territory where any public land may be found, which cordially indorse the course of Commissioner Sparks.

Living in the locality of the alleged fraud, and knowing directly whereof they speak, their utterances have a peculiar significance which can not be descried.

I hold in my hand more than four hundred letters, all indorsing the Commissioner. I have nineteen from the gentleman's [Mr. LAIRD's] own State, but I will not take the time to read them. I will first read a letter from a distinguished Republican of Illinois, whose long and honored public life entitles him to the highest credit, after which I will submit a few others:

SPARKS INDORSED—HON. E. B. WASHBURNE COMMENDS HIM FOR AN HONEST, FAITHFUL, AND EFFICIENT OFFICER.

The Chicago Tribune of January 28 prints the following:

CHICAGO, *January* 27.

EDITOR TRIBUNE:

I see that Hon. William A. J. Sparks, Commissioner of the Land Office at Washington, is the subject of many violent attacks by certain newspapers as well as by stipendiaries of the land-grant railroads. I have no personal acquaintance with Mr. Sparks, and have never seen him, and we are as far apart politically as it is possible for any two men to be. But I desire to say that in all that I have read in respect to his administration of the General Land Office I see nothing which justifies the attacks which have been made upon him, so far as I can judge. In respect to his decisions, they are substantially just and in accordance with law.

If persons affected by such decisions are dissatisfied, it would be far better for them to exercise their right of appeal to have such decisions reviewed than to be assailing the Commissioner through the newspapers. They can be heard, if they are dissatisfied, before the Secretary of the Interior, Mr. Lamar, whom I have known since some years previous to the breaking out of the war as a member of Congress from Mississippi and a member of the Committee of Commerce of the House of Representatives, of which I was the chairman; and I can state that he is not only a very able man, but a very just and conscientious man, who can be trusted in any matter of appeal that may come before him. And then on law questions the opinion of the Attorney-General could be had, who is an able lawyer and, I believe, an honest man.

The General Land Office for the past fifteen or twenty years has, according to my judgment, been the most corrupt Department that ever existed in any government on the face of the earth. For years and years the land-jobbers and the land-grabbers seemed to have had full sway there, and it is quite time they were rooted out; and I am glad to find that an Illinois man like Mr. Sparks has had the courage to attack these stupendous abuses and to attempt to recover for the benefit of the people at large some portion of the public lands which had been obtained from the Government by the railroad companies. I hope that his hands may be strengthened and that he will continue in the course which he has laid out for himself. Some say that a pressure has been made upon the President and upon the Secretary of the Interior, Mr. Lamar, and that it will be necessary for him to be removed. It is impossible to believe that such can be the case; that an honest, faithful, and incorruptible public officer should be hounded out of his place by the men whose action he has exposed and who is making such laudable efforts, as I think he is, to get back for the Government hundreds of millions of acres of acres of public lands which have been literally filched from it by the land-grant railroads.

In respect to these railroad grants Mr. Sparks seems to be traveling in the same direction with Judge PAYSON, the able Republican Representative from this State, who is making a reputation before the country for the energetic action he has taken in the House of Representatives to get back for the benefit of the settlers and for the public generally a portion of the lands which the railroads have grabbed through the connivance and corruption of the General Land Office. Mr. Sparks deserves to be commended for his actions rather than denounced, and, for one, I wish to bear toward him, as well as toward Judge PAYSON, my sincere thanks for the course which they have taken.

E. B. WASHBURNE.

This letter needs no comment; it is strong and to the point.

I now read a letter from Dakota:

FOREST CITY, DAK., *February* 19, 1886.

DEAR SIR: I thought I would write you giving you some idea of the sentiment of the people here.

I have been a Republican ever since that party was organized and thought that when Mr. Cleveland was elected our country was near ruined, but I now think different, and I think your honest and manly course has done a great deal to change public sentiment. All honest settlers are on your side, but land-grabbers are down on you to a man, regardless of politics.

* * * * * * *

J. P. PETERS.

MR. SPARKS.

I also submit the following:

TOBIAS, NEBR., *February* 17, 1886.

FRIEND SPARKS: Having recently returned from a trip through the western part of this State, and having at one time been employed in surveying with a party of Government surveyors in Dakota, and having taken a special course in surveying while at college, I took especial pains to investigate the public surveys here concerning which there has been so much said of late, and I find the charges of fraud are only too true. And in my opinion the office of surveyor-general in this State should not be abolished. I also took occasion to inquire as to the opinion prevailing in regard to your recent rulings, and find that every honest homesteader is well satisfied and fully upholds you in your endeavors to prevent fraud.

Yours, truly,

O. W. HENDEE.

I also submit the following letter:

LINCOLN, NEBR., *May* 22, 1886.

DEAR SIR: Allow a stranger (and Republican at that), one that has traveled all over the States and Territories and has lived in the Territories most of the time for the last four years, to say that you have the good-will and patronage of all law loving and abiding citizens of the West for the course adopted and pursued by you to date. And you have my especial esteem and regards, for only those that have lived, traveled, &c., in the West can know anything about the frauds that are perpetrated under the cloak of honest homesteaders, &c.

Yours, very respectfully,

E. N. PATTERSON.

P. S. I do not expect a good word for this for any purpose, though I believe there are new land offices being created in State.

To Hon. J. C. SPARKS,
United States Land Commissioner, Washington, D. C.

CUSTER COUNTY, NEBRASKA.

SIR: I take this opportunity to inform you that there is a large scope of country here held by cattle-men. Claims similar to this they will give $150 to a young man for his claim and do all the work, build his house, pay the money, furnish proof to prove up. He goes on, digs a little in the side of a hill, covers it with a few poles and hay and a little dirt, and digs a well. Sometimes the well is on the quarter taken; sometimes one well answers for two claims. The most of this township is held in this way: this is township 13, range 20, Custer County, Nebraska.

There are several families coming out here this spring—they will want a farm. It keeps the country back. We can not have schools unless it is settled up, we are so far apart. What is a timber claim worth where a man takes a claim and sells timber off it for seven or nine dollars a tree. There are some of them. This wants to be looked after. This is a good farming country; it is a little rough, but there is not a quarter that a man can not make a living off of. If a man takes a claim they beat him out of it in some way.

* * * * * * *

G. W. GEOFFREY.

Mr. SPARKS.

I now come to the next order issued by the Commissioner of the General Land Office of which we have heard so much in this Hall and elsewhere.

In order to fully vindicate the Commissioner and forever put at rest the charge of injustice and illegality, a statement of the facts and what the law is will be sufficient.

When the present administration came into power and the present Commissioner took charge of the General Land Office, he found a large amount of evidence on file proving great frauds on the public lands which had been taken by agents under a former administration, which evidence has been greatly increased under his charge, much of which I have referred to heretofore.

There was also found an appalling state of things growing out of the unlawful fencing of the public lands by cattle "rings" and capitalists—30,000,000 acres of the public lands were fenced with wire fences, many of these erected by foreigners, and when the honest settler undertook to settle upon these lands and make a home for himself and family he was driven off by the "cowboys," who were in the employ of the men who claimed to own the premises, for the purpose of raising cattle thereon, thus illegally prostituting these public lands to their exclusive use to gratify their greed and avarice in the accumulation of wealth.

In this way they were enabled to produce hundreds of thousands of cattle annually at a mere nominal cost per head, which they put in the market in competition with the cattle of the farmers which had to be raised and made ready for market from the products and labor of the farm. No wonder at the outburst of approval from the farmers of the whole country which arose when the present Executive issued his proclamation last year ordering the "cattle rings" and capitalists to take their cattle from these lands, and the great body of the people throughout the entire country will stand by the President in his efforts to strictly enforce the letter of this proclamation.

Why this was not done by a former administration I shall not stop to discuss. It was not done, however. Formal notice, I believe, was served on the parties to go from these lands, but no attention was paid to this, and they continued in unlawful possession of the lands. Some suits were also brought, but they were not prosecuted to effect. To give some idea of the enormity of these cattle ranches I read the following list which embraces only a part of them:

The following localities, in addition to the counties above mentioned in the State of Nebraska, are referred to, namely:

Kingman, Pratt, Barbour, Butler, Harper, Comanche, and Lane Counties, Kansas; Billings County, Dakota; Cassia and Oneida Counties, Idaho; Carbon, Laramie, and Sweetwater Counties, Wyoming; Humboldt, Mendocino, and Plumas Counties, California; Madison, Meagher, Gallatin, and Yellowstone Counties, Montana; Sevier County, Utah; Colfax and Mora Counties, New Mexico; and Bent, Las Animas, Pueblo, Fremont, Park, El Paso, Weld, and La Plata Counties, Colorado.

Among the cases specially reported, additional to the Brighton Ranch in Nebraska, are those of the Arkansas Valley Cattle Company, in Colorado, whose inclosures embrace upward of 1,000,000 acres; the Prairie Cattle Company (Scotch), in Colorado, upward of 1,000,000 acres; H. H. Metcalf, River Bend, Colorado, 200,000 acres; John W. Prowers, Colorado, 200,000 acres; McDaniel & Davis, Colorado, 75,000 acres; Routchler & Lamb, Colorado, 40,000 acres; J. W. Frank, Colorado, 40,000 acres; Garnett & Langford, Colorado, 30,000 acres; E. C. Tane, Colorado, 50,000 acres; Leivesy Brothers, Colorado, 150,000 acres; Vrooman & McFife, Colorado, 50,000 acres; Beatty Brothers, Colorado, 40,000 acres; Chick, Brown & Co., Colorado, 30,000 acres; Reynolds Cattle Company, Colorado, 50,000 acres; several other cases in Colorado, embracing from 10,000 acres to 20,000 acres; Coe & Carter, Nebraska, 50 miles of fence; J. W. Wilson, Nebraska, 40 miles of fence; J. W. Bosler, 20 miles; William Humphrey, Nevada, 20 miles; Nelson & Son, Nevada, 22 miles; Kennebeck Ranch, Nebraska, from 20,000 to 50,000 acres. In Kansas entire counties are reported as fenced. In Wyoming 125 large cattle companies are reported having fencing on the public lands. Among the companies and persons reported as having "immense" or "very large" areas inclosed, but specific quantities not mentioned, are the Dubuque, Cimmaron, and Renello Cattle Companies, of New Mexico; the Carlisle Cattle Company (English), in Colorado; the Marquis de Morales, in Dakota; the Wyoming Cattle Company (Scotch), in Wyoming; the Rankin Live Stock Company, in Nebraska. Several companies and persons in Montana and elsewhere are mentioned as having inclosures with no data as to areas. A large number of cases in the several States and Territories west of the one hundredth meridian are reported where the inclosures range from 1,000 to 25,000 acres and upward.

The cases above referred to are to be regarded merely as indicative of the situation.

DEPARTMENT OF THE INTERIOR, *Washington, March 3, 1884.*

DEAR SIR: Referring to our conversation on the subject of foreign companies controlling inclosures of the public lands, I send you the inclosed memorandum, which I think contains the facts you wanted. The land described, with the exception of perhaps a few thousand acres, is all Government land.

Very respectfully yours,

H. M. TELLER, *Secretary.*

Hon. I. R. PAYSON, *House of Representatives.*

The Arkansas Cattle Company have fenced in the following-described public land in the States of Colorado and Kansas, namely:

Beginning on the north bank of the Arkansas River, on the line between Secs. 19 and 20, in T. 23 S., R. 41 W., and running a northerly direction to Sec. 20, in T. 15 S., R. 41 W.; thence a northwesterly direction to Sec. 20 in T. 15 S., R. 44 W.; thence a southwesterly direction to southeast corner of Sec. 36., in T. 15 S., R. 48 W.; thence a southerly direction to the northeast corner of T. 19 S., R. 48 W., and thence a southeasterly direction to the bank of the river in Sec. 26, T. 22 S., R. 46 W. of the sixth principal meridian. Also all that other tract or parcel of land being on the south side of the Arkansas River, in Bent County, Colorado, and bounded as follows, namely: Beginning on the south bank of the Arkansas River on the east line of T. 23 S., R. 42 W., and running south on said township line to the south line of said township; thence west along the south line of said township to the middle of Sec. 33 in said township, and thence north to the Arkansas River on the north line of Sec. 21, in said township.

There appears to be about forty townships, or 921,600 acres, embraced in the inclosure.

The United States deputy surveyor, G. W. Fairchild, says in his report:

The whole country embraced in my contract (Northwestern Nebraska) is occupied and run by capitalists engaged in cattle-raising, who have hundreds of miles of wire fence constructed to inclose all desirable land, including watercourses, to form barriers for their cattle and to prevent settlers from occupying the land. They also represent that they have desert or timber claims upon the land they have inclosed. Upon their fences they have posted at intervals notices as follows: "The —— who opens this fence had better look out for his scalp." The fences are built often so as to inclose several sections in one stock ranch, and the ranches are joined together from the mountains clear round to the mountains again. Persons going there intending to settle are also informed that if they settle on the land the ranchmen will freeze them out; that they will not employ a man who settles on or claims land, and that he can not get employment from any cattle-men in the whole country.

All the facts which I have stated and many more confronted the in coming administration. Vigorous proclamations and orders, and their strict enforcement, were absolutely necessary.

These frauds had to be met in a way which would put a stop to them, else the absorption of our public lands would surely follow. To meet the emergency orders were issued by the General Land Office, and because of their issuance Commissioner Sparks has undeservedly been attacked. An order was issued suspending the further issuing of patents.

Another order, suspending entries under the provisions of the preemption, timber-culture and desert-land laws was issued. The latter order was issued in anticipation of the speedy passage of an act by Congress repealing those laws. The action of the Commissioner in this instance, in thus anticipating the action of Congress relative to matters relating to the General Land Office is well established by numerous instances in former administrations, which I will show further on when I come to read a letter from Commissioner Sparks on this subject.

As a matter of fact, there was at the time that this order was issued a bill pending before Congress for that purpose, which, but a few days after the issuance of this order, passed the House by a vote of more than 4 to 1, and which ought to pass the Senate and become the law. The repeal of these laws has been recommended for four years by the General Land Office.

I introduced a bill in the Forty-eighth Congress, as well as in this, for the repeal of these laws.

In the last Congress, as well as in this, I also had the honor to report a bill for the repeal of these laws to the House from the Committee on the Public Lands, of which I was then and am now chairman, which there passed but which was defeated in the Senate. Whether the present bill will pass the Senate without objectionable amendment remains to be seen.

For issuing his last order Commissioner Sparks has been most savagely denounced. All the land-grabbers in the country, together with their huge and organized array of agents and lobbyists, seem peculiarly distressed and denounce it as unlawful.

That the Commissioner had the clear legal right to issue this order is fully shown by his letter to the Secretary of the Interior of June 21, 1886, in answer to a Senate resolution calling upon that officer "to inform the Senate by what act it is claimed that Congress has delegated to the Commissioner of the General Land Office or to the Secretary of the Interior, or to those officers acting jointly, the power to suspend by executive order the operation throughout the United States of the preemption, the timber-culture, and the desert-land acts." I read from his letter:

The authority to issue such circular was founded upon precedents deemed to be sufficient, of more than forty years' standing, sanctioned by judicial decisions and by Congressional recognition.

The legislative authority upon which these precedents were established appears to have been drawn from the general powers of supervision and administration conferred upon the executive department (act of April, 1812, 2 Statutes, 716; July 4, 1836, 5 Statutes, 107; 3 March, 1849, 9 Statutes, 395; Revised Statutes, sections 441, 453) and upon the special recognition of the power of the President to create reservations of public lands found in the pre-emption act of 1841 and similar acts.

The following are among the leading decisions of the Supreme Court of the United States in which the authority of the President to reserve public lands from entry has been affirmed, the acts of the officers of the Land Department in this respect recognized as the acts of the President, and the legal effect of such reservations upheld.

In 1827, in the case of Chotard *vs.* Pope (12 Wheat., 586), the court said:

"An authority 'to enter' a certain quantity of land does not authorize a location on lands previously appropriated or withdrawn from the lands offered for sale."

In McConnell *vs.* Trustees (12 Wheat., 582), the court recognized "the reasonableness of reserving a public spring for public uses."

In Kissell *vs.* Saint Louis, an entry was held invalid because the land had been "reserved from sale" by officers of the Land Department." (18 How., 19.)

At the request of the Secretary of War, the Commissioner of the General Land Office in 1824 colored and marked upon a map a section of land as reserved for military purposes and directed it to be reserved from sale for those purposes. In the case of Wilcox *vs.* Jackson (13 Pet., 513), involving this land, the Supreme Court, reciting the foregoing, said:

"We consider this, too, as having been done by authority of law, for among other provisions in the act of 1830 all lands are exempted from pre-emption which are reserved from sale by order of the President. Now, although the immediate agent in requiring this reservation was the Secretary of War, yet we feel justified in presuming that it was done by the approbation and direction of the President. The President speaks and acts through the heads of the several Departments in relation to subjects which appertain to their respective duties. Both military posts and Indian affairs, including agencies, belong to the War Department. Hence we consider the act of the War Department in requiring this reservation to be made as being in legal contemplation the act of the President, and consequently that the reservation thus made was, in legal effect, a reservation made by order of the President, within the terms of the act of Congress."

In the pre-emption act of 1830 it is provided that the right of pre-emption contemplated by the act shall not extend "to any land which is reserved from sale by act of Congress, or by order of the President." In the pre-emption act of 1841 (sec. 2258 Revised Statutes) it is provided that "lands included in any reservation by any treaty, law, or proclamation of the President of the United States," shall not be subject to entry under the act. The act of 1853, extending the pre-emption laws to California, excepted from their operation lands "reserved by competent authority."

In Grisar *vs.* McDowell (6 Wall., 381), the Supreme Court, construing the foregoing acts, say:

"The provisions in the acts of 1830 and 1841 show very clearly that by 'competent authority' is meant the authority of the President and officers acting under his direction."

And the court further said in this case "that it was of no consequence to the plaintiff whether or not the President possessed sufficient authority to make the reservation." It was enough that the title remained in the United States. A legal entry could not be made while the lands were in the reserved condition.

In 1846 Congress made a grant of lands for the improvement of the Des Moines River below the Raccoon Fork. This grant was constructively held by the Commissioner of the General Land Office and the Secretary of the Interior to apply to lands above the Fork, and lands above the Fork, amounting to upward of 270,000 acres, were, on June 1, 1849, withdrawn from sale and entry by this office for the benefit of the river grant. It was afterward held by the Supreme Court that there was no grant above Raccoon Fork.

But under the excepting provisions of an act making a railroad grant, subsequent to the river grant, which subsequent act declared that lands reserved to the United States in any manner by competent authority, for any purpose whatever, should be reserved from the operation of the act, the courts have steadily held that lands so reserved by the Land Department for river improvement purposes, although under an erroneous construction of the law, did not pass with the railroad grant, and have also held that the withdrawal was an inhibition against settlement and pre-emption rights. (Wolcott *vs.* Des Moines, 5 Wall., 681; Homestead Company *vs.* Valley Railroad, 17 Wall., 153; Wolsey *vs.* Chapman, 101 United States, 755; Dubuque and Sioux City Railroad Company *vs.* Des Moines Valley Railroad Company, 109 United States, 329.)

And in Wolsey *vs.* Chapman, it was specifically held that an order of reservation sent out from the appropriate Executive Department in the regular course of business is the legal equivalent of the President's own order to the same effect, and is therefore such a proclamation by the President reserving lands from sale as the law contemplates. (Page 770.)

The foregoing decisions recognize the abstract right of the Executive Department to withhold lands from entry and thus to suspend the operation of the public-land laws to the extent of such withdrawals. Necessarily specific cases are treated of in these decisions because specific cases were before the court, but the court affirmed in these cases a general principle which it applied to the particular cases decided.

This was the right of the Executive to reserve lands from entry. Given the right of suspension, the only question that remains is that of the necessity or expediency of its exercise—the question of propriety. The extent of suspensions may be considered in connection with the question of expediency or propriety, but does not enter into a discussion of the question of abstract right. Neither does the occasion for suspensions—the reasons why they are made—touch the fundamental question of the right to make suspensions. If a suspension of public land entries, wholly or in part, in executive discretion is lawful for one cause deemed sufficient by the executive authority, it is equally lawful for another cause deemed equally sufficient.

It is the judgment of the Executive that determines the sufficiency in either case, and in either case the question whether the occasion is sufficient or not is one affecting the responsibility of executive officers in the exercise of their powers, and not a question of the power itself. Conceding the right to withdraw, or withhold from entry, one section of land, or any subdivision of a section, as a matter incident to administrative supervision and control, the right to withhold any larger area is equally admitted. It can not be said that a suspension of entries is authorized for a limited quantity of land, but not authorized for a larger quantity; that it may be made for one locality and not for another; for a part of one State or Territory and not for the whole State or Territory; or that it may be made for a portion of the public lands and not for all of them.

It is a question of principle and not a question of the extent to which the principle shall be applied. Indeed, a suspension confined to certain localities and in favor of particular interests is a far more dangerous exercise of the power of suspension than one operating generally. In the former case a latitude of discretion is opened which may be abused for the promotion of favorite interests or the accomplishment of particular purposes not of general or public import. In the other case there is a uniformity through which all interests are affected alike, and such general suspension can be founded only upon public considerations.

Again, the question of principle is not a question of analogy but of identity. The circumstances under which one suspension is made may or may not be analogous to the circumstances of another; the causes and reasons may or may not be the same, but the principle must in all cases be identical, since if there is no authority for executive withdrawals in executive discretion, there can be no such authority in any case; while, if authority exists at all, it exists for any cause in which the Executive deems its exercise proper and expedient.

Withdrawals, reservations, and suspensions, applied to lands withheld from public entry, operate to prevent entries from being made upon the withdrawn or reserved lands while the withdrawal, reservation, or suspension exists. In the various instances in which suspensions of entries have been made for railroad purposes, the terms "withdrawal of lands from entry" and "suspension of entries" are synonymously used, sometimes one phrase being used and sometimes the other. And all "withdrawals of land from entry" and "suspensions of entry" constitute "reservations," more or less complete, of the land involved.

Among the precedents relied upon as authority for the circular named the following are cited:

On March 3, 1883, Congress passed an act exempting the public lands in the State of Alabama from the operation of the mineral laws, and providing for the sale of lands previously reported as mineral, and for the disposal under agricultural laws of unsold lands of that character after an offering at public sale.

The operation of this act, so far as relates to sales and entries of lands previously reported as mineral, has been in suspension up to the present date in anticipation, I am advised, of amendatory legislation. On two occasions (one under the previous and one under the present administration) executive proclamations have been issued carrying the act into effect, and in each instance the President has revoked the same.

The Brighton Ranch Company, a cattle corporation in Nebraska, illegally inclosed with fences a large body of public lands, estimated at some 125,000 acres. Suit was brought to compel removal of the fences. Upon the representations of the United States attorney that an attempt was likely to be made by the company to defeat the suits by causing a line of entries to be placed upon the sections and subdivisions on which the fences were standing, this office, at the suggestion of Attorney-General Brewster, directed the register and receiver by letter of December 16, 1884, to "allow no further entries" on the lands crossed by or contiguous to the line of fence, pending the suit instituted by the Department of Justice to compel the removal of said fence.

On February 23, 1886, at the request of Attorney-General Garland, this office, by order addressed to the register and receiver at Cheyenne, Wyo., directed a suspension of all entries in certain sections of land in that district to prevent the defeat of a similar suit against another party.

I omit further reference to numerous cases of special character in which suspensions have been made on account of possible private land claims, proposed military and Indian reservations, and contemplated appropriations by the Government for various purposes, and as precautionary measures in view of anticipated fraudulent entries or the suspected character of public surveys, and for other causes, although these special suspensions necessarily depended upon the fundamental principle of the right of suspension for sufficient cause, and were assertions of that principle in its application to particular cases. The material line of precedents I deem proper to cite more *in extenso* are those involving withdrawals of public lands from settlement and entry for the benefit of corporations having or claiming grants of land for railroads and canals.

As early as September 28, 1828, Commissioner Graham, by direction of the President, instructed the register of the land office at Piqua, Ohio, to reserve from sale the lands along and within 5 miles of what was supposed would be the route of the canal from Dayton to Lake Erie, in aid of the construction of which a grant of lands had been made to the State of Ohio by act of Congress approved May 24, 1828. This reservation embraced about 500,000 acres.

On April 11, 1844, the Commissioner of this office (Thomas H. Blake), by direction of the Secretary of the Treasury, instructed the proper district land officers in Wisconsin to withdraw from sale or entry, for any purpose whatever, all the vacant lands, surveyed and unsurveyed, situated within 2 miles of the Fox and Wisconsin Rivers, in anticipation of a proposed grant by Congress to the State of Wisconsin to aid in the improvement of the navigation of said rivers.

The Congress then in session having failed to make the proposed grant, the withdrawal was revoked by this office under instructions from the Secretary of the Treasury dated July 14, 1845, having been in force for more than a year. This withdrawal covered about 500,000 acres.

During the years 1853 and 1854 a great quantity of land was withdrawn from sale or entry (except for valid pre-emption claims) by the Commissioner of this office, "by order of the President," "issued on the representations and at the solicitation of members of both Houses of Congress," in anticipation of grants being made to aid in the construction of certain proposed railroads. The lands so withdrawn were situated in ten States and thirty-four land districts, and amounted to about 31,000,000 acres, according to Commissioner Wilson's report for 1854, as follows:

"At the instance of many members of Congress and others, about 31,000,000 of acres in several of the land States had been withdrawn from market in anticipation of grants for railroad and other internal improvements. As such grants were not made, it was deemed expedient to restore these masses of lands to market, especially in view of the passage of the bill graduating the price of the public lands, and this has been done, except where the reservation was for a fixed period, or grants have already been made." (Land Office Report, 1854, page 6.)

Congress having failed to make the proposed grants, the lands were restored to market, by order of the President, during the months of October, November, and December, 1854.

In anticipation of a grant to the State of Iowa to aid in the construction of four railroads in that State, Commissioner Hendricks, on May 10, 1856, issued telegraphic instructions to the registers and receivers for the six land districts in said State, withdrawing from sale or location all lands south of the line between townships 91 and 92, comprising about two-thirds of the entire State. The act making the grant did not receive the signature of the President until May 15, 1856.

During the year 1856, in anticipation of railroad grants to the States of Louisiana, Michigan, Wisconsin, and Mississippi, the Commissioner of the General Land Office issued telegraphic instructions to the local officers of twenty land districts in said States suspending from sale and location large bodies of land, as follows:

State.	Order of suspension.	Date of grant.
Louisiana	May 31, 1856	June 3, 1856
Michigan	May 30, 1856	June 3, 1856
Wisconsin	May 29, 1856	June 3, 1856
Mississippi	Aug. 9, 1856	Aug. 11, 1856

The lands thus withdrawn in anticipation of proposed grants amounted to at least 50,000,000 acres, exclusive of lands previously appropriated.

During the same year railroad grants were made to the States of Florida and Alabama, and in 1857 grants for several roads were made to the Territory of Minnesota. Long before any of the roads provided for in said grants had been located, and consequently before any right to any particular lands under the grants had vested in the States, the Commissioner of the General Land Office issued directions to the local officers of nineteen land districts in said States and Territories suspending the sale and location of all lands within what was supposed would be the limits of the several grants, amounting to more than 28,000,000 acres, exclusive of lands previously appropriated, as follows:

State.	Date of grant.	Order of suspension.
Florida	May 17, 1856	May 17, 1856 May 23, 1856 June 9, 1856 July 8, 1856 Sept. 6, 1856
Alabama	May 17, 1856	May 17, 1856
Do	June 3, 1856	June 19, 1856
Minnesota	March 3, 1857	March 7, 1857

Representations having been made that pre-emption claims for speculative purposes were being placed upon the lands within the limits of the withdrawals in the States of Wisconsin, Michigan, Alabama, and Florida, the local officers in said States were, on December 16, 1856, February 2, February 13, and April

29, 1857, respectively, directed by the Commissioner of the General Land Office to refuse to receive any pre-emption claims, based on settlements initiated after the receipt by them of said orders, on large bodies of lands in their districts. These suspensions from pre-emption were prior to the location of the several roads in whose interest they were made, and consequently prior to the attachment of any right under the grant to any particular lands. This inhibition against the right of pre-emption affected more than 40,000,000 acres of public land.

On July 17, 1862, the lands granted to the Leavenworth, Pawnee and Western Railroad Company by act of July 1, 1862, were withdrawn "from pre-emption, private entry, and sale" by order of Commissioner Edmunds. This withdrawal, which included both odd and even sections, was made at the request of the attorney for the company before the acceptance of the grant, and was based upon a paper map of Kansas and Nebraska, upon which the "probable" line of the road from the Missouri River to the one hundredth meridian of west longitude was indicated in pencil. About 5,500,000 acres were included in this withdrawal.

On March 19, 1863, the Commissioner of the General Land Office, with the approval of the Secretary of the Interior, withdrew from pre-emption, homestead, private sale, or location all the odd-numbered sections within 10 miles on each side of the supposed routes of the Atchison, Topeka and Santa Fé and Leavenworth, Lawrence and Galveston Railroads, in the State of Kansas, amounting to at least 2,000,000 acres. This withdrawal was made prior to the designation of any actual route, and at the request of the Senators and Representatives from Kansas.

By acts of Congress approved March 3, 1865, and July 3, 1866, 400,000 acres were granted to the State of Michigan to aid in constructing the Portage Lake and Lake Superior Ship-canal. By act of July 3, 1866, a grant of 100,000 acres was made to said State for the Lac La Belle Ship-canal.

Although these grants were floats, not attaching, until selected, to the particular lands then vacant and subject to selection, and could easily have been satisfied from lands in market, all the lands in the odd sections in the upper peninsula of Michigan west of the line between ranges 15 and 16 (about two-thirds of the upper peninsula) were, on May 26, 1865, and July 14, 1866, "withdrawn from sale, location, or claim" by the Commissioner of the General Land Office, by direction of the Secretary of the Interior, in order to insure the ultimate satisfaction of the grant. This withdrawal embraced upward of 1,000,000 acres.

In addition to the foregoing, withdrawals of indemnity lands, where no withdrawals were authorized by law, have been made from time to time as the several roads were located, in anticipation of losses within granted limits. Withdrawals of this character, covering fully 54,000,000 acres, have been made for sixty-seven roads. The largest withdrawals of this class for any one road are those for the Northern Pacific Railroad Company, which were made at various dates between 1871 and 1884, and are still maintained. Said withdrawals were from sale, location, entry, and claim of any kind, and embraced at least 12,000,000 acres, including unsurveyed as well as surveyed lands. In the Territory of Dakota alone about 2,400,000 acres of indemnity lands are withdrawn, while the records of the General Land Office show that the losses within the granted limits in said Territory do not exceed 30,000 acres. Equally excessive withdrawals for this road have been made in other Territories.

By act of August 11, 1876, Congress opened to settlement the tract of country known as the Osage ceded lands in Kansas. It had previously been held that these lands passed under railroad grants for the Leavenworth, Lawrence and Galveston, and Missouri, Kansas and Texas Railroad Companies, but had been afterward decided by the Supreme Court to have been excluded from those grants.

The second section of said act gave a preference right to parties who had purchased from either of the companies to purchase from the United States, but limited the amount they would be allowed to take to 160 acres.

The Commissioner of the General Land Office (Mr. Williamson), deeming that an injustice would be done purchasers from the companies after patent in quantities greater than 160 acres, on November 16, 1876, with the approval of the Secretary of the Interior, Mr. Chandler, directed the local officers not to receive filings or allow entries upon any of the lands which had been purchased from the railroad companies until the attention of Congress could be called to the matter in the form of a bill for the relief of said purchasers.

The bill was submitted to Congress, and no action having been taken thereon the Commissioner of the General Land Office, on March 28, 1877, invited the attention of the Secretary of the Interior to the subject, and suggested that the law should be executed.

The Secretary, after consideration of the matter, on April 13, 1877, concurred in the opinion of the Commissioner, and orders were issued to the local officers accordingly on April 14, 1877.

The execution of the act of August 11, 1876, was therefore suspended from November 16, 1876, to April 14, 1877, or about five months, in anticipation of legislation by Congress.

I transmit herewith copies of the more material orders, including the above, suspending entries in various sections of country at different times throughout the public-land States and Territories for the benefit of railroad and other corporations, in advance of laws making grants; in anticipation of grants that never were made; in advance of the time when any right to any particular land attached under the grant, although the granting acts specifically protected the right of entry until the railroad right should attach, and suspensions made to hold lands for future indemnity selection by railroads, although the companies had acquired no rights to such lands at the time the suspensions of entries were made, and in numerous cases did not acquire such right for years, and in some cases never acquired such right. These withdrawals were suspensions by executive order of the operation of the public-land laws, including the homestead law after its passage in 1862, and a denial to citizens of the United States of their rights under said statutes.

Such suspensions were not only a denial of the right of citizens under said statutes, but were such denial in the face of provisions of the granting acts, which, in their terms, sense, spirit, and legal intendment, declared should be preserved notwithstanding the grants until a time certain had arrived. Not denying, and not treating of the abstract right of the executive department to temporarily withdraw public lands from the operation of the public land laws as a matter of administrative discretion and for sufficient cause justifying such action, I have in my annual report for 1885 shown that no public reason existed for railroad withdrawals of the character above indicated, and further, that such withdrawals were inimical to the protective clause of the grants and to the objects designed to be secured by Congress in making the grants, and oppressive and disastrous to citizens of the country.

Referring to the great delays, running through a score or more of years in many cases, in the construction of land-grant railroads, it is said:

"Such delays have been made possible through official action of the Land Department in withdrawing from public appropriation lands within assumed limits of projected roads and retaining such lands in indefinite reservation.

"The granting acts generally make no provision for official withdrawals. Granted lands were to be identified by the definitely fixed location of the line of the road. Until then the grant did not attach to any land, but all lands on the line of the proposed road remained within the disposable power of the Government and subject to settlement and entry.

"An official withdrawal of lands from appropriation and disposal under the public-land laws before the time arrived when the right of appropriation and disposal was concluded by the lawful identification of granted lands was clearly an act of wrong to the Government and an injustice to settlers, while of great and improper advantage to railroad corporations.

"Such withdrawals have, however, been made, such wrong and injustice perpetrated upon citizens and the Government, and such advantages secured by grantees upon whose requests and for whose benefit the withdrawals were ordered.

* * * * * * *

"In most, if not all, cases of railroad grants premature and unauthorized withdrawals have been made, the land held sacredly reserved for the railroad, and the legal rights of settlers arbitrarily and cruelly denied. The number of settlers having indisputable legal right to the lands occupied by them who have been forced to buy their homes of railroad companies or suffer eviction, because of official declarations of superior railroad right founded upon constructive withdrawals made before any railroad right had actually been acquired, can never be ascertained, since their applications for the most part died at the local offices, and the general failure of those who applied prevented even the assertion of rights by others."

And again:

"I know of no law authorizing or recognizing the location generally of railroads by sections or divisions. The entire line, including its branches, must be located before the law (as found by the Supreme Court) vests in a railroad company any rights to any land. (Cedar Rapids case, 110 U. S., 27.) The date of the filing in the General Land Office of the complete map of the whole line is the date when, under the law as so determined, settlement rights within railroad limits cease and the rights of the companies begin.

"But periods of attachment of railroad rights have been officially computed upon reported dates of partial 'surveys in the field,' or upon maps of portions of lines undetermined as a whole, and otherwise prematurely, and the difference in time between the accepted and actual definite locations have varied from some months to several years, and sometimes many years, during all of which time settlement rights have been refused, entries canceled, or applications rejected, and lawful claimants ousted from their possessions."

The above extract shows that such withdrawals were considered to be illegal, not because of want of power to suspend applications for entries as a general proposition, but because those withdrawals were made for a manifestly illegal purpose, and because of the special conditions and limitations of the granting acts themselves. These acts preserved the right of entry under the public-land laws within granted limits until the definite location of the line of the roads; and it is well-settled law, never open to reasonable question, that the companies acquired no rights to lands within indemnity limits until a still later period, and hence in these cases such conditions and limitations were believed to be a bar to the exercise of any general powers of suspension.

A marked distinction is to be drawn between the effect of suspension of entries under railroad withdrawals and the effect of the circular referred to in the resolution. This circular made no general withdrawal or reservation of lands and denied no settlement right. The land was not disposed of, nor contemplated to be disposed of, adverse to any valid settlement right accrued or accruing after its issue, and if any adverse entry should have been made, after the the issuance of the circular, upon lands in the occupation of a *bona fide* settler, the rights of the prior settler, being ascertained, would, under established rules and practice, cut off the subsequent claim.

As the greater includes the less, it would appear that the habitual exercise, without limit or qualification, of an assumed power of suspension would justify its qualified exercise when based upon the evident purpose of conserving the public interests.

The laws authorizing entries upon public lands are permissive and not mandatory statutes. They are to be carried into effect under rules and regulations adopted by the Land Department. Can it be said that action under a permissive statute should be judged by the rules applicable to a madatory one, or that, when the liability of a defeat of the purpose of the law is imminent, the authority of the Land Department to determine how, when, and in what manner the privileges of the law may be exercised, shall be so circumscribed as effectually to nullify that authority?

With a rigid regard for law and legal restraints, I should profoundly regret if a proper construction of any act of mine, with your approval or that of the President, or both conjoined, and with or without precedents, could be held to have nullified or suspended a law upon the statute-book. It appears never to have been supposed in the practice of the Land Department that a temporary suspension of applications to make entries for any cause deemed justifiable amounted to an abrogation of the statutes, but, on the contrary, as the statutes themselves recognize the power of the Executive to reserve lands from entry, with no qualification as to limit, extent, or cause, that suspensions, when deemed proper by the Executive, were in the line of the statutes and not contrary thereto, and therefore not a nullification of the law.

The pre-emption laws expressly declare that "lands included in any reservation by any treaty, law, or proclamation of the President, for any purpose," shall not be subject to the right of pre-emption, and the statute does not define what lands may be reserved, nor when, nor the extent to which they may be reserved; and the purpose of the reservation is left exclusively to the discretion of the President, who "acts through the heads of the Executive Departments."

Registers and receivers are overwhelmed with applications to enter and file for land. The register and receiver at Denver, Colo., report 1,353 pre-emption applications received at their office from January 1 to May 31, 1886, against 434 received during the same period in 1885; and 1,756 timber-culture applications are reported for the first five months in 1886 against 670 for the corresponding period in 1885, an increase in the number of applications of both classes from 1,104 in 1885 to 3,109 in 1886, or nearly 300 per cent.

The Garden City (Kans.) officers report 3,578 pre-emption applications received for the first five months in 1886, against 1,080 for the same period in 1885, an increase of over 300 per cent. The Wa Keeney (Kans.) officers report 4,033 pre-emption and timber-culture applications for this period in 1886, against 882 for the same period in 1885, an increase of over 450 per cent. The register and receiver at Cheyenne, Wyo., telegraph "We are overwhelmed with applications." Information is general that the local officers in many, and chiefly in suspected districts, are thus overwhelmed. The situation so indicated was some time since described by the officers at Garden City, Kans., as follows:

"The rush for land in this section of Kansas is unprecedented. Every train brings in a crowd of land seekers. For more than an hour before the office opens a mass of humanity throngs the doorway, and it is a remarkable sight to see the press and excitement. There are fifty or more land agents or attorneys who, I may say, facilitate this rush. They make out the papers of hundreds and present them at one charge. The aggregate becomes overwhelming. Besides, in all the little towns dotted through this valley there are numerous land agents, who send us enough mail and express packages to keep us ordinarily busy. I look upon this state of affairs as a real abuse of the privileges designed by law, for a majority of the patrons swept through by these land agents never see the land they make entry upon, fail to realize their obligation to the Government, and scheme, by following the form, to avoid the spirit and intent of the law. We have no time to correct these things; we can not have time to attend to that patron who is in real need of our assistance. The result of this heedless rush is that work is poured in without restraint, and we labor in vain when we try to keep up with the work."

It is difficult to conceive that a presumption of good faith can exist where entries are made in the heedless rush above set forth. It is apparently the rush of speculative appropriation only, and further evidence upon this point is shown

by the advertising columns of newspapers in such districts which overflow with announcements of "relinquishments for sale."

Can the public good or the rights of settlement on public lands be deemed injuriously affected if, in attempting to accommodate the business of overcrowded offices and to check speculative appropriations, registers and receivers are in effect instructed to give precedence to applications for homestead or more presumptively *bona fide* entries over, or to the temporary exclusion of, classes of applications in which the greater degree of fraud and misappropriation has been developed? The class of cases named in the circular are those in which the grossest frauds are habitually perpetrated, and which, as all the appearances indicate, are now being made for the prevailing purpose of covering up lands under laws expected to be repealed and so of defeating anticipated legislation by Congress.

Attention is invited to the fact that measures for the repeal of the pre-emption, timber-culture, and desert-land laws have been pending in Congress since the commencement of the present session; that bills have been favorably reported to both Houses, and that at the first sitting of the House after the adoption of the Senate resolution now under consideration a bill repealing those laws was passed under a suspension of the rules by an almost unanimous vote.

Suspension of entries in anticipation of legislation had frequently been made, as shown herein, and it appeared to me that if any latitude of executive action is ever allowable in anticipation of an act of Congress, it was allowable in this case, when the purpose and effect of it was to save the heritage of the people in their public lands from indiscriminate spoliation.

The practice of the Executive Departments, like the practice and decisions of courts, is largely governed by the common law of established precedents. Precedents for suspending entries when the object was to give to private corporations advantages in anticipation of law are of early origin, while suspensions where the object was to give private corporations advantages not contemplated by the law are numerous, and such suspensions have been maintained for periods running back thirty years, and are still maintained. The effect of these withdrawals from settlement and entry has been to suspend the operation of the public-land laws over great areas of territory for indefinite and long-continued periods. It appeared to me if such authority could be exercised when the purpose was inimical to the public interests, its exercise in a milder and limited form was proper when the public interests were to be protected thereby.

It appeared to me that if the rights of citizens to settle upon and enter public lands could be lawfully denied by executive authority in order to hold lands for the future use of corporations which might or might not at some time become entitled to any of them, it was equally lawful to withhold lands from speculative and fraudulent appropriation when speculation and fraud have become notorious, and when all evidences indicate that the privileges of the laws are being availed of to defeat legislative measures in progress of consummation.

Suspensions of entries have been asked for by the most distinguished members of the Senate and House of Representatives, and by entire State delegations in Congress, for the benefit of railroad and other corporations, when the authority invoked was only that of the general powers of administration and control; suspensions have been made in great numbers of instances and over great stretches of country when no specific statute provided for such suspensions, but in no case to my knowledge has the authority of the officers of the Land Department to make such suspensions for such purposes heretofore been formally challenged.

But when it is proposed to suspend applications to enter under three of the seven classes of entry for a brief period for the protection of the public domain, to save public lands, as it was believed, from the grasp of speculation and monopoly and preserve them for actual settlement under the law, the authority to do so is called in question. While the object of the circular of June 2 was to prevent the legislative will from being defeated and to protect and preserve the public lands for homes for actual inhabitants, and while the authority to take the contemplated action was deemed sufficient under judicial decisions and long-established practice, asserting and following the principle of executive suspensions for adequate cause, and while the cause in the present instance was deemed of such public importance and pressing exigency as to justify the application of the principle that had been recognized and maintained in less meritorious cases, still the strict technical authority of positive law for this action having been called in question, though informally at first, it was deemed proper that the question of doubt in respect to executive power should be resolved by the Executive Department against the exercise of the disputed power, and accordingly the same authority that issued the circular was at once invoked for its rescission, and it was in fact practically rescinded before the Senate resolution of inquiry was introduced and with no knowledge or expectation of the introduction of such resolution.

I may add that while the circular was general in its terms, being addressed to "registers and receivers of United States land offices," it was not essential to the purpose for which it was issued that it should be operative elsewhere than in certain districts, and telegraphic instructions conveying its substance were sent only to such districts, and not wholly throughout the public-land States and Territories. Those instructions were immediately revoked when the rescission of the circular was determined upon.

There are many other reasons in law and fact given in this letter for the issuing of this order, but enough has been read to convince the most skeptical of the legal right to issue it. That the facts fully warranted its issuance but few will have the effrontery to deny.

I sincerely regret that the Secretary of the Interior felt it his duty to revoke this order, and the whole country will regret it; for in contemplation of the passage of the bill repealing the pre-emption, timber-culture, and desert-land laws the number of entries made at many of the land offices, as I showed in a speech in the House a few days ago, has increased in the last three months more than 900 per cent. in many cases. This would have been stopped for a time had this order remained unrevoked.

Charges are made also that the Commissioner has made a new set of rulings controlling the entry, &c., of public lands. This I assert is not true; and to completely refute these charges and set the matter at rest I read the following letter, which may be found on the files of the General Land Office:

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., February 26, 1886.

SIR: I have the honor to acknowledge the receipt of your letter of recent date inclosing a letter addressed to you by William Coleman, of McCook, Nebr., asserting that "the action of Hon. Mr. Sparks in his stopping the issue of patents has caused a wonderful amount of suffering this winter." You also allude to similar letters received by you from others and desire me to favor you with information for intelligent replies to these letters.

I have the honor to state that the case referred to by your correspondent is not affected by any order of suspension, and that this is the fact in respect to similar complaints of which I have heard. In the case mentioned the entry was made in 1885. The work of this office has for many years been at best between one and two years in arrears, and frequently longer. Entries are now being examined in regular course that were made in 1884. The order of suspension complained of affects, therefore, only entries made before that date which would not and could not be patented if there had been no suspension.

Another "hardship" alleged by your correspondent is that my ruling prevent settlers from selling or mortgaging their homestead and pre-emption claims. I beg to say that no rulings of mine prevent them from doing so. Nor have I changed any rulings upon that subject, but am simply following the laws and the decisions of the Supreme Court in the matter. It is not held by me, as alleged, that no deed or mortgage can be given until after patent. Undoubtedly a man can sell or mortgage anything he has, and can give to another just as good a title as he has himself—and no better. This is the ruling of the Supreme Court, and it is my ruling.

In Myers *vs.* Croft (13 Wall., 291) the court said that "the object of Congress was attained when the pre-emptor went with clean hands to the land office and proved up his right and paid the Government for his land," and that the pre-emptor was "free to sell his land after the entry, if at that time he was in good faith the owner of the land, and had done nothing inconsistent with the provisions of the law on the subject."

In this, as in all Federal and State decisions upon the subject, the primary proposition is that the entry shall be a good-faith entry, and the laws shall have been fully complied with. In such cases the transfer is good; not otherwise. Strenuous efforts have repeatedly been made to assert the doctrine that although a claim might be worthless while in the hands of the entryman, on account of his failure to comply with the law, or for other reasons, it may be strengthened and made a matter of absolute right by virtue of a transfer to a third party. Such doctrine is without foundation in legal principle, and has never been admitted by the courts or by this Department. "The purchaser takes no better claim for title than the entryman has to confer; and whatever right is thus acquired is subject to the subsequent action of the Land Department." (R. M. Chrisinger, 4 L. D., 247.)

In Root *vs.* Shields (1 Wool., 364) the court said:

"I think it pretty clear that some at least of these defendants purchased and paid their money without any knowledge in fact of any defect in the title. Yet they are not *bona fide* purchasers, for a valuable consideration, without notice, in the sense in which the terms are employed in courts of equity."

It is the universal rule of law that purchasers of an equity take no better title than their grantor had to give. Persons purchasing before patent take only an equity, and this is settled law of which everybody had notice. If an entryman's claim is not good his transfer does not make it any better. This is the ruling of the courts followed by me.

If in advising the public through these rulings and decisions that entries must be valid in order to be confirmed, and if found invalid they can not be confirmed, and that I mean, as an administrator of the law, to find out whether they are valid or not, reminding purchasers and mortgagees that they must look to the foundation of their titles as in all other cases of land transactions between man and man, then a service and not an injury will be done to people who desire to be reasonably prudent and careful in their investments.

It is not believed that every honest settler who has taken up land for a home is suffering for an opportunity to mortgage it. If a man has taken up land on purpose to sell or mortgage it, he has made a fraudulent entry and has no right to impose his pretended title upon his fellow-citizens nor to prevent other men from getting the land from the Government without paying him a bonus for the privilege.

It is inconceivable that whole communities of farmers are anxious to mortgage their actual farms. Ordinarily where people live upon land as homes they want to keep them from the grasp of money-brokers and usurers as long as they can.

A particular case which your correspondent presents is the case of a man who, after an apparently doubtful "settlement" for six months and the most meager "improvements," wants to sell or mortgage his "asserted" home on the public lands in Nebraska for the most he can get and return to his actual home in some Eastern State. This is a very common case. I do not believe that the population of a State is increased by a settlement that is abandoned as soon as its temporary purpose is accomplished, nor that the wealth of the State is augmented by an influx of money that is immediately carried out of the State in this manner.

Another case is where a man made an entry, sold the land for $800, and the purchaser finds his title not good. The real hardship in this case is that an honest settler who wants to get a home upon the public lands is compelled to remain homeless or buy off a fictitious claim. This kind of hardship I am endeavoring to prevent.

The complaint of your correspondent is that of a loan agent. His letter shows such to be his business. There are very few complaints from entrymen on account of suspension of patents. In fact there are no complaints to this office by *bona fide* entrymen because of delay in the issue of patents. It is the experience of this office that *bona fide* entrymen are in no haste for their patents (thousands remaining in this and the local offices uncalled for). But the clamor for them comes from the procurers of fraudulent entries who want patents issued before falsity of the claims can be ascertained by the Government. Regular homestead entries are not suspended, but are being examined for patent as rapidly as possible. As a matter of fact I am now causing the issue of a greater number of patents per month than have ever before been issued from this office, and in so doing am causing to be issued to lawful claimants as fast as they can be ascertained.

The suspensions that have been made are chiefly pre-emption and commuted homestead cases, of which very few are now found upon investigation to be genuine. My predecessor for three years laid before Congress in his annual and special reports the alarming prevalency of fraudulent entries of these classes. On assuming charge of this office I found reports from officers appointed under the late administration asserting as the general result of their examinations, experience, and information that a very small per cent. of such entries were valid, and that the public domain was being largely taken under cover of pretended settlement claims made for speculation, or in the interest of corporations and combinations of capitalists, foreign and domestic, who were acquiring title to public lands in vast bodies by fraud, bribery, and perjury. Under these circumstances I caused final action looking to the issue of patents on entries conditional upon settlement, improvement, and cultivation to be suspended in districts of country in which the evidence before this office is that such entries are so largely fraudulent.

In so doing I have exercised an authority which has always been exercised by the Land Department, and which was recognized as lawful and proper by President Jackson and by Attorney-General Butler as far back as 1836. (Laws, Opinions, and Instructions, 92; 3 Opinions Attorney-General, 93.)

These early instructions and opinions were given under laws existing prior to the act of July 4, 1836 (5 Statutes, 107), which act imposed upon the Commissioner of the General Land Office increased powers and duties of supervision and control over the sale and disposal of public lands.

My immediate predecessor suspended for two or three years certifying for the issue of patents on all lands in New Mexico, the greater portion of Colorado, and in certain classes of entries in various other States and Territories. Such suspensions have always been found a necessary act of administration to prevent illegal appropriations of the public domain, and it has never been found that hardship has resulted to *bona fide* claimants from such suspension.

There have been hardships imposed upon settlers under rulings and decisions

of this office and Department in years past, especially in connection with Congressional grants for railroads and other causes. When this has occurred settlers have not been slow to make their complaints direct to the office. Any injustice or fancied injustice is at once followed by complaints. But actual settlers on public lands have not complained to this office of my action in suspending the issue of patents, or otherwise in respect to my rulings and decisions.

On the contrary, I have received many letters expressing the gratification of *bona fide* settlers because of my efforts to protect the public lands against fraudulent entries, which are justly regarded by them to be inimical to their interests no less than frauds upon the Government. It is the universal testimony of gentlemen of disinterested observation who have visited me that the body of the people in the land States and Territories approve my course.

It is equally the universal testimony that money-brokers, professional land locators and speculators, attorneys and managers of cattle corporations and timber syndicates, and the whole array of persons engaged in the promotion and procurement of illegal and fraudulent entries, or realizing the benefits thereof, are just as bitterly opposed to this course as *bona fide* settlers are heartily in favor of it. That multitudes of complaints have been poured in upon Senators and Representatives in Congress, purporting to be from settlers or from persons assuming to represent settlers, or pretending to speak in their behalf, I have reason to believe, and also have reason to know the motives by which such communications as a class have been inspired and the objects sought to be attained.

It was formerly a practice in this office to make cases "special" for patent; that is to say, to advance them out of their order at the instance of attorneys backed frequently by political or official influence. Even suspended cases were thus taken up and patents procured in large numbers of cases. "Suspensions of patents" were not objected to as long as a way existed for getting cases through notwithstanding the suspension. On the contrary, the parties who now complain of "suspensions" were benefited by the former practice, for the ordinary attorney's fee of $25 for getting a patent upon an unsuspended case was immediately increased by a demand for $100 more as soon as a case was found in the suspended list. Now, no honest settler can afford, nor does he need, to pay $100 or $25 or any other sum to hasten the issue of his patent. It is not surprising, therefore, that these expedited cases turn out to be fraudulent after patents have issued and it is too late to remedy the wrong by administrative action.

I found it necessary, as a matter of justice to all claimants not less than as a measure in the public interest, to refuse to make any case "special." That has been the fundamental grievance against my administration, of attorneys who thus found a profitable vocation cut off.

Again, my early rulings and decisions clearly indicated a purpose to hold land-grant railroad corporations to the line of the law, instead of permitting their agents and attorneys to continue control of the practice and policy of this office. In like manner it was seen that magnified claims under alleged Spanish and Mexican grants were likely to meet with a scrutiny they had never before received, and finally that all claims for public land would be judged by the laws and compliance with law insisted upon, and that robbery of public lands should be prevented so far as I had power to that end.

As soon as this was made clear an organized movement was started in this city with a view of attempting to break down any reform in the administration of the Land Department and to restore the era of successful frauds, favoritism, and fees. Circulars were issued and sent broadcast to local attorneys and land and money brokers, laying out a plan of campaign and advising them to cause letters to be written to Senators and Representatives in Congress protesting against my action in suspending final action pending the issue of patents, and representing the hardships to settlers resulting from such action.

That the letters with which Senators have been deluged are the products of this inspiration there is no manner of doubt. Individual money-lenders who, in their eagerness to exact a rate of interest that no cultivator of the soil can pay and keep his land, having loaned money without looking to their security, or loan agents who to get their percentages on the investments of their principals have taken risks beyond the bounds of prudence or reason, may of their own motion have added to the volume of systematic complaints, but the general plan of operations, in which all having a similarity of interest could join, was marked out as above stated.

In attempting to stand by the landmarks of the law I was quite as well aware at the outset as now of the interested hostility that such course would evoke. I have not expected that the unlawful clutch of speculation could be loosened from the public lands without a struggle; nor that an aggressive domination, disastrous to present and prohibitive of future actual inhabitancy over half a continent, could be checked or controlled without encountering a determined resistance.

What is complained of, Mr. Senator, to yourself and others is in reality, in my opinion, that, as an officer charged with the administration of the law, I have regarded it my duty to certify for patents to issue to those entrymen only who have made *bona fide* entries and have complied with the conditions prescribed by law as conditions precedent to entitle them to have patents, and that, to the extent of my official responsibility and the means which Congress provides, I am endeavoring to prevent the consummation of frauds upon the public domain.

The letter of your correspondent is herewith returned.

Very respectfully,

WM. A. J. SPARKS, *Commissioner.*

Hon. CHARLES F. MANDERSON,
United States Senate.

I now desire to call your attention to one more topic, and then I am done. It is in reference to the doctrine in land cases that the final certificate is title. Such is the doctrine held by many, but to my mind it is an erroneous one. I have always held that such is not the case. I have always been of the opinion that until a patent is issued the Department is at liberty to investigate any case, and where any disclosures of a fraudulent nature may be found I am most heartily of the opinion that the Department is at full liberty to deny the issuance of a patent. The decisions in support of my position are numerous, and I will here take occasion to cite some of the most prominent ones. Before, however, proceeding to a citation of judicial decisions I desire to say that the custom, or rather practice, of the Department in this matter has been influenced by a similar view of the subject.

An opinion rendered in 1834 by Attorney-General Butler (3 Op. A. G., 93) sets forth that the local-land-affairs act in a quasi judicial capacity in determining the question of fact on which the final certificate issues, but the issuing of patents, however, rests in the Commissioner, who may suspend them where the decisions of the local officers were obtained by fraud or founded on material errors of fact or law.

The doctrine laid down here has been uniformly observed by the Department, the most notable cases being the Charlemagne Tower cases decided on review by Mr. Secretary Teller February 20, 1884 (Decisions, volume 2, page 780); the Coggswell case (volume 3, Decisions), July 21, 1884, by Secretary Teller, and the Chrisinger case by Mr. Secretary Lamar, January 25, 1886.

The judicial decisions upon this subject are very numerous in confirmation of the doctrine I have expressed, and it is also held in addition that the purchaser from the entryman takes no better title than the entryman possesses. I here cite a few decisions which are to the point:

If, before patent issues, the Land Department finds the entry erroneous it may treat the assignment as void, and, notwithstanding it, set the entry aside. (Franklin *vs.* Kelley, 2 Nebr., 78.)

The act of 1841 provides that the entry shall be made with the register of the Land Office. The acts organizing the Land Department of the Government provide that the action of the register shall be subject to revision and supervision by the Commissioner of the General Land Office; an entry with the register is dependent upon the approval of his superior, so far as the course and order of the business go; and, without the affirmative action of the Commissioner, the patents issue. It would be a great evil if a party claiming a pre-emption right could, as soon as the entry was made, convey the land to a third party, and thereby prevent the Commissioner from re-examining and disapproving the entry if it was erroneously allowed. Such a course would expose the Government to serious loss, and pervert a statute conceived in a wise policy and a generous spirit into a means of perpetrating the greatest frauds. This is the mischief aimed at. The object was to protect the Government, and in this view the language—that the right secured by the act should not be assigned—is apt. As between the claimant and the Government, his interest is a right merely until the patent issues. It is subject to reinvestigation and, on inquiry, to be disregarded by the Department. Until the patent issues, it is treated by the Government not as a title but as a right or a claim of right.

I admit that if an entry under the act is made with the register, and the Commissioner finds that it was illegally allowed, as, for instance, if the entry is upon lands not subject to pre-emption, and he sets it aside, a conveyance intermediate the entry and the official act of vacating it would be void. Such a conveyance would be within the mischief. But if a valid entry be made, and a patent issued upon it, a conveyance intermediate those two acts would not be within the mischief. The issue of the patent is a confirmation of the entry; it relates back to it, and takes effect from it. (Astrom *vs.* Hammond, 3 McLean, 107.

In the case of Harkness *vs.* Underhill (1 Black., 316), counsel for plaintiff urged that the register and receiver having sold the land to Waters in conformity with the instructions of the Commissioner of the General Land Office had no further power or jurisdiction over it. Neither had the Commissioner of the General Land Office power to set aside the sale even for fraud. This could only be done by judicial authority.

Counsel for defendant in reply cited the language of the supreme court of Missouri (in Green *vs.* Hill, 9 Mo., 322):

"It is the duty of the Commissioner of the General Land Office to revise the proceedings of the register and receiver and vacate entries which may have been illegally made, and thereby arrest the completion of a title originating in fraud, mistake, or violation of law. And to the same effect: Perry *vs.* O'Hanlon, 11 Mo., 585; Huntsucker *vs.* Clark, 12 Mo., 333; Nelson *vs.* Simms, 23 Miss., 383; Glen *vs.* Thistle, 23 Minn., 42; Mitchell *vs.* Cobb, 13 Ala., 137; Dickinson *vs.* Brown, 9 Smeade & Marshall, 130; Gray *vs.* McCance, 4 Ill."

The court (Mr. Justice Catron) said:

The question is again raised whether this entry having been allowed by the register and receiver could be set aside by the Commissioner.

This question has several times been raised and decided in this court upholding the Commissioner's powers. (Garland *vs.* Winn, 20 How., 8; Lytle *vs.* The State of Arkansas, 22 How.)

The two following also have a bearing on the question at issue:

A purchaser of land must look to every part of the title which is essential to its validity. (Brush *vs.* Ware, 15 Pet., 112.)

States have no power to declare certificates of purchase of equal dignity with a patent. (Bagnell *vs.* Broderick, 13 Pet., 436.)

In Barnard *vs.* Ashley (13 How., 43), the court said that the power of supervision by the Commissioner of the General Land Office "is exercised by virtue of the act of July 4, 1836, which provides 'that from and after the passage of this act the executive duties now prescribed, or which may hereafter be prescribed by law appertaining to the survey and sale of the public lands of the United States, or in any wise respecting such public lands, and also such as relate to private claims of land and the issuing of patents for all grants of land under the authority of the Government of the United States, shall be subject to the supervision and control of the Commissioner of the General Land Office, under the direction of the President of the United States.'

"The necessity of 'supervision and control,' vested in the Commissioner acting under the direction of the President, is to manifest to require comment, further than to say that the facts found in this record show that nothing is more easily done than apparently to establish, by *ex parte* affidavits, cultivation and possession of particular quarter-sections of lands, when the fact is untrue. That the act of 1836 modifies the powers of registers and receivers to the extent of the Commissioner's action in the instance before us, we hold to be true. But if the construction of the act of 1836 to this effect were doubtful, the practice under it for nearly twenty years could not be disturbed without manifest impropriety.

"The case relied on, of Wilcox *vs.* Jackson (13 Pet., 511) was an ejectment suit, commenced in February, 1836; and as to the acts of the register and receiver, in allowing the entry in that case, the Commissioner had no power of supervision, such as was given him by act of July 4, 1836, after the case was in court.

In the next case (9 How., 333) all the controverted facts on which both sides relied had transpired and were concluded before the act of July 4, 1836, was passed; and therefore its construction, as regards the Commissioner's powers under the act of 1836, was not involved. Whereas, in the case under consideration, the additional proceedings were had before the register and receiver in 1837, and were subject to the new powers conferred on the Commissioner.

In Vaquire *vs.* Tyler (1 Black, 195) the court recognized and affirmed the "plenary powers conferred upon the Commissioner by the act of July 4, 1836," and said that the power of the Secretary of the Interior under the act of March 3, 1849, to revise on appeal is "necessarily coextensive with the powers to adjudge by the Commissioner."

In Shepley *vs.* Cowan (91 U. S., 340), the court say:

The officers of the Land Department are specially designated by law to receive, consider, and pass upon proofs presented with respect to settlement upon the public lands with a view to secure the rights of pre-emption. If they err in the construction of the law applicable to any case, or if fraud is practiced upon them, or they themselves are chargeable with fraudulent practices, their rulings may be reviewed and annulled by the courts when a controversy arises between private parties founded upon their decisions.

In Marquiz *vs.* Frisbie (101 United States, 475) the court say:

We have repeatedly held that the courts will not interfere with the officers of the Government while in the discharge of their duties in disposing of the public lands, either by injunction or mandamus. (Litchfield *vs.* Register and Receiver, 9 Wool., 552; Gaines *vs.* Thompson, 7 *Id.*, 347; The Secretary *vs.* McGarrahan, 9 *Id.*, 289.)

After the United States has parted with its title and the individual has become vested with it, the equities subject to which he holds it may be enforced, but not before. (Johnson *vs.* Towsley, 13 *Id.*, 72; Shefley *vs.* Cowan, 91 U. S., 330).

We did not deny the right of the courts to deal with the possession of the land prior to the issue of the patent or to enforce contracts between the parties concerning the land. But it is impossible thus to transfer a title which is yet in the United States.

In the United States *vs.* Schurz (102 United States, 395) the court say:

The Constitution of the United States declares that Congress shall have the power to dispose of and make all needful rules and regulations respecting the territory and other property belonging to the United States. Under this provision the sale of the public lands was placed by statute under the control of the Secretary of the Interior. To aid him in the performance of this duty a bureau was created, at the head of which is the Commissioner of the General Land Office, with several subordinates. To them, as a special tribunal, Congress confided the execution of the laws which regulate the surveying, the selling, and the general care of these lands.

In Irvine *vs.* Marshall (20 How., 555) it was held that although a certificate may be the subject of bargain and sale, yet the United States can take care that conveyance shall be to him who is in good faith its vendee, and the court said:

A reception of the certificate of purchase as evidence of title may be regular and convenient as a rule of business, but it has not been anywhere established as conclusive evidence, much less has it been adjudged to forbid or exclude proofs of the real and just rights of claimants.

A mere declaration in writing by a vendor that the vendee has paid the purchase-price of land, and that he intends to give him a deed, is not a document purporting to convey title. (Osterman *vs.* Baldwin, 6 Wall., 116.)

Legal title does not pass by contract of purchase without deed, and one who holds or claims by contract only is not protected as a *bona fide* purchaser for value. (Boone *vs.* Chiles, 10 Pet., 177.)

It will not do for a purchaser to close his eyes to facts which are open to his investigation for the exercise of that diligence which the law imposes. Such purchasers are not protected. (Boush *vs.* Wall, 15 Pet., 111.)

Purchasers by quitclaim deed even are not regarded as *bona fide* purchasers without notice. (Oliver *vs.* Piatt, 3 How., 333; May *vs.* Le Clare, 11 Wall., 217; Dickerson *vs.* Colegrove, 100 U. S., 578.)

Party without title can not acquire it by payment of taxes on land. (Homestead Co. *vs.* Valley R. R., 17 Wall., 153.)

A purchaser of land must look to every part of the title which is essential to its validity. (Brush *vs.* Ware, 15 Pet., 112.)

States have no power to declare certificates of purchase of equal dignity with a patent. (Bagnell *vs.* Broderick, 13 Pet., 436.)

In Quinby *vs.* Cowlan (104 U. S., 420) the court say:

The laws of the United States prescribe with particularity the manner in which portions of public domain may be acquired by settlers. They require personal settlement upon the lands desired and their inhabitation and improvement, and a declaration of the settler's acts and purposes to be made in the proper office of the district within a limited time after the public surveys have been extended over the lands. By them a land department has been created to supervise all the various steps required to the acquisition of the title of the Government. Its officers are required to receive, consider, and pass upon the proofs furnished as to the alleged settlements upon the lands, and their improvement when pre-emptian rights are claimed, and, in case of conflicting claims to the same tract to hear the contesting parties.

The proofs offered in compliance with the law are to be presented, in the first instance, to the officers of the district where the land is situated, and from their decision an appeal lies to the Commissioner of the General Land Office, and from him to the Secretary of the Interior. For mere errors of judgment as to the weight of evidence on these subjects by any of the subordinate officers the only remedy is by an appeal to his superior of the Department. The courts can not exercise any direct appellate jurisdiction over the rulings of those officers or of their superior in the Department in such matters, nor can they reverse or correct them in a collateral proceeding between private parties.

In this case, the allegation that false and fraudulent representations as to the settlement of the plaintiff were made to the officers of the Land Department is negatived by the finding of the court. It would lead to endless litigation and be fruitful of evil if a supervisory power were vested in the courts over the action of the numerous officers of the Land Department on the mere questions of fact presented for their determination. It is only when those officers have misconstrued the law applicable to the case as established before the Department, and thus have denied to parties rights which, upon a correct construction, would have been conceded to them, or where misrepresentations and fraud have been practiced necessarily affecting their judgment, that the courts can in a proper proceeding interfere and refuse to give effect to their action. On this subject we have repeatedly and with emphasis expressed our opinion, and the matter should be deemed settled. (Johnson *vs.* Towsley, 13 Wall., 72; Shepley *vs.* Cowan, 91 U. S., 330-340; Moore *vs.* Robbins, 96 *ibid.*, 530.)

The doctrine applicable to the conclusive character of the solemn judgments of courts, with full jurisdiction over the parties, and the subject-matter, made after appearance, pleading, and contest by parties on both sides, can not be properly applied to the proceedings of the land office, where no issue is taken, no adversary proceedings had, no contest made, and the land officers act only on such evidence as claimant presents, with no means of controverting its truth. (United States Minor, 114 United States, 243.)

The quasi-judicial nature of the functions of land officers has reference only to cases in which individuals have, as against each other, contested the right to a patent before them. (*Id.*)

Where a patent has been obtained through mistake or by fraud and perjury, and there are no innocent holders for value, the legal title conveyed by the patent may be set aside in a court of equity. (*Id.*)

The principles settled by the courts are that the action of registers and receivers in admitting an entry of public lands is not conclusive, but is subject to review by the superior officers of the Land Department, by appeal in cases of contest between private parties, and as a matter of executive jurisdiction in cases not of individual contest; that the latter are cases between the Government and the entryman alone; that assignees before patent have no standing as innocent purchasers; that until patent issues on public-land entries the legal title to the land remains in the United States; that the Commissioner of the General Land Office may reject and cancel unpatented entries for illegality and fraud; that this is necessarily an act of executive jurisdiction; that the duties of supervising the disposal of public lands are executive duties and are not the subject of judicial interference; that the question of passing the title of the United States upon an entry of public lands under the public-land law is essentially a question of executive and not of judicial determination; that the point where the jurisdiction of the courts begin is the point at which executive jurisdiction ceases, namely, after patent has been issued, when, in a proper proceeding, the courts may intervene to correct the errors of executive action; and that it is only after the conveyance of legal title by patent that purchasers for value are protected by the courts.

The courts have often ruled that where the right to a patent has once become vested in a purchaser of public lands it is equivalent, so far as the Government is concerned, to a patent issued. (Stark *vs.* Starrs, 6 Wall., 402; Simmons *vs.* Wagner, 101 U. S., 260.) But none of these decisions hold that the certificate and receipt of the register and receiver is conclusive evidence that a right has vested, nor that a patent is not necessary for the conveyance of the legal title. In Myers *vs.* Croft (13 Wall., 291), the court says that the pre-emptor could sell after entry if he came up and made his proof and payment "with clean hands." But he must be in good faith the owner of the land and have "done nothing inconsistent with the provisions of the law on the subject."

The validity of a conveyance depends upon the validity of the entry, and that is always a proper subject of inquiry by the Land Department at any time before patent issues, and by the courts in a proper proceeding afterward.

In the case of Harkness *vs.* Underhill (1 Black., 316), counsel for plantiff urged that—

"The register and receiver having sold the land to Waters in conformity with the instructions of the Commissioner of the General Land Office had no further power or jurisdiction over it. Neither had the Commissioner of the General Land Office power to set aside the sale even for fraud. This could only be done by judicial authority."

Counsel for defendant in reply cited the language of the supreme court of Missouri (in Green *vs.* Hill, 9 Mo., 322):

It is the duty of the Commissioner of the General Land Office to revise the proceedings of the register and receiver and vacate entries which may have been illegally made, and thereby arrest the completion of a title originating in fraud, mistake, or violation of law. And to the same effect: Perry *vs.* O'Hanlon, 11 Mo., 585; Huntsucker *vs.* Clark, 12 Mo., 353; Nelson *vs.* Sims, 23 Miss., 383; Glen *vs.* Thistle, 23 Minn., 42; Mitchell *vs.* Cobb, 13 Ala., 137; Dickinson *vs.* Brown, 2 Smeade & Marshall, 130; Gray *vs.* McCance, 4 Ill.

The court (Mr. Justice Catron) said:

The question is again raised whether this entry having been allowed by the register and receiver could be set aside by the Commissioner.

This question has several times been raised and decided in this court upholding the Commissioner's powers. (Garland *vs.* Winn, 20 How., 8; Lytle *vs.* The State of Arkansas, 22 How.)

In Barnard *vs.* Ashley (18 How., 43), the court said that the power of supervision by the Commissioner of the General Land Office "is exercised by virtue of the act of July 4, 1836, which provides 'that from and after the passage of this act the executive duties now prescribed, or which may hereafter be prescribed by law appertaining to the survey and sale of the public lands of the United States, or in any wise respecting such public lands, and also such as relate to private claims of land and the issuing of patents for all grants of land under the authority of the Government of the United States, shall be subject to the supervision and control of the Commissioner of the General Land Office, under the direction of the President of the United States.'

The necessity of "supervision and control," vested in the Commissioner acting under the direction of the President, is too manifest to require comment, further than to say that the facts found in this record show that nothing is more easily done than apparently to establish, by *ex parte* affidavits, cultivation and possession of particular quarter-sections of lands, when the fact is untrue. That the act of 1836 modifies the powers of registers and receivers to the extent of the Commissioner's action in the instance before us, we hold to be true. But if the construction of the act of 1836 to this effect were doubtful, the practice under it for nearly twenty years could not be disturbed without manifest impropriety.

The case relied on, of Wilcox *vs.* Jackson (13 Pet., 511) was an ejectment suit commenced in February, 1836; and as to the acts of the register and receiver, in allowing the entry in that case, the Commissioner had no power of supervision such as was given him by act of July 4, 1836, after the case was in court.

In the next case (9 How., 333) all the controverted facts on which both sides relied had transpired and were concluded before the act of July 4, 1835, was passed; and therefore its construction, as regards the Commissioner's powers under the act of 1836, was not involved. Whereas, in the case under consideration, the additional proceedings were had before the register and receiver in 1837, and were subject to the new powers conferred on the Commissioner.

In Vaquire *vs.* Tyler (1 Black, 195) the court recognized and affirmed the "plenary powers conferred upon the Commissioner by the act of July 4, 1836," and said that the power of the Secretary of the Interior under the act of March 3, 1849, to revise on appeal is "necessarily coextensive with the powers to adjudge by the Commissioner."

In Shepley *vs.* Cowan (91 U. S., 340) the court says:

The officers of the Land Department are specially designated by law to receive, consider, and pass upon proofs presented with respect to settlement upon the public lands with a view to secure the rights of pre-emption. If they err in the construction of the law applicable to any case, or if fraud is practiced upon them, or they themselves are chargeable with fraudulent practices, their rulings may be reviewed and annulled by the courts when a controversy arises between private parties founded upon their decisions.

In Marquiz *vs.* Frisbie (101 United States, 475) the court say:

We have repeatedly held that the courts will not interfere with the officers of the Government while in the discharge of their duties in disposing of the public lands, either by injunction or mandamus. (Litchfield *vs.* Register and Receiver, 9 Wool., 552; Gaines *vs.* Thompson, 7 *Id.*, 347; The Secretary *vs.* McGarrahan, 9 *Id.*, 289.)

After the United States has parted with its title and the individual has become vested with it, the equities subject to which he holds it may be enforced, but not before. (Johnson *vs.* Towsley, 13 *Id.*, 72; Shefley *vs.* Cowan, 91 U. S., 330.)

We did not deny the right of the courts to deal with the possession of the land prior to the issue of the patent or to enforce contracts between the parties concerning the land. But it is impossible thus to transfer a title which is yet in the United States.

In The United States vs. Schurz (102 United States, 395) the court say:

The Constitution of the United States declares that Congress shall have the power to dispose of and make all needful rules and regulations respecting the territory and other property belonging to the United States. Under this provision the sale of the public lands was placed by statute under the control of the Secretary of the Interior. To aid him in the performance of this duty a bureau was created, at the head of which is the Commissioner of the General Land Office with several subordinates. To them, as a special tribunal, Congress confided the executing of the laws which regulate the surveying, the selling, and the general care of these lands.

Congress has also enacted a system of laws by which rights to these lands may be acquired and the title of the Government conveyed to the citizens. This court has with a strong hand upheld the doctrine that so long as the legal title of these lands remained in the United States, and the proceedings for acquiring it were as yet *inchoate*, the courts would not interfere to control the exercise of the power vested in their tribunal. To that doctrine we still adhere.

And again (*Id.*, 411):

The question whether any particular tract belonging to the Government was open to sale, pre-emption, or homestead right is in every instance a question of law as applied to the facts for the determination of those officers.

In Quinby vs. Cowlan (104 U. S., 420) the court say:

The laws of the United States prescribe with particularity the manner in which portions of public domain may be acquired by settlers. They require personal settlement upon the lands desired and their inhabitation and improvement, and a declaration of the settler's acts and purposes to be made in the proper office of the district within a limited time after the public surveys have been extended over the lands. By them a land department has been created to supervise all the various steps required for the acquisition of the title of the Government. Its officers are required to receive, consider, and pass upon the proofs furnished as to the alleged settlements upon the lands, and their improvement when pre-emption rights are claimed, and, in case of conflicting claims to the same tract, to hear the contesting parties.

In conclusion, it may and can with great propriety be said that the charges heaped upon Commissioner Sparks are totally groundless. To the poor and the homeless his acts have been of a special blessing; to fraud and dishonesty they have been of a blighting nature. To those who have the best interests of our country at heart, whose desire it is to see honesty and integrity the guides of official conduct, the acts of Commissioner Sparks will receive approval and hearty support.

Education.

That education is an object of national concern, and a proper subject of legislation, all admit.—*Chief-Justice Marshall*, 4 Wheaton, page 634, Supreme Court decision.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886.

On the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt.

Mr. WHEELER said:

Mr. CHAIRMAN: I offer the amendment which I send to the desk.

The Clerk read as follows:

Add the following proviso:

"*Provided*, That before any bonds be purchased or redeemed under this resolution there be appropriated, from the surplus money in the Treasury, the sum of $10,000,000 each year, to aid in the support of common schools, and that such money shall annually be divided among and paid out in the several States and Territories in that proportion which the whole number of persons in each who, being of the age of ten years and over, can not read bears to the whole number of such persons in the United States. Such computation shall be made according to the census of 1880. Said schools to be under the supervision and control of the State officials in the States where located, and of the Territorial authorities where located in the Territories."

Mr. MORRISON. I make a point of order that the amendment is not germane.

Mr. WILLIS. I hope the gentleman from Alabama [Mr. WHEELER] will withdraw that proposition.

Mr. WHEELER. I am earnestly in favor of the object sought to be attained by the measure under consideration, but I can not concur with my distinguished friend from Illinois [Mr. MORRISON] that my amendment is not germane to the resolution. The design of the resolution is to pay off a portion of the interest-bearing debt of the Government with money now lying idle in the Treasury and wholly unproductive. It is to release and put in circulation the surplus now in the Treasury, and my amendment directs that a portion of any surplus shall be applied to the praiseworthy and necessary purpose of aiding common schools in all the States of the Union.

This statement of the object of the amendment will show my friend from Kentucky [Mr. WILLIS] its propriety and importance.

I am most decidedly in favor of making the most advantageous use of all the idle money that may be available for any purpose. It is a matter of plain business judgment. I read from the last official report showing the condition of the Treasury on July 1:

Cash in the Treasury July 1.

Available for reduction of the public debt:		
Gold held for gold certificates actually outstanding		$76,044,375 00
Silver held for silver certificates actually outstanding		88,116,225 00
United States notes held for certificates of deposit actually outstanding		18,250,000 00
Cash held for matured debt and interest unpaid		18,999,817 05
United States bonds and interest		3,789,163 51
Fractional currency		2,667 17
Total available for reduction of the debt		205,202,247 73
Reserve fund:		
Held for redemption of United States notes, acts January 14, 1875, and July 12, 1882		100,000,000 00
Unavailable for reduction of the debt:		
Fractional silver coin	$28,904,681 66	
Minor coin	377,814 00	
		29,282,495 66
Certificates held as cash:		
Legal-tender	250,000 00	
Gold	55,129,870 00	
Silver	27,861,450 00	
		83,241,320 00
Net cash balance on hand		75,191,109 95
Total cash in the Treasury as shown by Treasurer's general account		492,917,173 34

From this statement it appears that we now have in the Treasury, available for the reduction of the debt, about $200,000,000. The resolution provides that $100,000,000 of this surplus shall always be retained in the Treasury, but that any sum in excess of that amount shall be applied to the payment and retirement of the interest-bearing debt. This is a proposition which must command the unqualified assent of any good business man. There is not a clear-headed and reputable merchant or banker in the country who will not recognize the advisability of using all idle and unproductive money for the reduction of the obligations upon which interest is constantly accruing.

But while we recognize and make the necessary provision for our outstanding debt, let us not forget the important fact that we have other obligations beside those due the bondholder; there is a debt due the people—the most sacred for which the Government can be held. All civilized governments now recognize it as an important duty to assist in educating the children of the laboring people; and that our Government shall do this is specifically demanded in the platform of the Democratic party adopted at Chicago in 1884, the demand being expressed in these words:

We favor * * * the diffusion of free education by common schools, so that every child in the land may be taught the rights and duties of citizenship.

The purpose and the theory of this amendment is identical with the educational bill which I had the honor to introduce on the 21st day of December, 1885, and therefore I shall address the House upon this amendment precisely as though that bill was under consideration.

Mr. Chairman, I feel constrained by a sense of duty to my constituents and to the country at large to endeavor to impress upon the House my idea of the importance of this amendment, and the educational bill to our general welfare and prosperity.

In my humble judgment the question involved in this amendment and that bill is more important, more momentous in its relations to and bearing upon our future progress and prosperity than any that has engaged our attention during the entire session.

I appreciate as fully as can any gentleman the necessity for some carefully prepared and well-considered measures of revenue and administrative reform. Such measures are, I concede, of very great importance, for in them are involved the questions of economy, wisdom, and efficiency in all the public departments.

But in the educational measure we are confronted with the vital, the overshadowing question of the stability of the form of Government established by our forefathers, and upon which depends the perpetuity of free institutions among men.

For this reason, sir, I desire to enter my most earnest and emphatic protest against the adjournment of this House before it has enacted some bill of this character into a law.

THE POINTS IN THE CASE.

In asking the attention of the House to this subject I shall endeavor briefly to show:

First. That the theory of the educational bill has been the theory of our Government from its first inauguration.

Second. That the theory of this bill was fully recognized and continually acted upon by the Continental Congress.

Third. That all our early Presidents heartily concurred in and earnestly advocated the principle upon which this bill is based.

Fourth. That all governments have of late years recognized as an indisputable principle of governmental action the fact that for a country to become prosperous and great it is necessary to educate the people.

Fifth. That this law is necessary to equalize the benefits and advantages conferred by the General Government—some States having received from fifty to sixty times as much as others.

Sixth. That this bill is advocated by our wisest, most patriotic, and sagacious citizens.

Seventh. That the purpose designed to be accomplished by this bill is essential to the highest prosperity of our people and the maintenance of that form of government under which they will be the recipients of the greatest blessings.

Eighth. That the bill in no wise contravenes the Constitution of the United States, but, on the contrary, according to the interpretations of that instrument by our highest judicial tribunal, is in strict conformity thereto.

Ninth. That the one ill-considered opinion and expression of Mr. Madison, in 1792, which has been so often iterated and reiterated by the opponents of this bill, has been refuted and rejected by our greatest Democratic statesmen, including Monroe, Calhoun, Jackson, and finally has been recanted, repudiated, and apologized for by Mr. Madison himself; and that it is this repudiated doctrine upon which the opponents of education base their arguments in their efforts to show that the measure is violative of the Constitution.

Tenth. That it is in strict conformity with the usages, principles, and demands of the Democratic party.

THE THEORY OF OUR GOVERNMENT.

Our forefathers came to this country for the purpose of founding a Government in which the people should rule. They abandoned luxurious homes and all the comforts and conveniences which had resulted from centuries of civilization to encounter and struggle with the hardships and dangers of a land covered with dense forests, traversed by wild beasts, and inhabited by savage Indians.

All they expected in return for their dangers, privations, and sufferings was the privilege to worship God according to the dictates of their conscience, and to establish a government which would restrain vice and encourage virtue. To accomplish this great and God-like purpose, they declared as the cardinal doctrine of their new government that all men are created free and equal; and to maintain freedom, they appreciated the necessity that all should enjoy the blessings of education.

Before leaving Europe schoolmasters were procured for every vessel, and classes were established and maintained on shipboard during the voyage. One of the first acts of the colonists was to enact laws donating both money and lands for educational purposes; and during the early period of American settlements as much as one-fourth of the income of some of the colonies was devoted to the maintenance of public schools. In addition to primary schools, grammar schools were established in many parts of New England. Harvard College was founded in 1638, William and Mary in 1693, and Yale in 1701.

During the war of the Revolution a temporary check was given to the pursuit of learning; but its importance was early considered upon the return of peace, and one of the first laws enacted by the Colonial Congress was to set apart one thirty-sixth of the great western domain for the advancement of this object.

LAWS OF THE COLONIAL CONGRESS.

As chairman of the committee on the organization of the Western Territory, in the Congress of the Confederation, Mr. Jefferson, in May, 1784, made a report upon that subject, in which it was provided:

That there shall be reserved the central section of every township for the maintenance of public schools, and the section immediately adjoining the same for the support of religion.

The proposition to provide in any way for the support of religion excited some opposition, and after debate that proviso was stricken out. A year later, after mature consideration, the Congress enacted a law on May 20, 1785, in which it was provided:

There shall be reserved lot No. 16 of every township for the maintenance of public schools.

I read from the Journal of the American Congress, volume 4, April 1, 1782, to November 1, 1788, pages 520 and 521, containing proceedings of May 20, 1785:

Congress proceeded with third reading of the ordinance for ascertaining the mode of disposing of lands in the Western Territories, and the same being gone through was passed, as follows:

* * * * * * * *

"There shall be reserved the lot No. 16 of every township for the maintenance of public schools within said township; also, one-third part of all gold, silver, lead, and copper mines to be sold or otherwise disposed of, as Congress shall hereafter direct." * * *

RICHARD H. LEE, *President.*

The vote of the Colonial Congress upon this measure was unanimous.

The report of the committee upon the ordinance, dated July 23, 1787, to provide for the sale of the Western Territory, ordered:

That the lot No. 16 in each township, or fractional part of a township, be given perpetually for the purpose contained in said ordinance (the ordinance of May 20, 1785).

The ordinance passed during the same month for the government of the "Territory of the United States northwest of the River Ohio" contained these words:

ART. 3. Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall be forever encouraged.

It is worthy of note that Mr. Madison was a member of the committee which reported the ordinance of July 23, and was one of its most ardent advocates.

It is interesting to find that the ideas of our colonial fathers on the subject of education were deeply impressed upon the minds of the founders of our Government under the Constitution. Nearly every one of the principal actors in the stirring events which resulted in the separation of the colonies from the mother country, the establishment of our independence, and the formation of a more durable Government under the Constitution were open, bold, and persistent champions of the theory that education was not only important but indispensable to the welfare of a free people, and that it was the duty of the Government to provide the means of acquiring an elementary education to those of its citizens who were unable to provide it for themselves.

WASHINGTON AND ADAMS ON EDUCATION.

General Washington, in his first message to Congress, says:

Knowledge is in every country the surest basis of public happiness. In one in which the measures of government receive their impressions so immediately from the sense of the community as in ours, it is proportionately essential.

In his eighth annual message, he recommended the establishment of a national university and of a national military academy, and in his farewell address he again reverts to this subject in a most impressive manner, for he says:

Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened.

Mr. John Adams, who succeeded Washington, though a Federalist, unable to bring himself to believe or trust in the intelligence, virtue, or integrity of the great mass of mankind, could yet recognize the advantages of state education in making better citizens and benefiting the whole people of the entire country, and was quite as earnest as his predecessor in his advocacy of general education. In his work on government, he said:

Laws for the liberal education of youth, especially of the lower class of people, are so extremely wise and useful that, to a humane and generous mind, no expense for this purpose would be thought extravagant.

Just before his death he wrote to a committee of the Kentucky Legislature in these words:

The wisdom and generosity of your Legislature in making liberal appropriations in money for the benefit of schools, academies, colleges, and the university is an equal honor to them and their constituents, a proof of their veneration for literature and science, and a portent of great and lasting good to North and South America and to the world. Great is truth, great is liberty, and great is humanity, and they must and will prevail.

THE APOSTLE OF DEMOCRACY ON EDUCATION.

Jefferson, the author of the Declaration of Independence, the great apostle of the democratic theory of the equality of man and of his inherent and inalienable right to self-government, was ever an earnest, eloquent, and efficient advocate of education by the State.

As a member of the Virginia Legislature he prepared and introduced three bills for State education, the first of which related solely to common schools.

The preamble to this bill is so cogent and unanswerable a presentation of the reasons why the measure now under consideration should be supported that I quote it:

Whereas it appeareth that however certain forms of government are better calculated than others to protect individuals in the free exercise of their natural rights, and are at the same time themselves better guarded against degeneracy, yet experience has shown that even under the best forms those intrusted with power have, in time, and by slow operations, perverted it into tyranny; and it is believed that the most effectual means of preventing this would be to illuminate as far as practicable the minds of the people at large, and more especially to give them knowledge of those facts which history exhibiteth that, possessed thereby of the experience of other ages and countries, they may be enabled to know ambition under all its shapes, and prompt to exert their natural powers to defeat its purposes; and

Whereas it is generally true that the people will be happiest whose laws are best, and are best administered, and that laws will be wisely formed and honestly administered in proportion as those who form and administer them are wise and honest; whence it becomes expedient for promoting the public happiness that those persons whom nature hath endowed with genius and virtue, should be rendered by liberal education worthy to receive and able to regard the sacred deposits of the rights and liberties of their fellow-citizens, and that they should be called to that charge without regard to wealth, birth, or other accidental condition or circumstance; but the indigence of the greater number disabling them from so educating at their own expense those of their children whom nature hath fitly formed and disposed to become useful instruments for the public, it is better that such should be sought for and educated at the common expense of all than that the happiness of all should be confided to the weak or wicked.

Mr. Jefferson, in his sixth annual message, opposing the removal of the tax on imports, uses these words:

Patriotism would certainly prefer its continuance and application to the great purposes of the public education, roads, rivers, and canals.

In his eighth annual message, in discussing the surplus revenue in the Treasury, he uses these words:

Shall it lie unproductive in the public vaults? Shall the revenue be reduced? Or shall it not rather be appropriated to the improvements of roads, canals, rivers, education, and other great foundations of prosperity and union, under the powers which Congress may already possess, or such amendment of the Constitution as may be approved by the States?

Mr. Jefferson was deeply interested in the schools of Virginia, and proposed a system which is expressed in these words:

First. Elementary schools, for all children generally, rich and poor. Second. Colleges for a middle degree of instruction, calculated for the common purposes of life, and such as would be desirable for all who were in easy circumstances. And third, an ultimate grade for teaching the sciences generally and in their highest degree.

I find in Jefferson's work (Volume VI, page 517) a letter to Mr. Yancey dated January 6, 1816, in which he says:

If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be. The functionaries of every government have propensities to command at will the liberty and property of their constituents. There is no safe deposit for these but with the people themselves;

nor can they be safe with them without information. Where the press is free and every man able to read, all is safe.

In the same volume, page 566, I find a letter to Governor Nicholas, dated April 2, 1816, in advocacy of elementary education. He says:

My partiality for that division is not founded in views of education solely, but infinitely more as the means of a better administration of our Government and the eternal preservation of its republican principles.

In a letter to Mr. Cabell dated November 28, 1820 (see Jefferson's works, Volume XVII, page 187), Mr. Jefferson said that—

More money from the people was not needed, but that the money raised for education should be employed understandingly and for the greatest good.

He also said:

That good requires that, while they are instructed in general competently to the common business of life, others should employ their genius with necessary information to the useful arts, to inventions for saving labor and increasing our comforts, to nourishing our health, to civil government, military science, &c.

Would it not have a good effect for the friends of this university—

University of Virginia—

to take the lead in proposing and effecting a practical scheme of elementary schools, to assume the character of the friends rather than the opponents of that object?

In the same letter Jefferson said:

Surely Governor Clinton's display of the gigantic efforts of New York toward the education of her citizens will stimulate the pride as well as the patriotism of our Legislature, to look to the reputation and safety of their own country, to rescue it from the degradation of becoming the Barbary of the Union, and of falling into the ranks of our own negroes. To that condition it is fast sinking. * * *

MADISON'S VIEWS OF ITS IMPORTANCE.

Madison, who was called the father of the Constitution, who was one of the originators of the idea and was more active than any of his associates in framing that great instrument, and who, therefore, it may be reasonably supposed, understood more fully than any one man who ever lived the full extent of the powers granted by the Constitution to the General Government, and the limitations imposed by that instrument under which those powers were to be exercised, steadfastly and earnestly upheld the idea that the education of the people was one of the first and most important duties of the Government.

I have shown that on May 23, 1785, the Continental Congress enacted a law which gave every sixteenth section in the public domain for the maintenance of public schools, and Mr. Madison was one of the members of the committee of the Congress which, in July, 1787, unanimously recommended that this donation, or grant, be made perpetual.

Mr. Madison stepped from the halls of the Colonial Congress into the convention which framed our present Constitution, and immediately upon the conclusion of its labors was elected a member of the first Congress held under the Constitution, and was re-elected to the second, third, and fourth Congresses, and with all the debates and discussions touching the duties and powers of the General Government under the Constitution fresh in his mind, all of his utterances—speeches or letters—prove him to have been a staunch advocate of popular education by the General Government.

And yet many of the opponents of this measure have endeavored to find in Mr. Madison's speech on the cod-fisheries a denial of the right of the General Government to make appropriations to assist in the cause of education.

Passing by, for the time being, the constitutional questions raised by this speech of Mr. Madison—which I propose to consider in another part of my argument—I beg now to call the attention of the House to other well-known utterances of this eminent constitutional authority upon the question of Government aid to education. My object in doing this is to enable gentlemen to constrast these utterances with this isolated expression regarding a bounty to a special industry.

On March 4, 1809, President Madison delivered his inaugural address, and alluding to the principles by which he pledged himself to be governed, he said:

To favor in like manner the advancement of science and the diffusion of information as the best aliment to true liberty.

In his second annual address he was, if possible, more emphatic, enforcing the importance of general education and the establishment of a national university. He said:

While it is universally admitted that a well instructed people alone can be permanently a free people, and while it is evident that the means of diffusing and improving useful knowledge form so small a proportion of the expenditures for national purposes, I can not presume it to be unreasonable to invite your attention to the advantages of superadding to the means of education provided by the several States a seminary of learning instituted by the National Legislature, within the limits of their exclusive jurisdiction, the expense of which might be defrayed or reimbursed out of the vacant grounds which have accrued to the nation within those limits.

During Mr. Madison's entire life the subject uppermost in his mind seems to have been the great importance of education. In volume 3, page 276, of Madison's works, I find a letter to Mr. Barry, under date of August 4, 1822, in which he says:

The liberal appropriations made by the Legislature of Kentucky for a general system of education can not be too much applauded. A popular government without popular information, or the means of acquiring it, is but a prologue to a farce or tragedy, or perhaps to both. Knowledge will forever govern ignorance; and a people who mean to be their own governors must arm themselves with the power which knowledge gives.

I also read from the same volume, page 523, a paragraph from a letter from Mr. Madison to Mr. Teakle, dated March 29, 1826:

The best service that can be rendered a country, next to that of giving it liberty, is in diffusing the mental improvement equally essential to the preservation and the enjoyment of the blessing.

MONROE AND QUINCY ADAMS ON EDUCATION.

On March 4, 1817, Mr. Monroe delivered his inaugural adddress, in which he said:

Had the people of the United States been educated in different principles; had they been less intelligent, less independent, or less virtuous, can it be believed that we should have maintained the same steady and consistent career or been blest with the same success? While, then, the constituent body retains its present sound and healthful state everything will be safe. * * * It is only when the people become ignorant and corrupt, when they degenerate into a populace, that they become incapable of exercising the sovereignty. Usurpation is an easy attainment and an usurper soon found. The people themselves become the willing instruments of their own debasement and ruin. Let us look to the great cause and endeavor to preserve it in full force. Let us by all wise and constitutional measures promote intelligence among the people as the best means of preserving our liberties.

John Quincy Adams, in his inaugural address, March 4, 1825, emphasized and reiterated the recommendations regarding education made by Washington, Adams, Jefferson, Madison, and Monroe. He discussed the specific power of Congress under the Constitution, and said:

If these powers and others enumerated in the Constitution may be effectually brought into action by laws promoting the improvement of agriculture, commerce, and manufactures, the cultivation of the mechanic and of the elegant arts, the advancement of literature, and the progress of the sciences, ornamental and profound—to refrain from exercising them for the benefit of the people themselves would be to hide in the earth the talent committed to our charge, would be treachery to the most sacred of trusts.

In 1805, soon after the acquisition of Louisiana, the Territory of Orleans petitioned Congress for a grant of lands for public schools. The committee of the House of Representatives made their report on February 27, 1806, which I read from American State Papers, Public Lands, volume 1, page 258:

Your committee are of opinion that it ought to be a primary object with the General Government to encourage and promote education in every part of the Union, so far as the same can be done consistent[ly] with the general policy of the nation and so as not to infringe the municipal regulations that are or may be adopted by the respective State authorities on this subject.

The benefits resulting to society in general from the establishment and support of public institutions for the education of youth and the general diffusion of science, are too well known to all discerning persons to require any particular investigation on the present occasion. The National Legislature has by several of its acts on former occasions evinced in the strongest manner its disposition to afford the means of establishing and fostering, with a liberal hand, such public institutions.

WEBSTER AND PRENTISS.

In his celebrated speech of January 26, 1830, Mr. Webster referred to the ordinance of the Continental Congress of 1787, in these words:

It set forth and declared it to be a high and binding duty of government itself to support schools and advance the means of education, on the plain reason that religion, morality, and knowledge are necessary to good government and to the happiness of mankind.

In another speech, Mr. Webster said:

Education comprehends all that series of instruction and discipline which is intended to enlighten the understanding, correct the temper, and form the manners and habits of youth and fit them for usefulness in their future stations.

Sergeant S. Prentiss, one of the ablest lawyers and most eloquent speakers our country has produced, fully realized the necessity of providing means for educating a people who were charged with the responsible duty of perpetuating free institutions. In a speech delivered in New Orleans in December, 1846, this profound thinker and brilliant speaker expressed his convictions upon this point in these emphatic words:

The principle that society is bound to provide for its members education as well as protection, so that none need be ignorant except from choice, is the most important that belongs to modern philosophy. It is essential to a republican government. Universal education is not only the best and surest, but the only sure foundation for free institutions. True liberty is the child of knowledge; she pines away and dies in the arms of ignorance.

The written and spoken opinions of these thoughtful, earnest, great men show that in their view education includes moral and religious, as well as physical, scientific, and literary training.

Education is the guide to progress, and no civilization is worth having which does not crystallize around Christian virtue.

Knowledge is freedom.
Knowledge is power.

INTELLIGENCE RULES THE WORLD.

When the Assyrian Empire was most cultured it was most powerful. When the Medo-Persians became most learned they overran and destroyed the Assyrians.

When learning made the Greeks most powerful they annihilated the Medo-Persians, and, finally, when learning elevated the Roman barbarian into greatness, Greece was conquered by victorious Rome.

While this intellectual struggle was in progress between Syria, Greece, and Rome, Germany and England were inhabited by barbarians as savage and ignorant as the natives of Central Africa to-day.

This idea was very forcibly put by Disraeli, who, when reproached on account of his Jewish extraction, retorted that he was proud of, gloried in, the knowledge that while his assailants' ancestors were savage, half-naked barbarians, living in holes in the ground, his (Disraeli's) ancestors were lawgivers and princes among the most intelligent and greatest nation on earth.

But we need go so far back for proofs upon this subject. Alabama has fertile soil and rich and abundant minerals. The soil of little Massachusetts is barren and her minerals are of little value. Yet her wealth is five times ours, and in comparison to the extent of her area her

wealth is fifty times as great as ours. While there are many reasons for this, education has had a great deal to do with it.

The same disproportion exists between the wealth of Alabama and that of Rhode Island. Give Alabama boys the same chance for education as is enjoyed by the boys of Rhode Island and Massachusetts, and I will guarantee that in twenty years the wealth of Alabama will exceed that of both these States combined. And if God spares my life I shall never cease my efforts until Alabama is as rich, prosperous, and happy as any State in the Union, and I believe that to reach this condition she must educate her children.

UNEQUAL DISTRIBUTION OF BENEFITS.

For one hundred years it has been the policy of our Government to aid public schools. The donations, however, have been very unequal. Sometimes land has been donated and sometimes money has been given to States. The belt of Southern States, including Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia, received in land 4,321,576 acres. These States had in 1880 a population of 13,665,654, and therefore were given less than one-third of an acre per capita. The belt of Northern and Northwestern States and Territories, and Texas, namely, California, Colorado, Kansas, Minnesota, Nebraska, Nevada, Texas, and Oregon, and Arizona, Dakota, Idaho, Montana, New Mexico, Utah, Washington and Wyoming Territories, received 112,893,919 acres.

The population of these States and Territories was, according to the last census, 5,723,994; which shows that they received 20 acres for each inhabitant. We therefore see that the States and Territories last enumerated have received sixty times as much land per capita as the Southern States first mentioned.

As might be expected there is less illiteracy in the States where the grants have been liberal than in those States where they have been meager, and the proposed appropriation upon the basis of illiteracy tends in a slight degree to make compensation for the unjust and unequal distribution heretofore made.

Millions of acres of land have been sold and the money placed in the Treasury, and this bill seeks to appropriate a portion of this money for educational purposes.

It would be presumed that the States which have been given the liberal amounts would be willing to do justice to those States which have been neglected, but it is painful to see that some of them are most determined in their opposition to any measure having for its object a tendency to equalize these benefits.

THE SOUTH ACQUIRED THE DOMAIN.

The States which need this bounty at present furnished the men who contributed more than all others toward acquiring the vast territory which has rendered these liberal grants possible. Southern Presidents—Jefferson, Monroe, and Polk—acquired for us these vast territories.

	Acres.
The Louisiana purchase	756,961,200
Florida	37,931,520
Under the treaty of Guadalupe Hidalgo	334,443,520
Total acres	1,129,336,240

It was the brave men from the extreme Southern States who formed the greater part of the army which won on the battlefields of Mexico a very large part of this vast domain.

While there are very many people in the prosperous States who advocate this measure, yet, I regret to say, there are some who oppose it with unrelenting bitterness, and, what is still more painful, they endeavor to deceive our own people by false representations regarding the proposed law.

In 1836, just a half a century ago, there was a surplus in the Treasury, and under the act of June 23, 1836, $28,104,464.91 was distributed to the States, and all or nearly all of this fund was used for public schools, and formed in many States the basis of the system of education which has made them great and prosperous.

Our average receipts from 1830 to 1840 were but $30,461,109, while of late the revenues of the Government have in single years exceeded $400,000,000. It is easily seen, therefore, that the cash distribution of surplus funds in 1836 was relatively more than twelve times as great as the amount asked to be appropriated by this bill. If that law, recommended by Andrew Jackson, was right then, certainly a similar law appropriating less than one-twelfth of the proportionate amount can not be wrong.

But this bill provides that the appropriation shall be distributed over a period of eight years; therefore the sum taken from the Treasury under the law of 1836 was relatively about one hundred times greater than the sum proposed to be appropriated during any one year under the provisions of this bill.

THE BILL MISREPRESENTED.

The enemies of the bill falsely tell the Southern people that it provides for mixed schools. This is absolutely untrue. It specially provides for separate schools. The bill does not establish or control any school. It simply provides money to aid the schools established by the States. The schools are to be controlled by the State and county officials in every respect as they are now.

It is simply a donation of nearly $6,000,000 to Alabama and large amounts to other States which have not received their equitable quota.

This is just and right.

Some States have heretofore received more than Alabama, and this law tends to equalize the fund. Alabama did not refuse her share of the $28,104,464.91 in 1836, and she will not refuse her share of the $77,000,000 appropriated to aid common schools by this bill. It taxes our patience, equanimity, and sense of decorum to listen to arguments against this bill by gentlemen from California, Colorado, Nevada, and Texas when we recall the fact that the first-named State has received from the people of the United States in aid of her public schools relatively more than twelve times as much as Alabama, and that the last-named State has received, for the same purpose, more than fifty times as much.

The impatience and intolerance naturally provoked by the opposition of these States to this is likely to be emphasized, if not intensified, by the further reflection that the addition of these States to the Union and of an immense area of territory beside, was principally the work of Southern men in support and defense of Southern policy.

When Texas sought to establish her independence of Mexico, we of the South rushed to her assistance and gave our best blood in her defense and to secure her freedom.

TEXAS SHOULD NOT OPPOSE IT.

The joint resolution under which Texas was empowered to retain control of her own public lands was carried by the votes of Southern men and was approved by a Southern President. By this resolution the splendid Lone Star State was invested with the control of at least 150,000,000 acres of land, not less than one-third of which—worth $200,000,000—has been used or is now available to foster and develop her system of public schools.

We rejoice in and congratulate Texas upon the magnificent results of her school policy and measures, but at the same time we hope her representatives will be sufficiently just and generous to vote with us for a measure which promises to give us an insignificant fraction of the immense benefits she has enjoyed, principally by and through our means.

And we are not merely hopeful upon this point, we are confident that such will be the final result. The generosity of the people of Texas has long since become proverbial, and her able and distinguished representatives upon this floor are known to represent the traits and characteristics of their constituents as faithfully as they guard their interests. This appeal for justice and generosity applies with almost equal force to the States of California, Colorado, and Nevada.

The opponents of this bill claim to have just made the discovery that such measures as the one under discussion are not constitutional.

They flatter and praise our constitutional scruples, and contend that Southern men are too noble and generous, too earnestly devoted to the doctrine of State-rights to wish aid from the Federal Government.

By this and similar methods in times past many Southern men have been induced to oppose appropriations for the improvement of their rivers and harbors.

In such cases the further argument was advanced that the money to improve our rivers and harbors would be spent under the supervision of a Federal officer, who, coming into our States under authority from the General Government, assumed personal and direct control of all work done under such appropriations. Vain and foolish men contended that this was an invasion of the principle of "State-rights."

The new South has conquered this opposition, and without hesitation recognizes the fact that unless her rivers and harbors are improved by the General Government they will remain as they were when navigated by the Indians in their canoes, and that so long as our water navigation is obstructed we never can overtake the prosperous North which has received such munificent aid of this character.

Now, since the South is willing and anxious to receive such aid, and to have the works controlled by the Federal Government or its officers, is it not a direct insult to the intelligence of the Southern people to attempt to defeat the educational bill by the assertion that the South does not wish it?

SOUTHERN PEOPLE NEED AND WISH IT.

It has been contended here that the people of none of the Southern States desire the passage of this measure, and some Northern gentlemen give that as their only reason for opposing it, producing letters from prominent Southerners in support of their position. Many of them say: I admit the bill to be just; I admit that the insignificance of the aid extended to the South as compared with the benefits conferred upon many States of the North would constrain me to vote for the bill had I not been impressed with the belief that the South does not want it. Many of them say: Prove to us that the South really desires the success of this measure and we will give it our support.

In reply to these gentlemen I assert that the South does want it; she needs it; she demands it. A gallant, struggling people, yearning for the fountain of knowledge, beseech you to accord them this just and necessary measure.

She has never been backward in her duty. Whether in poverty or prosperity she has paid her tribute to the Federal Treasury. Her sons have always been prompt to give their blood in her defense. Nearly

a century and a half ago Southern men hastened to the defense of the Western settlers in the French and Indian wars. It was Southern men who started to Massachusetts the day they heard of the conflicts at Lexington and Concord. It was Southern men who were most lavish in their devotion during the war of 1812, in the many Indian conflicts, and in the war with Mexico, and even in the conflict of 1861-'65 Southern States gave as many men to the Federal as they did to the confederate army.

It is men of this character who now ask aid in the cause of education.

How can it be said on this floor that they do not wish it, when the records emphatically show the contrary?

HISTORY OF THE PRESENT BILL.

On January 16, 1882, I introduced a bill in Congress which appropriated $100,000,000 for this purpose. It provided that the State officials should control the fund, and have exclusive control of the schools. On January 15, 1883, a resolution was introduced fixing a day to consider the bill as reported to the House by the Committee on Education. A second was demanded, and 117 members voted for the measure, and only 11 against it. (See CONGRESSIONAL RECORD, Forty-seventh Congress, page 1202.) The vote was then taken upon the resolution, and the affirmative vote was increased to 129. I was present, and state of my own knowledge, that on both votes the measure was favored by nearly every Southern Democrat except the gentleman from Texas.

In the Forty-eighth Congress Senator BLAIR introduced a similar bill which was referred to a committee of which Senator PUGH was a member. Mr. BLAIR recognized the fact that the South would, necessarily, be the largest beneficiary of the bill, and in his solicitude to have his bill so framed as to secure the accomplishment of the greatest possible good, and be, in all respects, entirely acceptable to the South, he requested Senator PUGH to make such changes in the bill as he thought necessary to secure the purpose he had in view. In compliance with this request Mr. PUGH undertook the revision of the bill, and the measure generally known as the "Blair bill" was reported to the Senate in the handwriting of that eminent Southern Democrat. This bill passed the Senate on April 7, 1884, being supported by the following Southern Democratic Senators:

Brown,	Hampton,	Pugh,	Lamar,
Call,	Jackson,	Ransom,	Vance,
Colquitt,	Jonas,	Williams,	Walker.
Garland,	Jones of Florida,	Gibson,	
George,	Kenna,	Camden,	

(The last five being supporters of the measure, but "paired" with the same number who opposed it.)

A STAB AT THE MEASURE.

On January 23, 1885, Mr. Hurd introduced a resolution, which I will read (RECORD, page 1058):

Whereas certain bills, appropriating money from the Treasury of the United States, originating in the Senate, have passed that body, and have been sent to this House for its concurrence, which are now upon the Speaker's table, to wit, Senate bill No. 398, entitled "A bill to aid in the establishment and temporary support of common schools" and many others; and

Whereas it is asserted that these bills are in violation of the privilege of this House to exclusively originate bills for raising revenue: Therefore,

Be it resolved, That the Committee on the Judiciary be hereby directed to inquire into the power of the Senate to originate bills appropriating money from the Treasury of the United States, and report to this House at as early a day as practicable. And said committee shall have leave to report at any time.

This was a direct stab at the educational bill. The resolution was supported by all of its enemies, and also by some of its friends, who desired the success of the bill, but were yet jealous of the action of the Senate in originating the bill, which they regarded as an invasion of the exclusive rights of the House. A motion was then made to table the resolution, which was voted for by the following Southern Democrats, who thus gave emphatic and unmistakable expression to their advocacy of the bill:

Ballentine,	Covington,	Hemphill,	Reese,
Barbour,	Cox, W. R.	Herbert,	Talbott,
Bennett,	Crisp,	Hewitt, G. W.	Taylor, J. M.
Blackburn,	Davidson,	King,	Vance,
Blanchard,	Dibble,	Lewis,	Warner,
Bratton,	Dibrell,	Money,	Williams,
Breckinridge,	Ellis,	Nicholls,	Willis,
Buchanan,	Finley,	Oates,	Wise, G. D.
Cabell,	Forney,	O'Ferrall,	Wolford.
Candler,	Garrison,	Peel,	
Clements,	Hammond,	Pierce,	

Had I been a member of that Congress I should certainly have voted with these Southern Democrats.

Upon the first call of the States in the Forty-ninth Congress I introduced the bill (H. R. 43) to aid common schools which I will read:

A bill to aid in the temporary support of common schools.

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That for eight years next after the passage of this act there shall be annually appropriated from the money in the Treasury the following sums, to wit: The first year the sum of $7,000,000, the second year the sum of $10,000,000, the third year the sum of $15,000,000, the fourth year the sum of $13,000,000, the fifth year the sum of $11,000,000, the sixth year the sum of $9,000,000, the seventh year the sum of $7,000,000, the eighth year the sum of $5,000,000; which several sums shall be expended to secure the benefits of common-school education to all the children of the school age mentioned hereafter living in the United States.

SEC. 2. That such money shall annually be divided among and paid out in the several States and Territories in that proportion which the whole number of persons in each who, being of the age of ten years and over, can not read, bears to the whole number of such persons in the United States; such computation shall be made according to the census of 1880.

SEC. 3. That no State or Territory shall receive any of the benefits of this act until the governor thereof shall file with the Secretary of the Interior a statement, certified by him, showing the character of the common-school system in force in such State or Territory; the amount of money expended therein during the last preceding school year in the support of common schools, not including expenditures for the rent, repair, or erection of school-houses; whether any discrimination is made in the raising or distributing of the common-school revenues or in the common-school facilities afforded between the white and colored children therein, and, so far as is practicable, the sources from which such revenues were derived; the manner in which the same were apportioned to the use of the common schools; the number of white and the number of colored common schools; the average attendance in each class, and the length of the school term. No money shall be paid out under this act to any State or Territory that shall not have provided by law a system of free common schools for all of its children of school age, without distinction of race or color, either in the raising or distributing of school revenues or in the school facilities afforded: *Provided*, That separate schools for white and colored children shall not be considered a violation of this condition. The Secretary of the Interior shall thereupon certify to the Secretary of the Treasury the names of the States and Territories which he finds to be entitled to share in the benefits of this act, and also the amount due to each.

SEC. 4. That the amount so apportioned to each State and Territory shall be drawn from the Treasury by warrant of the Secretary of the Treasury, upon the monthly estimates and requisitions of the Secretary of the Interior as the same may be needed, and shall be paid over to such officers as shall be authorized by the laws of the respective States and Territories to receive the same.

SEC. 5. That the instruction in the common schools wherein these moneys shall be expended shall include the art of reading, writing, and speaking the English language, arithmetic, geography, history of the United States, and such other branches of useful knowledge as may be taught under local laws.

SEC. 6. That the money appropriated and apportioned under the provisions of this act to the use of any Territory shall be applied to the use of common and industrial schools therein by the Secretary of the Interior, unless said Territory shall have provided by law for the free common-school education of all its children of school age, without any distinction, for at least three months in each year, from the funds provided for schools under the laws of said Territory.

SEC. 7. That the design of this act not being to establish an independent system of schools, but rather to aid for the time being in the development and maintenance of the school system established by local government, and which must eventually be wholly maintained by the States and Territories wherein they exist, it is hereby provided that no greater part of the money appropriated under this act shall be paid out to any State or Territory in any one year than the sum expended by said State or Territory in the preceding year for the maintenance of common schools from money other than that appropriated under the provisions of this act.

SEC. 8. That a part of the money apportioned to each State or Territory, not exceeding one-tenth thereof, may yearly be applied to the education of teachers for the common schools therein, which sum may be expended in maintaining institutes or temporary training schools, or in extending opportunities for normal or other instruction to competent and suitable persons, of any color, who are without necessary means to qualify themselves for teaching, and who shall agree in writing to devote themselves exclusively, for at least one year after leaving such training schools, to teach in the common schools, for such compensation as may be paid other teachers therein.

SEC. 9. That no part of the educational fund allotted to any State or Territory by the first section of this act shall be used for the erection of school-houses or school buildings of any description, nor for rent of the same.

SEC. 10. That the moneys distributed under the provisions of this act shall be used only for common schools, not sectarian in character, in the school districts of the several States and Territories, in such way as to provide, as near as may be, for the equalization of school privileges to all the children of the school age prescribed by the law of the State or Territory wherein the expenditure shall be made, thereby giving to each child, without distinction of race or color, an equal opportunity for education. The term "school district" shall include all cities, towns, parishes, and other territorial subdivisions for school purposes, and all corporations clothed by law with the power of maintaining common schools.

SEC. 11. That no second or subsequent allotment shall be made under this act to any State or Territory unless the governor of such State or Territory shall first file with the Secretary of the Interior a statement, certified by him, giving a detailed account of the payments or disbursements made of the school fund apportioned to his State or Territory and received by the State or Territorial treasurer or officer under this act, and of the balance in the hands of such treasurer or officer withheld, unclaimed, or for any cause unpaid or unexpended, and also the amount expended in such State or Territory, as required by section 8 of this act, and also of the number of public, common, and industrial schools, the number of teachers employed, the total number of children taught during the year and in what branches instructed, the average daily attendance and the relative number of white and colored children, and the number of months in each year the schools have been maintained in each school district. And if any State or Territory shall misapply or allow to be misapplied, or in any manner appropriated or used other than for the purposes herein required, the funds, or any part thereof, received under the provisions of this act, or shall fail to comply with the conditions herein prescribed, or to report as herein provided, through its proper officers, the disposition thereof, and the other matters herein prescribed to be so reported, such State or Territory shall forfeit its right to any subsequent apportionment by virtue hereof until the full amount so misapplied, lost, or misappropriated shall have been replaced by such State or Territory and applied as herein required, and until such report shall have been made: *Provided*, That if the public schools in any State admit pupils notwithin the ages herein specified, it shall not be deemed a failure to comply with the conditions herein. If it shall appear to the Secretary of the Interior that the funds received under this act for the preceding year by the State or Territory have been faithfully applied to the purposes contemplated by this act, and that the conditions thereof have been observed, then the Secretary of the Interior shall distribute the next year's appropriation as is hereinbefore provided. The Secretary of the Interior shall have power to hear and examine any complaints of misappropriation or unjust discrimination in the use of the funds herein provided, and shall report to Congress the results thereof.

SEC. 12. That on or before the 1st day of September of each year the Secretary of the Interior shall report to the President of the United States whether any State or Territory has forfeited its right to receive its apportionment under this act, and how forfeited, and whether he has withheld such allotment on account of such forfeiture; and each State and Territory from which such apportionment shall be withheld shall have the right to appeal from such decision of the Secretary of the Interior to Congress.

SEC. 13. That there shall he appropriated, in addition to the sums appropriated by the first section of this act, the sum of $2,000,000, which shall be allotted to the several States and Territories on the same basis as the moneys appropriated in the first section, which shall be known as the school-house fund, and which shall be paid out annually to each State and Territory, at the end of the year, until said sum of $2,000,000 shall be exhausted, and no longer, to be expended for the erection and construction of school-houses for the use of pupils

attending the common schools in sparsely populated districts where the local communities shall be comparatively unable to bear the burdens of taxation. Such school-houses shall be built in accordance with modern plans, which plans shall be furnished free on application to the Bureau of Education, in Washington: *Provided, however*, That not more than $100 shall be paid from said fund toward the cost of any single school-house, nor more than one-half the cost thereof in any case; and the States and Territories shall annually make full report of all expenditures from the school-house fund to the Secretary of the Interior, as in case of other moneys received under the provisions of this act.

SEC. 14. That the Secretary of the Interior, through the Commissioner of Education, shall be charged with the practical administration of this act in those Territories which shall not have established by law a system of free common-school education as provided in section 6 of this act. He shall report annually to Congress its practical operation, and briefly the condition of common and industrial education as affected thereby throughout the country, which report shall be transmitted to Congress by the Secretary of the Interior, accompanying the report of his Department. And the power to alter, amend, or repeal this act is hereby reserved.

SEC. 15. That no State or Territory that does not distribute the moneys raised for common-school purposes equally for the education of all children, without distinction of race or color, shall be entitled to any of the benefits of this act.

THE BLAIR BILL REVISED BY SENATOR PUGH.

Simultaneously Mr. BLAIR introduced a bill, to aid in the support of common schools, in the Senate, which was unanimously reported from the Senate Committee on Education and Labor. It was similar to my bill in many respects, but did not contain the provision which is recited in section 13 in the measure introduced by myself. The bill as reported to the Senate was an exact copy of the bill prepared by Mr. PUGH in the previous Congress. While being discussed in the Senate it was amended by the addition of a provision almost identical with section 13 of the bill introduced by myself. The bill thus amended passed the Senate on March 5. Those Southern Senators present who voted for the bill in the Forth-eighth Congress again gave it their support, together with the following, namely: BERRY, BLACKBURN, EUSTIS, JONES of Arkansas, and WALTHALL. It will be observed, therefore, that the bill received the support of twenty-three Southern Democratic Senators.

As further evidence of the sentiment of Southern men on this subject I will read a resolution introduced by myself on March 22:

Mr. WHEELER submitted the following resolution; which was read, and referred to the Committee on Rules:

"Resolution directing the Committee on Rules to report a rule to the House, by which by a majority vote the House may instruct a committee in charge of a bill to report it back to the House.

"Whereas the Tenth Census of the United States shows that there are 6,239,958 persons in the United States over the age of ten years who can not write, and 4,923,451 over ten years of age who can not read; and

"Whereas during the first session of the Forty-eighth Congress a bill passed the Senate, by a vote of 33 to 11, to aid in the establishment and temporary support of common schools; and

"Whereas said bill was never acted upon by the House of Representatives; and

"Whereas during the present session of Congress, to wit, on the 5th day of March, 1886, the Senate passed another bill to aid in the establishment and temporary support of common schools, by a vote of 35 to 11; and

"Whereas said bill was engrossed and reported to the House of Representatives, and on the 9th day of March the Speaker laid before the House the said bill (namely, the bill S. 194) to aid in the establishment and temporary support of common schools, which was read twice and referred to the Committee on Education; and

"Whereas on the first day on which bills could be introduced in the present Congress, namely, on the 21st day of December, 1885, bill H. R. 43, to aid in the temporary support of common schools, was introduced, read twice, and referred to the Committee on Education, and ordered to be printed; and

"Whereas said committee has failed to make any report upon said bills; and

"Whereas the Legislatures of the States of Alabama, Arkansas, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Virginia, and West Virginia have passed resolutions requesting or directing their Senators and Representatives to aid in securing the passage of bills which seek to aid in the temporary support of common schools; and

"Whereas Christian and educational associations throughout the United States have adopted resolutions urging that Congress enact a law providing for the temporary support of common schools; and

"Whereas the superintendents of public instruction for the States of Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, Missouri, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia have memorialized Congress, setting forth the immediate and pressing educational wants of the Southern States of the Union and praying for speedy action in aid thereof; and

"Whereas the passage of this bill is absolutely essential to the welfare of the children of citizens who are compelled to labor for low wages in farming and other occupations; and

"Whereas the non-action of the Committee on Education indicates that they will not make a report, as contemplated by the rules of the House, in time to secure action by the House during the present session; and

"Whereas it is the duty of a committee of this House to consider all bills referred to them and report them back to the House with a statement of their character, accompanied by the recommendation that such as they approve shall be passed and such as they disapprove shall not be passed: Therefore,

"*Be it resolved*, That the Committee on Rules be instructed to report a rule to this House by which it may by a majority vote direct any of its committees to report back any bill referred to them for consideration."

I will also read the joint memorial which was unanimously adopted by the Legislature of Alabama:

That the Senators and Representatives in Congress from this State be requested to secure the passage of a bill granting aid to education in the several States upon the basis of illiteracy, the amounts so appropriated to be applied by the several States through their superintendents of education.

WILBUR F. FOSTER,
Speaker of the House of Representatives.
GEO. P. HARRISON, JR.,
President of the Senate.

Approved December 11, 1882.

E. A. O'NEAL, *Governor.*

HON. JOSEPH WHEELER,
House of Representatives.

SOUTHERN CONGRESSMEN SUPPORT THE BILL.

On March 29 a vote was taken to refer the Senate educational bill to the House Committee on Labor. Those who voted in the affirmative were advocates of an early consideration of the bill, and among them were the following-named Southern Democrats. Most of these distinguished Southern Democrats had expressed their approval of the bill itself in most emphatic terms:

Allen,	Croxton,	Herbert,	Rogers,
Ballentine,	Daniel,	Irion,	Sadler,
Barbour,	Davidson, R. H. M.	Johnston, T. D.	Singleton,
Barksdale,	Dibble,	Jones, J. T.	Snyder,
Barnes,	Dunn,	King,	St. Martin,
Barry,	Forney,	Martin,	Taulbee,
Blanchard,	Gay,	McCreary,	Taylor, J. M.
Breckinridge, C. R.	Gibson, Eustace,	McRae,	Trigg,
Cabell,	Glass,	Neal,	Turner,
Candler,	Green, W. J.	Norwood,	Wheeler,
Catchings,	Halsell,	O'Neill, J. J.	Willis,
Clements,	Hammond,	Peel,	Wise,
Cowles,	Harris,	Perry,	Wolford.
Cox,	Hemphill,	Reid, J. W.	
Crisp,	Henderson, J. S.	Reese,	

Who will insult this great body of Southern Democratic Senators and Representatives by maintaining that they advocate a bill which is objected to by Southern people?

Why, Mr. Chairman, the proposition is wholly untenable upon its face. There are a few men in the South who oppose educating the rising generation, but they are isolated adherents to and representatives of the exploded and abandoned theories and ideas of a by-gone age; loiterers on the highway of advancement who have voluntarily placed themselves far behind in the onward and upward march which is the distinguishing characteristic of this great age of progress and improvement.

These gentlemen also seem to have forgotten the principles upon which our Government was based. They have forgotten that we are all born free and equal.

They seem not to comprehend that every citizen of this Republic is a sovereign, and that in a government like ours, where all have sovereign power, all should be so educated that this sovereign power shall be wisely exercised.

ITS BENEFITS NOT LIMITED.

It has been objected by some of the opponents of this measure that, in effect, it calls upon the people of some parts of the country to pay out money for the exclusive benefit and advantage of those resident in other parts; that the people of the East, the North, the West, and the Northwest will, under the operation of this bill, be taxed to provide the means of educating the illiterates of the South, and that while they will have to furnish the greater part of the money, they will derive no corresponding benefit.

Sir, I deny this proposition *in toto*. Granting, for the sake of the argument, that the assumption is correct, that the greater part of the money to be expended under this bill in case it becomes a law will be supplied by the North, the East, and the West, I reject and utterly repudiate the conclusion that they will derive no benefit from the expenditure. It is simply impossible to raise the standard of intelligence in any portion of a free country without benefiting those of every portion.

In every land under the sun labor is the source of wealth, and this is especially the case in America. Here we may have a specially favored class who rejoice in the possession of immense fortunes—the bondholders, the railroad magnates, the monopolists of various kinds—but they add nothing, they can add nothing, to the sum of the general wealth of the country; they merely fatten upon the toil of others. With us, if nowhere else on earth, it is true that the only creator of wealth is he who labors. This being true, I take it for granted that no one will deny the proposition that the intelligent laborer, I care not whether the scene of his activity be in the factory, the mine, the field, or the workshop, will produce more wealth than the laborer who is not intelligent.

Supplement the brawn and muscle and endurance of the toilers of any portion of the country with the keen and comprehensive intelligence which education alone can bestow, and you necessarily add to their productive capacity, add to their productiveness, and of equal necessity you lighten the burdens which all must help to bear. Enable the laborers of the South to increase their products 25 per cent., and it must follow as a natural and unavoidable consequence that the rest of the country must participate in their increased prosperity. They will consume more of what is produced elsewhere, the interchange or exchange of commodities between the sections will be stimulated, every branch of industry become more thriving, and all must share in the improved condition of affairs which must be the result.

But disregarding for the moment any sordid considerations of mere pecuniary advantage to be gained by any augmentation of the sum of the productive power of any locality, and there will still remain vast and widespread benefits as the result of a more general diffusion of education.

Knowledge is the handmaid of virtue, sobriety, order, and thrift and the deadly foe to vice, crime, and lawless disturbances. Educate any people in any section and you make them better citizens, better neighbors, and purer patriots.

How can it be possible to bring about this result without benefiting every part of the country?

THE IMPORTANCE OF THE MEASURE.

If the decision of the House upon this amendment and the educational bill involved only a question of constitutional law or construction I should feel it incumbent upon me to leave the discussion entirely to those gentlemen whose reputation as constitutional lawyers has been universally recognized.

But, sir, in my opinion the questions to which our consideration is invited by this bill are of too much practical importance to our people, and particularly to the people of the section I have the honor to represent in part upon this floor, to permit me silently to contemplate the possibility of their being deprived of the benefits of this measure by strained constructions, if not palpable disregard of the provisions of the Constitution.

The scope and the limitations of the powers conferred upon Congress by the Constitution, what the General Government may lawfully do and what it can not lawfully attempt, are, I admit, questions of the utmost gravity and importance, and it would, no doubt, be highly advantageous to the country if we could reach some conclusion regarding them which would be accepted and acquiesced in by all men of all parties.

But, sir, suppose it were possible to convince all those who have differed upon these questions that their disagreements were unreasonable, to induce them to lay aside inherited prejudices, party antagonisms, political distrusts, and intellectual convictions, and bring all men to the point of admitting, with absolute unanimity, that there was but one possible construction of the Constitution; suppose this impossibility to have been acheived, what practical effect would such conclusion have upon the happiness and the prosperity of the great body of the people of the United States?

But the passage or the rejection of this measure must have a direct, positive, and practical effect upon the whole people of the United States. There is no city so large, no locality so prosperous, that will not be benefited by the success of this bill; there is no hamlet so insignificant, no community so wretched, that will not be injured by its defeat.

The opponents of the bill may regard this as the extravagant proposition of an enthusiast; but I think it is clearly within the limits of even my feeble powers to convince any fair-minded man that, though I avow myself an enthusiast upon this subject, the language I have uttered is that of truth, of soberness, and of sadness.

The question which we are called upon to decide by our action on this bill is vastly more important than any that has been, or is likely to be, submitted to this Congress. And I say this with a full realization of the responsibilities that rest upon us at this time. I do not underestimate our obligations to devise such measures as may relieve an oppressed and overburdened people from the weight of unjust, unequal, and unnecessary taxation; the pledges we have given to reform the administration of the General Government by abolishing superfluous offices and to reduce the expenditures to the lowest point compatible with efficiency in the various Departments. These are grave and most important duties, and the responsibility for their faithful performance is proportionately great.

But, sir, I maintain, that, serious as they are, they must be regarded as of only minor consequence when they are contrasted with the great consideration which underlies this bill. They relate to details in the financial administration of the Government; the purpose and object of this bill is to make it certain that we shall continue to have a government to administer. The object of this bill is to provide means for the dissemination of that knowledge without which no people can long be free.

IGNORANCE WRECKS REPUBLICS.

The pathway of time is strewn with the wrecks of republics and governments whose overthrow and ruin have been directly traceable to their failure to properly educate the masses of the people.

I do not propose to weary the House with a dissertation upon ancient or modern history, for the fact I have stated is too generally known, too universally admitted, to require proof. Every tolerably well informed school boy knows that the ignorance of the people has been the most fruitful source of the disasters that have overwhelmed the nations of the earth. The opponents of this bill believe, and I believe, that it is impossible for disaster from this source ever to overtake this people. But the very foundation of this belief, the ground for this assurance, is to be found in our reliance upon and confidence in the intelligence and the virtue of our people. And that intelligence must not be permitted to diminish; it must be widened, deepened, strengthened; and to secure this result the opportunities for acquiring knowledge must be augumented as our numbers increase.

Why are governments instituted among men?

This is an abstraction, the discussion and decision of which can not, by any possibility, add anything to the sum of human happiness or subtract anything from the wretchedness of a single individual.

But take the question, What is the principal duty of the Government to the citizen? and we pass at once from the field of abstract intellectual speculation into the domain of practical human interests, the decision of which is of vital interest and importance to every man, woman, and child from whom a government claims allegiance.

The first question may never be settled to the satisfaction of all who delight to exercise their faculties upon the elucidation of abstruse propositions, but the answer to the latter inquiry is a matter which comes directly home into the daily life of every individual member of a civilized community.

A man may get along through life very comfortably and very creditably without ever having attempted to find a solution of the vexed question, at what precise point does the obligation of the Government to the citizen absolutely terminate, but he will neither be prosperous himself nor contribute to the general prosperity if he be left in doubt as to the security of his person or property.

In all free countries, where liberty is something more than a name, men have differed and always will differ in their views as to the rightful scope, the legitimate functions of government. There will always be those who, like Hamilton and Adams, will insist that the government must be strong if the citizen would be secure, and fortunately for mankind there will also always be those who, like Jefferson, will endeavor to reduce the powers of government to the narrowest limits compatible with the duties it must discharge, and leave the individual free and untrammeled by any restraints not supplied by his intelligence, his virtue, and the laws which they have established for the general welfare.

ALL AGREE ON THIS QUESTION.

But whether they be followers of Hamilton or of Jefferson, there is one point upon which all freemen are agreed, and that is that the first and paramount duty of all government is to protect the citizen in his person and property.

However widely they may differ in opinion as to the rights and powers of the General Government, the Republicans and Federalists of 1800 and the Democrats and Republicans of 1886 meet upon this common ground. Whatever the extent of the powers intrusted to the General Government, and whatever the limitations under which these powers are to be exercised, the citizen has an undeniable right to expect that the Government will render him absolutely secure in his person and property.

This proposition is so obvious, its justice so manifest and so incontrovertible, that the failure of Government to afford this security is universally held to justify the overthrow of any system which has been shown to be unequal to its first and greatest obligation, and by the common consent of mankind the government which fails to afford this security is regarded as a despotism.

In a constitutional monarchy like England, or even in an imperial government like that of Germany or Austria-Hungary, the intelligence and the selfish interests of the ruling class were for centuries relied upon to furnish this security.

But in the last few decades this view has undergone an entire change, even in these imperial governments. They have found that security and stability are most certainly to be found in the education of the people. They have found also that education of the people supplies the surest road to prosperity; that an educated workman produces from ten to twenty times more wealth than an ignorant one. Therefore, as the ruling classes in these countries are the almost exclusive possessors of the wealth of the country, and, like all other men, they desired to increase their wealth, they have learned that their selfish interests as well as the general welfare of the country could be most effectually promoted by education, and the result has been—in two of these countries at least, Germany and England—the inauguration and development of a system of popular education which is to-day far superior to our own in its efficiency and in its results.

This having been the experience of such governments as I have mentioned, how much greater is the necessity for recognizing the principle in a government like ours, where the people themselves are the rulers, under which all power is derived from the people; in which the equality of all men before the law is the very corner-stone of the structure. The only guarantee we can have for the purity and perpetuity of our institutions is to be found in the intelligence, the prosperity, and the virtue of the people; and as an ignorant people can not be either intelligent or prosperous it is clearly the duty of the Government to see that the people be educated.

RULERS MUST BE EDUCATED.

With us the people must always govern themselves, and to make it certain that the best possible results of such government are attained the agencies the people have selected and intrusted with the powers we recognize as pertaining to government must be active in increasing the intelligence and strengthening the virtue of the people.

In other words, as the people are intrusted with their own government for their own good it is the bounden duty of the government to see that they are not governed by their own ignorance.

I assume that it will be admitted by all—by the opponents of this measure as well as by its advocates—that the primary and paramount duty of every government is to protect the persons and property of the individual members of the community for whose benefit the government exists. This being so, it follows by necessary consequence that

the government is bound to adopt those measures, to pursue that line of policy which promises to be most effectual in securing this object.

This brings us face to face with the important question, What is the most effectual means of protecting the persons and property of the community?

Unhesitatingly and confidently I reply—the education of the people.

The opinions of the profoundest thinkers, the greatest philosophers, the brightest essayists, the most gifted poets, the leaders and molders of thought, and the leaders of men in action, and the experience of mankind, all unite to establish the truth of this proposition.

Solomon, when offered his choice, preferred wisdom to honor, riches, and length of days, and, in the language of Holy Writ, the Lord assured him:

Lo, I have given thee a wise and an understanding heart, so that there was none like thee before thee, neither after thee shall any arise like unto thee. And I have also given thee that which thou hast not asked, both riches and honor: so that there shall not be any among the kings like unto thee all thy days. * * * and I will lengthen thy days.

Lord Bacon, "the brighest, wisest of mankind," though he may not have uttered the opinion generally ascribed to him, "Knowledge is power," undoubtedly regarded knowledge as the most desirable possession man could acquire.

Pope has declared:

'Tis education forms the common mind:
Just as the twig is bent the tree 's inclined.

Addison, Steele, Chapman, and even Swift, with most of the writers who shed such luster upon Queen Anne's reign, have all attested the importance they attached to education.

MACAULAY.

But I do not wish to fatigue the House with tedious citations of authorities upon this point, and will therefore adopt the comprehensive words of one of the most brilliant writers and thorough scholars of modern times, of whom it has been said that his mind was a vast storehouse of knowledge, an inexhaustible treasury of wisdom drawn from the writings of the ancient and modern world. Macaulay, in a speech upon this very subject, said:

I say, therefore, that the education of the people ought to be the first concern of a state, not only because it is an efficient means for promoting and obtaining that which all allow to be the main end of government, but because it is the most efficient, the most humane, the most civilized, and in all respects the best means of attaining that end. This is my deliberate conviction; and in this opinion I am fortified by thinking that it is also the opinion of all the great legislators, of all the great statesmen, of all the great political philosophers of all ages and of all nations, even including those whose general opinion is and has ever been to restrict the functions of government.

In this speech, delivered in the English Parliament in 1847, Macaulay strove to enforce the proposition that it was the duty of the government to educate the people as the most effectual means of securing the persons and property of the community, citing the authority of Adam Smith, the great author of that great work, the Wealth of Nations, and referring to the disastrous experience of England in the Gordon riots.

Upon these points I read at some length:

I ask can it be denied that the education of the common people is the most effectual means of protecting persons and property? On that subject I can not refer to higher authority or use more strong terms than have been employed by Adam Smith; and I take his authority the more readily because he is not very friendly to state interference, and almost on the same page as that I refer to he declares that the state ought not to meddle with the education of the higher orders; but he distinctly says that there is a difference, particularly in a highly civilized and commercial community, between the education of the higher classes and the education of the poor.

The education of the poor he pronounces to be a matter in which government is most deeply concerned; and he compares ignorance, spread through the lower classes, neglected by the state, to a leprosy or some other fearful disease, and says where this duty is neglected the state is in danger of falling into this terrible disorder. He had scarcely written this than the axiom was fearfully illustrated in the riots of 1780. I do not know if from all history I could select a stronger instance of my position when I say that ignorance makes the persons or property of the community unsafe, and that the government is bound to take measures to prevent that ignorance.

On that occasion what was the state of things? Without any shadow of a grievance, at the summons of a madman, one hundred thousand men rising in insurrection, a week of anarchy, Parliament besieged, your predecessor, sir, trembling in the chair, the lords pulled out of their coaches, the bishops flying over the tiles, * * * thirty-six fires blazing at once in London, the house of the chief-justice sacked, the children of the prime minister taken out of their beds in their night-clothes and laid on the table of the Horse Guards, and all this the effect of nothing but the gross, brutish ignorance of the population who had been left brutes in the midst of Christianity, savages in the midst of civilization. * * * Could it have been supposed that all this could have taken place in a community were even the common laborer to have his mind opened by education and be taught to find his pleasure in the exercise of his intellect, taught to revere his Maker, taught to regard his fellow-creatures with kindness, and taught likewise to feel respect for legitimate authority, taught how to pursue redress of real wrongs by constitutional methods?

A PREVENTIVE OF ANARCHY.

But it may be urged that the religious fanaticism which rendered the "no-Popery" cry of the Gordon riots so dangerous in England in 1780 can not possibly be re-echoed in the United States; that the ignorant ferocity and brutality of a London mob a century since can not justly be accepted as indicating a possible danger to any community in this country at this time.

I wish I could think so. But ferocity and brutality are just as certainly characteristics of ignorance toward the close of the nineteenth century as they were toward the close of the eighteenth. Privation, want, greed, and envy will just as certainly excite an ignorant mob to violent and lawless acts now as they did in 1780. Then the cry of "no Popery," started by a madman, was caught up by demagogues and made the pretext for lawless attacks upon property and life, and it was only the other day that the cry of "no monopoly" in Chicago enabled a few miscreants to excite an ignorant mob to deeds of violence and bloodshed no less ferocious than those so graphically described by Macaulay.

What was the instrument which Parsons, Spies, and their associates found most potent in creating the tumult which drenched in blood the streets of that great city? What was the only thing that rendered that occurrence possible? I answer boldly and fearlessly it was the ignorance of the poor creatures who had accepted them as leaders.

Can any one imagine that under any stress of circumstance, under any extremity of bitter feeling, provoked by long-continued, patiently endured, and apparently irremediable wrongs, a crowd of educated, intelligent American workingmen could have been goaded into the perpetration of such a treacherous, wanton, and cowardly attack upon the civil authorities as that of which these foreign anarchists were guilty in Chicago?

"Ah," says one, "but these same anarchists are beyond the reach of any influence for good which education can exert. You might establish fifty schools in their midst, and not one of them would become pupils; they have passed the school age, and your sovereign panacea could not prove efficacious with them because they will not subject themselves to its influence."

Grant that this be true, is it any the less the duty of a humane, a civilized, a Christian government to at least make an effort to enlighten the ignorance which has been so revoltingly displayed?

A PLAIN, IMPERATIVE DUTY.

Make the effort. Give to these benighted, misguided victims of ignorance and passion the chance to learn the enormity of the offenses into which they have been betrayed by the arts of a few designing and cowardly miscreants who lacked the manliness to face the consequences of the belief they professed, and if they will not accept it, if they persist in their lawless theories and practices, then let the full power and vigor of the State be invoked to suppress their ignorant violence. Let them suffer for their crimes, but let us at least make the effort to teach them so much as will enable them to know they are criminals. Let the State punish them for their crimes, not for their ignorance which the State has not attempted to remove.

Even if the effort to reach these criminals and to ameliorate their ignorance prove useless in these particular cases, the schools, which I maintain it is the duty of the Government—the State being unable—to establish in their midst, would be available for their children. The education which the father could not appreciate or would not accept may convert the son of an assassin into an industrious, honorable, ambitious mechanic, who may so improve his opportunities that in the future his vote in this Hall may decide whether the blessings of Government aid to education shall not be still further extended.

But it may be urged this bill does not propose to extend the benefits of Government aid to education to the Chicago anarchists or to their children, and that I have endeavored to fortify it by an inapplicable illustration.

I deny that this exemplification of the dangers to which persons and property are exposed by the ignorance of the people is not applicable to my argument.

If Chicago were the only locality in this broad land where ignorance could be found, and if it were the fact that Chicago could not benefit by this bill, the objection might be pertinent.

I maintain though that every city, town, and hamlet throughout the country must be benefited by this bill, no matter whether the immediate effect of its passage is to plant a school-house in that particular city, town, or hamlet or not. Is not every community in every portion of the land interested in every effort which promises to give us greater security for persons and property? Do we not all possess a common interest in increasing the intelligence of our people, no matter where they may reside? Has not the whole country, North, South, East, and West, benefited by the system of popular education which we have always enjoyed since the outposts of civilization were first planted upon our shores? And would not the advantages of its further extension inure to all sections alike?

Unhappily, too, there are portions of our country where the ignorance of the mass of the people is even greater than it is in Chicago, or than it is in any of the prosperous and populous cities of the North—localities where there is one voter who can not write to every two who can; where only one voter out of every three can read the ballot which he deposits in the box.

ITS CONSTITUTIONALITY ESTABLISHED.

But it is claimed that the passage of this bill involves the usurpation by Congress of powers not delegated to it by our organic law, and that therefore, praiseworthy and commendable as may be its purpose, the measure is unconstitutional and should be defeated.

I have had occasion heretofore, Mr. Speaker, to deprecate what I have considered unwarranted and unjustifiable appeals to the Constitution

to obstruct legislation which, in my opinion at least, was clearly within the line which defines the duties, rights, and powers of the General Government. I have heretofore professed myself, and I wish now to repeat, that I am and wish to be considered as a Democrat after the straitest sect; that I never have been and never shall be willing to see Congress arrogate to itself any right or power not clearly deducible from the language and purposes of the great charter from which all its powers are derived.

I never have relied upon and I never shall exclusively rely upon the "general welfare" clause of the Constitution—that clause which has been so aptly designated as "the blanket clause"—as supplying of itself a warrant for the exercise of any doubtful or questionable right. On the contrary, I have always been a devout and firm believer in the principle and practice of strict construction of the terms by which the right to exercise our powers is conveyed.

WHEN TO CONSTRUE STRICTLY.

But, sir, I would apply this principle and practice of strict construction only according to the purposes and within the usages of the great party within which this wise and salutary principle originated.

No fact in the history of the Democratic party is or can be clearer than that this great and necessary principle of strict construction has been invoked only when the reserved rights and the liberties of the people were imperiled, when the integrity and sovereignty of the States have been threatened, or when the encroachments of arbitrary power endeavored to subvert the fundamental principles of our system of government.

It was to shield us from such evils that the Democratic party deemed it necessary to insist upon a strict construction of the terms of our great charter. That great and patriotic party, animated by the spirit of its immortal founder and influenced and controlled by its great leaders who have succeeded him, has always been too ardently devoted to the welfare and happiness of the people to seek to limit the agencies through which alone that welfare could be promoted by confining those agencies to the exercise of only those powers which are expressly granted.

In other words, the Democratic party has always relied upon the Constitution to shield and protect the liberties of the people, but it has never desecrated that instrument by converting it into a barrier to the people's progress or a bar to their greater prosperity.

This, I maintain, is the spirit, the very essence of true Democracy as to constitutional construction and limitations, and under this conviction I assert that the most sincere and unfaltering Democrat, while insisting upon the principle of strict construction, yet has his party's warrant for advocating measures like this, designed to increase the happiness and prosperity of the people.

And it is upon this theory that I say I would limit to the very narrowest bounds warranted by the language and manifest intentions of the framers of the Constitution the powers and privileges of the General Government. I am as keenly alive to the dangers to which our peculiar system of Government would be exposed by any infraction of the Constitution as any gentleman on this floor or in this country can be, and I am as firmly convinced as any one can be that the prosperity of our people and stability of our institutions depend largely upon the vigilance and fidelity with which we, the representatives of the people, guard and defend them against the unauthorized and insidious encroachments of power.

DUTY OF CONGRESS TO THE PEOPLE.

But, sir, our duties here call upon us to do something more than to merely guard against any and all infractions of the Constitution. It is our duty to protect and defend the Constitution, and that duty we are sworn to perform, but we have other duties no less obligatory. It is also our duty to serve the people of the United States. We are as much bound to devise such measures and enact such laws as our judgment tells us are calculated to promote the present positive benefit and advantage of the people as we are to render the negative service of preventing any invasion of their reserved rights and powers.

And it is because of my anxiety to secure for the people these positive, present benefits that I feel constrained to enter my respectful but emphatic protest against the prevalent—and I must say, in my opinion, the unwarranted and unreasonable—practice of invoking the Constitution to retard or prevent the passage of measures designed to secure to the people somewhat of the positive, present advantages of our system of self-government to which they are clearly and lawfully entitled.

I wish to render it impossible for my position in relation to such questions to be misunderstood. I say benefits to which the people are clearly and lawfully entitled; and by this I mean such benefits as should be and may be conferred upon them without the slightest infraction of those wise and salutary limitations within which only can Congress exercise its constitutional powers. I am not of those who hold that we may be justified in doing a little evil now to secure great good hereafter. On the contrary, I am unalterably opposed to that doctrine—I care not how little may be the evil contemplated or how great may be the good anticipated. In legislation, as in morals, a thing must be either right or wrong, and a measure not sanctioned by law is a measure which can not possibly be right.

WHERE THE BURDEN OF PROOF RESTS.

Let the enemies of this bill show that it is prohibited by the Constitution, and I will unite with them in securing its defeat.

But they must establish the fact of such prohibition—must show clearly and unmistakably that it is prohibited. I say they must do this, and I have very high authority for the assertion. In McCulloch *vs.* The State of Maryland (4 Wheaton, pages 409, 410) Chief-Justice Marshall held:

> The government which has a right to do an act, and has imposed on it the duty of performing that act, must, according to the dictates of reason, be allowed to select the means; and those who contend that it may not select any appropriate means, that one particular mode of effecting the object is excepted, take upon themselves the burden of establishing that exception.

Can this express constitutional prohibition be established against this bill? I think not. And I think further that it can be shown, not only that this bill is not prohibited, but that it is expressly sanctioned by Congressional action in innumerable instances, and by judicial interpretations of the Constitution as well as by legitimate implication from the language of that instrument.

AN OBJECT OF NATIONAL CONCERN.

In Dartmouth College *vs.* Woodward (4 Wheaton, page 634), Chief-Justice Marshall used this forcible and unequivocal language:

> That education is an object of national concern and a proper subject of legislation, all admit. That there may be an institution founded by government, and placed entirely under its immediate control, the officers of which would be public officers, amenable exclusively to government, none will deny.

The foundation, the base, upon which those who oppose this bill on constitutional grounds rest their argument is simply this: Our Government is one of expressly delegated, clearly defined, and strictly limited powers, and all powers or rights not distinctly delegated, are, by the tenth amendment to the Constitution, expressly "reserved to the States respectively, or to the people," and as there is no distinct and express grant to the General Government of the right to appropriate money to the temporary support of common schools the exercise of that power must be regarded as prohibited.

That, sir, is the whole of the constitutional argument against this bill in all its strength, and all its weakness; no wealth of ornament or elaboration can make it stronger, and no process of refinement can render it less forcible.

The object of the Constitution, as we learn from the preamble, was "to form a more perfect Union * * * insure domestic tranquillity * * * and secure the blessings of liberty to ourselves and our posterity." It will be observed that I have purposely omitted the "general-welfare" clause, together with others not bearing upon my subject, as it is not my intention to appeal to that clause, even indirectly, to support or strengthen my argument in favor of the object sought to be accomplished by this measure.

The Constitution, then, was ordained and established in order to cement and perpetuate the bonds of Union, insure domestic tranquillity, and to secure the blessings of liberty to this people forever.

But, sir, this instrument, benignant in its purposes as it was, successful in its operation as it has been, the greatest and most perfect monument of human wisdom ever devised by the genius of man as it is, was yet the work of finite beings, inspired only by their devotion to the liberty and happiness of mankind. Wise, sagacious, and clear-sighted as the great framers of this great charter of our liberties were, it was impossible for them to have foreseen and expressly provided for all the necessities of an unparalleled growth in all that makes a people intellectually and materially great and prosperous. They could not have foreseen, and therefore they could not make explicit and distinct provision for all the necessities which are the legitimate and logical consequence of our growth.

OUR PHENOMENAL GROWTH UNFORESEEN.

They could reasonably anticipate that an asylum for the oppressed of all nations must necessarily increase in population out of all proportion to the increase in population of the rest of the world. But the man who had said in the constitutional convention of 1787 that he believed that within the first century of its national life the population of the United States would increase from less than 4,000,000 to more than 60,000,000 would have been deemed a visionary whose speculations were not worthy of a moment's consideration.

Inspired apostles of human liberty though they were, possessing and displaying in their acts, works, and words a wisdom I have often regarded as almost divine, our fathers were yet neither omniscient nor prescient—these are the attributes of Deity alone—and only by the gift of prescience could they have known that one State or several States of the Union they had so wisely and lovingly formed would be absolutely unable to provide adequate means for the education of the illiterate poor within their limits.

Accepting their recorded opinions as to the vital importance of education in fostering and developing the sentiments, feelings, and principles indispensable to freedom and self-government, can we doubt what would have been their action had they conceived of such a possibility? We all know they would not have been content with embodying in the Constitution a positive permission, but would have used words the effect

of which would have been to make it obligatory upon the General Government to extend its aid to the States so circumstanced.

Fortunately, however, they have not left the friends of education in a position where they are forced to justify an effort to secure such Government aid to education by mere surmises or conjectures as to what the framers of the Constitution would have done in the present condition of the country. They have embodied that justification, that authorization in the Constitution itself.

WHAT THE CONSTITUTION REQUIRES.

As I have shown, the Constitution was ordained and established in order, among other things, to insure domestic tranquillity and to secure the blessings of liberty to the people. To accomplish these objects the Constitution created certain agencies, clothed with certain powers and vested with certain rights. The agency first specified is called into being in these words:

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

Mark the comprehensive and emphatic terms in which the rights of the Congress are conferred. "All legislative powers herein granted," not some legislative powers, or a portion of the legislative powers, but all of them shall be vested, not may be vested or will be regarded as being vested, but shall be vested in Congress. It has been claimed, however, by a very able and very distinguished opponent of this bill that the words "herein granted" constitute a distinct and express limitation upon the right of Congress to exercise the "legislative powers" conferred upon it.

The distinguished gentleman to whom I have referred attached great significance to these words and argued that Congress has no constitutional right to exercise legislative powers except where the Constitution grants that right in express terms. The gentleman is justly regarded as one of the profoundest and most eminent constitutional lawyers who ever served in any legislative body in this country, and it is with the greatest possible diffidence that I venture to dissent from his opinion upon a question which his vastly superior natural ability and his much profounder study enable him to understand far more thoroughly than I can ever hope to do. But even Jove nods at times, and the greatest constitutional lawyer may be mistaken once in his life, and I think I can show that to have been the case in this instance.

IMPLIED POWERS RIGHTFULLY EXERCISED.

I agree fully with the opinion that the legislative power must be granted by the Constitution; but I venture to dissent from the idea that only those powers are granted which are given in express terms. I maintain that while this is a Government of enumerated powers, there are some powers conferred which are not specifically enumerated.

In the case of McCulloch *vs.* State of Maryland (4 Wheaton, pp. 405, 406, and 407), which, the reporter informs us, was regarded as so important that "the court dispensed with its general rule permitting only two counsel to argue for each party," Chief-Justice Marshall, in considering this very question, used this very significant and unequivocal language:

If any one proposition could command the universal assent of mankind we might expect it would be this: That the Government of the Union, though limited in its powers, is supreme within its sphere of action. This would seem to result necessarily from its nature. It is the Government of all; its powers are delegated by all; it represents all, and acts for all.

The learned Chief-Justice then proceeds to enforce the proposition of the absolute supremacy of the Government, acting within its delegated powers, and comes to the question of the right of the Government to exercise any power which is not enumerated, upon which point he is especially clear and convincing, as gentlemen will see by the language to which I now ask their attention:

But there is no phrase in the instrument (the Constitution) which, like the articles of confederation, excludes incidental or implied powers and which requires that everything granted shall be expressly and minutely described. Even the tenth amendment, which was framed for the purpose of quieting the excessive jealousies which had been excited, omits the word "expressly," and declares only that the powers "not delegated to the United States, nor prohibited to the States, are reserved to the States or to the people;" thus leaving the question, whether the particular power which may become the subject of contest has been delegated to the one government or prohibited to the other, to depend on a fair construction of the whole instrument. The men who drew and adopted this amendment had experienced the embarrassments resulting from the insertion of this word in the articles of confederation, and probably omitted it to avoid those embarrassments.

A constitution, to contain an accurate detail of all the subdivisions of which its great powers will admit, and of all the means by which they may be carried into execution, would partake of the prolixity of a legal code, and could scarcely be embraced by the human mind. It would probably never be understood by the public. Its nature, therefore, requires that only its great outlines should be marked, its important objects designated, and the minor ingredients which compose those objects be deduced from the nature of the objects themselves. That this idea was entertained by the framers of the American Constitution is not only to be inferred from the nature of the instrument, but from the language.

In the same case the court held (pages 408, 409):

Can we adopt that construction (unless the words imperiously require it) which would impute to the framers of that instrument, when granting these powers for the public good, the intention of impeding their exercises by withholding a choice of means? If, indeed, such be the mandate of the Constitution, we have only to obey; but that instrument does not profess to enumerate the means by which the powers it confers may be executed.

WE MUST ACCEPT JUDICIAL INTERPRETATION.

Now, sir, I have always understood, and I do not think it has ever been disputed by the most earnest and ardent upholders of the theory of strict construction of the very words of the Constitution, that an interpretation of any dubious clause of the Constitution—a construction of its meaning, intent, and purpose by the Supreme Court—was just as forceful and binding as though that interpretation and construction had been imbedded in the instrument itself; as if no dubiety had existed, and no construction required. There is no tribunal under heaven to make plain the doubtful or questionable things in the Constitution if the Supreme Court be not that tribunal. For this purpose, among others, was it created.

If, then, the Supreme Court, in a most important case, involving directly a question of constitutional law and constitutional construction, has declared that the General Government is possessed of certain unenumerated powers, legitimately deducible from the language in which expressly delegated powers are conferred, then I maintain it is practically a part of the Constitution itself that the General Government is clothed with the right to exercise powers which are not enumerated.

The Supreme Court has decided this point, as I have shown, and has decided that the Government has the right to exercise powers not expressly enumerated, and it is upon this decision that I base my dissent from the views of the eminent constitutional lawyer to whom I have referred.

The constitutional principle involved in this case is so important, and the decision of the court so fully vindicates the position assumed by the friends of this bill, that I venture to quote from it still further.

After having established the points already cited, the learned Chief-Justice goes on to argue that the fact of conferring certain powers necessarily and unavoidably carries with the grant an undeniable right to adopt such means as appear best calculated to render the grant of power effective for the general good. To illustrate his theory he cites the power to raise revenue as necessarily implying the right to transport money from place to place, though no such right is expressly granted; and (on pages 410, 411) declares his inability to "comprehend the process of reasoning which maintains that a power appertaining to sovereignty can not be connected with that vast portion of it which is granted to the General Government, so far as it is calculated to subserve the legitimate objects of that Government."

And he concludes (page 411):

The power of creating a corporation is never used for its own sake, but for the purpose of effecting something else. No sufficient reason is, therefore, perceived why it may not pass as *incidental* to these powers which are expressly given, if it be a direct mode of executing them.

A QUESTION ADJUDICATED.

Now, sir, I submit that this language of the Supreme Court, a tribunal expressly created for the purpose of expounding any and all intricacies or doubtful points in the Constitution, has forever settled the fact that under our great charter the General Government is clothed with the power to exercise rights not expressly granted or enumerated. Such is the decision of the most august tribunal known to our judiciary system, and between a decision of the Supreme Court and an opinion of the most distinguished constitutional lawyer I think we are bound to accept and be governed by the decision of the court.

But, sir, the court is not content to rest its exposition of the constitutional rights of the General Government upon even so unanswerable an argument as that which I have cited. It goes further and demonstrates the fact that this right of the General Government has not been left to mere inference or construction. Says the Chief-Justice (pages 411–412):

But the Constitution of the United States has not left the right of Congress to employ the necessary means for the execution of the powers conferred on the Government to general reasoning. To its enumeration of powers is added that of making "all laws which shall be necessary and proper for carrying into execution the foregoing powers, and other powers vested by this Constitution, in the Government of the United States or in any department thereof."

The counsel for the State of Maryland have urged various arguments to prove that this clause, though in terms a grant of power, is not so in effect, but is really restrictive of the general right, which might otherwise be implied, of selecting means for executing the enumerated powers.

In support of this proposition they have found it necessary to contend that this clause was inserted for the purpose of conferring on Congress the power of making laws; that without it doubts might be entertained whether Congress could exercise its powers in the form of legislation.

But could this be the object for which it was inserted? A government is created by the people, having legislative, executive, and judicial powers. Its legislative powers are vested in a Congress, which is to consist of a Senate and House of Representatives. Each House may determine the rule of its proceedings, and it is declared that every bill which shall have passed both Houses shall, before it becomes a law, be presented to the President of the United States. * * * Could it be necessary to say that a Legislature should exercise legislative powers in the shape of legislation? After allowing each House to prescribe its own course of proceeding, after describing the manner in which a bill should become a law, would it have entered into the mind of a single member of the convention that an express power to make laws was necessary to enable the Legislature to make them? That a Legislature, endowed with legislative powers, can legislate is a proposition too self-evident to have been questioned.

But the argument on which most reliance is to be placed is drawn from the peculiar language of this clause. Congress is not empowered by it to make all laws which may have relation to the powers conferred on the Government, but only such as may be "necessary and proper" for carrying them into execution. The word "necessary" is considered as controlling the whole sentence, and as limiting the right to pass laws for the execution of the granted powers to such as are indispensable, and without which the power would be nugatory. That it excludes the choice of means and leaves to Congress in each case that only which is most direct and simple.

The court then enters upon the consideration of the just and reason-

able signification of the word "necessary," as used in this clause of he Constitution, and concludes (pages 415, 416, 417, &c.):

* * * This word, then, like others, is used in various senses; and in its construction, the subject, the context, the intention of the person using them, are all to be taken into view.

Let this be done in the case under consideration. The subject is the execution of those great powers on which the welfare of a nation essentially depends. It must have been the intention of those who gave these powers to insure, as far as human prudence could insure, their beneficial execution. This could not be done by confining the choice of means to such narrow limits as not to leave it in the power of Congress to adopt any which might be appropriate and which were conducive to the end. This provision is made in a Constitution intended to endure for ages to come, and, consequently, to be adapted to the various crises of human affairs.

To have prescribed the means by which Government should, in all future time, execute its powers would have been to change entirely the character of the instrument, and give it the properties of a legal code. It would have been an unwise attempt to provide, by immutable rule, for exigencies which, if foreseen at all, must have been seen dimly, and which can be best provided for as they occur. To have declared that the best means shall not be used, but those alone without which the power given would be nugatory, would have been to deprive the Legislature of the capacity to avail itself of experience, to exercise its reason, and to accommodate its legislation to circumstances. If we apply this principle of construction to any of the powers of the Government we shall find it so pernicious in its operation that we shall be compelled to discard it.

The powers vested in Congress may certainly be carried into execution without prescribing an oath of office. The power to exact this security for the faithful performance of duty is not given, nor is it indispensably necessary. The different Departments may be established; taxes may be imposed and collected; armies and navies may be raised and maintained, and money may be borrowed without requiring an oath of office. It might be argued with as much plausibility as other incidental powers have been assailed that the convention was not unmindful of this subject. The oath which might be exacted—that of fidelity to the Constitution—is prescribed, and no other can be required. Yet he would be charged with insanity who should contend that the Legislature might not superadd to the oath directed by the Constitution such other oath of office as its wisdom might suggest.

So with respect to the whole penal code of the United States. * * * The several powers of Congress may exist, in a very imperfect state to be sure, but they may exist and be carried into execution, although no punishment should be inflicted in cases where the right to punish is not expressly given.

Take, for example, the power "to establish post-offices and post-roads." This power is executed by the single act of making the establishment. But from this has been inferred the power and duty of carrying the mail along the post-road, from one post-office to another. And from this implied power has again been inferred the right to punish those who steal letters from the post-office or rob the mail. It may be said, with some plausibility, that the right to carry the mail, and to punish those who rob it, is not indispensably necessary to the establishment of a post-office and post-road.

* * * * * * *

The lawful influence of this narrow construction on all the operations of the Government, and the absolute impracticability of maintaining it without rendering the Government incompetent to its great object, might be illustrated by numerous examples drawn from the Constitution and from our laws.

DISCRETIONARY POWER IN CONGRESS.

The court then holds that if this limited construction of the word "necessary" must be abandoned to establish the right of Government to inflict punishment it must also be abandoned with reference to the execution of other powers of the Government, and in finally determining the sense in which the word is used in this clause of the Constitution it is found that it is qualified by the word "proper" with which it is associated. Having established this point, the court says (pages 419, 420, and 421):

But the argument which most conclusively demonstrates the error of the construction contended for * * * is founded on the intention of the convention as manifested in the whole clause. To waste time and argument in proving that without it Congress might carry its powers into execution would not be much less idle than to hold a lighted taper to the sun. As little can it be required to prove that in the absence of this clause Congress would have some choice of means. That it might employ those which, in its judgment, would most advantageously effect the object to be accomplished. That any means adopted to the end, any means which tended directly to the execution of the constitutional powers of the Government, were in themselves constitutional. This clause, as construed by the State of Maryland, would abridge and almost annihilate this useful and necessary right of the Legislature to select its means. That this could not be intended, is, we should think, had it not been already controverted, too apparent for controversy. We think so for the following reasons:

First. The clause is placed among the powers of Congress, not among the limitations on those powers.

Second. Its terms purport to enlarge, not to diminish, the powers vested in the Government. It purports to be an additional power, not a restriction on those already granted. No reason has been or can be assigned for thus concealing an intention to narrow the discretion of the National Legislature under words which purport to enlarge it. The framers of the Constitution wished its adoption, and well knew that it would be endangered by its strength, not by its weakness. Had they been capable of using language which would convey to the eye one idea and after deep reflection impress upon the mind another, they would rather have disguised the grant of power than its limitation.

If, then, their intention had been, by this clause, to restrain the free use of means which might otherwise have been implied, that intention would have been inserted in another place, and would have been expressed in terms resembling these: "In carrying into execution the foregoing powers and all others, &c., no laws shall be passed but such as are necessary and proper." Had the intention been to make this clause restrictive it would unquestionably have been so in form as well as in effect.

The result of the most careful and attentive consideration bestowed upon this clause is that if it does not enlarge it can not be construed to restrain the powers of Congress or to impair the right of the Legislature to exercise its best judgment in the selection of measures to carry into execution the constitutional powers of the Government. If no other motive for its insertion can be suggested, a sufficient one is found in the desire to remove all doubt respecting the right to legislate on that *vast mass of incidental powers* which must be involved in the Constitution, if that instrument be not a splendid bauble.

We admit, as all must admit, that the powers of the Government are limited, and that its limits are not to be transcended. But we think the sound construction of the Constitution must allow to the National Legislature that discretion, with respect to the means by which the powers it confers are to be carried into execution, which will enable that body to perform the high duties assigned to it in the manner most beneficial to the people. Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, *which are not prohibited* but consist with the letter and spirit of the Constitution, are constitutional.

Having reached this conclusion as to the right of Congress to exercise incidental or implied powers—powers not expressly enumerated—the court decided that the bank must, as a corporation created by the National Legislature in the exercise of its legitimate powers, "be exempt from the power of a State to tax its operations." On this point the court held (page 426):

There is no express provision for the case, but the claim has been sustained on a principle which so entirely pervades the Constitution, is so intermixed with the materials which compose it, so interwoven with its web, so blended with its texture, as to be incapable of being separated from it without rending it into shreds.

LIBERAL CONSTRUCTION NECESSARY.

If any theory of constitutional construction has ever been officially and effectually exploded it is that which would insist that no power not expressly enumerated in the words of the Constitution can be lawfully exercised. The decisions of the Supreme Court which I have already cited suffice of themselves to show that this claim is not merely fallacious but absurd, and I have by no means exhausted the arguments by which the court has demonstrated the fallacy of the theory. I might easily fill the RECORD with additional citations all tending to establish this proposition. But I do not wish to weary the House, and will content myself with one further quotation, which, I think, must be admitted as convincing and conclusive upon the point.

In the important case of Gibbons *vs.* Ogden (9 Wheaton, pp. 137 *et seq.*) Chief-Justice Marshall delivered the opinion of the court in this forcible and unmistakable language:

This instrument contains an enumeration of powers expressly granted by the people to their Government. It has been said that these powers ought to be construed strictly. But why ought they to be so construed? Is there one sentence in the Constitution which gives countenance to this rule? In the last of the enumerated powers, that which grants expressly the means for carrying all others into execution, Congress is authorized "to make all laws which shall be necessary and proper" for the purpose.

But this limitation on the means which may be used is not extended to the powers which are conferred, nor is there one sentence in the Constitution which has been pointed out by the gentlemen of the bar, or which we have been able to discern, that prescribes this rule. We do not, therefore, think ourselves justified in adopting it. What do gentlemen mean by a strict construction? If they contend only against that enlarged construction, which would extend words beyond their natural and obvious import, we might question the application of the term, but should not controvert the principle. If they contend for that narrow construction which, in support of some theory not to be found in the Constitution, would deny to the Government those powers which the words of the grant, as usually understood, import, and which are consistent with the general views and objects of the instrument; for that narrow construction which would cripple the Government and render it unequal to the objects for which it is declared to be instituted, and to which the powers given as fairly understood render it competent, then we can not perceive the propriety of this strict construction nor adopt it as the rule by which the Constitution is to be expounded.

A man whose intentions require no concealment generally employ the words which most directly and aptly express the ideas they intend to convey, the enlightened patriots who framed our Constitution, and the people who adopted it, must be understood to have employed words in their natural sense, and to have intended what they have said. If, from the imperfection of human language, there should be serious doubts respecting the extent of any given power, it is a well-settled rule that the objects for which it was given, especially when those objects are expressed in the instrument itself, should have great influence in the construction. We know of no reason for excluding this rule from the present case.

The grant does not convey power which might be beneficial to the grantor, if retained by himself, or which can inure solely to the benefit of the grantee, but is an investment of power for the general advantage, in the hands of agents selected for that purpose, which power can never be exercised by the people themselves, but must be placed in the hands of agents, or lie dormant. We know of no rule for construing the extent of such powers other than is given by the language of the instrument which confers them, taken in connection with the purposes for which they were conferred.

SANCTIONED BY A CENTURY'S LEGISLATION.

Our Government has now existed under the Constitution for a century, and during that time forty-nine Congresses have been elected and have enacted laws which have been in innumerable instances subjected to the consideration and construction of the Supreme Court, and the decisions arrived at by the court have had the effect of ingrafting the laws it has approved and upheld upon the Constitution and investing them with the same power and effect as though they had been part of the original instrument. And the uniform construction of the Constitution by the various Congressional enactments must now be accepted and regarded as no less binding than the provisions of the Constitution itself.

If every successive Congress should construe the provisions of the Constitution in accordance with the views of individual members, or to accommodate the purposes of a majority, without regard to the antecedent construction of its predecessors, it will be manifest that we should practically have no constitutional guide whatever.

In 1816 in delivering the opinion of the Supreme Court upon the point of constitutional law involved in the famous case of Martin *vs.* Hunter's Lessee, Justice Story used these words (1 Wheaton 304):

The Government, then, of the United States can claim no powers which are not granted to it by the Constitution, and the powers actually granted must be such as are expressly given or given by necessary implication. On the other hand, this instrument, like every other grant, is to have a reasonable construction, according to the import of its terms; and where a power is expressly given in general terms it is not to be restrained to particular cases unless that construction grow out of the context expressly or by necessary implication. The

words are to be taken in their natural and obvious sense and not in a sense unreasonably restricted or enlarged.

The Constitution unavoidably deals in general language. It did not suit the purposes of the people, in framing this great charter of our liberties, to provide for minute specifications of its powers or to declare the means by which those powers should be carried into execution. It was foreseen that this would be a perilous and difficult, if not an impracticable, task. The instrument was not intended to provide merely for the exigencies of a few years, but was to endure through a long lapse of ages, the events of which were locked up in the inscrutable purposes of Providence. It could not be foreseen what new changes and modifications of power might be indispensable to effectuate the general objects of the charter; and restrictions and specifications which at the present might seem salutary might in the end prove the overthrow of the system itself. Hence its powers are expressed in general terms, leaving to the Legislature, from time to time, to adopt its own means to effectuate legitimate objects and to mold and model the exercise of its powers as its own wisdom and the public interests might require.

LAWS ENACTED UNDER IMPLIED POWERS.

If we reject this theory of implied grants of power to Congress by the Constitution, upon what principle will we be able to justify the enactment of a large majority of the laws which we find upon our statute-books?

During the first four years of the existence of the Government under the Constitution Congress appropriated $15,000 for the support of the refugees from the island of San Domingo. During Washington's second administration a law was passed appropriating $4,000 to remunerate American citizens who had ransomed themselves from the Government of Algiers.

During the administrations of Adams and Jefferson laws were enacted appropriating money to aid American seamen in foreign countries.

During Madison's administration money was appropriated to purchase provisions and donate them to the relief of the sufferers from an earthquake in Venezuela.

During Polk's administration Democrats enacted laws to purchase and convey provisions to famine-stricken Ireland. And since the war there is no limit to the laws authorizing the expenditure of money for which no express constitutional warrant can be found.

There is no express authority in the Constitution for the establishment of the Department of Agriculture, or for the Fish Commission, or for the Geological Survey, or for the exploration of the Amazon or expeditions to the North Pole, or for the Signal Service Corps, or for the Smithsonian Institute, or the Life-Saving Service, or to make surveys in Panama or Nicaragua with a view to canal construction, or to establish schools for the education of Indians, or to erect monuments to distinguished citizens, or to donate $250,000 each Congress to the employés of that body for which sum no services whatever are rendered or expected, or to loan the credit of the Government to the Pacific railroads, or to acquire the Territory of Alaska at a cost of $7,200,000, or to donate the public treasure to promote a centennial exhibition at Philadelphia or a world's exposition at New Orleans, or to create a civil-service commission under the rules now in force, or to tax private banks out of existence and establish national banks.

I might cite hundreds of laws for which not the faintest shadow of authority can be found in the express grants of the Constitution, all enacted under the implied powers conferred upon Congress, and I insist there is no implication to justify any of these laws so strong as that which exists in favor of the educational bill. And in addition to the implications in favor of this measure, the Supreme Court has decided in numberless instances that its purpose is in strict conformity with the Constitution.

DECISION BY EXTREME STATE RIGHTS DEMOCRATS.

The decisions I have already cited were rendered in 1824 and prior thereto. It is unnecessary for me to accumulate decisions of this character, but there is one delivered a short time before the war to which I will call attention on account of the character of the court at the time of its rendition. At that time the Supreme Court of the United States was eminently distinguished for its strict construction of the Constitution, opposition to centralization, and adherence to the principle of State rights; and yet while thus organized it announced a unanimous decision prepared and delivered by Justice Campbell, of Alabama, in which the court fully affirmed the constitutionality of Congressional grants for the aid of education, and the opinion even took occasion to commend the wisdom of such enactments.

The style of the case is Cooper vs. Robert, 18 Howard, page 177.

I read from page 178:

> There is, obviously, a definite purpose declared to consecrate the same central section of every township of every State which might be added to the Federal system, to the promotion "of good government and the happiness of mankind," by the spread of "religion, morality, and knowledge," and thus, by a uniformity of local association, to plant in the heart of every community the same sentiments of grateful reverence for the wisdom, forecast, and magnanimous statesmanship of those who framed the institutions for these new States before the Constitution for the old had yet been modeled.

To realize the full force of this decision it must be remembered that Judge Campbell was so extreme in his views as a strict constructionist of the Constitution that shortly after, when the State of Alabama seceded, he felt constrained to surrender his high position as a judge of the Supreme Court of the United States and retire to private life in his native State.

A WISE AND MAGNANIMOUS MEASURE.

Note the language. Judge Campbell and all the Supreme Court of the United States speak of "the wisdom, forecast, and magnanimous statesmanship" of those who framed the law granting aid to education.

I wish I had a voice that could resound throughout our land, to repeat those words to all our people.

If the State-rights Democrats who sat on the supreme bench during Buchanan's administration call such laws evidence of wisdom, forecast, and magnanimous statesmanship, certainly it must be a kind of legislation it would be highly culpable in us to neglect under the country's present circumstances.

But beside being wise and magnanimous, we see that the Supreme Court has held such a law to be constitutional, and now the opponents of the educational bill are reduced to the pitiable extremity of a plea of confession and avoidance. They must confess that they are in error in pretending that the bill is unconstitutional in the face of the oft-repeated decisions of the Supreme Court and the uniform action of Congress upon the subject, but seek to avoid the effect of this confession by insisting that the Government has no lawful right to assist education by donations of anything but land or property—that so soon as Government converts the people's property or land into money its right to devote to the purposes of education the money equivalent of such land or property is destroyed.

That is, they attempt to maintain the absurdity that the General Government can lawfully give $7,200,000 for Alaska, and then donate to educational purposes any part, or all of the territory so acquired, but that it is debarred by constitutional limitations from donating, for this purpose, the most insignificant fraction of this amount until it has lost its monetary form.

A CLIMAX OF ABSURDITY.

Carried to its logical and unavoidable result their reasoning would lead us to the conclusion that the Government has ample constitutional warrant to bestow upon the several States and Territories all the land it possesses, and I might add all the old and useless hulks which constitute our feeble apology for a navy, with express authority to sell the land and ships for whatever could be realized and devote the proceeds to education, but that were the Government to make the sale itself not one dollar of the money could legally be taken from the Treasury to aid in providing our laborers with the opportunity of educating their children.

It is possible that I am in error, but to my understanding no proposition was ever more absurd than this.

To make the absurdity of the position of our opponents more apparent, let me recall to your attention the fact that much of the donation for educational purposes has not been given to the States in land at all, but in place thereof land-scrip has been given. Now, land-scrip is a paper issued by the Government which has a current value stable and defined. It can be converted into money almost anywhere and at any moment, and such property is frequently used as money.

When people argue that it is constitutional and right and democratic for Congress to donate land-scrip for education, and unconstitutional and wrong and undemocratic to donate the money for which the scrip is sold for the same purpose, they have assumed a refinement of hair-splitting too acute for my reasoning faculties, and when they go further, and while upholding as democratic the law that gives land-scrip to universities, and oppose as undemocratic the law giving the proceeds of land-scrip to aid common schools, a climax of absurdity is reached which needs no refutation.

It refutes itself.

THE PRESENT CHIEF-JUSTICE.

In 1880 Chief-Justice Waite, William M. Evarts, and others were appointed a committee by the trustees of the Peabody fund to memorialize Congress upon the subject of its appropriating funds for education. In referring to the constitutionality of such laws, this distinguished committee say:

> It may be regarded as *res adjudicata*. The laws of the United States present innumerable precedents in which Congress has exercised the power to contribute toward the general education of citizens of the new States, and in no instance has its constitutional right to do so been questioned.

Up to 1880 these distinguished gentlemen say:

> In no instance has the constitutional right to make these appropriations been questioned.

But in 1886 the question is raised and urged by Senators from States which have received from the General Government for educational purposes forty times as much as has been given to States which will be benefited under this bill, and to attain their object they raise the cry of constitutional limitations.

In the same spirit New England, New York, and other States of the North, who have had millions upon millions appropriated for rivers, harbors, and public buildings within their borders, oppose on constitutional grounds the appropriation of a few dollars to improve the navigation of the Tennessee or build a public edifice for Government use in the Southern States.

I ask gentlemen to look on the map and see the 2,700,000 square miles of territory, which is bounded on the east by Pennsylvania, the Virginias, the Carolinas and Georgia, and the 60,000 square miles of Florida, and to bear in mind that all this territory, except about 40,000 squre miles in the States of Wisconsin, Michigan, Illinois, In-

diana, and Ohio, was donated by Southern States or acquired under Southern administrations, and then ask the question if the vast domain of wealth should not be so distributed as to give the South her portion, and if not her full portion, at least some approximation to it.

MR. MADISON UNFAIRLY INVOKED.

In 1792 Mr. Madison made a strong speech against giving improper bounties to Massachusetts codfishery men, and in the earnestness of his oral argument he declared that the measure was unconstitutional. The substance of his objections was expressed in these words:

I, sir, have always conceived—I believed those who proposed the Constitution conceived; it is still more fully known and more material to observe that those who ratified the Constitution conceived—that this is not an indefinite government, deriving its powers from the general terms prefixed to the specified powers, but a limited government, tied down to the specified powers, which explain and define the general terms.

It is to be recollected that the terms "common defense and general welfare" as here used are not novel terms first introduced into this Constitution. They are terms familiar in their construction, and well known to the people of America. They are repeatedly found in the old Articles of Confederation, where, although they are susceptible of as great a latitude as can be given them by the context here, it was never supposed or pretended that they conveyed any such powers as is now assigned to them. On the contrary, it was always considered clear and certain that the old Congress was limited to the enumerated powers; and that the enumeration limited and explained the general terms. I ask the gentlemen themselves whether it was ever supposed or suspected that the old Congress could give away the money of the States to bounties to encourage agriculture, or for any other purpose they pleased? If such a power had been possessed by anybody, it would have been much less impotent, or have borne a very different character from that universally ascribed to it.

The novel idea now annexed to those terms and never before entertained by the friends or enemies of the Government will have a further consequence, which can not have been taken into the view of the gentleman. Their construction would not only give Congress the complete legislative power I have stated; it would do more; it would supersede all the restrictions understood at present to lie in their power with respect to a judiciary. It would put it in the power of Congress to establish courts throughout the United States, with cognizance of suits between citizen and citizen, and in all cases whatsoever.

* * * * * * *

There are consequences, sir, still more extensive, which, as they follow clearly from the doctrine combated, must either be admitted, or the doctrine must be given up. If Congress can employ money indefinitely to the general welfare, and are the sole and supreme judges of the general welfare, they may take the care of religion into their own hands. * * * In short, everything, from the highest object of State legislation down to the most minute object of police, would be thrown under the power of Congress.

This earnest and impulsive objection of Mr. Madison to a construction of the general-welfare clause of the Constitution then sought to be enforced, but long since virtually abandoned and now advocated by but few, has been incorporated in nearly every speech made by the opponents of this bill, whether in or out of Congress. The construction which Mr. Madison was contending for was simply this: That this particular clause did not, of itself, constitute an undefined and unlimited grant of power. I wish it to be clearly understood that I am as inflexibly opposed to this construction of the clause as Mr. Madison could have been or as any opponent of this bill can be now; and I maintain that the deservedly great weight and influence of Mr. Madison's name and opinions have been unjustifiably invoked by the enemies of this measure inasmuch as they have studiously abstained from coupling with their persistent use of his speech any explanation of the particular idea which was being so vigorously controverted.

But even were this appeal to the authority of Mr. Madison perfectly fair and ingenuous, let me ask those who rely upon it so absolutely, how it is that they can be rigidly bound by Madison's idea of constitutional grants of power as expressed in this speech and yet be at liberty to disregard his views upon the same question as indicated in his actions as the Chief Executive of the Republic.

In 1791 he maintained that the United States Bank was unconstitutional, and yet in 1817, as President, he approved the bill rechartering the Bank. In 1792 he held the cod-fishery bounty bill to be unconstitutional and made the speech against it which has been so frequently quoted, and yet in 1813, as President, he approved the bill granting a bounty on all exported pickled fish of the United States fisheries, both measures being identical in principle. In 1794, on the floor of the House, he opposed the appropriation for the relief of the refugees from San Domingo, asserting that the measure—

Involved the constitutional question whether the money of our constituents can be appropriated to any other than the specified powers.

And yet in 1812, as President, he approved a similar bill for the relief of the sufferers by an earthquake at Caracas, in Venezuela.

THE OPPONENTS' ARGUMENT REFUTED.

The opponents of this measure attach great importance and significance to the declaration of Mr. Madison, in the speech on the cod-fishery bounty already cited, that this is—

A limited government, tied down to the specified powers which explain and define the general terms.

They insist that this construction of the powers which Congress may lawfully exercise, by "the father of the Constitution," constitutes an insuperable and fatal objection to this bill.

I admit that there is great force in this argument; that had not the construction of Mr. Madison been shown to be erroneous it would, of necessity, be unanswerable. But, sir, I insist that this error has been shown by Democratic leaders whom the party hold in a reverence only less profound than that cherished for Madison himself.

In vetoing the bill passed in 1822 making an appropriation for continuing the Cumberland road, Mr. Monroe took the ground that the provision assuming Federal supervision and control of the work was unconstitutional, but took the pains to transmit to Congress, accompanying his veto message, a separate document in which the very question under consideration is discussed with marked ability.

In this great state paper Mr. Monroe said:

A power to lay and collect taxes, duties, imposts and excises subjects to the call of Congress every branch of the public revenue, internal and external; and the addition, "to pay the debts and provide for the common defense and general welfare," gives the right of appropriating the money raised, that is of appropriating it to the purposes specified, according to a proper construction of the terms. Hence it follows that it is the first part of the clause only which gives a power, which affects in any manner the power remaining to the States; as the power to raise money from the people whether it be by taxes, duties, imposts, or excises, though concurrent in the States as to taxes and excises, must necessarily do. But the use, or the application of the money after it is raised, is a power altogether of a different character. * * * The right of appropriation is, therefore, from its nature secondary and incidental to the right of raising money; and it was proper to place it in the same grant and same clause with that right.

Further on he says:

It is contended on the one side that, as the National Government is a government of limited powers, it has no right to expend money except in the performance of acts authorized by other specific grants according to a strict construction of their powers; that this grant in neither of its branches gives to Congress a discretionary power of any kind, but is a mere instrument in its hands to carry into effect the powers contained in the other grants. To this construction I was inclined in the more early stage of our Government, but on further reflection and observation my mind has undergone a change.

He then gives the reasons which have produced this change in his views. Among other things upon this point he says:

Many considerations of great weight operate in favor of this construction, while I do not perceive any serious objection to it. If it be established, it follows that the words "to provide for the common defense and general welfare" have a definite, safe, and useful meaning. The idea of their forming an original grant, with unlimited power, superseding every other grant, is abandoned. They will be considered simply as conveying a right of appropriation, a right indispensable to that of raising a revenue, and necessary to expenditures under every grant.

* * * * * * *

If, then, the right to raise and appropriate the public money is not restricted to the expenditures under the other specific grants according to a strict construction of their powers respectively, is there no limit to it? Have Congress the right to raise and appropriate the public money to any and to every purpose according to their will and pleasure? They certainly have not. The Government of the United States is a limited government, instituted for great national purposes, and for those only. Other interests are committed to the States, whose duty it is to provide for them. Each government should look to the great and essential purposes for which it was instituted, and confine itself to those purposes.

MONROE VINDICATES OUR POSITION.

Now, sir, I submit with the utmost possible confidence that the views of the advocates of this measure as to the rights and powers of Congress in making appropriations are fully vindicated by this exposition by Mr. Monroe of the constitutional question involved in this bill. "The right of appropriation," says Mr. Monroe, "is, from its nature, incidental to the right of raising money"—not a right to be exercised only in rigid adherence to the precise language in which the enumerated powers are expressly conferred, but a right to be exercised in accordance with the judgment and wisdom of Congress; provided, and this is the only limitation upon the right of appropriation upon which Mr. Monroe insists, the appropriation be for an object of national concern by which the good of the whole country is to be promoted. This is precisely the interpretation for which the advocates of an appropriation in aid of common schools have contended, and that this is the rightful and proper interpretation is asserted by Mr. Monroe.

To appreciate the full significance of Mr. Monroe's opinion upon this point, we must remember that he was the contemporary of Jefferson and Madison, associated with them in the administration of public affairs, and presumably entirely familiar with their views upon all public questions, and a participant in the public discussions and private interchange of opinions which must necessarily have taken place at the time. It must be remembered, too, that he was a member of Mr. Madison's Cabinet and an associate of Thomas Jefferson, to whose vigilant solicitude we are indebted for the restrictive amendments to the Constitution.

Is it at all likely that amid such surroundings, and under such influences, Mr. Monroe would have sanctioned any construction of the Constitution which would relieve Congress or any branch of the Government from any proper or necessary limitation upon its powers? Can it be imagined that the enemies of this bill are more careful to guard against any tendency to centralization than was Mr. Monroe?

CALHOUN'S COMMON-SENSE CONSTRUCTION.

The views held by Mr. Calhoun on this question are very forcibly expressed in a speech delivered in 1817, some paragraphs from which I will read:

It is mainly urged that the Congress can only apply the public money in execution of the enumerated powers. I am no advocate for refined arguments in the Constitution. The instrument was not intended as a thesis for the logician to exercise his ingenuity on. It ought to be construed with plain, good sense; and what can be more express than the Constitution on this point?

Note the emphasis with which the great modern advocate of strict construction insists that the Constitution shall be "construed with plain good sense," not with "refined arguments."

Mr. Calhoun then calls attention to the plain significance of the language of the first clause of the eighth section. He said:

The first power delegated to Congress is comprised in these words: "To lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States;" "but all duties, imposts, and excises shall be uniform throughout the United States." First, the power is given to lay taxes; next the objects are enumerated to which the money accruing from the exercise of this power may be applied, namely, to pay the debts, provide for the defense, and promote the general welfare; and last, the rule for laying the taxes is prescribed, to wit, that all duties, imposts, and excises shall be uniform.

Mr. Calhoun then shows the absurdity of that construction of this clause for which the opponents of the educational bill now contend, in the forcible language which I will read:

If the framers had intended to limit the use of money to the powers afterward enumerated and defined nothing could have been more easy than to have expressed it plainly. I know that it is the opinion of some that the words "to pay the debts and provide for the common defense and general welfare," which I have just cited, were not intended to be referred to the power of laying taxes contained in the first part of the section, but that they are to be understood as distinct and independent powers granted in general terms and are qualified by a more detailed enumeration of powers in the subsequent part of the Constitution. If such were in fact the meaning intended surely nothing can be conceived more bungling and awkward than the manner in which the framers have communicated their intention. If it were their intention to make a summary of the powers of Congress in general terms which were afterward to be particularly defined and enumerated they should have told us so plainly and distinctly, and if the words "to pay the debts and provide for the common defense and general welfare" were intended for this summary they should have headed the list of our powers, and it should have been stated that to effect these general objects the following specific powers were granted.

I trust that some of the advocates of their strained and narrow construction of the powers of Congress under this clause will undertake the task of replying to Mr. Calhoun's arguments upon this point. Until they do this I hope they will cease to assert that the educational bill is unconstitutional.

Further on in his argument Mr. Calhoun shows that not only "plain good sense" but the uniform practice of the Government is wholly inconsistent with the theory upon which the enemies of this bill rely. He said:

But suppose the Constitution to be silent, why should we be confined in the application of money to the enumerated powers? There is nothing in the reason of the thing that I can perceive why it should be so restricted, and the habitual and uniform practice of the Government coincides with my opinion. Our laws are full of instances of money appropriated without any reference to the enumerated powers. We granted by a unanimous vote, or nearly so, $50,000 to the distressed inhabitants of Caracas, and a very large sum at two different times to the St. Domingo refugees. If we are restricted in the use of our money to the enumerated powers, on what principle can the purchase of Louisiana be justified? To pass over many instances, the identical power which is now the subject of discussion has in several instances been exercised. To look no further back, at the last session a considerable sum was granted to complete the Cumberland road. In reply to this uniform course of legislation I expect it will be said that our Constitution is founded on positive and written principles and not on precedents. I do not deny the position, but I have introduced these instances to prove the uniform sense of Congress and the country, for they have not been objected to, as to our powers, and surely they furnish better evidence of the true interpretation of the Constitution than the most refined and subtle arguments.

Having conclusively disposed of this branch of his subject Mr. Calhoun then considers the effect of the reasonable and proper construction for which he contends. Though habitually opposed to the idea of an unrestricted exercise of power by any branch of the General Government, it will be noticed that his opinions were widely different from those entertained by the alarmists of the present day. Upon this point he used this language:

Let it not be argued that the construction for which I contend gives a dangerous extent to the powers of Congress. In this point of view I conceive it more safe than the opposite. By giving a reasonable extent to the money power it exempts us from the necessity of giving a strained and forced construction to the enumerated powers. For instance, if the public money could be applied to the purchase of Louisiana, as I contend it may be, then there was no constitutional difficulty in that purchase; but if it could not, then we are compelled either to deny that we had the power to purchase or to strain some of the enumerated powers to prove our right.

No language of mine can add force to this masterly exposition of the point at issue.

The right of appropriation is not only fully conceded, but it is demonstrated that the unwise attempt to subject it to undue restrictions and limitations is calculated to bring the cardinal principles of the Constitution itself into question.

OLD HICKORY ON OUR SIDE.

General Jackson also dissented wholly from the proposition of Mr. Madison, in his speech on the cod-fishery bounty, and maintained that under any such construction the successful administration of the Government would be impossible, though admitting that it might have been desirable had it only been feasible. In his veto of the Maysville road bill he said:

The symmetry and purity of the Government would doubtless have been better preserved if this restriction of the power of appropriation could have been maintained without weakening its ability to fulfill the great objects of its institution, an effect so likely to attend its admission, notwithstanding its apparent fitness, that every subsequent administration of the Government, embracing a period of thirty out of the forty-two years of its existence, has adopted a more enlarged construction of the power.

The extent of the discussion to which the question of the proper and legitimate construction of the rights and powers of Congress under this clause has given rise is referred to by Chancellor Kent in these words:

That Congress possesses the power to appropriate money raised by taxation or otherwise for other purposes, in their discretion, than those pointed out in the enumerated powers, is a question that has given rise to very able and acute discussion; and the affirmative side of the question has been sustained and successfully vindicated by the practice of the Government and the weighty authority, among others, of Mr. Hamilton and Mr. Monroe, in celebrated documents under their official sanction.

I might go on and enumerate the various authorities alluded to by the eminent commentator, but it is unnecessary for me to do so, as there is one single authority who in this case must be accepted by all as absolutely conclusive, it being no other than Mr. Madison himself.

MADISON RECANTS THE THEORY OF HIS CODFISHERY SPEECH.

When he vetoed the bill setting apart the bonus to be paid by the bank and the Government's share in its dividends for certain improvements, Mr. Madison had so far modified his views regarding constitutional limitations as to concede that Congress had the right to appropriate money for such purposes. In his veto message he said:

A restriction of the power "to provide for the common defense and general welfare" to cases which are to be provided for by the expenditure of money would still leave within the legislative power of Congress all the great and most important measures of Government, money being the ordinary and necessary means of carrying them into execution.

As was to have been expected, this, the changed opinion in the matter of the Bank, and other marked divergences from the theory so vigorously maintained in the speech upon the codfishery bounty, provoked both criticism and comment. General Jackson, for one, referred to this change of Mr. Madison's views. In alluding to declarations of Mr. Madison on this subject President Jackson used these words:

I have not been able to consider these declarations in any other point of view than as a concession that the right of appropriation is not limited by the power of Congress to carry into effect the measure for which the money is asked as was formerly contended.

I am not disposed to regard this change as in any way justifying a charge that Mr. Madison was inconsistent. But it shows, I think, that, like Mr. Monroe, Mr. Madison's reflection and observation had convinced him that his early opinions upon this point were untenable, and like the wise and sagacious statesman he was, he modified his views, and brought them into harmony with the dictates of a calmer judgment, and the lessons of practical experience in the administration of the Government under the Constitution.

WHY MADISON'S VIEWS WERE REVERSED.

When the speech on the codfishery bounty was made in 1792 the Constitution was an experiment, but when he was President the Constitution had become an established, practical fact, and it was unavoidable that a man like Mr. Madison should have gained knowledge and wisdom by experience. And this view of the causes which had operated to produce this change in opinion is fully sustained by Mr. Madison's own letter, dated June 25, 1831, addressed to Mr. Ingersoll, in which he uses these words:

The charge of inconsistency between my objections to the constitutionality of such a bank in 1791 and my assent in 1817 turns on the question how far legislative precedents expounding the Constitution ought to guide succeeding Legislatures and to override individual opinions.

The weight Mr. Madison attached to judicial interpretations of doubtful constitutional questions is also shown in this letter, where he says:

The case in question has its true analogy in the obligation arising from judicial expositions of the law on succeeding judges—the Constitution being a law to the legislator, as the law is a rule of decision to the judge.

It should be borne in mind that prior to the date of this letter there had been many important decisions by the Supreme Court affirming the more liberal views of constitutional construction; and these decisions, as well as the diverse legislation of successive Congresses, are urged by Mr. Madison as amply vindicating the modification of his views. I quote further from the letter:

Can it be of less consequence that the meaning of a constitution should be fixed and known than that the meaning of a law should be so? Can, indeed, a law be fixed in its meaning and operation unless the Constitution be so? On the contrary, if a particular Legislature, differing in the construction of the Constitution from a series of preceding constructions, proceed to act on that difference, they not only introduce uncertainty and instability in the Constitution but in the laws themselves; inasmuch as all laws preceding the new construction and inconsistent with it are not only annulled for the future but virtually pronounced nullities from the beginning. * * * Has the wisest and most conscientious judge ever scrupled to acquiesce in decisions in which he has been overruled by the matured opinions of the majority of his colleagues and subsequently to conform himself thereto, as to authoritative expositions of the law? And is it not reasonable that the same view of the official oath should be taken by a legislator acting under the Constitution, which is his guide, as is taken by a judge acting under the law, which is his?

There is in fact and in common understanding a necessity of regarding a course of practice as above characterized in the light of a legal rule of interpreting a law; and there is a like necessity of considering it a constitutional rule of interpreting a constitution.

After enlarging upon this point, the writer proceeds in this language:

Let it then be left to the decision of every intelligent and candid judge, which on the whole, is most to be relied on for the true and safe construction of the Constitution; that which has the uniform sanction of successive legislative bodies through a period of years and under the varied ascendency of parties; not that which depends upon the opinions of every new Legislature, heated as it may be by the spirit of party, eager in the pursuit of some favorite object, or led away by the eloquence and address of popular statesmen, themselves perhaps under the influence of the same misleading causes. It was in conformity with the view here taken of the respect due to deliberate and reiterated precedent that the Bank of the United States, though on the original question held to be unconstitutional, received the executive signature in the year 1817.

It seems to me incomprehensible that gentlemen presumably familiar

with this emphatic and unequivocal recantation by Mr. Madison of the views of constitutional construction advanced by him in the cod-fishery bounty speech of 1792 should now refer to that speech as an authoritative exposition of Mr. Madison's theory of the limitations of the power conferred upon Congress in the matter of appropriation. Can it be possible; that they wish to be considered as excluded from the number of the "intelligent and candid judges" to whom Mr. Madison so confidently appeals to decide this question; that they refuse to admit or recognize the binding force of judicial interpretation and legislative sanction?

THE BILL IS DEMOCRATIC.

But the enemies of the educational bill say it is not democratic. Let me ask them, one and all, is it not democratic to enable the children of our laboring people to acquire the rudiments of education?

Let me ask my learned and esteemed friend from Texas, the gentleman who has championed the opposition to this bill—one of those on the committee who for months refused to report it back to the House, the member who stood on this floor and demanded that the bill introduced on March 29 should be confided to the tender care of his committee, eight members of which, by their dilatory motions appeared to justify the apprehension that they sought to deprive the three hundred and seventeen other members of this House of the privilege of voting on or expressing their views upon this great measure—let me ask him, does he say it is not democratic to teach the alphabet to the poor and lowly? Let me ask him if the bill he introduced on May 3, for the establishment of a high school in Washington, was more democratic?

Is it democratic and constitutional to appropriate money for a high school in Washington to teach agriculture and mechanical arts and other accomplishments to the children of comparatively well-to-do office-holders and the children of the many wealthy people—some of them being millionaires—who have congregated in our capital?

I know my gallant friend will concur with me that it is not. I feel confident that his intelligence and generous sympathies will always be found among the advocates of education.

Let me ask some of the opponents of this bill if it is constitutional and democratic for Congress to appropriate or donate largely to universities where only the sons of the rich are educated and undemocratic or unconstitutional to give a small sum to common schools where the sons of poor men are taught the elements of learning?

It is a remarkable fact that nearly all the determined opponents of this bill, which is for the benefit of the poor and lowly, have been foremost in advocating bills to endow universities which the poor and lowly seldom enter. I know that upon reflection you all will say that true democracy tells us to espouse the cause of those who work; to give practical effect to the words of the Declaration of Independence which assert that all men are created equal.

THE WAGE-WORKER THE BENEFICIARY.

If then, Mr. Chairman, this amendment and the educational bill be strictly and clearly within the limitations of the Constitution as that great instrument has been interpreted by the Supreme Court, if it does not transcend the most rigid limitations upon the rights and powers of the General Government as understood and explained by the most earnest and zealous advocates of limitations and restrictions; if, in its theory as well as in its effect, it be in perfect harmony and complete accord with the principles and practice of the Democratic party, and expressly sanctioned by the latest authoritative enunciation of Democratic faith, upon what ground can any sincere Democrat consistently oppose it?

I can understand any and all antagonism to such a measure on the part of the Republicans, because all, or almost all, of the legislation for which that party is responsible has had for its effect, if not indeed for its immediate object, the material, the pecuniary benefit and advantage of the few at the expense of the many, to create a specially favored wealthy class whose peculiar privilege it shall be to bear no share, or the lightest possible share, of the burdens of Government, and to exact tribute in a myriad forms from the vast army of toilers who create the wealth in which these untaxed and pampered plutocrats are reveling.

DEMOCRACY AT WAR WITH PLUTOCRACY.

But, sir, between Democracy and plutocracy there exists in matters of legislation an endless and relentless war, and I think one is justified in feeling and expressing some surprise when he sees the Democrat uniting with the plutocrat to defeat a measure which must have the effect of improving the condition and increasing the prosperity and happiness of the multitude of laborers upon whom the plutocrat habitually preys.

What, sir, is the object of this amendment, and what is the object of the educational bill? It is to educate the people. To enable those whose lot in life, through no fault of their own, is hard and laborious, uncheered by comfort, and unilluminated by hope for themselves, to look forward to a brighter fate for their children.

The child is father to the man, and if the child grows up without enjoying the opportunities for education, he can not by any possibility become a prosperous citizen. Therefore, for the benefit of the child and for the good of the country, I appeal to the House to give to the children of our laborers those opportunities of obtaining an education which will be secured to them by this amendment or the educational bill.

Education is necessary to free man from the dominion of his passions; to enable judgment to rise superior to prejudice; to enable man to obtain a clear perception of his duty to himself, his neighbor, his country, and his God—for strictly and logically, though, perhaps, not theologically, conscience is, at least in a measure, the result of education.

Education dignifies and enlightens toil and sweetens its results by enlarging the toiler's capacity to enjoy whatever he may have gained. Education makes a good man, a good son, a good husband, a good father, and a good citizen.

The lack of education, if it does not necessitate the lack of this goodness in all of these relations, at least renders its existence less likely.

Ignorance engenders distrust, aggravates discontent, and ferments controversy and turbulence.

OPPOSITION SHOULD BE IMPOSSIBLE.

What American Representative dares avow by his vote that he does not wish to do all in his power to make every man in the United States a good citizen? If there be any such Representative he can conscientiously vote against the proposition I advocate.

What gentleman upon this floor dare proclaim to the world that he would limit the comforts and enjoyments of the great body of the people and doom their children to the hopeless bondage of ignorant, despairing servitude?

Let him vote against this measure, and he will take a long stride toward the accomplishment of his purpose.

What member of this House does not wish to raise the average standard of intelligence throughout our land and add to our country's greatness and prosperity?

If there be none who do not cherish this desire there can be no vote against measures designed to promote the cause of education.

Mr. Chairman, there may be, and possibly it is best there should be, difference of opinion among us as to questions of policy and measures of administration, but upon questions like this—questions which have for their sole and only possible object the alleviation of the sufferings, the mitigation of the hardships, the brightening of the hopes, the enlightening of the understandings of the poor but industrious laborers of this land of freemen—all differences should vanish and all should unite, not in the bestowal of a boon, but in the performance of this sacred duty to those who have made our country prosperous and great.

LOVE OF COUNTRY DICTATES ITS PASSAGE.

It is not enough, of itself, that man should be free; he should be able to fully realize and thoroughly appreciate the nature and extent of the blessings of freedom. It is not enough that a country should be prosperous and powerful; the virtue, the patriotism, and the manhood of its citizens demand that its prosperity shall be more generally diffused, and that its power shall be increased.

Adopt this amendment and you will have conferred the blessings upon the individual citizen; adopt this amendment and you will have insured that future grandeur of our country, which every patriot so proudly and so confidently anticipates.

We have sat here patiently, Mr. Chairman, and passed many measures the benefits of which would inure chiefly to our wealthy class. I now appeal to the House, let us devote a few hours to perfecting this measure so essential, so indispensable to the comfort, the happiness, the prosperity of the millions of toilers who have created the wealth of this great and prosperous Republic.

Fraudulent Entries of Public Lands.

REMARKS

OF

HON. WILLIAM S. HOLMAN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 28, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9478) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1887, and for other purposes, the pending paragraph being:

"Protecting public lands: For the protection of public lands from illegal and fraudulent entry or appropriation, $90,000"—

Mr. HOLMAN said:

Mr. CHAIRMAN: As a motion designed to perfect the pending paragraph appropriating $90,000 to investigate the alleged fraudulent entries of public lands, before the pending motion to strike out the paragraph is put, I move to amend so as to make the appropriation $150,000.

It is not often that I submit a motion to increase the amount of an appropriation [laughter]; but I have listened to this debate with interest, and I certainly have not been convinced that there is not a widespread system of fraud extending throughout the land districts of

the United States. On the contrary, I am the more convinced that our public lands, which ought to be held as the sacred heritage of our people for homes and freeholds, are rapidly passing beyond the control of our Government and being appropriated by speculators, and in securing large landed estates to unscrupulous men, defeating the end of securing homes for our landless people. There is no doubt that enormous frauds have been committed in the entry of land in the Western States and Territories. You can pass through regions hundreds of miles in extent in the Territories of Dakota, Montana, and the most beautiful sections of the great Northwest without seeing any evidence of human settlement or habitation. Yet on visiting the land office you would be informed that every acre of those lands has been entered in some form or other—not an acre left for the actual settlers. Traveling over that region of country, which a few years ago was a vast public domain, you would have pointed out to you whole townships upon which there was not a settlement, not a house, not a shanty, no evidence of human life, yet every acre has been secured in some form or other by private parties, and in many instances in vast tracts—whole townships by a single citizen.

Is this anything new? Has not your attention, gentlemen, been called for years by the late Commissioner of the General Land Office, Mr. McFarland (whom I believe to have been an honest and upright officer), to the fact that frauds and fraudulent methods were widespread throughout the whole of the public-land district of the country? In looking at the report of the Commissioner of the Land Office for 1883 I am struck by the fact that almost a dozen different classes of frauds are mentioned. As far back as that report we find this system of frauds mentioned in detail under the following heads, "fraudulent pre-emption entries," fraudulent pre-emption filings," "fraudulent homestead entries," "fraudulent mineral-land entries," "fraudulent timber-culture entries," "fraudulent desert-land entries," "fraudulent timber-land entries," "fraudulent donation entries," "illegal fencing of the public lands," &c. And under these heads we have a whole chapter of frauds upon the public domain, and that Commissioner called for $400,000 to enable him to ferret out and defeat these frauds. Yet gentlemen propose deliberately to strike out this comparatively small appropriation of $90,000 designed to enable the Commissioner of the General Land Office to ferret out these frauds and restore the millions of acres, fraudulently entered, to the people.

The present Commissioner of the General Land Office has been denounced here in unmeasured terms. Yet no public officer of our time has in a period of peace rendered this Government as much valuable service as that Commissioner, General Sparks; and in the name of every landless and laboring man in America, I for one thank him for the good work he has done in behalf of the American people. I cheerfully move an increase of the appropriation to enable him more effectively to carry on his work. It was to be expected that when General Sparks with sturdy and resolute purpose placed himself between the public domain and the men of wealth who were seeking to appropriate large portions of its rich fields, at a nominal price, through fraudulent entries, to their own use, a good deal of indignation would be exhibited, and that here and there disappointed greed and avarice would find expression in the public press; but when that incorruptible public officer with steady purpose began to rend from these public robbers the rich estates they had apparently already secured, abuse and denunciation knew no limit.

When, sir, the land-grant railroad corporations saw their titles to millions of acres of lands falling to pieces under the impartial rulings of this new Land Commissioner there was a burst of rage at the great railroad centers, in some degree intensified by the fact that these corporations had apparently for years decided their own causes and had given construction to the laws under which they claimed the imperial estates which Congress had so lavishly granted. I pointed out years ago that one fatal result of these great land grants would be that under ordinary conditions the public corporations, created and enriched by Congress, would enter the great Departments of your Government and administer the laws under which their grants were held. With these great corporations and organized bodies of speculators and mercenary capitalists seeking to appropriate to themselves the remnants of all that was valuable in the once great public domain, what chance had the settler single-handed and alone?

While the great body of our people had indulged unfortunately in the delusion that the public domain was inexhaustible, and Congress had shown no special interest in the subject and seemed to act on the belief that an outlet for our growing population was of no pressing moment, the fact at least came to the knowledge of men vigilant in the race for fortune that the body of the public domain adapted to agriculture without a vast expenditure for artificial irrigation was of limited extent, and the fact was manifest to all men who cared to examine the subject that when the lands adapted to agriculture could no longer be secured at the nominal price charged by the Government an enormous advance in the price of wild lands would occur. The land-grant railroad corporations seemed fully informed on the subject, and all men who were watching the rapid increase of our population. The value of lakes and streams of water in the arid regions of the Western and especially of the Southwestern section of the Union was fully comprehended.

The land laws applicable to all the land States and Territories (except the five public-land States of the South) only permitted the entry of public lands adapted to agriculture on condition of settlement or improvement; such was and is the letter and spirit of the homestead, pre-emption, timber-culture, and desert-land laws. To reach, therefore, the agricultural lands, except for honest homestead settlement, these laws must be evaded. With such motives for seizing upon the valuable public lands every device to evade the laws that ingenuity could invent or cupidity suggest has been resorted to. Your public land system has been literally overrun and overmastered by capitalists of Europe and America and land jobbers of all nationalities in a fierce and unscrupulous struggle for your public lands, securing in a single year lands exceeding in the aggregate an average State of the Union, much the larger portion unsettled, showing conclusively that the land was entered in defiance of law for speculation and to found large private landed estates, and not for honest homestead settlement. Congress has refused up to this moment to repeal or modify the laws which rendered these frauds possible. The report of your Land Commissioner for 1876, ten years ago, shows that during that year only 6,524,326 acres of your public lands were disposed of, while the last report shows the entry last year of the enormous aggregate of 33,436,923 acres! Is there nothing in this to arouse public anxiety?

I ask you, sir, is it a matter of astonishment that in the midst of this high carnival, this riot of the unscrupulous and venal, of wealth and power, of British and Scotch lords, of incorporated capital, parceling out in great estates the grand inheritance of virgin lands which we received from our fathers and which they designed should become the free homes of free men, the appearance in your great Land Office of an upright public officer who could neither be overawed by power nor touched by the blandishments of great pretentions or purchased by wealth, but stood up resolute in the administration of his great trust in the spirit of the law—I say, sir, is it a matter of astonishment that such an event should have caused fiery indignation, and filled the land with loud and bitter denunciation from the foiled plunderers? No, sir, it was a natural result. But the outcome of all this is most assuring to the friends of free government. It did not take the American people long to understand the real issue. It was soon seen that it was a war waged by audacious venality and unblushing fraud on an upright public servant, whose only crime was that he administered with fearless fidelity a great public trust.

It was seen by all men that even when an error was committed it was in an honest effort to resist a torrent of fraud; that the complaints did not come from the honest settler on the public land, but that, however disguised, it was the cry of baffled and disappointed robbers.

Watching as I have done for twenty-five years the great landed interests of the American people, conscious as I have been through all these years of the overwhelming importance of reserving every acre of the public domain to actual settlers in limited estates, believing as I have always believed that upon the sturdy and independent freeholders of the Republic rested the permanency of our institutions and that no republic can long exist unless the great body of its citizens are independent freeholders, resisting as I have done ever since I first entered this Chamber every grant or disposal of public lands except in limited estates to actual settlers, I rejoiced that even at so late a day as the 21st day of January, 1884, this House in response to the awakened interest of the people in the question of their public lands, adopted by an overwhelming vote the following resolutions, which on that day I had the honor to submit to the House:

Resolved, That in the judgment of this House all the public lands heretofore granted to States and corporations to aid in the construction of railroads, so far as the same are now subject to forfeiture by reason of non-fulfillment of the conditions on which the grants were made, ought to be declared forfeited to the United States and restored to the public domain.

Resolved, That it is of the highest public interest that the laws touching the public lands should be so framed and administered as to ultimately secure freehold therein to the greatest number of citizens; and to that end all laws facilitating speculation in the public lands or authorizing or permitting the entry or purchase thereof in large bodies ought to be repealed, and all of the public lands adapted to agriculture (subject to bounty grants and those in aid of education) ought to be reserved for the benefit of actual and *bona fide* settlers, and disposed of under the provisions of the homestead laws only.

Resolved, That the Committee on the Public Lands is hereby instructed to report to the House bills to carry into effect the views expressed in the foregoing resolutions; that said committee shall be authorized to report such bills at any time, subject only to revenue and appropriation bills; and the same shall in like order be entitled to consideration.

I had surely some reason to rejoice over this action of the House when it is remembered how often an effort to secure a declaration of this House of its purposes in relation to the public lands had failed and that on the 18th day of January, 1869, the following resolution which I had submitted to the House was laid on the table by an overwhelming majority on a yea and nay vote:

Resolved, That grants of the public lands to corporations ought to be discontinued, and the whole of such lands ought to be held as a sacred trust to secure homesteads to actual settlers, and for no other purpose whatever.

The decision of the House on the 21st day of January, 1884, clearly indicated that this House and the country appreciated the importance of the land question and saw the mistake that had been made in the enormous grants to railroad corporations. Some progress has been made since the House declared its policy on the land question on the 21st day of January, 1884, in correcting the fatal mistakes of former years. Many millions of acres of land have already been restored to the public domain;

many millions more undoubtedly will be before this session of Congress adjourns; and the laws under which the great frauds have been perpetrated in the acquiring of the public lands for speculation and monopoly—the pre-emption law, the timber-culture law, and the desert-land law—will undoubtedly be repealed. These measures of reform will be of great value, and will aid in postponing the day when the public lands will cease to be available for homes for our people; and yet that day, which with prudent statesmanship ought not to have occurred for generations to come, will soon be upon us.

Our people are not yet fully aware how nearly the public domain is already appropriated to private ownership, and they never will appreciate the value of that once grand domain until its conversion into private estates shall leave the great body of our laboring and landless people without hope of independent and prosperous homes. Then, sir, the first great peril to our free institutions will be upon us. The rapidity with which this great public resource is being exhausted will be seen by referring to the last report of the Commissioner of the General Land Office.

The Commissioner states the disposal of the public land during the last fiscal year as follows:

From the reports of the subordinate divisions of this office, which are appended in detail, it appears that during the last fiscal year the sales, entries, and selections of public land under various acts of Congress relating thereto embrace 20,113,663.37 acres, and of Indian lands 881,850.21 acres, making a total of 20,995,513.58 acres, being a decrease, as compared with the year 1884, of 6,535,656.41 acres, and an increase over the year 1883 of 1,565,480.78 acres.

The receipts from the disposals of public lands are $7,686,114.80; from sales of Indian lands, $933,483.52; a total of $8,619,598.32, being a decrease, as compared with the year 1884, of $4,159,532.01, and with 1883 of $3,086,167.33, to which is to be added $8,821.86 for certified copies of records furnished by the General Land Office, making the total receipts for the year from all sources $8,628,420.18.

The following is a statement in detail:

CASH SALES.	Acres.
Public sales	3,098.76
Private entries	473,023.84
Pre-emption entries	2,311,296.71
Timber and stone land entries	139,301.93
Desert-land entries	928,250.06
Mineral-land entries	35,215.02
Coal-land entries	3,675.19
Town-site entries	60.34
Excesses on homestead and other entries	17,209.75
Abandoned military reservations	1,318.89
Total cash sales	3,912,450.49

MISCELLANEOUS.	Acres.	
Homestead entries (original)	7,415,885.53	
Timber-culture entries (original)	4,755,005.57	
Entries with military bounty-land warrants	26,833.18	
Entries with agricultural college scrip	961.83	
Entries with private land-claim scrip (Supreme Court)	7,944.37	
Entries with Valentine scrip	400.00	
Entries with Israel Dodge scrip	477.88	
Entries with Sioux half-breed scrip	358.85	
Donation entries	2,200.76	
Railroad selections	3,558,914.10	
Wagon-road selections	128,066.94	
Salt spring selections	1,286.43	
State selections—school, swamp, &c.	299,239.68	
Indian homestead entries	3,637.77	
Total miscellaneous disposals		16,201,212.89
Total area of public land entries and selections		20,113,663.38

INDIAN LANDS.		
Cherokee school lands	119.70	
Cherokee scrip lands	267.86	
Kansas trust and diminished reserve lands	7,391.76	
Kansas trust lands	1,644.53	
Osage ceded lands	840.25	
Osage trust and diminished reserve lands	825,533.30	
Pawnee lands	78.15	
Sioux lands	4,455.32	
Ute lands	35,212.53	
Omaha lands	6,306.81	
		881,850.21
Grand total		20,995,515.59

The foregoing does not include the following final entries, the areas of which have previously been reported in the original entries of the respective classes:

	Acres.
Commuted homesteads (section 2301 Revised Statutes)	929,155.53
Commuted homesteads (act June 15, 1880)	198,288.22
Final desert-land entries	190,984.30
Final homestead entries	3,032,679.11
Final timber-culture entries	90,300.66
Total area previously reported	4,441,407.82

In addition to the foregoing, and not included in the total areas of current sales, entries, and selections, are pre-emption, homestead, and miscellaneous filings, namely:

	Acres.
Pre-emption filings	47,946
Miscellaneous filings	4,898
Total	52,844

The area of land embraced in these filings aggregates 8,000,000 acres.

CASH RECEIPTS.	
From cash sales	$6,223,926 74
From homestead fees and commissions	836,999 85
From timber-culture fees and commissions	428,184 00
From military bounty land-warrant locations	870 50
From fees on scrip locations	76 00
From fees on pre-emption and other filings	146,099 00
From fees for reducing testimony to writing	659 88
From fees on donation claims	65 00
From fees on State selections	3,134 45
From fees on railroad selections	44,494 63
From fees on wagon-road selections	1,598 75
From fees on salt-spring selections	16 00
Total receipts from public lands	7,686,114 80
Receipts from disposal of Indian lands	933,483 52
Receipts from fees for transcripts of records furnished by the General Land Office	8,821 86
Total	8,628,420 18

It will be seen from the foregoing statement that during the last fiscal year the lands disposed of by the United States and placed forever beyond the reach of the great body of our landless people of this and the coming generation, greatly exceeds in the aggregate the area of the great State of Ohio, and that too in a single year! A careful examination of the foregoing statement shows the following facts:

	Acres.
Cash sales	3,912,450.49
Miscellaneous, including homestead entries	16,201,212.89
Indian lands disposed of	881,850.21
Grand total	20,995,515.59
Entries previously reported	4,441,407.82
Additional pre-emptions, homesteads, and miscellaneous filings, embracing	8,000,000.00
	33,436,923.41

All of this vast aggregate of our public land was finally disposed of during the last year or initiative steps taken for its acquisition. Thus, 33,436,923.41 acres, a body of land as large in the aggregate as the State of Indiana, and 12,000,000 acres more, all disposed of virtually in a single year!

It is hard for our people to appreciate the fact that in a few years the public domain, the magnificent gift of nature to mankind, the great factor in our progress and prosperity as a people, the grand possession that has rendered our republican institutions and national greatness possible will be a thing of the past, its conservative and life and hope giving power gone forever, and yet that is now inevitable.

The following table published in the last report of the Commissioner of the General Land Office embraces a statement of the public domain from the beginning, with a statement of the public land in every State and Territory in which the United States ever held or now holds public lands:

Tabular statement showing the total number of acres of public lands surveyed in the following land States and Territories up to June 30, 1884; also the total area of the public domain remaining unsurveyed within the same.

Land States and Territories.	Area of public lands in States and Territories.	Total number of acres of public lands surveyed up to June 30, 1884.	Total area of public and Indian lands remaining unsurveyed inclusive of the private land claims surveyed up to June 30, 1884.
	Acres.		
Alabama	32,462,115	32,462,115	
Arkansas	33,410,063	33,410,063	
California	100,992,640	68,130,539	32,862,101
Colorado	66,880,000	54,088,821	12,791,179
Florida	37,931,520	30,549,085	7,382,435
Illinois	35,465,093	35,465,093	
Indiana	21,637,760	21,637,760	
Iowa	35,228,800	35,228,800	
Kansas	51,770,240	51,770,240	
Louisiana	26,632,681	26,632,681	
Michigan	36,128,640	36,128,640	
Minnesota	53,459,840	41,631,867	11,827,973
Mississippi	30,179,840	30,179,840	
Missouri	41,836,931	41,836,931	
Nebraska	48,636,800	46,988,259	1,648,541
Nevada	71,737,600	31,767,405	39,970,195
Ohio	25,581,976	25,581,976	
Oregon	60,975,360	36,778,775	24,196,585
Wisconsin	34,511,360	34,511,360	
Alaska	369,529,600		369,529,600
Arizona	72,906,240	11,795,441	61,110,799
Dakota	96,596,480	41,299,300	55,297,180
Idaho	55,228,160	8,887,362	46,340,798
Indian Territory	40,481,600	27,003,990	13,477,610
Montana	92,016,640	16,225,021	75,791,619
New Mexico	77,568,640	43,673,551	33,895,089
Utah	54,064,640	12,269,828	41,794,812
Washington	44,796,160	19,950,395	24,845,765
Wyoming	62,645,120	43,054,987	19,590,133
Public Land strip	3,672,640		3,672,640
Total	1,814,965,179	938,940,125	876,025,054

It will be seen by a glance at this table that the great body of agri-

cultural land in the entire public domain has already ceased to be subject to disposal by the United States; the lands have been surveyed and disposed of in the main in the agricultural regions. Not all of the land surveyed has been disposed of, but the agricultural portion in the main. This table shows a remaining region of unsurveyed land of 876,025,054 acres, an immense aggregate of land; but of this vast aggregate 369,529,600 acres belong to Alaska, our northern possessions, where agriculture is impossible; it also embraces the vast mountain ranges lying between the Missouri and the Pacific Ocean, the millions of acres yet unsurveyed which you have granted to the Pacific and other railway corporations, the forfeiture of which is not yet declared, and a portion of which, many million acres, is now beyond your reach; it embraces also millions of acres which must be recognized as the property of the Indian tribes, and which must be disposed of by sale for their benefit, and can not be treated as a portion of the public domain, the common property of the American people. It embraces also the wide extended region of arid lands in New Mexico, Arizona, and Southern California which can only be made productive by an expensive system of irrigation. All these portions are to be deducted. How fearfully do these reductions shrivel the once grand domain we received from our fathers. That portion of that grand domain which has come to be the homes and freehold estates of our people in the great States of the Union and growing Territories is the pride and glory of the Republic. That vast portion surrendered to the greed of speculation, to venal and corrupt monopolists, and to the grasping and despotic power of corporations is a monument of national dishonor.

The one system of disposing of the public lands—that of our fathers—carried with it the freshness and vigor of youth; the other the decrepitude and feebleness of old age. The rapid development of resources and the activity in human affairs produced by consolidated wealth, which go hand in hand with the imperial estates which our land policy of recent years has produced, has no kinship with a republic in which the progress and independence of the individual citizen is the source of stability and the element of power.

The reason urged for the new land policy, in which the leading feature was grants of large portions of the public domain to railroad corporations, was the opening up of the country west of the Mississippi to settlement. Specious and plausible, yet in striking contrast with the policy which had converted the public domain from the western slope of the Alleghany Mountains to the Mississippi into freeholds of moderate extent—prosperous and independent homes throughout the whole magnificent expanse, exempt from the curse of a single great private landed estate.

Under the new policy a single generation has almost closed out the public possessions by a monopoly of lands in magnitude never before witnessed in the history of mankind, even where sovereigns have parceled out conquered provinces among the favorites of kingly or imperial courts. And to add to the misfortune, in this high-handed robbery of the people of their most valuable wealth, a new factor comes in, never known in the spoliations and robberies of former ages, by which multitudes of men become the serfs of a new imperial lordship—that of corporate power. Even a despotic master might be humane and just, while corporate power is unconscious of the sense of justice and as remorseless as death. Let the dealings of these land-grant railroad companies with the settlers whose lands were claimed to be within the limits of their grants bear witness. For when has the settler who by patient labor has opened and improved a farm which unhappily was claimed by one of these land-grant corporations to be within the limits of the grant—when has he, unaided and alone (no matter how dishonest the claim of the corporation), ever obtained justice? Let your own public records answer.

I wish the last report of the Commissioner of the General Land Office was within the reach of every citizen. It would explain in some degree how excessive fortunes are made, and the advantage that capital possesses in controlling our affairs and of monopolizing opportunities to convert public resources into private fortunes. In speaking of the "deposit system," by which citizens depositing money in a depository of the Government for that purpose may secure the survey of a given body of land and secure land scrip, to the extent of the deposit made, at the rate of $1.25 per acre, General Sparks, the Commissioner, in his last report says:

> Wealthy speculators and powerful syndicates covet the public domain, and a survey is the first step in the accomplishment of this desire. The bulk of deposit surveys has been made in timber districts and grazing regions, and the surveyed lands have been immediately entered under the timber-land, pre-emption, commuted homestead, timber-culture, and desert-land acts. So thoroughly organized has been the entire system of procuring the survey and making illegal entry of lands that agents and attorneys engaged in this business have been advised of every official proceeding and enabled to present entry applications for the lands at the very moment of the filing of the plats of survey in the local land offices. Prospectors employed by lumber firms and corporations seek out and report the most valuable timber tracts in California, Oregon, Washington Territory, or elsewhere; settlers' applications are manufactured as a basis for survey; contracts are entered into and pushed through the General Land Office in hot haste; a skeleton survey is made and full field-notes improvised for platting; the final acts of approval and acceptance are officially expedited; entry papers, made perfect in form by competent attorneys, are filed in bulk, and the manipulators enter into possession of the land and exploit its timber, which is shipped to foreign ports or sold to our own citizens at the market price of timber cut from private lands, or, as the case may be, the lands are retained for the advance of price which is to come from forest monopoly. This has been the course of proceeding heretofore. In a single case reported by special agents in California it was discovered that an English firm had obtained 100,000 acres of the choicest redwood lands in the State, worth perhaps an average of $100 per acre, while the cost of procuring surveys and fraudulent entries did not probably exceed $500 per quarter-section, or at the rate of $3 per acre.

Under the pre-emption laws, it is shown how men of wealth—European as well as American capitalists—have employed multitudes of men to enter lands for their benefit, thus securing vast estates of valuable land at the nominal price of $1.25 per acre, and by the same dishonest method monopolizing valuable streams of water and the lands surrounding magnificent lakes.

Millions of acres of the most valuable part of the remaining public domain have thus within the last few years—in fraud of the land laws—laws which contemplated *bona fide* settlements for homes only—been entered by speculators and capitalists seeking great landed estates, every acre of which ought to be restored to the public domain for settlement under the homestead laws by actual and *bona fide* settlers. Surely Congress will furnish to this earnest and incorruptible Commissioner of the General Land Office the means necessary to secure this result, so important to the integrity of the public service, of such commanding interest to the American people.

The Surplus in the Treasury.

SPEECH

OF

HON. WILLIAM WALLACE BROWN,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886,

On the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt; to which several amendments were offered.

Mr. BROWN, of Pennsylvania, said:

Mr. CHAIRMAN: I have voted for the amendment of the gentleman from Ohio [Mr. MCKINLEY] because I was willing to throw every protection about the legal reserve of one hundred million, but I shall vote for the resolution without the amendment for the reason, first, it is a censure against the management of the present administration of the Treasury Department, and, second, it instructs the Secretary of the Treasury to do just what all his predecessors have done in relation to the surplus ever since the resumption of specie payment.

The gentleman from Ohio [Mr. MCKINLEY] and the gentleman from Illinois [Mr. CANNON] have both given us the figures showing that on each 1st day of January since the year 1879 there has been only a balance of reserve above the one hundred millions provided by law for the redemption of the greenbacks—an amount running from five hundred thousand below to only fifteen million above. The policy was evidently always to pay out on the national debt just as fast as possible without invading the one hundred million reserve fund. When the present administration came into power this surplus was only about eight million. From that hour to the present it has been growing, until to-day it is over seventy million. If the present Secretary had been reducing the national interest-bearing-debt at the rate of his predecessors he might rest on his laurels and with some propriety hold on to his large reserve. But when it appears that the reduction he has made is less than one-third the average reduction of his predecessors since 1880, he should have used the utmost dollar he could possibly spare for the liquidation of the interest-bearing debt of the country.

All this talk about repudiation is the merest bosh. What lurking purpose to repudiate can be inferred from the actual payment of that debt to the extent of every dollar the Treasury can spare? If the seventy million surplus over that needed to fulfill the provisions of our statutes had all been paid over to the bondholders there would have been $70,000,000 less debt to repudiate. The less national debt there is at the end of each fiscal year the less there will be for any party so disposed to repudiate.

The present administration came into power pledged, so far as its stump orators could pledge it, to pay out all surplus upon the debt. They claimed that there was then a large surplus, some fixing the amount as high as $400,000,000, and charged that it was held for the purpose of perpetuating the debt to the longest possible period. They have failed to keep their pledges. It is time their memory was jogged a little.

This resolution has been too tardy in coming. Democracy is bound to go wrong always when it fails to follow the example set by the party that has managed our finances so faithfully and successfully during and since the war. I only hesitate as to what course I should take on this question because I think that in general full discretion in a matter of this kind should be left in the Secretary of the Treasury. But, sir, sixteen months is long enough to wait for him to go about paying the debt. He should before now have paid at least one hundred and fifteen million. He has paid a little more than fifty. This resolution will simply tell him to pay over the balance.

The Surplus in the Treasury—The Truth about Vice-President Hendricks.

SPEECH

OF

HON. JAMES E. CAMPBELL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886,

On the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt; to which several amendments were offered.

Mr. CAMPBELL, of Ohio, said:

Mr. CHAIRMAN: There is an old saying to the effect that a lie well stuck to is as good as the truth. Probably no lie, political or otherwise, has ever had wider circulation or more persistent utterance than the one which ascribes to the late Vice-President Hendricks the authorship of the statement that there were $400,000,000 of surplus money in the Federal Treasury. This allegation, which never had any foundation in fact, was originally made by the Republican newspapers in the campaign of 1884, and has been printed and mouthed so often, and so publicly, that many well-informed persons have believed it, and have honestly repeated it on this floor as well as elsewhere.

It would seem proper that a complete refutation of this charge against Mr. Hendricks should be spread on the CONGRESSIONAL RECORD and made a matter of public notoriety so that those gentlemen, if any, who hereafter arraign the late Vice-President as the fabricator of that monstrous statement may be known to have openly sinned against light and knowledge.

I am moved to these remarks by reason of the debate this day, in which gentlemen of the highest reputation for probity have fallen into the error of charging to Mr. Hendricks the gross mistake just referred to. For instance, my colleague [Mr. MCKINLEY] has alleged that this is charged, although no one would impute to him an intentional misstatement. The gentleman from Maine [Mr. REED] also undertook to twit the Democratic party with having sized-up the surplus in the Treasury in 1884 by the standing of the particular Democrat who might at the time be spinning campaign yarns. I quote from his speech:

It will be remembered, and indeed has been repeated here, that gentlemen of the Democratic party fought the last campaign on the statement that there was a large sum of money in the Treasury which ought to come out, and the size of that statement always depended upon the rank the man held in the party. [Laughter and applause.] The candidate for Vice-President boldly put it at $400,000,000, because the Democratic party would probably absorb more from him than they would from the gentleman from Pennsylvania [Mr. RANDALL], who only made it $300,000,000.

When such great men fall into error and unintentionally asperse the memory of a departed statesman, it is time to effectually settle this question in the interest of common veracity. The truth is, that the Republicans themselves started this story about the $400,000,000 surplus alleged to be in the Treasury. For years they have habitually boasted how little money the Treasury contained in 1861, when their party came into power, and how much had accumulated therein under Republican rule. In their anxiety to make a telling point in 1884—being hard pressed for campaign thunder—they put the sum then on hand at $400,000,000. That excellent gentleman, Major Calkins, who was then the Republican candidate for governor of Indiana, thought to delight the good Quakers at Richmond, in that State, by the astounding recital that the "grand old party" had garnered $400,000,000 into the Treasury, contrasting this fatness with the lean receptacle for public funds under the economical sway of the Democracy. This statement of the gallant major was repeated and commented on by Mr. Hendricks. In the mean time, it having become apparent that the people were not pleased with the spectacle of so much idle money in the Treasury, the Republican press joined in an unanimous cry that Mr. Hendricks was the inventor of this tale and that the surplus was really much less.

Now, let us see what Mr. Hendricks actually did say. On the 20th day of September, 1884, he opened the campaign in Ohio by a speech at the city of Hamilton, in that State. It was my pleasure to hear him there, and, that too, upon the very matter in controversy now. The stenographic report of that speech was published in all the leading newspapers of the country. I quote from the Cincinnati Enquirer of September 21, which announced, very truthfully, that Mr. Hendricks's speech was delivered before a great concourse of "the Lord's Anointed," meaning, of course, our Ohio Democracy. He said:

In the first place, are you aware of the revenue system and the amount of money that is being collected into the national Treasury? Are you aware that the money in to-day and has been for several years accumulating in the Treasury beyond the needs of the Government? I got myself into a scrape not very long since very unexpectedly, and my Republican friends would hardly believe how it occurred. I quoted the Republican candidate for governor in the State of Indiana in respect to the amount of money piled up in the Treasury. I supposed he had investigated the subject, and I was quoting what he said; and I have been abused very roundly by Republican papers for having made the statement. What do you think the statement was? At Richmond, Ind., in his speech, the Republican candidate for governor stated that when the Republican party came into power it found an empty Treasury, but now it has $400,000,000 in the Treasury; and I repeated it upon his authority, and only upon his authority.

Thus it is seen that the vain glory of Republican stump speakers caused it to be generally circulated that there were $400,000,000 in the Treasury in 1884, and that it was not the assertion of the late Vice-President.

Perhaps it would now be in order for my eloquent colleague [Mr. MCKINLEY] and the sarcastic gentleman from Maine [Mr. REED] to turn their batteries upon Major Calkins and the other Republican orators of that campaign in which they met such a deserved and disastrous defeat.

The Surplus in the Treasury.

SPEECH

OF

HON. WILLIAM T. PRICE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886,

On the joint resolution (H. Res. 126) directing the payment of the surplus in the Treasury on the public debt; to which several amendments were offered.

Mr. PRICE said:

Mr. CHAIRMAN: This is a proposition to use all the available surplus in the United States Treasury in reducing the interest-bearing national debt; and as it seems to be the only way that such moneys can be released and put in circulation I will vote for it, because no money should lie idly there—that is, our own—and none that is held by us in trust should be used for any other purpose than to discharge that trust.

I would much prefer to use the fifty, seventy-five, or one hundred million for which we have no other use in building a navy or fortifying our seacoast or paying our non-interest-bearing debts, but as I can not do that I am willing to release it in this way.

But the amendment of the gentleman from Ohio [Mr. MCKINLEY] ought to be adopted, because without it it would be possible for the Secretary to trench upon the $100,000,000 which has been set aside by law to redeem so much of the $346,681,012 of national-bank notes as may be presented for redemption.

And the amendment of the gentleman from Ohio [Mr. WARNER] ought to be adopted, because without that amendment a contraction of our circulating medium would inevitably follow that would seriously and disastrously affect the debtor classes, who, as a rule, are the classes who are controlling the creative industries of the country.

And that raises the old question which has arrayed the debtor and creditor classes against each other since the organization of human government. Double the volume of money and you double the price of labor and labors products. Take one-half of our circulation out of existence and you reduce one-half of the value of labor and the products of labor. One course would be unjust to the creditor, the other to the debtor; both should be avoided, because each is unjust to one or the other of these classes of our citizens.

In the consideration of these financial questions, therefore, we should never lose sight of the underlying and fundamental principle that the relations of the volume of circulating medium toward the volume of our commerce should be maintained as nearly as practicable to those sustained by them at the time the obligations were incurred or debts created.

To do this the most reliable basis of circulation would probably be upon our whole population; and taking that as the basis, and it is easily seen that our population is rapidly increasing, and under the pressure of the creditor classes, to which pressure our present and past Presidents and ministers of finance have continually yielded, a constant contraction has been going on.

July 9, 1885, there were on deposit with the United States Treasurer bonds to the amount of $311,544,300, which authorized a circulation of $280,390,870 national-bank notes. July 9, 1886, these bonds had shrunk to $275,382,800 and the authorized circulation to $247,844,520. In one year a shrinkage of $36,161,500 of bonds and of circulation of $32,546,350, or $2,720 per month.

I can readily see how the Representatives on this floor of the money centers of the country can advocate a further contraction, but I can not understand how the Representatives of the West, which in developing the natural resources of the country is in debt, can fail to jealously guard against such a policy.

You pass this resolution without the Warner amendment and you secure a further contraction of seventy-five or one hundred millions in the next seven or ten months, and nothing to take its place except the silver coinage, which is only about sufficient to neutralize our increasing population.

I can not agree with gentlemen who claim that the surplus in the

Treasury was four hundred millions during the last political canvass, nor can I agree with the conclusions of those who claim that there is now seventy-eight millions, but in this last I may be mistaken, as under the present mode of making the balance sheets good book-keepers might very easily disagree as to the result.

I append herewith a balance sheet as I think it ought to be made; and if so, there is $104,611,531 now in the Treasury that could be used without trenching on any of the trust funds or of the one hundred millions of reserve:

Condition of the Treasury of the United States.

We have got—

Gold coin and bullion		$232,838,123
Silver coin and bullion		184,345,765
United States notes		41,118,316
National-bank notes and deposits, national-bank depositories		14,435,199
Fractional currency, bonds, checks, and coupons		3,839,203
National-bank notes in process of redemption		3,840,402
Interest on District bonds		590
Fractional silver		29,282,495
All we have		509,700,093

And we owe—

Gold certificates	$131,174,245	
Silver certificates	115,977,675	
Certificates	18,500,000	
Interest, &c	22,791,647	
Held for redemption of national-bank circulation	70,693,820	
Total liabilities		359,137,387
Balance in Treasury not appropriated		150,662,706
Reserve to reduce greenbacks		100,000,000
Balance		50,662,706
Add certificates on hand		83,231,320
		133,894,026
Deduct fractional silver not available to pay debts		29,282,495
Total sum lying idle and available to pay debts		104,611,531

The Surplus in the Treasury.

SPEECH
OF
HON. RALPH PLUMB,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886,

On the joint resolution (H. Res. 126) directing the payment of the surplus in the Treasury on the public debt; to which several amendments were offered.

Mr. PLUMB said:

Mr. CHAIRMAN: Secretary Manning reports the interest-bearing debt of the Government March 4, 1885, to be $1,260,772,612. Assistant Secretary Fairchild, on the 1st of June, 1886—the administration then having been fifteen months in power—states the interest-bearing debt at $1,220,650,312, showing a reduction from the commencement of the present administration to June 1st of $40,122,300. The same authority shows an increase of cash in the Treasury for the same period of $105,510,341.50, exclusive of $100,000,000 gold coin which has been kept on hand for the redemption of the Treasury notes in circulation.

These statements are here quoted for the purpose of getting at the condition of the Treasury, and of ascertaining, if possible, the financial policy of the administration—if, indeed, such a thing as a well-defined policy of administering the finances of the Government has an existence—and for the purpose of comparing Democratic promises with Democratic performances, as well as to show the enormous difference between the debt-paying record of the two great parties while each has been intrusted with the administration of the Government.

The Democratic party came into power on the cry of reform, and one of the important declarations in their platform was "that a change is necessary is proven by the existing surplus of more than $100,000,000 in the Treasury." This declaration was supplemented by Democratic stump orators, headed by the late Vice-President Hendricks, who assured voters that not one hundred million only, but four times that sum lay idle in the Treasury and should be promptly disbursed for the benefit of the tax-payer; and, sir, it was on this false pretense industriously circulated and everywhere insisted upon, as much as any one thing, that the Democratic party came into power.

These statements, Mr. Chairman, were all false; the money in the Treasury, amounting to over $400,000,000, was held there in trust for the several purposes which were so clearly and correctly stated by my colleague, the chairman of the Committee on Ways and Means, Mr. MORRISON.

The balance available for the reduction of the public debt has been largely increased since the advent of the present administration, and, as has been stated, amounted to over $100,000,000 on the 1st of June, 1886.

As I have already stated, the actual reduction of the interest-bearing debt by the administration to June 1, 1886, is $40,122,300, which shows a monthly reduction averaging $2,674,820 each month.

Now, sir, the record made by the Republicans shows in four years of President Arthur's administration the interest-bearing debt to have been reduced as follows:

1881	$120,730,890
1882	162,289,150
1883	115,360,300
1884	80,737,709
Total	479,117,950

In four years, or an average monthly reduction of $9,773,290, making a difference in favor of Republican debt paying of $7,098,470 every month.

Mr. Chairman, we now begin to understand why it was that the remarkable method pointed out by the gentleman from New York [Mr. HEWITT] was adopted by the chairman of the Ways and Means Committee [Mr. MORRISON], a method which was characterized by Mr. HEWITT as a "device" to do by indirection what could not be otherwise accomplished.

It is plain, sir, that the gentleman from Illinois who yesterday presented to the House in his usual clear and concise manner the arguments in favor of his resolution—arguments that I have no purpose or desire to refute in this discussion—I say it is plain that the leader of the Democratic party on this floor feels, and ever since the introduction of this resolution has felt most keenly the awkwardness of the dilemma in which his party is left before the people on this question of the reduction of the public debt.

Promises, high-sounding on the stump, and solemn promises in the party platform have not been kept; aye, sir, and what is worse, those promises can not be kept, for the reason that the counsels of the Democratic party on this, as on every other question of revenue and finance, are divided. The gentleman who sits in his office at the other end of the Avenue with his coat off vetoing widows' pensions, in the interest of what men of money call economy, is pledged to do the bidding of New York on this question, without regard to the promises made in the Chicago platform; and that, sir, is a fact so stubborn that the chairman of the Ways and Means Committee, and every other Democratic Congressman from the West, is obliged to recognize it and to govern themselves accordingly.

What less could he do, Mr. Chairman, under the circumstances, than to report and advocate this resolution, with the hope that although it would never get to the President, and would never influence the Secretary of the Treasury, it would, nevertheless, be of service as the best apology in the power of these Western Democratic Congressmen to make to their deceived supporters on the important question of the promised rapid payment of the public debt?

Mr. Chairman, in my opinion there is nothing in this proposed legislation in the shape of giving direction to the Secretary of the Treasury. It is a farce from beginning to end, so far as any practical result is to be attained.

Why, sir, the Secretary of the Treasury is already authorized to pay off the public debt as fast as the accumulation in the Treasury will justify. If it were not so, then indeed it would be the duty of Congress to instruct him by proper legislation, for the people do not desire that large accumulations of money not required for reserves should lie unused in the Treasury.

If the question of paying out the gold now kept as a redemption fund for the three hundred and forty-six millions of Treasury notes was before us in a serious way, if a vote on such a question meant anything, I for one should be in favor of putting it where it would do the most good—into circulation, paying off interest-bearing debt, relieving taxation, and increasing the volume of currency.

The greenback is the best money in this country; it is the safest and most convenient of all money in use; it has conferred upon it by law every quality that money needs to equip it with the power to do the work of money for the American people. It is a legal tender for all amounts, made so by a law that the Supreme Court, with great unanimity sustains, not only for the purposes of war but of peace, and what is better still it enjoys the unshaken confidence of the people. Both gold, silver, and greenbacks are redeemed every time they effect an exchange of commodities or pay a debt; and it is in this way that all real money needs to be redeemed. Gold, silver, and Treasury notes, issued by Government—the former represented when need be by certificates for convenience in handling—make a currency than which there is no better in existence.

Mr. Chairman, the people of the United States have just reason to be proud of their financial system, and especially of the national banks, which constitute an important part of that system.

This is no occasion for entering upon a discussion of the national-bank question, but in passing it may be said that, as the system stands, it is the best ever instituted in this or any other country. With a modification which would relieve them from issuing circulation, on such just

conditions as might be devised, the national-bank system would be perfected.

Mr. Chairman, I can see no necessity for the passage of the resolution recommended by a majority of the Ways and Means Committe. The Secretary of the Treasury has already all needed authority to call bonds as fast as the condition of the Treasury makes it advisable to do so; in fact, sir, the present Secretary must so regard it, for he has called just enough bonds to show that he knows how to do it. The fact is apparent that this is nothing more nor less than a "device," as the gentleman from New York [Mr. HEWITT] terms it, by which one faction of the dominant party seeks to control and direct the action of the Secretary of the Treasury.

On the question of finance, as well as on that of revenue and of civil service, the party in power is hopelessly divided. They are represented on this floor by three distinct leaders, each able and uncompromising, and each faction seeks the aid of the minority to carry its points.

It may be a hopeless and useless endeavor for the minority here to aid in trying to make the Secretary of the Treasury fulfill the promise of reform on which his party came into power, and use idle money in reducing the public debt; but being willing to undertake the difficult task I shall vote for the resolution.

The honorable gentleman from my own State, who presides over the Committee on Ways and Means, is an able exponent of Western ideas on the subject of finance. He draws his inspiration from one of the great Republican States of the West; he is anxious, no doubt, to have the promises of the Chicago platform redeemed; but alas, for his hopes, the Executive he has helped to place in the Presidential chair gets his inspiration from a different source, and so does the Secretary of the Treasury; that source is the moneyed men of the East; and this influence will continue to control the course of the administration whatever may be the vote of this House on the resolution before us.

The Surplus in the Treasury.

SPEECH

OF

HON. JOHN V. L. FINDLAY,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886,

On the joint resolution (H. Res. 126) directing the payment of the surplus in the Treasury on the public debt; to which several amendments were offered.

Mr. FINDLAY said:

Mr. CHAIRMAN: I am opposed to this resolution, because it restrains the discretion of the Secretary of the Treasury in a matter over which it would be wiser, in my opinion, to give him full control.

The vice of the resolution consists in confounding a surplus with a reserve fund pledged by custom and strong implication of law to the redemption of the legal-tender notes. (See chapter 290, first session, acts of Forty-seventh Congress, July 12, 1882, section 12.) These notes in round numbers amount to $346,000,000. To these are to be added $311,000,000 national-bank notes, the two together constituting the paper or representative currency of the country; in all, say $656,000,000. One hundred millions in gold is, in my opinion, too small a sum to be held in reserve for the redemption of this paper. In Great Britain the specie reserve is one of gold to two of paper, or about that ratio. In France it is still greater.

There is nothing in the resolution and the debate on the different amendments showing that it is not the intention of the resolution to restrain an invasion upon this reserve. All the amendments for this purpose have been rejected. But even if this were not true I believe that the Secretary should have a working balance in the Treasury, which the resolution will not allow him.

But the resolution is wrong, in my opinion, for another reason. It has been stated that if the reserve is drawn down to the danger-point the Secretary may sell bonds and bring it up again. But what can be the sense of reducing the reserve to redeem bonds, and then issuing new bonds to add to the reserve? The reserve is to be taken to pay debts, and these debts are to be created to bring the reserve back again to its former condition. I see no sense in this seesawing.

What this House ought to do is to reduce revenues, or better still use the revenues of the country for the purpose of strengthening its position. Whatever surplus can be safely spared should be applied to building up the Navy and erecting new and strengthening old coast defenses. But if the House refuses to enter upon this policy, then surely it is wiser to stop the money coming into the Treasury, in other words, leaving it in the people's pockets, than it is to be forced to invent the means by which the surplus can be got rid of. The debt redeemable at the pleasure of the Government is about $144,000,000, not taking into the account outstanding calls. When this sum is used up there will be no debt to redeem until 1891, when the four-and-a-halfs will be redeemable amounting to $200,000,000, round numbers.

Between September 1, 1891 and 1907, when the fours fall due, there will be none of the public debt proper subject to redemption. Ought we not now to determine upon some fiscal policy by which the finances of the country are to be managed, instead of resorting to a nibbling expedient like this, which promises only annoyance and vexation to the management of the Treasury, without any corresponding relief to the people. It is said, I know, that these millions to be set free from the Treasury are to flow in an irrigating stream along the arid plains of industry and commerce, and make them blossom again as the rose.

But who are the principal holders of the bonds? The banks undoubtedly. And if they were not, this demand for their immediate redemption would not be so noisy. It is notorious that the banks now are loaded up with idle money, and the only effect, therefore, of this resolution will be to increase the stock. Instead of more money getting into circulation by this means you will only add a few more millions to the idle sums now held by the banks; in other words, you will only change the place of rest and stagnation of this fund from the Treasury, where it serves a useful purpose, to the banks, where it will not only be idle but functionless.

It is a great mistake, I think, to suppose that a specie reserve is useless simply because it happens to be in a state of rest instead of motion or circulation. The idea underlying this fallacy is the basis of all the projects for paper currencies which have afflicted mankind. By the constant use of paper representatives of money we come to regard the symbol as the thing itself, and mistake the shadow for the substance. Everything that passes as money is very naturally treated as money, and as long as credit and confidence are maintained there is no harm done by this kind of circulation. But notwithstanding this, it is nevertheless true that a legal-tender note commonly called the greenback is not money, but a promise to pay money. Every dollar of this currency so recites upon its face. It does not say "I am a dollar," but it says that the United States will pay a dollar to the bearer. That dollar by the strengthening-credit resolution of the 18th of March, 1869, is a coined dollar. By the provisions of that resolution these promises of the Government to pay are made expressly redeemable in coin. What else is there to redeem a promissory note with?

Greenbacks, by the express decision of the Supreme Court, are a legal tender in the discharge of private debts; and being the equal of coin by virtue of their convertibility into it, are received by the Government in payment of its dues. But the Supreme Court never held that a greenback could work out its own salvation and redeem itself. There must be specie behind it to be had on the asking, or the greenback will depreciate. The paper on which it is printed and the pictures and legends stamped upon it cost so little in each individual piece of money as to make it almost valueless. What gives it its value, and therefore its currency, is the faith that it can be immediately converted into that of which it is the representative—that is, coined money which is intrinsically valuable, the standard and measure of all other values.

It has been stated in argument that there was no use for the $100,000,000 specie reserve, because not a single dollar of the greenback currency had ever been presented for redemption. It is difficult to notice that such an argument as that could either have been made or listened to by sensible men. Everybody, out of Congress at least, knows that the greenbacks have not been presented for redemption for the simple reason that their holders knew the Government was able to redeem them whenever presented. Everybody, with the same limitation, also knows that the very moment this belief was shaken and men began to doubt whether the Government could or would redeem, that moment there would be a rush and a panic conducted on the principle of the devil taking care of the hindmost. I will never give my consent to any financial theory which ignores a fair specie reserve as absolutely essential to the credit of a paper currency, and as I regard this resolution as a step in that direction it follows that the measure can not receive my approval.

But, as I have before intimated, now is the time for settling the terms of some broad, comprehensive, and permanent fiscal policy, if for no other reason, to get rid of these little teasing expedients, which if they were purely harmless accomplish nothing and determine nothing. A farmer with a bottom but fertile piece of ground, when he wishes to reclaim it from the waters that settle there, finds it more practical and economical to stop the flow than to be all the time engaged in draining the accumulations off. A ship-owner with a leaky vessel finds it much more sensible to stop up the leaks than to expend his energies in pumping the water out of the hold. So, here, the United States ought to stop the surplus getting into the Treasury instead of resorting to doubtful expedients to get it out. Sooner or later it will be forced to adopt this policy. If the present ratio of expenditures and receipts is maintained after 1891, the surplus will be maintained and there will be no debt to which it can be applied. There is said to be a surplus of $76,000,000 over and above the specie reserve of $100,000,000, which in my opinion it is a misnomer to call a surplus.

In his admirable report upon this subject Mr. HEWITT has stated what every business man will confirm, that a working balance equal to about a month's disbursements is absolutely essential to the proper

administration of the uncertain and intricate movement of Treasury receipts and expenditures. He estimates roughly that $30,000,000, on the basis of the receipt of $1,000,000 per day, would not be an excessive balance for this purpose. This would leave some $46,000,000 undisposed of.

On the 3d of May last I offered a joint resolution for the repeal of the tobacco tax, special and otherwise, inclusive of course of the tax on cigars, &c. This would have reduced the surplus about $30,000,000, leaving about $16,000,000 more, which could readily have been disposed of by some judicious tariff reductions. The Committee on Ways and Means reported this resolution back to the House on the 10th of July with a recommendation that it should not pass.

The principle reason given for this adverse conclusion is that the abolition of this tax would render it impossible to remove the burdens imposed by the tariff upon the industries of the country. An elaborate argument is made to show that two things have been lowered in price, namely, wool and iron, in answer to one of the preambles to the resolution, that *all* things which enter into the present consumption of man have been so cheapened, and the further argument is then made that the tariff by the ruinous competitions it engenders, and not as the peaceful sequence of the protection it affords, has been the cause of this reduction in price in the two articles named.

I am not going to make a tariff speech, still less attempt at this time to answer the several propositions of the report. But I have this to say as bearing upon the subject immediately in hand, that the policy which refuses to remove one tax because it can not get rid of another, and at a time, too, when it has been twice demonstrated in the last two years, and each time with conspicuous emphasis, that the country is not yet prepared to adopt any line of tariff changes such as that indicated by the report, is, to say the least of it, of very questionable soundness. Why the farmers of Kentucky, Pennsylvania, Ohio, Maryland, Virginia, Missouri, North Carolina, Connecticut, and other tobacco-growing States, as well as the cigar-makers and manufacturers of limited capital, should be subjected to espionage and vexatious rules and regulations, and the last-named class to exacting taxes, both special and stamp, as well as to bonds, besides being the victims of the harassing regulations referred to, simply because the manufacturers of the country enjoy the bounty of a protective tariff, is a question which I am sorry I can not answer with the same ease with which it appears to have been disposed of in this report.

Every tax is an evil. It may be contended that a man had better pay a tax on his cigar, or the tobacco in his pipe or pocket, than on the clothes on his back or the blanket on his bed. Granted. But suppose he is paying a tax upon both and asks to be relieved from one, is it any comfort to him to be told we can not grant you relief, because if we do we are afraid we will not be able to extricate you from the other? Suppose even the wisdom of this is conceded, what shall we say in reply to him if he asks the question, What is the prospect of my being relieved from the other? Will any one pretend that a Kentucky farmer or dealer in tobacco would say that he was content to stand both taxes on the remote contingency of an abatement in each rather than take what he can get now, the repeal of the one which galls him the most—the one to which he is the least accustomed, the one which is foreign to the traditions of a free people and has only been specially imposed in times of war to meet extraordinary emergencies?

But whatever may be the case with the farmer, or the dealer, or the payer of this tax, is it not plain as a mere fiscal proposition, disconnected with all other considerations, that when revenues are redundant taxes should be decreased or abolished; that a reduction of revenue is in the nature of things better than the distribution of surplus, and that any other policy is putting the cart before the horse?

In my opinion, if we appropriated the revenues in putting the country in a proper defensive position there would be no occasion to deal with this surplus; but failing this, and treating reduction as the fixed policy of the country, I will vote for no resolution defining the fiscal policy of the country which does not propose the means by which its redundant revenues shall be brought back to their ordinary volume and channels.

Let us suppose 1891 upon us and nothing done in this direction in the mean time. What is proposed for the sixteen years of interval until the 4 per cent. debt matures in 1907? Will the same old tit-for-tat, dog-in-the-manger, do-nothing policy be pursued? Shall we hear it then as we hear it now, "If you are not willing to swap internal revenue as against tariff, or some parts of each, we will not trade at all?" As if this were a subject for bargain or barter! A tax is a tax. Thirty million dollars is just that sum to a cent, whether it comes out of tobacco or wool, and if the revenues are excessive by that amount there is no wisdom in refusing to reduce them simply because it is impossible to reduce some other tax, even conceding it is more onerous.

In making these remarks I have not thought of the national banks and the bearing of the resolution upon them. They must put their house in order and get ready for a change in a comparatively short time whether the resolution becomes a law or not. They are built upon foundations that will necessarily crumble into pieces in course of time, because the debt of the Government will eventually be paid. They have given us the best currency and the most stable banking system we have ever had, but I do not believe that a national debt is a blessing, and I have, therefore, no desire to perpetuate the security upon which these institutions are founded. All that I have said or intended to say was, that a resolution vaguely drawn so as to be susceptible of a construction which would impair the specie revenue held for the redemption of legal-tender notes, and at the same time destroy the working balance in the Treasury which experience has demonstrated to be necessary, and all proceeding upon the indefinite continuance of redundant revenues, without any policy or provision for their diminution, could not receive my approval or support.

Tensas River and Bayou Macon.

SPEECH

OF

HON. J. FLOYD KING,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 1, 1886,

On the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. KING said:

Mr. CHAIRMAN: I would like to submit a few facts to the House, and through it to the public whose ear has been so often abused by complaints scattered broadcast against what has been called "the log-rolling river and harbor bill." I will take for my text lines 712 and 713 on page 30 of the bill now before the committee. They are:

Improving Tensas River and Bayou Macon, Louisiana: Continuing improvement, $4,000.

The Tensas River rises in Lake Providence, in the northeastern part of Louisiana; flows in a southerly direction through a rich alluvial district, and unites with Ouachita and Little Rivers at Trinity, La. These three form the Black River, and, as united, continue (as the Black) to the southward, joining the Red River near its mouth. The length of the Tensas from its source to its junction with the Ouachita is 205 miles, and it is navigable from November to July, inclusive, for vessels drawing 3½ and 5 feet, between Dallas, La., and its mouth, a distance of 180 miles.

Bayou Macon rises in Desha County, Southeastern Arkansas; flows in a general southerly direction, and joins the Tensas 40 miles above the mouth of that river. Both streams drain a rich cotton and corn-producing and stock-raising country, and are navigated by steamboats which carry their products to the markets and bring back assorted cargoes of supplies, provisions, clothing, &c. Bayou Macon is 200 miles long to its junction with the Tensas.

For these rivers the appropriations have been made as one. The first governmental examination was made, pursuant to act of Congress, in 1880, and resulted in a project for removing snags, logs, wrecks, and leaning timber, for the purpose of securing safe navigation. And it was estimated that this could be done in both rivers for $40,000—being $23,000 for the Tensas and $17,000 for Bayou Macon. Up to 1885 we had appropriated $7,000; that is, $3,000 for 1881–'82, and $4,000 for 1884–'85. Last year the appropriation failed along with the river and harbor bill itself. This year (1886–'87) we appropriate $4,000. These sums are so small that the improvement works are likely to drag their slow length along in so lingering a fashion that few of us elders will be likely to live long enough to see them completed. The amount allowed each year is soon exhausted, the works are stopped, the engineers and workmen discharged, and the vessels annually laid up or sent to other streams more liberally treated, while yet whole months of profitable work might be theirs. Thus it is impossible, with the small portion of improvements thus far completed, to state with any certainty what amount of good has been done. And yet, annually down these two streams are carried from 20,000 to 30,000 bales of cotton and 100,000 sacks of cotton-seed, while the return freight is estimated at not less than $35,000 a year.

It seems strange that objection should be made to an appropriation for the improvement of two streams whose annual commerce amounts to more than forty times the amount of the whole sum asked for; and which has thus far been doled out in pitiful morsels which are expended in a few months. But thus it is; and I think I have made it clear that there is no "grab game" intended to be played in the project for the improvement of the Tenas and the Macon. Since my advent in Congress I have repeatedly introduced measures looking to the annual appropriation of at least $20,000 for the improvement of these streams, which sums I am satisfied could be profitably expended in procuring safe navigation throughout their entire length. The first appropriation ever made for them and all subsequent ones were made at my in-

stance, and it was strongly against my desire that they were made in such small and insufficient sums.

I take occasion to repeat here, Mr. Chairman, what I have said on other occasions on the subject of these improvements; that is, the work on them should be let out to local contractors under properly guarded restrictions. They can be found in that section of the country, and men of industry, honesty, and competent to perform the work to be done. This and all kindred measures are for securing cheap freights for the people, who pay the taxes and are entitled to such benefits.

Treasury Surplus.

SPEECH

OF

HON. GEORGE E. SENEY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886.

On the joint resolution (H. Res. 126) directing the payment of the surplus in the Treasury on the public debt; to which several amendments were offered.

Mr. SENEY said:

Mr. CHAIRMAN: Official reports, year after year, show that there is a large sum of money in the Treasury which plays no part in the financial transactions of the Government. This money is in underground vaults, behind bars and bolts and locks, and is carefully guarded day and night at no inconsiderable expense to the people. This vast sum of money we are accustomed to call the surplus in the Treasury. It is called the surplus, I suppose, because it is not needed to meet the demands, ordinary or extraordinary, of the Government. Why, then, should it be in the United States Treasury rather than in the pockets of the people? In the Treasury it is idle and useless, and can not possibly benefit the Government or the people. Outside of these vaults it is never seen, and inside it is seldom touched.

What good can come to the people, or the Government, by keeping money, bag upon bag, piled in the dark and dingy vaults of the Treasury? When, if not now, will it come forth from its dreary abode? As long as it remains where it is it is of no more value, practically, than so many chips and whetstones.

As well might the vast pile be dumped into the Potomac. Sink it at some fathomless point in the ocean and the world will be as much benefited as it is by keeping it under constant lock and key in the vaults of the United States Treasury. The surplus out of the Treasury would in due time work its way into the channels of trade, and thus help, in some degree, to relieve the depression under which the business and labor interests of the country now suffer.

The Government is deeply in debt. We pay large sums of money each year as interest upon what we owe. Complaints reach us from all parts of the country that taxation is burdensome. We can give our people some relief by applying this surplus in the reduction of the interest-bearing debt. Appropriate of the surplus what is proposed by the resolution we are considering and we will make a yearly saving of $2,100,000 in interest.

In addition to this the debt itself will be reduced $70,000,000. The question before us ought to be solved upon sound business principles. Others may consider it from a political standpoint; but for my part it shall have no thought not suggested by what I conceive to be the best interests of the people. If we can, by the use of this surplus, pay $70,000,000 of our interest-bearing debt, and thereby save the people from the payment of $2,100,000 yearly interest, why, sir, ought not this measure to pass?

I am sure, sir, that no one of us would advise a friend to hold on to his money when he could use it in paying an interest-bearing debt. In a mere matter of business our advice to the Government ought not to be different from that which we give to our friends. If we do not apply this surplus upon the public debt there is great danger, sir, that it will be legislated out of the Treasury for purposes in which the people have little or no concern. As long as it remains unappropriated, it is a strong temptation for extravagance in public expenditures. Scheme after scheme has been devised to get this money out of the Treasury.

Not a great while ago it was proposed, if not by the Republican party certainly by its late candidate for the Presidency, to divide the Treasury surplus between the States.

We all know that those who say, and possibly, believe, that the peace and perpetuity of our Government is in great peril because a few of our population are unable to read and write, have been after this surplus for years. They tell us that they want it to build school-houses, establish schools, and to educate for school-teachers the young men and women of the country. This scheme for getting rid of all surplus money now in the Treasury, and all which may be accumulated for years, it will be remembered, passed the Senate in the last Congress and also in this; and it is among the possibilities that before the close of the present Congress it may pass the House.

It may be, sir, that before winter sets in, or the coming spring opens, that under the pretense of aiding commerce between a few States, the Government will be spending this money in digging canals and the construction of other water ways. These are some of the organized schemes for relieving the Treasury of the money now idle in its vaults.

View this matter as we may, it is very doubtful whether or not the people will get any substantial benefit from this surplus unless it is applied, and that soon, upon the public debt.

But we are told that if this surplus is taken from the Treasury it will weaken the credit of the Government. The public will have less confidence in the ability of the Government to pay its debts, says the distinguished gentleman from New York [Mr. HEWITT], if this money gets out of the Treasury and into the pockets of the people.

Mr. Chairman, it can not be possible that the public credit would be affected in the remotest degree by the absence or presence in the Treasury of $70,000,000. Why, sir, if the Treasury should be burglarized and the entire surplus be stolen, without hope of recovery, the Government credit at home and abroad would be then, as it is now, high and without limit. The payment of $70,000,000 of our interest-bearing debt will strengthen instead of weaken public confidence.

The opposition discuss this measure as if the Government had no resources except those now in the Treasury, and no ability to get more should more be required. I would remind the other side that there is $50,000,000,000 of value pledged for the payment of all that the Government owes. It is these values, and not the gold and silver in the Treasury, that keeps high the public credit.

Nine years and more ago we resumed specie payment. We then owed nearly $1,000,000,000 more than we do now, and the Treasury had no more coin than it has now. Still we resumed, and ever since have met our obligations when presented. Fortunately, perhaps, that all demands were not presented the same day, or, possibly, the same week or month, and equally fortunate that the notes of the Government were more desired than gold or silver.

I repeat, sir, it is credit more than it is cash that gives to the Government its stability and strength. Why, sir, unless we use this surplus there is nothing in the Treasury to pay our 3 per cent. bonds, amounting to $194,190,500. These bonds are payable at the pleasure of the Government, and ought to be paid from time to time from what the Treasury accumulates over and above current wants. Undesirable as these securities are in moneyed circles they are worth a premium, although there is no fund in the Treasury for their redemption and the interest upon them may cease at any moment. These 3 per cent. bonds are held largely by the national banks. They own $138,920,650. This amount they have on deposit in the Treasury to secure their circulation.

It is said if we appropriate this surplus as contemplated by this resolution these bonds, or $70,000,000 of them, will be paid and to this extent we contract the circulation of these institutions. This we are admonished would be a public calamity and would greatly disturb the business interests of the country.

National bank-note circulation was contracted $8,284,047 in 1883; in 1884, $24,170,476; and in 1885, $15,545,461. This contraction has not affected perceptibly the business of the country; and it will go on without disturbing values or interests whether the surplus remains in or is legislated out of the Treasury.

It is, sir, but a question of time when national banks will cease to issue circulating notes. This measure if it becomes a law will, I believe, hasten the day, and for this reason among others I favor it.

We can give the people better paper money than national-bank notes—paper money with legal-tender value, which for all ordinary uses our people prefer to silver or gold.

The passage of this resolution will not disturb in the least the monetary interests of the country. They who say otherwise are false prophets. The same gentlemen who prophesy that trouble will come if the surplus is taken from the Treasury and put where it will get back into the hands of the people told us eighteen months ago that the further coinage of silver would precipitate a financial crisis upon the country. Since then $39,474,258 have been coined, and the crisis has not yet appeared.

This crisis they predicted again in February last unless this coinage was immediately stopped. Still, silver dollars are being coined at the rate of $2,600,000 a month, and no crisis has come.

The resolution, it will be noticed, proposes to apply the surplus in sums of not less than $10,000,000 per month. Under the most favorable circumstances seven months must elapse before all of the surplus is paid out. Within these seven months, if the receipts of the Government for the current year be as large as estimated, there will be a surplus therefrom of $17,500,000. So that at the end of the seven months the Treasury will be weakened but $52,500,000. Surely the absence of this sum can work no embarassment to the financial operations of the Government.

Then, again, but $40,000,000 of this surplus can be used before Congress will meet. Then, if thought best, the payment of the remaining $30,000,000 may be stopped.

The opponents of this measure fear, so they say, that if the surplus be reduced $70,000,000, even at the rate of $10,000,000 per month, there may be times when the Treasury may be unable to meet current demands. Its receipts are over $1,000,000 a day. If these receipts, with other resources not set apart for a specific purpose, will not make a sufficient working balance, there can be no tenable objection to using temporarily, and until this balance is obtained, what the Government may hold for a different purpose, if it be necessary for the proper administration of public affairs.

We have in the Treasury $100,000,000 set apart for the redemption of the legal-tenders issued by the Government. This fund has been in the Treasury for this purpose since 1879. The amount of legal-tenders redeemed from this fund in seven years is very small. There is reason to believe that this money will be idle in the Treasury for many years. Although in one sense it is held in trust, and therefore, in strict law, can not be used except as specified in the trust, yet its use by the Government in whole or in part, temporarily only, to meet an unexpected or unusual demand upon its Treasury would not be regarded as dishonest or dishonorable by the considerate judgment of the country.

Plainly, no one, except he be the holder of greenbacks, could of right complain. The question is wholly outside of the law governing individual or corporate trusts, and outside, too, of what may be rightfully esteemed a breach of the public faith.

The chairman of the Ways and Means Committee [Mr. MORRISON] told us on yesterday that the $59,000,000 to the credit of the Post-Office Department, and in the hands of disbursing officers, might be used if needed in the current transactions of the Treasury. Relying upon this unquestioned statement, why should we hesitate to do what the pending resolution proposes?

Is it not evident, Mr. Chairman, that any fears that may be entertained that the passage of this resolution may leave the Treasury without a sufficient working balance are groundless? The situation of the Treasury in the absence of this surplus need give no one alarm. The mistake, if this measure should so prove, may be readily corrected. Under the act to provide for the resumption of specie payment, approved January 14, 1875, still in force, the Secretary of the Treasury is authorized to issue and sell the bonds of the Government, if necessary, to meet any demands made upon the Treasury. Therefore, I repeat, that in taking this surplus out of the Treasury we run no risk of embarrassing it, or putting it to serious inconvenience or disadvantage.

Apparently, sir, all of the objections made to taking this surplus from the Treasury come from the same quarter and in the same interest. The public good demands that it be put to some use; but private gain seems intent upon keeping it inactive and unemployed.

Capitalists say it is best to keep this money in the Treasury. All who hate silver and despise greenbacks say the same thing. The Government bondholder and the national banker press this view upon the country. Those who speak for these interests tell us that if we take up the 3 per cent. bonds with the silver surplus we repudiate the contract between the Government and the holders of these securities. These bonds are payable in coin. In other words they are payable in silver or gold. This is the law.

We violate no contract, nor do we break faith in using silver instead of gold in paying these bonds. All of these 3 per cent. securities, except $17,150, are held in this country. The silver surplus is a full legal tender. Why, then, should our bondholding people have gold and our non-bondholding people be compelled to take silver?

This feature of this controversy was well stated by my honorable friend from Iowa [Mr. HENDERSON], when he said:

> It has been said that this resolution countenances repudiation—that it means paying off these bonds in silver. Upon this point, if the bondholder is not content to take the coin I have to take and which my people have to take for what the Government may owe them or me, I will shed no tears over his distress.

We are told that if the silver surplus is used in the payment of these 3 per cent. bonds the holders of our securities abroad will consider the act as a breach of faith, and home will come all the bonds which they hold. This, it is said, will shake public confidence and impair public credit.

It will do nothing of the kind. He who thinks otherwise underestimates the wealth and financial strength of our country. Of the outstanding bonds of the Government, amounting to $1,260,778,612, only $76,755,000 are held abroad. The balance are in the hands of our own people, and they have the ability to hold twice as many more. Whenever our friends on the other side of the waters feel that their securities are weak, a word from them to this side will enable them at once to get rid of what they hold, and at a large advance upon their cost.

My honorable friend from New York [Mr. HEWITT] tells the committee that in his city alone there is more than $75,000,000 of unemployed money wanting profitable investment. If the passage of this resolution will start homeward the Government bonds now held abroad it seems to me that if advocated by that gentleman with the zeal and ability for which he is so eminently distinguished, his constituency would shower upon him their thanks and remember with gratitude his services. This prediction, sir, will create no alarm, nor will it be verified.

One word more, Mr. Chairman, and I have done. Gentlemen on the other side of the House who oppose this measure remind us that the Democratic party is divided upon this question. So, too, is the Republican party. They forgot to state what they surely know to be true—that the division is less in our party than it is in theirs. This division in opinion, to my mind, is strong proof that the question is one of business and not of politics.

Opinions once fixed and long entertained are not easily changed. Honest convictions after all are the only safe guide. Long before I had the honor to occupy a seat in this body I thought that the Treasury surplus would be best used if applied in the reduction of our interest-bearing debt. Since, nothing has occurred to change but much to confirm the opinion then formed.

The resolution shall have my vote because I believe it to be right, and because it expresses the views entertained by the people I represent.

Fitz-John Porter.

SPEECH

OF

HON. PRESTON B.. PLUMB,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Friday, June 25, 1886,

On the bill (H. R. 67) for the relief of Fitz-John Porter.

Mr. PLUMB said:

Mr. PRESIDENT: The events which have been the subject of discussion to-day occurred nearly twenty-four years ago. They occurred under circumstances which, while we may feebly recall, we can never wholly appreciate. I do not believe it is possible that any one, however intimately he may have been connected with those great events, can ever as fully appreciate them as they were appreciated at the time when they occurred.

I do not believe that it is possible to retry at this late date with fairness any question which was tried during the war either by the Commander-in-Chief of the Army under the authority which he had under the statute to dismiss officers or by the properly appointed tribunal known under military law as courts-martial. There are circumstances and belongings and surroundings peculiar to a time of war which can never be fully appreciated in a time of peace. The question as to whether a given movement was fast enough, prompt enough, thorough enough, and in perfect accord with what was intended by it, is one of those things which can not be properly settled in a time of profound quiet.

A few years ago I dropped into the room in which was being held the Warren inquiry in New York city. It will be remembered that at the battle of Five Forks (I believe that is the name of it, one of the last battles of the war) General Sheridan relieved General Warren from the command of his corps while under fire. General Warren appealed a number of years later from that judgment. He asked for the institution of a court of inquiry to pass upon his conduct at that time and to say whether or not General Sheridan was warranted in thus having arbitrarily relieved him from his command in the presence of the enemy. He asked that the stigma upon his character involved in his removal by General Sheridan might be removed. I happened to drop in, as I said, to the room where the inquiry was being held, and I think I never had anything come as vividly to my mind then as the fact that the question presented by General Wright could never be retried.

An intimate friend of mine was a soldier under General Warren, and was present when the general was relieved, and he had stated to me his belief that it was a great act of injustice, and I was prepared to believe this statement; yet sitting in that room, with the buzzing flies and with the drowsy atmosphere, and with everything as far as possible removed from the circumstances which existed at the time and the place when General Warren was relieved, I realized how utterly impossible it was that any one should ever put himself sufficiently into connection and in harmony with the situation as it was on the field to determine whether General Sheridan was right or whether he was wrong. Some question was involved as to whether General Warren was bringing up his forces fast enough. Four miles an hour is a pretty good gait, and yet at that time 10 miles an hour might have been a snail's pace in view of the emergency of the situation.

Can we ever in cold blood, after the lapse of twenty-four years, and when, except for the maimed men whom we see around us, the armless sleeves, the wasted frames—there is practically nothing to remind us that there was a war, and we are busily concerned with the events of peace, all our thoughts and all our conduct being gauged by the requirements of a time of peace—can we ever go back into that time of war and fairly disturb the judgments then rendered?

Under the statutes of the United States in a time of war the commander-in-chief may remove without court-martial any officer under his command. It is a great power, one that was exercised in hundreds of cases in the Union Army, exercised many times in a manner I have no doubt we would say, looking at it through the spectacles of peace, wrongfully, unjustly, simply because we can not adequately realize the tremendous stake which was then being played for, and the great and overwhelming demand that it made upon the men who were assisting in playing for it.

If I had a suspicion even, if I had that which amounted to a belief, that Fitz-John Porter was wronged, I never would put myself in the attitude of attempting to reverse the decision then rendered, because if we can not lift the entire cover from that period, if we are not prepared to do justice to private and officer alike, we ought never to touch it. Let all the events of the war be buried in one great trench with the dead.

Fitz-John Porter was a professional soldier. He knew better than any man who served under him the consequences of the disobedience of orders. He knew the summary nature of trials by courts-martial, and the power of the President to remove him for even the slightest dereliction of duty. Being a professional soldier, he took all these things into account intelligently when he undertook military service in the Union Army. He is not the man who should complain.

Rather let there be brought up here the spectre of some man enlisted from the cross-roads or the farms of the country, who, lying in camp, with no battle at issue, getting a letter from his wife that all of the supplies had failed, that the inexorable creditor was about to turn her out of doors, or some other misfortune was about to overwhelm her, not cowardly but simply mistakenly threw down his musket and went home—rather take up that class of men, to whom was applied the inexorable rule of the military law, which said that death should follow desertion of that kind, than to take the professional soldier, educated at the expense of the Government, who knew to the smallest parting of a hair exactly what that military law was under which he was serving and against which he offended.

It is admitted here by the advocates of the bill for the purpose of the decision we are to render that Fitz-John Porter did not obey orders; but it is claimed that he had a right to disobey them; and it is claimed that now by reason of newly-discovered evidence he did wisely in disobeying. I venture to say that there is not a man on the Democratic side of the Chamber who served the confederacy under arms that will not say that such a soldier in the confederate army would have been dismissed in disgrace, if not shot, for failing to perform the obvious duty which Fitz-John Porter failed to perform on the 29th and 30th days of August, 1862.

Suppose he had no orders—upon that point there is no question now—but suppose he had no orders, he lay within the sound of a battle which he knew was going against the cause of the Union and in which he must have known the service of his corps was needed. He was as cool and collected and free from anxiety as ever he was on parade; he did not concern himself about what was going on at the front; he did not even ride forward or send forward to inquire. Leaving out the question of orders, suppose General Pope did not know he was there. He knew he was there and he knew what his duty was, being there with the best corps of the Army, the largest in the number of men, the best equipped, and the freest from fatigue. When General Sherman cut himself from his base of supplies at Chattanooga for the purposes of his Atlanta campaign, he congratulated himself that he had an army that could not be stampeded and that wherever and under whatever circumstances it might be found, a regiment, a brigade, a division, or a corps in a place separated from him, he knew they were going on fighting the fight they were appointed to do as well as though they were in communication with him, receiving his commands; and that is just exactly what they did over and over again, because in the long line which he commanded, spread out for miles and miles some days, it inevitably happened that if a fight was to be fought at all it was to be fought without specific orders. That army of men that conquered Atlanta and afterward marched to the sea never failed, as Fitz-John Porter failed, to find the fighting by the fire and to do their full duty in order that there might be victory.

Some years ago I introduced a bill for the relief of Richard H. White, late lieutenant-colonel of the Third Regiment Wisconsin Cavalry Volunteers, who had been dismissed from the service because he did not obey an order, not an order to fight a battle, but an order to report himself at a certain place, he being ill. There was no fighting going on in that part of the horizon; he was not needed anywhere for duty of that kind; but he disobeyed an order, was court-martialed and dismissed. Upon a statement made by a friend of his in regard to the circumstances of the case, I deemed it worthy of investigation and introduced a bill granting an honorable discharge to Colonel White, which caused an investigation by the Military Committee of the Senate. It came out of that committee accompanied by a report dated on the 15th day of February, 1884, a report made by the Senator from Missouri [Mr. COCKRELL], in which occur these two paragraphs:

It thus clearly appears that Colonel White was absent without leave, and was reported and summoned to appear before a military commission to answer the charge, and made his defense by letter to the commission, and upon such defense rested the decision of his case; and that there was no undue haste in the proceedings, no refusal of time to make defense, and there is now no allegation of prejudice or improper conduct on the part of the commission. The commission rendered their decision; the Secretary of War, in pursuance thereof, dismissed Colonel White, and now, after the lapse of twenty years, Congress is called upon to enact a law removing the charge of absence without proper authority, which the records show to be true, and to revoke the order of dismissal and grant an honorable discharge.

It was in time of war; a terrible struggle, when punctual obedience to all orders and regulations and requirements of the service and strictest discipline were essential. Proceedings in such times are often a matter of necessity which in times of peace would be considered harsh, extreme, and unjust.

And so the committee concluded that Richard White having disobeyed an order to report himself somewhere could not claim leniency at this late date and must remain forever under every dishonor which the sentence of the court-martial imposed. That report was made by a man who served the confederacy as a brigadier-general. He makes no parade of that service; but I have heard him tell about the closing fight at Franklin, how being ordered to make a charge which he and every man under him knew was absolutely futile, which he knew could only bring death to his men and disaster to the army, he yet threw himself against General Schofield's line, fighting as he said by the light of the flashes that came from the guns of the Union Army, only to go down, himself wounded, his division decimated, and that disaster which every man in the line foresaw and knew was inevitable overwhelming them. If you ask him to-day what the consequences would have been if he had refused to obey that order thus attended with inevitable disaster or if he had failed to obey, he would tell you that the confederate army was not big enough to have held him for a moment of time thereafter.

And so when the Senator from Missouri [Mr. COCKRELL] put in his report that brief but comprehensive statement of the requirements of a time of war upon those who had enlisted in an army, he simply stated that which he had verified by his own experience and emphasized by his own blood.

The court-martial which tried General Porter was composed of Major-General Hunter, Major-General Hitchcock, Brigadier-General King, Brigadier-General Prentiss, Brigadier-General Ricketts, Brigadier-General Casey, Brigadier-General Garfield, Brigadier-General Buford, Brigadier-General Slough, every member of which, with two exceptions, has since died. We are sitting in judgment to-day upon the dead. That court-martial was composed of men any one of whom was the peer of Fitz-John Porter even as described here by his best friend; and is there any impeachment of the soldierly character of a single one of them? Has it been left to any one in behalf of Fitz-John Porter to say that that was a prejudiced court?

I will state a little circumstance related to me about General Hunter and his connection with the court, a few days ago by a prominent Army officer. General Hunter's family lived in Washington at the time this court was convened. He came here under orders for some military purpose, and noticed in a morning paper that he had been made a member of this court. He left his house immediately to go to see the Secretary of War to ask to be relieved. He had not been fairly out of his house until General Porter came there in hot haste to ask him as his friend to remain on the court. Learning where Hunter had gone, Porter pursued him quickly, overtook him before he reached Mr. Stanton, and persuaded him to remain a member of the court as his personal and Army friend.

It is understood and it has become part of the common knowledge of all who had to do with the investigation of this matter that the court rendered a unanimous judgment, and it is also understood that it came within one vote of decreeing death to General Porter for the offense of which he was found guilty. Well, Mr. President, the Senator from New Jersey [Mr. SEWELL] asks me who says it. Does he deny it? He has as much opportunity as I have for affirming it. Neither of us can in the nature of things have testimony on that point because the members of the court were of course sworn to secrecy; but, as I have said, it has gone into the common knowledge of men; it is part of that which gets into the atmosphere concerning such a case. Naturally of course the members of the court more or less talked about it among themselves. I have no doubt of the essential correctness of what I have stated.

We are asked after twenty-four years have chased each other into the abyss of time to reverse the action of this court-martial thus composed, upon what ground? Upon the ground of newly discovered testimony, and not only that but testimony which Mr. Porter knew nothing at all about or supposed at the time was in existence; in other words, upon the testimony of General Longstreet, and other confederate officers, something that is new and which General Porter could not have known unless he had been on the other side.

It is a new thing, if I may say so in the presence of those who are better qualified to speak about military matters than I am, that an officer is not to attack in obedience to orders for any reason whatever. Does any person who has given the most cursory examination to military matters, and especially to the position of troops, not know that General Porter could have attacked even if his force were less than one-half the force opposing him, to some effect at least; and that if he had attacked the enemy, as far as we can apply human judgment to a state of facts so far removed, he would have prevented that reinforcement by General

Longstreet of another portion of the confederate line which took place and which resulted in a great disaster to the Union cause.

Mr. President, after all these men have gone into their graves, after Abraham Lincoln and Edwin M. Stanton, who knew more about this case than anybody else, who knew more showing that the conduct of Fitz-John Porter was disloyal and unsoldierly than others—after all these men have disappeared and nearly a generation of time has passed—we propose to do that which would never be done in any private cause, and we propose to do that which is a direct reflection upon the great and the honored dead. The vindication of Fitz-John Porter, so called, is a stab at the memory of Abraham Lincoln, who summoned the court and who approved its findings and sentence. There was no ill-feeling or malice in his action. No kinder or more just man ever lived than Abraham Lincoln.

Mr. VOORHEES. Will the Senator from Kansas allow me to ask him whether then General Grant stabbed Abraham Lincoln? No man has said so much as General Grant has said in vindication of Fitz-John Porter; and if we are to be arraigned for stabbing Abraham Lincoln, what are you to do with Grant?

Mr. PLUMB. This new-found love for General Grant is as marvelous as the conversion of Paul.

Mr. VOORHEES. I am professing no new-found love for Grant; but has the Senator lost his, if he ever had any?

Mr. PLUMB. I will get to that in a moment. It will not do for the Senator and men like him, who are going to vindicate Fitz-John Porter, to set up General Grant as their leader.

Mr. VOORHEES. I do not know why.

Mr. PLUMB. They abused him; they hounded him; they held him up as the pattern of everything base; and it will not do for them now to shake his honored name at us.

Mr. VOORHEES. The question is not what we do, but what you do with Grant and his testimony.

Mr. PLUMB. We will take care of that when the time comes. We have nothing to reproach ourselves with in regard to Grant. Yes, Mr. President, General Grant took the side of Fitz-John Porter at the last, and a gentleman here on my right [Senator SEWELL], whom I respect so far as manly qualities are concerned as much as I respected General Grant, takes the side of General Porter in debate and vote in this Chamber. I heard read here in the presence of the Senate the other day the request of some posts of the Grand Army of the Republic that Fitz-John Porter might be vindicated by the passage of this bill. Yes, Mr. President, there is a slight division among Northern soldiers and Northern people on this question. It is the division which occurs in the Mississippi River, the eddy going one way and the great full-handed stream going the other.

Does any man doubt that the great body of the men who fought at the second Bull Run believe that Fitz-John Porter's failure on that day to perform his duty was the cause of the disaster which came to our arms? No man doubts that. Does any man doubt that the great majority of the men who followed the flag of the Union with their prayers and their tears and their hopes, as well as those who followed it with their bodies, believe the same way?

It is not a new thing for the North to divide. The Senator compels me to anticipate what I was going to say later. Will the South divide upon this question? Is there nothing significant in the fact that in the other House as in this every single man who served the confederacy in war and peace, with determined zeal and without exception, votes to put Fitz-John Porter among the roll of heroes of the Union Army, and along with it and as a supplement and not in a minor strain either is an apotheosis to Jefferson Davis and a denunciation of Edwin M. Stanton. Is all this to vindicate Fritz-John Porter as a loyal, effective Union soldier? Or is there behind it all somewhere, unconscious to the minds of these honorable men, no doubt, a fellow-feeling for the man who helped them in the hour of battle? Is it necessary for this purpose that the martyred President should be brought into contempt and that the great war secretary should be defamed? This is what is being done. As Fitz-John Porter is praised they are blamed. The two processes go together and are inevitably joined.

Mr. President, this bill may pass. It may receive a constitutional majority in both Houses of Congress and may be signed by the President, but the spectacle of the vote that will be given will not be lost to the country, and the country will not believe either now or hereafter that the motive for the votes that give this majority was simply the vindication of a wronged man.

I beg to say to Senators on that side we have not attempted to put up or to put down the men who fought the battles of the confederacy. You rate your heroes as you please; you put up Lee and Jackson and Hill and Longstreet and Hood, and we do not interfere with you in that. You write the history from your standpoint so far as it relates to individuals and the merits of different movements of armies and of the actions of legislative bodies and so on as you please. Let us do the same. We know where these men belong who fought on our side. We ask no help to fix their status or their merits.

And yet, Mr. President, in a manner which I will not further characterize, the men who won the fight that Pope lost because Fitz-John Porter dallied and was insubordinate and unfaithful are now seeking to put Porter among the Union heroes and cast reflections upon Pope and men like him upon whose military escutcheon there is no blot. The Senator from Missouri [Mr. VEST] some years ago in a debate in this body said, with that eloquence for which he is noted, that it was for the victors to write the history of the struggle in which the victory was won, and therefore the North had a right to write the history of the war of the rebellion. One of the offices of history is to give proper place and character to the actors in it, and it is for the North and not for the South to fix Fitz-John Porter's place in the history of the war of the rebellion. If I mistake not, whatever the motive may be, the reinstatement into the Union Army of Fitz-John Porter is the beginning of an attempt to rewrite the history of that great drama from the Southern standpoint, to put that which was practically disloyal and which at all events was unfaithful above that which was loyal and above that which was faithful. The indication can not be mistaken. One confederate soldier who sits on this side of the Chamber, detained from here now by illness, when this bill was before the Senate on another occasion said in a speech which became him and his manhood that in view of the fact that he had served on the confederate side he felt restrained from casting his vote on the passage of the bill, feeling that he had no right to sit in judgment in a case involving the relative merit of Union soldiers.

This is a question which concerns the Union Army, the doings of that Army, the consequences of that which grew out of their doings. It is our quarrel; it is something which I think the other side ought to refrain from entering upon or expressing an opinion about. But, after all, neither here nor elsewhere where the subject has been under consideration has there been cast anything but an affirmative ex-confederate vote.

Mr. BUTLER rose.

The PRESIDENT *pro tempore*. Does the Senator from Kansas yield to the Senator from South Carolina?

Mr. PLUMB. Yes, sir.

Mr. BUTLER. I have sat here during the whole discussion of the Fitz-John Porter case, and I have not opened my mouth for or against it. I do not know of any man from the South who has opened his mouth; but I do submit that there is a point beyond which forbearance ceases to be a virtue, and that point has about arrived as far as I am concerned.

It has been intimated by innuendo, almost by direction, that we are casting our votes to restore Fitz-John Porter to the Army because he was disloyal to the Union. I not only protest against that, Mr. President, but, for one, I denounce it as absolutely and entirely and unqualifiedly untrue; and if we were in another forum I would denounce it as cowardice. Because we are here in the exercise of our constitutional rights as Senators upon this floor casting our votes as our consciences dictate, to be aspersed in this way is something beyond my comprehension among men and gentlemen.

I have not opened my mouth for Fitz-John Porter. I know of no man from the South or in the confederate army who has. We have taken the ground that it is not our fight or our quarrel. But are we supposed to sit here like dumb brutes when called on to exercise a constitutional duty to vote? And because we vote as our conscience dictates, without regard to his loyalty or his disloyalty, following in the track of Republicans who brought this question here, we are to be aspersed and our integrity impugned? I repeat, sir, that if that aspersion were put upon me in another forum I would denounce it as false and cowardly.

I care nothing about Fitz-John Porter; I know him very slightly; you may restore him or you may continue him in disgrace as you please; but I have heard for the last time, without protest at least, these constant aspersions upon the men from the South, who are here simply doing their duty as they understand that duty to be.

I am the last man in the world, I can inform the Senator from Kansas, who would sustain a traitor to the Union cause. I am the last man upon this floor who would have respect for a man who I thought deserted his colors. But from the evidence which I have had, and which I have looked at I think judicially, I do not believe that Fitz-John Porter was a traitor, I do not believe he did desert his colors. Believing in that way, I shall vote for this bill.

Mr. PLUMB. Mr. President, I knew all that before the Senator got up.

Mr. BUTLER. Then I hope the Senator will stop throwing out insinuations.

Mr. PLUMB. I knew there was a forerordained vote, and as the Senator has not restrained himself from some lively declarations of speech on this subject, I hope he will not restrain himself elsewhere.

Mr. BUTLER. I can say this to the Senator, that if he were to indulge in just such expressions as he has elsewhere he would be very likely to hear from me.

Mr. PLUMB. Ah, Mr. President, we hear a great many things in these days; there are signs, and portents, and wonders, and all that sort of thing. It is just what the Senator has said that I was commenting upon, that while the men who served in the Union Army and the

Northern people divide to some extent upon this question affecting the honor, the good name, the faithfulness, the loyalty of one of their own soldiers, no confederate soldier has any doubt upon the subject whatever, but all of them votes *nem. con.* that Porter was not guilty.

I do not know that I could make the statement stronger. The Senator from South Carolina has done so, however. He has made it stronger than I could make it. It was the fact, as I said, that without speech, with a resolution that betokened a fixed, irrevocable conviction he and those who like him served in the confederate army march in solid phalanx to vote for Fitz-John Porter.

I leave the question as to what is the motive so far as I am to characterize it with them, but I had a right to say what I did say, and I will repeat it. While neither a prophet nor the son of a prophet, I will still venture to say what will be evidenced from day to day from now henceforth, that the Northern people will not believe that the men on that side of the Chamber vote to restore Fitz-John Porter to the Army solely for the purpose of vindicating him. That public opinion which rules the country, putting up and putting down, will not fail to penetrate all disguises and to place proper construction upon the action of those who exhibit this extraordinary zeal to vindicate an unworthy Union soldier.

A Senator sends me a memorandum to say, what illustrates to some extent the setting of the tide, that the President of the United States has just vetoed a bill giving Mrs. General David Hunter a pension of $50 a month. I will not make any connection between that fact and the fact that General Hunter presided over the court-martial that tried Fitz-John Porter, and that he too is dead and in his grave. If Abraham Lincoln can be stabbed, if Edwin M. Stanton can be defamed by those whom he condemned because they were disloyal, and if we can live to see that in this year of grace I do not wonder that along with it comes the veto of a bill giving a pension of $50 a month to the widow of the major-general who was the chairman, the presiding officer of the court-martial which convicted Fitz-John Porter, and upon whose soldierly record there is no stain.

Mr. HAWLEY. Not because the pension was made $50 a month.

Mr. PLUMB. Not because it was $50 a month, for the same President signed a score or more of bills giving $50 a month to the widows of naval and army officers at this session of Congress. A gentleman who sat in the seat in front of me for many years famed for his ability and eloquence would speak of this veto as a "decoration" of Mrs. Hunter. Mrs. Hunter has indeed been "decorated" by the veto of this bill giving her $50 a month. The loyal people of this country will see to it abundantly that Mrs. Hunter does not come to want for the lack of a pittance of $50 a month if the Congress of the United States should fail to do its duty and pass that bill over the President's veto.

I believe that Fitz-John Porter was unfaithful to the Union cause. I believe that he practically conspired that the Union cause should lose that battle. I believe the letters he wrote to General Burnside and to General McClellan would have furnished ample warrant for the President to have exercised the great power and prerogative conferred upon him by the statutes of dismissing officers whose services he believed were no longer useful to the cause of the Union, and whose example was pernicious. Among persons who speak about each other with that general glibness and freedom of comment which characterize the newspapers and men in private speech, there might be said in a time of peace what General Porter said about General Pope, and generally what he said of a discouraging character in regard to the fight of which he was not but ought to have been a part; but there are times when a nation being in peril, disrespect for a superior officer, the expression of it, however slight, is treason in point of fact. Every man, every gun, every agency of the Union Army was in demand. The Union, republican government, human liberty, hung suspended in the balance. In a tremendous time like that, with these great issues at stake, with every loyal man with his blood on fire and his nerves at the highest tension, here was a soldier educated by the Republic, in command of the best corps in the Army, for whom the best that can be said is that he did not march to the sound of the fighting; that he lay idly by while disaster overtook the Union Army. But he received the order to march and in contempt of his superior officer requested that some wagons which he had control of should be taken out of the way, and with this sneering request on his lips remained in camp and failed to move. That was either a record of unfaithfulness or of criminal inefficiency.

For the restoration of such a man I can not vote, and I believe the restoration of Fitz-John Porter to the Army will prove to be one of the most significant things that have occurred since the war and one which will come to divide the sentiment of this country in regard to the causes, the consequences, the rightfulness of that great struggle. If Fitz-John Porter is to be vindicated at the hands of the men whom he refused to fight, if he is to have the judgment of the confederacy in his behalf, let him take it. Is there any other Union soldier who desires such a vindication? He has not been heard from to date.

Mr. President, this is the aspect this case presents to me. It is fairly and squarely presented here between faithfulness and unfaithfulness, and, as I said before, it is an issue that side of the Chamber have no right to force. It is our fight, in our charge, in regard to a great and momentous part of the struggle for the Union

The Surplus in the Treasury.

SPEECH
OF
HON. ARCHIBALD J. WEAVER,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886,

On the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt, as follows:

"*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That whenever the surplus or balance in the Treasury, including amount held for redemption of United States notes, shall exceed the sum of $100,000,000, it shall be, and is hereby made, the duty of the Secretary of the Treasury to apply such excess, in sums not less than ten millions per month, during the existence of any such surplus or excess, to the payment of the interest-bearing indebtedness of the United States payable at the option of the Government."

Mr. WEAVER, of Nebraska, said:

Mr. CHAIRMAN: I offer the following amendment:

Provided, That the first payment under this resolution shall be for an amount that will reduce the surplus to $100,000,000.

If the penalty for making false statements on political subjects of great importance wherein nothing but the truth should be stated, were banishment to that location which is spelled by affixing two ll's to the pronoun "he," the orators of both wings of the Democratic party would, in Democratic executive language, be in a condition of innocuous desuetude in the temperate zone of North America, and the first-named locality would have the benefit not only of a Democratic Executive, but would have a large majority in each branch of the legislative department of the Government; and while there would be a few members from the anthracite and iron districts clamoring for protection yet in that country, under Democratic rule, you would always find a clear working quorum for free trade, free rum, and State sovereignty.

The Democratic party is just now in power by a systematic continuation of hypocrisy, duplicity, and falsifying that, for a moment, seized upon the credulity of the masses, who, as might have been expected, find that their votes were obtained under false pretenses. What did the Democratic orators say to the voters of this country as an inducement to get their support and suffrages? You said there was from three to five hundred millions of dollars in the Treasury that should be applied on the interest-bearing debt of the United States. That is what you all said from one end of the country to the other—you men who have been in public life for a long time and knew all about public affairs said that. The second man on the Democratic Presidential ticket proclaimed it most loudly of all, and you can not now deny it, because there are too many to bear witness to your statement; and now, having come into possession of the Treasury with all of this alleged amount of available surplus—because there is no complaint that you did not get the last cent that was shown to be in the Treasury by the statement from the Treasury Department on which you made the campaign—I say what is your record since you came into possession of that money?

On the 4th of March, 1885, you came into possession of this overloaded Treasury, and one would have supposed from your professions and your talk of what would be done that the month of March would not have passed before all the $194,000,000 (option bonds) would have been called and paid; but not so, nor was one cent paid on the interest-bearing obligation of the Government. April passed, and May passed, and June passed, and July passed, and August passed, and September passed, and October passed, and November passed, and December passed, and January passed, and at this time there has accumulated $75,000,000 more of money in the Treasury and yet not one dollar of the interest-bearing obligation of the Government had been paid, and to prove this allegation I here call attention to that part of the monthly statements from the Treasury Department which show that for all this time the interest-bearing debt of the Government was always the same, namely, $1,260,778,162.

Neither was a dollar ever paid on the interest-bearing debt of the Government under Democratic rule until a resolution was introduced in Congress to require such payment.

This is a true record of the Democratic party since it came into power on the payment of the debt or rather failing to pay the debt; but that is not the only thing this great party has failed to do. The Executive made a great effort to paralyze the industries of the country by an attempt to retire the $346,000,000 of greenback currency and failed in all save the effort.

The head of the same great party conceived the brilliant thought of discontinuing the coinage of the silver dollar, but as a veto has no force on a law passed under Republican administration he could not make it work and the coinage goes on.

Another brilliant scheme of the Democratic party is to cut down the revenues of the Government while we have an interest-bearing debt of more than $1,200,000,000 and while the estimated revenue of the Gov-

ernment—estimated by Democratic officials—is less than the estimated expenses.

Now, sir, when we consider that under the rule of the Republican party the interest-bearing debt of the nation was being paid at the rate of $150,000,000 a year, what shall be said of a party that got the control of the Government under the pretension that this debt was not being paid fast enough and then failed month after month to pay a single cent?

I favor the resolution under consideration requiring the application of the available money in the Treasury in excess of $100,000,000 on the interest-bearing debt of the United States.

While there is power under the law as it now stands for the Secretary of the Treasury to do this without being directed so to do, yet from the record made by this Democratic administration we are fully advised there is no disposition to do this, but rather to continue to allow the money of the country to accumulate in the Treasury when it should be in circulation to revive the drooping industries of the country.

It is stated by the leading Democrats on this floor, and especially by the chairman of the Committee on Ways and Means [Mr. MORRISON], that not more than $70,000,000 will be paid out under this resolution, and computing the interest at 3 per cent.—because this is the rate drawn by option bonds, which are the only ones subject to call—it will readily be seen that to pay out $70,000,000 at $10,000,000 per month would require seven months, and computing the interest on the $70,000,000 for one-half of the seven months, the average time for which the $70,000,000 would continue to draw interest under the resolution, $612,500 is the amount that would be paid out as interest, which amount would be saved if my amendment be concurred in to pay out the surplus at once.

Judging from the financial ability thus far displayed by the Democratic party it is quite certain that this amendment will be rejected.

The amendment was disagreed to.

"Where there is no Mail there is no Trade."

SPEECH

OF

HON. WILLIAM D. OWEN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 19, 1886,

On the amendments of the Senate to the bill (H. R. 5887) making appropriations for the service of the Post-Office Department.

Mr. OWEN said:

Mr. CHAIRMAN: This Congress is able to enact legislation that will help the country. No Congress for twenty years has had such an opportunity. There is want in many homes where want was never known before, and we have been promised that relief shall be had, so far as it can be brought by the action of this House. The panic of 1873 threw business out of gear, and since that date the products of the field and mill have not had a profitable sale nor wage-workers profitable wages.

If a man has anything to sell from a day's work to a farm he finds buyers scarce. There is money in the land but it is hard to get. Money is the most sensitive thing on earth. On the slightest alarm it hides. The man that has money will not let you have it unless he absolutely needs what you have, because what you have is sinking in value, but his money does not shrink, and next year he can buy your article cheaper than now. When things get to going this way hard times get harder and the poor get poorer, and as the purchasing power of money increases the rich get richer. These are our times and they are evil days. The discontent in our country has been growing for years. Its voice has grown so loud it has even been heard in these Halls. There is trouble in the country when the laborers' cry gets so loud it can be heard in Congress.

More men are idle to-day than ever before in this land, and the idle have no hope for an early relief. We have been told that prices of things we buy are low, lower it is claimed than the average of 1860, but what is the benefit of low prices to the man who has no money to buy with? The laborer must be employed before he becomes a purchaser; to talk to him about the low prices of goods is to apply a salve that becomes an irritation. The continued unsatisfactory condition of his employment has caused the laborer to enter into a confederation to protect his own interests. He has endured all sorts of changes in the past, but never before has he organized for protection. This uprising against the present condition of things is one of the greatest revolutionary movements in history. It is twenty millions of people driven into an organized body by want, and requesting that the wheels of business start again, and giving notice that when the start is made they are to be partners in the business.

It was Wendell Phillips who said:

Toil has a brawny hand but a warm heart. It bears all things, believes all things, and hopes all things. If the time ever comes when this great force shall refuse to be led any longer, and shall organize, it will likely lose sight of its own interests in hatred of its ancient enemy, and this country will find that the "blind giant" has seized the pillars of the temple, and capital and labor, and great and small, will be ruined together.

This undisciplined force has achieved an organization that astounds the country.

Mute sentinels of the divine mandate that "man shall eat his bread in the sweat of his face," they gaze upon a vast scene of enforced idleness; upon mills shut down; factories stopped; spindles that are silent; wheels that hum no more; upon furnaces closed; mines without miners; molds without castings; blasts without flames; chimneys without belching smoke; upon women and children shamed by their need; upon men whose earnings are a pittance, and ask from whence can relief come? This is the great question before this House. Relief can only be found on this floor. Various wise and prudent measures have been introduced here which if enacted into laws would lift this blockade and open our doors to public confidence and a return of prosperity. What do you propose to do about it? Timidity and indecision have no rights you are bound to respect at this time. Do not in your doubts lay this matter over until after the election this fall. It will be a dangerous undertaking. This is a case where the man who doubts will be damned.

With the factories running on half time the tariff question should have been decided during the first sixty days of this session instead of holding it until the close, and then doubtless bring in a bill no true tariff reformer can support. The factories are not making goods except on order. They no longer manufacture and store for future sales, because the tariff may be reduced and bring them to bankruptcy. The great industrial interests are paralyzed into inactivity through fear of injurious legislation; and capital, menaced by the uncertainty of what you will do, will not venture into new fields. Whatever is going to be done in the matter should be done promptly. If the tariff is to be reduced under a free-trade tendency, it had better be done now. Let the factories then close out, and business, knowing what it can depend on, will adjust itself to new surroundings; but you stand here week after week threatening what will be done, yet doing nothing. Some action ought to be taken to relieve this unfriendly attitude to labor and capital, or it should cease.

ORGANIZED LABOR NOT A MENACE.

Wendell Phillips could to-day see an organized force which, contrary to his prophecy, refuses to go blind and bring ruin to the country. With Powderly at the head this Samson is not blind.

With my belief in the destiny of this country and my trust in divinity I think that whenever a national crisis presents itself there will arise a man equal to the hour. Never has a man been better fitted for a struggle than this man for this great labor struggle. For eight months he has held back a storm which had it started would probably have thrown us into the terrors of the French commune. But he had the courage to withstand rash men, the generalship to organize a million men, the prudence to overlook many mistakes, controlling a revolution against the existing order of things, and supposed to be contrary to the interests of invested capital, he has guided its vast and involved movements with a wisdom so astute and a judgment so well balanced that he has won the confidence of the public and has been received with esteem into the councils of that element against whom he had organized for redress of grievances.

Mr. Speaker, the problem for us in this House is to do our duty as circumspectly and successfully. It is our duty to inaugurate a system of legislation that will result in making farming again profitable: that will again permit the workingman to receive wages that are living wages; that will move the now silent mill; that will call idle men to work; that will make every mechanic feel that he is pushed again; that will cover the ocean with our ships and with our flag as in the days gone by; that will give plenty to the people and prosperity to the country.

Ours is a government of the people and for the people. This Congress, the first after a new administration, has an auspicious opportunity to relieve this great depression and bring blessings to the people.

EXTRAVAGANCE.

We have been in session six months, and what have we done? We must adjourn now within a few days. We will go into history as having done less than any Congress before us. With the exception of the widow's pension bill no measure has passed entitled to the dignity of national importance. But idleness is not the greatest crime here. This Congress is extravagant. My distinguished colleague [Mr. HOLMAN], the great Democratic economist, in a recent interview said:

We promised to decrease expenses and we have increased them; we promised to practice retrenchment and we have not done so; we promised to economize and we have not done so; we promised to introduce reforms, but where have we done so? We have not kept our pledges, and unless we change speedily our party will be defeated at the polls this fall. We have increased the amount of the appropriations $23,000,000, and this does not include the extra appropriation for pensions nor the $6,000,000 deficiency bill voted last week.

This is what the best authority in this House says regarding our legislation. I think it is admitted the increase this year over the expenses of last year will be $40,000,000. Forty million dollars is a large amount of money. The time was when the entire expense of the Government was less than $40,000,000.

It might be supposed as a member of another party I would rejoice

at the record made by this Congress. It is a political victory that they have not kept faith with the public, but the condition of our country is too grave at this time for any man who has to deal with these problems to be a politician. When the interests of our common Government are at stake, then on this floor, under his oath, every member should forget his party and be a patriot.

There are interests here legitimate and beneficial of various matters aggregating the expenditure of millions of dollars which need not be passed this session. On these matters many members have set their hearts strongly. I am greatly interested in the erection of a public building at my city, but let this and all of these expenditures which are not absolutely essential go over until next session.

Let us address ourselves to legislation that is productive. All methods of bringing money into the Treasury require some outlay at first. The farmer has this experience; so has the mechanic and the manufacturer. They plant, they water, they till, and then comes the harvest. I believe we can practice this same reproductive policy. Other nations have done it and made themselves great and rich. We can do it, and stir the stagnant blood of our depressed trades with a new life. It will bring the idle into employment and money into circulation. The country will not look upon appropriations thus made as pledges broken, but will receive it as the earnest of promises kept.

OUR FINANCES UNSATISFACTORY.

The bill before us has in it more ways of helping the country than anything that has been here for many a day. In seeking a relief from this industrial depression it is but fair for me to say the demonetization of silver in 1873 has been one of the great procuring causes of these times. While it was not strictly a party measure, it was a mistaken policy on the part of those engaged in it. Although the harm was intended to be atoned for by remonetization in 1878, it was but lamely done, for it decreed that no more than $4,000,000 could be coined per month. To make the coining of gold free and limit that of silver was to disparage silver.

In addition to this the administration violated the law of remonetization by refusing to pay the nation's obligations in anything but gold coin. The result was that gold was hoarded by the few who had it, and under the nation's ban silver depreciated in value. Grenfell, the distinguished ex-president of the Bank of England, lays all our troubles to this disparagement of silver. Arendt, the great economist, says it "is the crime against silver, the people's money, which has brought this unspeakable commercial misery, which has now lasted ten years, and is becoming yearly more and more acute."

With the election of Mr. Cleveland it was thought we had come to the dawn of better times, and we all remember how the telegraph wires prophesied a speedy resumption of business.

Every paper in the land spoke confidently of the revival of business, and thousands of depressed lines of trade looked forward to the day of his inauguration as the beginning of a revival of industry.

If the advent of Mr. Cleveland to the Presidency was to reclaim business prosperity, restore our shattered finances, make the ships hives of busy workmen, bring good prices for labor and products, give plenty to homes and smiles to children, he was entitled to be received with open arms.

In February before the inauguration it was surmised that Daniel Manning was to be made Secretary of the Treasury, and as he was known to be an ally of Wall street a letter was addressed to Mr. Cleveland asking him not to express any financial views in his inaugural address, but to first acquaint himself with the wants of the people. No answer was requested. None was expected. But Mr. Cleveland at once made a public reply asserting his position in advance. This was a remarkable thing to do. He announced himself against the further coinage of silver, and revealed a strong sympathy with the gold interest. That Manning and Wall street were to have a champion in the new President was a surprise, and created the profoundest regret. Republican presidents had been regarded as allies of the money monarchs, but that a Democratic President should be one also created comment and grave apprehension lest the policy of his administration would be in harmony with this element, who however estimable as citizens do not in these problems of government have interests in common with the producing classes.

Within two weeks after the publication of that letter the papers ceased their prophecy of better times. The trusting confidence of business had received a wound from an unexpected source; the fires that were preparing in the mills were not lighted; trade suddenly retreated to its old paths, and all things continued as they had for years.

I venture the assertion that if Thomas A. Hendricks had been the Chief Executive he would not have carried out the policy of Wall street.

All financiers agree that under a contracting currency prices fall. Goschen says that the amount of gold produced yearly in the world at this time is only $90,000,000. He says the arts have $60,000,000 of this, the East takes $20,000,000, that the wear and tear is $5,000,000, and there remains just $5,000,000 for the monetary requirements of the world. Suppose we got every dollar of this. As our population is increasing at the rate of 1,000,000 per year, that would give $5 to each person when they need $35, but we receive only the merest fraction of this $5,000,000. Now, to this shrinkage in consequence of increasing population add the fact that our national bank circulation is being reduced at the rate of $15,000,000 per year, and we have an enormous contraction of currency—a sufficient contraction to choke the life out of business in a very few years.

Only through the continued issuance of money can we hope for a monetary relief, and yet the President, unmindful of these facts, and of the fate of England in 1832, demands that we shall stop the further coinage of silver. To follow the administration here is to be led into panic and disaster.

Money never invests in industrial enterprises except for the hope of gain. The peculiar effect of a contraction in the volume of circulation is to give profit to the holders of uninvested money. In a year or two's time its purchasing power has increased so much by reason of the fall in prices that hoarding pays better than investing. Money is simply worth its purchasing power. With a shrinking volume of currency the capitalist whose millions lie idle in his vaults is growing in wealth more rapidly than if he was running mills or building railroads or steamboats. Thus do falling prices rob labor of employment, and precipitate an unequal conflict between capital and labor, for all the time capital is increasing in value, while labor each day gets less and less for its toil.

For example, a farmer who owes $300 pays it with 300 bushels of wheat at a dollar a bushel. If, however, he has a running mortgage, and when it falls due wheat is 75 cents per bushel, it takes 400 bushels of wheat to pay his debt. It is this that is bankrupting our farmers. A laborer who contracted a debt in 1880 of $100, and has not been able to pay it, and undertakes to do so this summer, finds that instead of eighty days' work paying the bill it will take one hundred.

Thus we have idle money, idle capital, idle labor, idle machinery, standing and facing each other.

Mr. Manning was Secretary of the Treasury twelve months before he made a payment on the public debt, and then not until two resolutions demanding that he should do so had been introduced into Congress. We lost six months of interest in consequence. In the last fifteen months $21,000,000 of national-bank notes have been retired from circulation, and millions of one and two dollar bills have been called into the Treasury. There was $8,000,000 surplus when Secretary Manning came into the Treasury; now he admits he has locked up $65,000,000 in addition. The average of prices has fallen 9 per cent. within these fifteen months.

It is in the shadow of a shrinking volume of money that disorders, social and political, gender and fester, that communism organizes; that capitalists conspire; that workingmen combine, and that stagnation spreads wider and wider. As long as the present storm continues to gather in the financial sky there is but little hope for the real prosperity of labor.

I appreciate the pain felt by earnest workers on the other side of this floor when they see the Executive refuse to recognize the coined silver dollar. His action would be a strange spectacle if it were not a serious grievance. It is a nullification of the Constitution. The Constitution says "Congress shall coin money and regulate the value thereof." Congress has coined silver money and established its value. Every citizen takes it without question. A piece of silver is worth 79 cents; the mint places the Government stamp on it, and it becomes a dollar. It passes for a dollar everywhere. It is a dollar. It is the coined money of the realm. If you had a million dollars in gold you could not buy a million dollars in silver at 99½ cents on the dollar. You could not buy them for less than they are worth—100 cents on the dollar. The law means something, and before its sovereign majesty we all bow down. No man in the country ever refused one of these dollars.

With the price of wheat, cotton, and other products so low as to discourage the producer, with labor in a turmoil and Congress embarrassed it is within the power of the Executive alone to grant a financial relief. One stroke of his pen can better the condition of the whole country by ordering the mints to coin $4,000,000 of silver per month as the law permits. As the people desire it for their convenience in using this silver, Congress can quickly furnish them one, two, and five dollar silver certificates, and this vast volume of money would then start into circulation. If the President would do this he would perform an act that would receive the applause of all parties.

Mr. Henry Watterson, who, as I take it, is the most brilliant of all editors, recently in his paper, The Louisville Courier-Journal, speaks upon the present condition of affairs in the following way:

> To-day, putting aside all consideration of the Republican party, the danger is that the popular verdict concerning the Democratic party, and it is the Democratic party that is on trial, will be, "Weighed in the balance and found wanting." Ordinarily the party might hope to escape popular censure by forbearance, but the people are in no mood now for the exercise of forbearance. The Democratic leaders two years ago were rich in promises. They attributed all popular distress to the misgovernment of the Republican party; but two years have passed and the distress is as widespread as then. Every plan of relief has perished in the committee-rooms of Congress or fallen still-born in the House. The political situation is serious. The party must do something to regain public confidence.

If the President in the exercise of his discretion fails to give us the needed relief, Mr. Watterson says the country will look to Congress for help. With 41 majority you can pass any measure you desire to pass, but the House has refused to take any forward step to relieve the great

financial trouble; the interstate-commerce bill to regulate railroad traffic slumbers on the Calendar; the agricultural bill to make agriculture a Cabinet office is bitterly fought; the great labor complication has been set aside by a measure that is only a pretense and is already a dead letter; the promised rehabilitation of the Navy has got no further than the report; the much-criticised surplus in the Treasury has had millions added to it; the justly-condemned practice of hiring convict labor on Government works has greatly increased. If any plan for relief has been proposed I am not able now to recall it.

The restoring of our merchant vessels so that we can carry our mails to foreign ports and open up the trade of the world is now before us in the shape of a measure to pay $800,000 for ocean mail transportation. The question is whether it will not also be carried over until next winter, or indeed killed outright. Not one great measure of relief has passed the House. Mr. Watterson said "every plan of relief has perished in the committee-rooms or fallen stillborn in the House." The campaign of this fall will not be a repetition of 1884. Then it was all politics; but this fall there will be less politics and more business. There is less politics to-day in this country than there has been for forty years.

ONE OPPORTUNITY REMAINING.

If this ocean-mail bill passes it can not then be said that every measure of relief has failed. Your majority of 41 can pass it. These ocean ships will be the opening gates to a trade with the South American states, that will take millions of our surplus productions and thus start a revival of trade. It is claimed that $200,000,000 of our goods could be sold there the first year. The very thought of it would make the plow scour better and the mill-wheel run swifter. If you start this trade it will be an achievement so vital to the business interests of the country that this Congress will be made illustrious.

THE OCEAN MAIL.

I now turn to the ocean-mail bill, which is the only measure left by which we can bring help to the people in the present crisis. Our mails to foreign countries are carried almost entirely by foreign vessels. This bill proposes the establishment of a line of vessels between our country and Mexico, Central and South America, West Indies, Australia, China, and Japan. Its purpose is to restore, as far as may be possible, our old time supremacy of the seas, and to furnish to these countries our products. They are now chiefly supplied by England, Germany, and France. It is wise and prudent to restore our flag to the seas. On account of our overproduction it is business sagacity to take possession of the trade of these States.

The countries lying south of us, Mexico, Central and South America, are our neighbors, and by the laws of relation their trade belongs to us. If our commercial vessels are restored and the empire of the South added to our trade, we have conquered a new world. We will be as England, who looked upon India and saw an opportunity. She took her surplus products there, and while saving herself from overproduction was a blessing to India. So we may relieve the surplus of the farm and factory by developing a trade with these States, and while helping ourselves to prosperity elevate that people by furnishing them the best products of civilization.

THE EFFECT ON THE FARMER.

We will first consider the bill's effect on the farmer, as he is the basis of all industries. We have about the number of farmers that the experience of the world says is required by such a nation, but hard times causing people to buy less has given us an overproduction from the farmer. The farmer is one of the manufacturers in this country that is overproducing. Our agriculturists are raising a surplus. Millions of dollars' worth of their products can not be used by our people, and this overproduction, as a dead weight, has to be shipped to some foreign market for sale with the unavoidable result of lowering the price. If our home markets consumed all of these products their price would be better.

Whenever the demand for an article is fully equal to the supply prices are good. There is a tonic about an equal supply that helps prices. An oversupply is the reverse of a tonic on prices. After the discovery of gold in Australia and California its price rapidly declined. It was thought there was an oversupply. No matter how highly prized, how necessary to comfort or health, when there is more of an article than can be used its price declines. Political economists say the period when the supply is just equal to the demand is the time of best profits and healthiest prosperity.

To pass from the philosophy of prices to their practical operation we find that when the farmer ships his products to a distant market he has to pay the freight, and coming into competition with others from other countries who ship to that point he has to stand the difference in freight charges; no matter if their distance is 500 miles and his 5,000 he must put his article in the market at the price of his competitor. If a farmer in Indiana has wheat to sell the shipper who buys it for Chicago pays him Chicago prices less the cost of carrying it to Chicago. The farmer in fact hauls his wheat to Chicago, and if the shipper means to sell the wheat at Liverpool he pays what the article is worth in Liverpool less the cost of carrying it there. The farmer thus conducts a free delivery. He could afford this if he could control the prices he receives, but this he does not do. No farmer ever controlled the prices he received for his crops.

The less shipping he does the better, especially if that shipping is to a foreign market where he comes in competition with people who can produce the article cheaper than he can. For illustration, in India they produce wheat for 9 cents a bushel. Their land is not worth half so much per acre as ours, and the ryot, the farm-hand, who raises it, works for 8 cents a day. The distance from these wheat-fields to Liverpool is very great, but England is equalizing that distance by covering India with railroads and hauling the wheat on the water in bounty-paid ships.

Twenty-eight million of our sixty million people are on the farm.

There are five million farmers in America; one-half our population is engaged in agricultural pursuits. In view of the fact that they never dictate the prices they receive, and must pay the freight, however distant the market their products are sold in, they have the right to ask the shortest possible haul, and that in no event shall they cross the ocean and then be placed in competition with the ryot of India. There is no avenue open to us to shut off these long hauls except through a return of prosperity. In such event the increased consumption by the people would relieve our surplus.

When our incomes decrease we all reduce living expenses, and when the income increases we grow liberal and our consumption increases. A family that uses 4 barrels of flour in one year in hard times will use 5 barrels in good times. Four barrels of flour in hard times is more extravagant than 5 barrels in good times. With the wonderful growth of our population in the last six years I think if we had prosperous times we would consume every bushel of wheat grown on our shores. The same logic will apply to all our farm products.

The price of an article is determined in the market where its surplus is sold. Our surplus is sold in Liverpool, and thus it comes about that Liverpool controls the prices of the labor of one-half the people of America. Liverpool is the master of the American farmer. Every bushel of your wheat, corn, oats, rye, or barley, is worth at your railroad elevator what it is worth at Liverpool, less the freight. Just as long as our farmer is an overproducer just that long will he be the hired man of Liverpool. I would like to see him set free. I am willing to vote to have this Government pay something for his ransom. It is not fair to him to compete with the serf of Russia, who has a short haul, and more unfair yet to make him compete with the ryot of India, who has subsidized a hundred million of England's money to put his long hauls at a low rate.

There are two methods of getting rid of the farmer's overproduction. One is to do as the factories, when business is not at a profit, stop the manufacture; but the farmer can not stop his factory; he can not leave his fields idle. Like the wageworker, who must earn his wages, even if they are inadequate, in order that he may live, so the farmer must raise his crops. He lives by them. Plainly, the farm production can not be diminished.

The other method is to increase home consumption. This can be done by inaugurating a policy that will give idle men work. Our Commissioner of Labor reports one million idle men in our country, and each man represents a family of five persons. That means five million people out of employment. This population swarms in the cities, overflows in the towns; it is an enormous army, a frightful legion of idleness and want. If promoted to their various trades, such an increase of consumption will come that surplus will bother us no more. At work each of these men will buy one dollar's worth of this surplus a day; that is $1,000,000 a day, and that will consume all the surplus.

Every member on this floor knows, every economist in the United States understands, that if we can give remunerative employment to this million men, we will consume every bushel of wheat we raise, and that we will not have a dollar's worth of farm products for foreign shipment. The solution of this problem is to give the idle men work, and within twelve months consumption will be equal to production.

THE PROBLEM STATED.

We can consume the farmers' surplus by calling the idle men to work; but suppose there is no work to call them to? What use to put them in the factories? These are already crowded with unsold goods. Grant, for the argument's sake, that the surplus has been consumed in these years of closed shops. With these men at work there would be a show of revival of business; but in six months we would again have a surplus. The fact is, we have reached the condition of the old nations. Our producing capacity is greater than our consuming capacity. When a country's capacity to produce is greater than its capacity to consume, the overproduction must be carried off to other countries, or its production ceases, and the land is filled with idle men. Our provision for disposing of surplus is so inadequate that America is filled with idle men. Is it better to continue this enforced idleness, or to construct a channel to convey our goods to a people who want them?

THE SOLUTION IN SHIPS.

There ought to be no divided opinion as to the line of policy to be pursued. With our exports fallen a hundred million dollars in the last two years, with a thousand factories closed and business stagnated, there is but one action to be taken. Senator MAXEY, of Texas, speaking on this subject, said:

The importance of securing the trade of Mexico and Central and South America can not be overestimated. We must have an outlet for our surplus manufact-

ures, or the shutting down of mills, the placing of workmen on half-time, the reduction of labor, and strikes will unavoidably follow. We can not hope for an extensive market for our manufactured goods in Europe, and the most inviting field is the country south of us.

Following the speech of that distinguished gentleman, the American Shipping League was organized at New Orleans; this league is composed of the representative men of all parties in the Gulf States, their purpose being to secure a commercial outlet for our surplus to this south country. They have grown tired of cotton and cane; with factories springing up all over the South, their cotton mills are rivaling Manchester, and Birmingham, Ala., is becoming a rival of Birmingham, England. Under the influence of diversified industry that land is growing a new South. They ask for ships to carry their products. They, like we of the North, are now fighting the battles of industry and peace, and the market for our wares is all that is needed to bring a victory far greater than war.

It is to the wisdom of British statesmen in providing ships to carry their manufactured goods to foreign countries, and bringing back and expending in Great Britain the moneys received from this trade, and in manufacturing raw material, thereby increasing its value threefold, that the English people are indebted for their prosperity, their low rate of interest, and the employment of their people.

A great nation with her surplus products must take to the seas. Our people are slow to realize that the greatest of all industries is shipping.

OUR SHIP INTERESTS.

For years prior to 1850 we had the supremacy of the seas; our wooden ships were the best and fleetest on the ocean; they far surpassed England. That year the English builders decided to stop a hopeless competition with wooden ships and try another kind of vessel; they decided to make ships of iron and steel, and the experiment proved that iron and steel vessels could be made larger than wooden, stronger and fleeter, and more serviceable in every particular. Lindsay, a British member of Parliament, speaking at the launch of a vessel named after himself, in 1852, uttered these words:

I believe that in five or six years there will be very few ships built of wood, and what a start iron will give us over a nation which has most interfered with us as competitors. America has labored hard to maintain the supremacy of the seas, but we now have a material for building ships which America does not possess and for which she will have to come to us.

These words were prophetic; within six years we had lost our supremacy with wooden vessels, and England's iron ships were masters of the sea. England had been developing her iron industries for centuries. Within ten years we had been ushered into a new era; we had moved from wooden wagons, stages, and ships into the iron age; commerce had become so great that the old appliances were not large enough nor rapid enough to transact the world's business. The iron horse now became the carrier for each continent, and we latticed the land with railroads more rapidly than any state ever built her dirt highways. But the nation with the best practical use of iron could take the ocean as its heritage; England took the ocean. The war turned our statesmen's attention to the value of our resources. We have a hundred times larger iron and coal deposits than England, and it was decided that these industries should be developed. The nation placed her strong arm around the coal banks and iron fields, and mills sprang into being and flames burst from the tops of furnaces.

In 1852 we could not build an iron ship because its most important parts had to be imported from abroad. In 1863 it cost twice as much to build a vessel here as in England; now, after twenty-three years, it only costs 10 per cent. more to build here than there. Lilley, the English ship-master, says we can never cover that 10 per cent., because our wage-worker on ships is paid 30 per cent. more here than in his country. But having developed this interest from 200 per cent. to within 10 per cent. of the English cost in twenty-three years, I think if Congress will leave the laws as they now are we can cover that fraction by 1890. In that year we will turn out iron and steel ships equal to any England launches on the Clyde or Tyne, at the same cost, and our wage-workers not be reduced in their pay.

REVIVING THE INDUSTRY.

When France sought to restore her shattered commercial marine, she honestly admitted her decadence on the seas, and asked her capitalists to build vessels to be used for the purpose of her commerce. She entered into a contract with every ship company, granting 8 per cent. interest per year on the cost of the ship for ten years, and when the profits above the expenses for running the vessel and its insurance did not amount to 8 per cent. the Government supplied the deficiency.

I would not recommend such a measure. We do not need such an extreme action. I am opposed to guaranteeing profits. But I am in favor of this Government, when it has any ocean carrying trade, giving it to American vessels and not giving it to foreign vessels as we are now doing; and I am in favor of saying to our vessels, "We want Government freight carried to foreign ports, and whenever you will build a vessel we will pay you what other governments pay their vessels for like service." If we will give to our vessels one-half for carrying Government freight to foreign ports what other governments pay their vessels, fifty thousand men would be working on fresh keels along our coast within one year.

RESTORE COMMERCE.

This proposed act revives ship-building, restores our ships to the ocean, and establishes regular trips between our own and foreign ports, contracting that they shall be maintained for a given term of years. This opens up a channel through which commerce can flow back and forth with confidence, and it will increase every year. We will ship to them what they want, and they will ship to us what we want. Thus trade will become established. We would dispose of our surplus and restore our commerce.

THE OCEAN-MAIL BILL.

I will now read the proposed ocean-mail bill. It is as follows:

For the transportation of foreign mails by American built and registered steamships, to secure the greater frequency and regularity in dispatch and a greater speed in the carriage of such mails to Brazil, the Republics of Mexico, Central and South America, the Sandwich, West India, and Windward Islands, New Caledonia, New Zealand, and the Australian colonies, China, and Japan, $800,000; and the Postmaster-General is authorized to make, after due advertisement for proposals, such contract or contracts with such American steamships, for a term of not less than five years, and at a rate of compensation not exceeding for each outward trip $1 per nautical mile distance.

That is to say, 50 cents per mile for each mile actually traveled on the round trip—

In the most direct and feasible sailing course between the terminal points as shall be found expedient and desirable to secure the ends above set forth.

It will be observed this bill proposes to pay for ocean-mail service not exceeding $1 per nautical mile traveled for each outward trip. That is, 50 cents per mile for each round trip.

The gentleman from Michigan [Mr. BURROWS] has offered the following amendment:

Provided, That not exceeding $400,000 of this amount herein appropriated shall be expended in payment of existing American steamship lines for the transportation of foreign mails according to the schedules heretofore enforced, and that so much of the balance as may be required shall be expended in increasing the frequency of the postal service of such steamship lines and in the establishment of postal service by American built and registered steamships between the United States and such ports of the foreign countries herein named not now connected with the United States by American steamship lines, as the Postmaster-General may select, including Buenos Ayres and Montevideo.

This amendment provides that $400,000 shall be paid to vessels we now have for carrying the mail to ports we now visit, but requiring that the service be increased in frequency, and that the remaining $400,000 shall be paid to the vessels we now have and to new vessels for extending trips to ports we do not now visit. The countries with which this communication is to be made are named in the bill. Its purpose is to have vessels make systematic and regular and frequent trips to these ports, and that it shall be done on a time card, just as our railway trains are run.

The carrying of mails is a governmental duty, and in obedience thereto the Government last year paid twenty-three and one-half million dollars for carrying our inland mail. Sixteen and a half million of this was paid to the railroads; five and one-half millions to the star-route service; for steamboats and the service along the coast, or, as it is termed, the coastwise service, one half a million; and for carrying the mails from the depots to the post-offices $879,000.

We do not advertise and let the contract for carrying our mail by railroad to the lowest bidder; but the Postmaster-General is authorized by law to arrange for this service, and the expenditure of this enormous sum of $16,500,000 is left entirely to his discretion.

The mail that is carried by stage or horseback, called the star-route mail, is usually let to the lowest bidder. The steamboat and coastwise mails are never put to bidders, the Postmaster-General contracting for the service on his own judgment.

The law controlling our mail to foreign ports is unlike that which provides for inland mails. No more than the amount of postage that is placed upon the letters that are in a mail sack can be paid for carrying that mail to a foreign port. In other words, the law says that "the pay to vessels for carrying our foreign mails shall be limited to the postage."

Neither on the coastwise, the steamboat, or the star-route, or the railroad service is the compensation limited to the postage. There has never been a time in the history of the Government when the star-route, steamboat, or coastwise mail could be carried for the postage. The carrying of the mails is a duty enjoined by our highest law, and is provided for as one of the necessities of civilization. No man has ever dared to ask the question if it paid for itself. Now, sir, this measure proposes to put our foreign mail service on the same basis; it seeks to pay for carrying mails to foreign countries, whatever that service may be worth. This bill authorizes the Postmaster-General to contract with the lowest responsible bidder, and puts but one restriction on the contract, and that is that the vessel shall be an American vessel.

I am for this restriction. I am for American interests. I am for every man in America as against every man in foreign lands. I am for the American farmer, the American laborer, the American trader, as against those of like occupations in any other country; and now, as the question of vessels has come into national importance, since the civil-

ized governments have entered into competition for the commerce of the inferior nations, I am for every letter we send to foreign lands or receive from foreign lands, every bushel of wheat or manufactured article we send or goods we receive in return, being carried on a vessel built by Americans, owned by Americans, manned by Americans, and whose keel plows the ocean under the folds of the American flag.

On the coast of Florida are two cities, Tampa and Key West. They are 249 miles apart. Last year we paid for the coastwise service between them $23,600. This same mail is taken from Key West across to Cuba, a distance of 100 miles. But Cuba is a foreign country, and this is foreign mail service, and for it we pay $237. We pay $237 from Key West to Cuba, and $23,600 from Tampa to Key West. This is the work of a bad law, which only allows postage to be given as pay for carrying mail to foreign countries. While $23,600 may be generous pay to one, I think it will not be claimed that $237 is just compensation to the other.

OCEAN MAIL.

Last year we paid $326,000 for carrying our foreign mails. How much of it do you think we paid to foreign vessels? Two hundred and eighty thousand dollars. And how much of it to American vessels? Forty-six thousand dollars.

Gentlemen on this floor talk themselves hoarse lamenting our decayed shipping; how can it but decay when its chief impetus to regular and quick trips, Government mail, has a pay grossly inadequate to the work done; for the service is exacting, and no wonder it is wrecked and ruined when that pittance is divided with foreign competitors at the rate of $280,000 to the foreigner to $46,000 to our home vessels. But, some one urges, the foreign vessels carry the mail much cheaper than our native vessels. Yes; and the foreign vessels, which are receiving millions of dollars bounty from their governments, can afford to carry our mails cheaply; they would gladly carry them for nothing if thereby they could drive us from the commerce of the seas.

NOT A NEW QUESTION.

This question has been discussed in our country before; it has engaged the ablest men at the other end of the Capitol; but there have always been obstructionists who, like the distinguished gentleman from Missouri, say there is "no patriotism in a ship," and have refused to give just pay to our vessels because the work could be done cheaper by some one else. We now see its results. We are without ships, without foreign trade except to Europe, and we are groaning under an overproduction, while England owns vast shipping facilities, has established a trade at every port in the world, and under our very eyes has grasped the trade of our next-door neighbors, the South American states. She sells them $200,000,000 worth of goods annually—a trade so large it would bring relief to our distress. Yet we see men here shut their eyes to our prostrate commerce, stop their ears to the cries of an oppressed country, and object to opening commerce by way of our vessels because they can get mails carried cheaper by British ships.

Let me quote the words of some of the fathers on this subject. Mr. Bayard, father of the present Secretary of State, then in the United States Senate, said:

The mail service in this and all countries on land is a governmental duty, and with all great maritime nations which have the power to control that service on the ocean, it is as much a governmental duty where their extensive commerce is concerned as is on land the proper transportation of correspondence. The mail service with foreign countries, on any principle that I can appreciate, is as much a governmental duty, and demands as much expenditure, as transportation of correspondence in the interior of the country. Will you adopt a policy which will place the entire transportation of our mails under British control; which will put into British hands the transportation of passengers; which will lay a tax on American citizens for the advancement of British commerce? Such may be the judgment of the honorable Senator, but it is not mine, and I trust will not be that of the American Senate.

The first Bayard is in the grave, but his son now sees American citizens taxed for the advancement of British commerce; he sees America without a single American ship crossing the Atlantic carrying the American mail; he sees us paying $326,000 a year for ocean mail, and $280,000 of that paid to British ships. These are the things which make a thoroughbred American's blood boil.

James K. Polk, the President of the United States, once said:

It is strange, sir, that men who are presumed to embody the wisdom of the land should have to be reminded that they are pandering to British power, forgetting American interests, and losing sight of that greatness and grandeur which attaches to this American Government.

I stand upon the floor of the American Congress and I find men who are willing to measure our greatness by the circumference of a dollar—a dollar, sir!—measure American prosperity and American greatness by a round dollar, and thus pander to British interests, bow the pliant knee, and say to the power that assailed us at Lexington, that flashed the first guns from Bunker Hill, that fought us upon the sea and land in 1812, and that has been jealous of our prosperity and our greatness ever since—say to her, "Good mother, won't you please carry our mails?" Why, sir, I scorn, I despise that anti-American feeling and sentiment. The men who stand battling upon these principles are behind the age. They are behind the progress of their country; they know nothing of its power or its influence, and are contributing to a combination of foreign policy designed to overslaugh us.

THE REVIVAL OF TRADE.

Ocean mail service is the basis of foreign trade, because it is only as you have frequent and regular communication that trade can be built up. We all agree that frequent and regular ship connection between the South American states and the United States will build up a trade with those countries. The people of this great country lying at our very doors are not manufacturing people; they have neither the genius nor the invention nor the industry that creates manufacturing interests. We want their raw products, nearly all of which are admitted here free of duty. That is all they have to sell.

This bill is proposing to give our people relief through the same channel that has been sought by every people who have found themselves embarrassed by overproduction. Civilization and trade follow mails; where there are no mails there is no civilization or trade. Our great West would have remained a wilderness, for no company of men could control the capital necessary to build a railroad across the continent; but the Government, in its wisdom, provided the necessary assistance, and the nation's highway was built. Doubtless it cost more than was necessary. Within twenty years the West has become an empire of people; its riches are enormous; and the Government's revenues therefrom have paid for the expense of that road many times over. Our fathers did well when they made the mail service a governmental duty. The gentleman from New York [Mr. HEWITT] uttered a great truth in this discussion when he said the Postal Union was one of the grandest triumphs of civilization.

No great line of steamers has ever been successfully established between two or more foreign ports without government aid. The reason is that it costs several hundred thousand dollars to build an ocean steamer; the expenses of the crew and running the vessel average a hundred and fifty dollars a day. A trip of 5,000 miles to a distant port, as to Rio, in Brazil, is made at great cost, so heavy that where trade is not already established that furnishes a cargo each way the company has in every instance bankrupted.

HOW IT WORKS.

The great ship companies of Eurpoe, as soon as they find one of our new ships looking for business in a port they have had the monopoly of, cut down the rates below what it costs to carry the goods. Backed by the bounties of their governments, they suffer no material loss, but our ship "freezes out" and drops back to the coastwise trade of Boston and New York. If we shall pay to our ships a fair compensation for the mail service upon a five-year contract to the points named in this bill, the foreign lines would see that our ships had become permanent between these ports; knowing that our companies had given immense bond for the faithful performance of their contract, and that it must be carried out, they would not enter into a five-year crusade on rates. The bids for freight would resolve themselves into the ordinary competition between common carriers, the result being we would be relieved from the extortionate rates now charged by the foreign ships, and we would open a direct avenue to these desirable ports.

When the House bill was first considered, and you refused to give more than $60,000 for the mail service described in the bill before us, the following telegram was received in New York by the agent of the English mail line within three days:

LONDON, *April* 3, 1896.

The Imperial Government of Great Britain has decided to subsidize a new line of steamers between British Columbia and Hong-Kong and Australia by paying a hundred thousand dollars annually for ten years. The steamers must be first class, capable of carrying guns and troops, and if required the Government shall have the right to use the steamers in event of war.

On our western coast, where the British possessions north of us are insignificant in a commercial sense and ours are of the first value, reaching from our northern line down to Mexico, backed by a farming area of surpassing fertility and mountains rich in oil and coal, an extent of territory larger than any nation in Europe, unless it be Russia, and to which the commerce of China, Japan, and Australia is priceless—here we find England paying a hundred thousand dollars to open up a new mail line of steamers, and little Canada has just now supplemented it by adding $60,000 to the line. The purpose is to compete with and break down our struggling line between San Francisco and these points. Yet this House refused to vote the sum named in the first bill before us to our line for this same service. And do you remember how much that sum was? I will tell you. Twenty-three thousand dollars.

Last year we paid for ocean freightage, $150,000,000. That is a stupendous amount of money for one people to pay for carrying their goods over the water. These goods went and came from almost every port in the world. We were driven out of all the most important ports by foreign competition. We paid $150,000,000 for freight. How much did we pay to American ships? Fourteen million dollars. And how much to foreign ships? One hundred and thirty-six million dollars. Not 10 per cent. to American ships. Millions for tribute, but not one dollar for home support.

Go home, gentlemen, you Republicans and Democrats who will vote against this measure, and in your campaigns this fall tell the people these facts, and tell them you voted to keep all these things as they are; tell them you voted to pay foreign vessels $280,000 for carrying our mails, and only $46,000 to our home vessels; tell them you voted for them to pay $150,000,000 for ocean freightage—$136,000,000 to go to foreign vessels and $14,000,000 to American vessels; tell them that the civilized nations pay their vessels for ocean mail $11,000,000, and that you voted for our mails $326,000; tell them foreign vessels bid to carry our mails cheaper than our vessels, and you voted they should have the

contract; tell them those vessels could afford to do this, with the vast home guarantees they receive, and that they did it in order to break down our efforts to secure foreign trade, but that you voted for these because they worked cheap, and that if there is anybody you dote on it is somebody that works cheap.

Tell them this bill seeks to inaugurate a policy that will increase the number of our merchant vessels and grow us a trade with South America, China, and Japan that will largely result in calling our idle men to work, consume our surplus, and insure our prosperity. But this was to be done by cultivating foreign trade, and you voted against it. Tell them you voted against it knowing that it gave up to foreign countries the rule of the seas and the control of commerce, while our toilers were idle and our farm and manufactured products were a drug in the market at half prices. Tell them that this is your policy, and if they want these things continued they should send you back to Congress.

This measure does not provide for sending the mails to Europe; that ought not to be undertaken at this time. It only proposes to go to the seaport cities of our south continent and to the countries lying west of us, to the nations that are not in competition with us in the great race of national development. It proposes to give $800,000 for carrying the mail to these countries. Should this be considered a large sum to carry the mails to these distant places? In view of the service to be rendered the price is remarkably low. We pay $879,000 for carrying our mails from the post-offices to the depots, but to cross the ocean we hesitate to pay $800,000.

AN EVIDENT INJUSTICE.

I will cite a few illustrations of the injustice done vessels going to foreign countries as compared with our coastwise service. The distance from San Francisco to Japan is 6,000 miles. In the round trip the vessel travels 12,000 miles. And how much do you suppose we pay for this service? Twenty-three thousand dollars. A little steamboat line runs from Norfolk to Baltimore, a distance of 200 miles, and what do you suppose is its mail pay? Even $18,000. The vessel at San Francisco plunges into the ocean and has no station for 6,000 miles, surrounded by great dangers, carrying costly insurance, and making a trip equal to half around the world. The vessel from Norfolk to Baltimore has an insignificant pouch of mail, has a station every few miles to take on and let off passengers and freight, and has a 200-mile trip.

Our New York and Cuban line travels a distance of 1,174 miles, and we paid for that service last year $2,600. At the same time a steamer running from Norforlk to Cape Charles—38 miles—received $10,970.

We paid the New Orleans and Central American line, running from New Orleans to Nicaragua—1,065 miles distance—the magnificent sum of $24.50! At the same time we paid this line $24.50 we paid another line running from New Orleans to Port Eads $22,719.

Now look on the other side of our continent. From San Francisco to Hong-Kong—6,080 miles distant—we paid $3,506 for last year's service, and at the same time another boat starts from San Francisco, and goes up the coast to Eureka—216 miles distant—and we paid that line $6,500. The vessel that crossed the ocean and traveled 12,000 miles received $195 for the trip. The coastwise vessel that traveled 432 miles received $125 for its trip. The Hong-Kong service cost the Government about 1½ cents per mile.

FAIR PAY.

No man contends that the pay of the line from Norfolk to Baltimore is too much, or from Tampa to Key West, or the line to Sitka or to Port Eads; but if they received a just compensation, what shall we call the compensation paid to the line from New York to Brazil, or to Venezuela, or Rio, or to Hong-Kong?

The Postmaster-General pays the coastwise vessels whatever he thinks is right, and no citizen has ever laid a complaint against this exercise of official discretion. I have yet to hear the first gentleman assert that the pay of the line to Rio in Brazil was fair pay. But more than the postage can not be given to ocean steamers running to foreign ports, as our law now stands. The Postmaster-General has no discretion in this case; we therefore ask to amend the law and pay a reasonable compensation. We ask to pay it to our vessels that are now struggling against odds that are crushing them.

Some one has said this is a subsidy. The man who raises the cry of subsidy here has raised the cry of a demagogue. I think that cry was first raised by an imported editor of a New York paper. I am opposed to imported and convict labor.

Senator VOORHEES, from my own State, who is one of the leaders of the Democratic party, was too ill to speak on this subject when it was in the Senate, but published an interview in the Cincinnati Enquirer, in which, speaking of this charge of subsidy, he denounced it roundly, asserting that he would not support any subsidy, but that this measure had no such element. In England the word subsidy has no such meaning as it bears in America; there it means nothing more than government pay to individuals or companies who perform the government service. With us, however, subsidy is a vicious word; it carries with it a combination to rob the Treasury and corrupt and pillage the state under the guise of a Government contract. So I was greatly pleased to see the plucky Senator rebuke the prattlers in his own State for trying to incite the people by an insincere use of this word. It is true that this measure has no element of subsidy in it.

WHAT IS A SUBSIDY?

It is a gift or pay vastly greater than is just. There is no gift in this case. We made gifts of land to the Pacific Railroad. Is this an excessive payment? Not a man opposed to the measure has so said. Admitting the present compensation to be inadequate, it is an effort to make it just. How are we to arrive at a fair compensation? Not by weighing the mail carried. The Government does not weigh the mail on star routes, steamboat, or coastwise service. If she did the mails could never be carried. A trip that costs a hundred dollars frequently does not carry a hundred letters. The Government pays on the distance traveled. It is only on a few of the great lines of railroad that we pay for mails by the amount carried.

How shall we arrive at the proper amount to be paid each line? The bill says advertise for bids. The contract is to be let to the lowest bidder, but shall in no case exceed 50 cents per mile, and the Postmaster-General has the right to reject any and all bids. How shall we decide upon a basis for these contracts? Has no one a method to propose for arriving at a just compensation?

The answer is easy: do as we do in other cases where we want work performed and do not know what it is worth—go where the labor is performed and learn what is customarily paid for it.

Usual and customary prices for labor are the law for wages the world over. Anywhere that a man labors for another and no price is agreed upon, the laborer may sue and recover the price that is usual and customary. The usual and customary price is by all people deemed to be just and fair. It is never regarded as extravagant. It is based on the understanding that experiments have been had, and results obtained, and the business can afford this price. When we go into the markets of the world to find the usual prices paid for carrying ocean mail, we find the indignant words of Senator VOORHEES are fully sustained. Every one of the great nations is this day paying much more for this service than we provide for in this bill. The difference between what these nations pay and what we propose to pay is so great, that, if we compare them, we must see theirs is extravagant and ours is fair pay.

FOREIGN PAY.

Let us examine the ocean-mail pay of a few of the foreign governments. The shipping world is familiar with the German line to Australia. This line was running an ocean tramp's life, sometimes getting a load that paid, but usually not so fortunate. The German people arose to the requirements of the Australian trade and contracted to give their line for increased and regular trips to Australia $1,000,000 per year's service. If any member should rise in his place and seriously offer to pay our mail line to Australia the half of $1,000,000, such a howl would break loose here that the visitors in the gallery would think that a section of a Chicago mob had got possession of the floor. Germany, which is financially the best managed of any of the great nations, the most prudent and conservative in investments, puts a million a year into the Australian line and finds that it pays. How much do we pay for our Australian service? Twenty thousand dollars; and we complain that it does not pay. Well, it does not. "There is a withholding that tendeth to poverty."

Suppose we wanted to establish a line to Havre, France (which we do not, as we only seek the ports that are near us), but suppose we did—the round trip is 6,000 miles, and if the limit of this bill was paid (50 cents a mile)—the line would receive $3,000 per trip. Now, sir, France wanted to increase her vessels to this country, and under contract five new steamers were built and received $14,500 per trip, nearly $3 per mile for their service. France is now giving $14,500 for a round trip, while under this bill we could give but $3,000. Because we are ashamed to confess that the pay in our bill is parsimonious and niggardly, we call it fair pay.

Pay every cent we propose, and it is the least pay of any nation for ocean mail service. We boast that we pay the best wages in the world to the toiler; this is true, but we have come to an overproduction, and unless we pay the toilers on the sea a reasonable wage the toilers on the land will soon be reduced to the European laborer's diet of black bread and potatoes for his daily table, and meat once a week.

Take the case of England's South American line. When England saw France had established a line there and was securing a trade likely to become enormous, she at once contracted with a new line for that country, and yearly pays it $495,000. We pay our line that is trying to run to South America $15,000. England pays nearly as much for one trip as we pay for a year's service. England pays half as much to her mail line to Brazil as we ask in this bill for all the ports named. England keeps up this pay year after year. If the business did not warrant the outlay her sagacious statesmen would promptly curtail it. She pays $495,000 for this service, and we pay $15,000. I believe it is $15,136.16 we pay for carrying the mails from Louisville, Ky., to Evansville, Ind. England pays $1.03 per mile to her South American line. Our bill forbids paying more than 50 cents per mile, and competition may make it less.

France pays her South American mail line, which also goes to the West Indies, $728,000. We pay for this same service $15,000, for our South American line also goes to the West Indies. The French pay on this route is $3.80 per mile.

Take Germany's North German Lloyd line, called the Australian line, going by way of China and Japan. For this $1,000,000 is paid. We are now paying $23,000 for the same service. The German pay on this route is $1.48 per mile.

Take the English Peninsula and Oriental line, to China and Japan, and England pays to it the enormous amount of $2,250,000. The English pay on this line is $3.38 per mile.

We find that the great nations, seeking to extend their commerce, have obeyed the law of civilization—where there is no mail there is no trade—and have extended mail communication to every point where trade was valuable. We find they have paid large sums of money to secure regular and speedy mail connections with these ports. We find that the usual and customary price paid for this service is from $1.03 to $3.38 per mile; this for each mile traveled by the vessel. We find that in no case does a mail vessel journeying to the points named in our bill receive less than $1.03 per mile. We find, therefore, that a bill proposing to give not to exceed 50 cents per mile for ocean mail service with the ports of South America, Central America, China, Japan, and Australia is very conservative and far below what is usual and customary in such service.

This measure will everywhere command the favor of enlightened patriotism. We are in competition with England, France, and Germany. They have an agricultural, manufacturing, and toiling class, as we have; they have a surplus production, as we have. They have established lines along which they carry their goods to non-producing countries, which we have not. It would be an act of wise statesmanship for us to establish such a line. It would be an act of legislative prudence to do this, when it can be done at one-half what it costs other governments.

I have cited these ocean mail lines because they run to the countries we propose to reach. But their lines run to other countries, and at the same rates; even colonies maintain lines at a cost going up into thousands of dollars. I print herewith a table furnished the House by the gentleman from Georgia [Mr. BLOUNT], which shows the ocean-mail pay of various countries during 1884:

[From General Statistics of the Postal Service, published by the International Bureau, Berne, 1886, page 15.]

Argentine Republic	$6,229 07
Austria	43,106 55
Belgium	134,793 32
Brazil	2,223,958 10
Denmark	32,469 54
France	5,152,388 98
Great Britain	3,006,766 67
British India	350,724 42
Japan	241,250 00
Netherlands	101,975 60
Portugal	23,964 61
Roumania	984 87
British Honduras (British colony)	23,320 67
Hong-Kong (British colony)	31,314 82
Danish Antilles (Danish colony)	2,895 00
Cochin China (French colony)	202,044 00
Guadalupe (French colony)	22,204 07
Martinique (French colony)	2,123 00
St. Pierre and Miquelon (French colony)	10,072 67
Senegal (French colony)	11,042 68
Netherlands East Indies (Netherlands colony)	29,635 15
Cape Verde Islands (Portuguese colony)	7,854 43
	11,661,118 22

United States pay is $326,000.

We stand midway between pagan India, whose pay is $350,000, and Cochin China, whose pay is $202,000; but business sagacity is with the Cochin and Indian, for they pay their own lines alone, while we pay $46,000 to our line and $280,000 to foreign lines.

DOES IT PAY?

Has the ocean-mail investments of these countries paid? Have they opened a commerce that has made a demand for their goods so great that these nations have been stirred with a new life, and at the end of each decade have found their prosperity so enhanced that all the people demanded the continuance of the system? I know their legislative bodies would not dare to continue these vast appropriations unless the results were apparent. I know if they continued to vote this money as a mere party policy, when its results were unprofitable, the people would soon vote to leave them at home; and I also know if the results were profitable the people would defend them by a majority large enough to keep them in their places.

I know party lines are strong, but you convince a man that a certain man stands for the country's best interests and he will quietly vote for that man, no matter if his party man should make large professions in the same direction. Whatever party lines may cause one to do in a general way, there is a deep sense of justice in the citizen to support the man who has proved himself by trial. It is this patriotic virtue that ultimately saves a country in its great struggles. When I see the men in England, Germany, and France who have labored and voted for this great shipping service, and have made it paramount to every other question, holding their places year after year, undisturbed through all the political changes of those countries, I know the agriculturist and manufacturer and toiler have found that service to be a blessing.

This mail service is wanted here because it is believed it will give us ships and trade. These are our greatest wants. Give us these and the commercial change will be so great it will force on this Government a proper action on financial questions. Give us these and we will obtain the like result with every nation that has tried this service. This has been the policy of all European nations, and has always had the same results. A nation wanted ships and wanted trade; they paid their money, after this fashion we are speaking of, and got ships and trade, and almost in the ratio in which they paid their money. England paid the most, so England got the largest returns.

England has pursued this policy for nearly half a century. In forty years she has paid $250,000,000 for her ocean mail service, and yet this enormous amount has proved the best investment she ever made. To-day she controls 55 per cent. of the foreign tonnage of the world. We ship across the ocean 25,000,000 tons of products annually. The average price for carrying this freight is $6 per ton. We, therefore, pay $150,000,000 a year for ocean freight tonnage. One hundred and thirty-six million dollars of that is paid to English ships; $14,000,000 only to American ships. We pay $136,000,000 a year to this masterly policy of English statesmanship. Do not consider the millions of profit she makes by selling her products in all the markets of the world (and this is what the service was established for); do not consider the maritime supremacy it gives her; do not consider the millions of tons she carries for China and other semi-civilized nations who have no ships; but only consider the $136,000,000 we pay her for freight, and the profits on that alone will pay seven times over the three millions she gives for her entire mail service this year.

AN ILLUSTRATION.

My Democratic friend from Delaware [Mr. LORE] says that two years ago he saw on the Delaware River four elegant ocean steamships, owned and run by American capital from Philadelphia to Liverpool. They were the Pennsylvania, Ohio, Indiana, and Illinois, competing as ocean carriers with European lines. He watched them with patriotic pride as they steamed out to ocean and back on the trips to England; he thought they had come to stay, and were the nucleus of our return to the foreign seas. But the United States Government turned its cold shoulder to the enterprise, and what became of those splendid vessels? They were driven from the regular ocean service. This Government renewed its mail contract with English ships, which now under the pay of two governments dropped rates below a living figure. This young line, denied a crust by its mother country, saw her feed with a free hand a foreigner, who had been already fed to fatness by its own mother. These ships are now ocean tramps, picking up work where they can find it, and are at times employed by speculators, who buy up a cargo of goods for an obscure port, and intend there to purchase a junk-load for return.

ANOTHER CASE.

We have a struggling line from our western shore to Australia, and a growing trade with that country. If we give the sea and inland postage to our Australian line it would pay them $41,000. This would be fair compensation, and about as much as I think they ought to have. The reason the mail pay to Australia amounts to this much is because that country is not a member of the Postal Union, and postage there is 12 cents a letter, which amounts on the average to $41,000 a year. But does the postal bill, as reported to this House, propose to give this line that is doing so much for our trade with that country this fair compensation? An examination of the bill does not show this line to be mentioned at all. It is left out without any provision whatever.

But an examination of our postal records discloses the fact that we have made a contract with the government of New Zealand to carry this mail. Now New Zealand lies southeast of Australia. I have cited the fact that New Zealand pays her Australian mail line $150,000 a year. Their vessels make the trip up by way of San Francisco, and our Government pays them for carrying our mail to Australia $20,000. The New Zealand line has to make the trip anyhow. It can carry our mails at comparatively little cost or trouble; it is supported by large home bounty; it is in competition with our American line, and, by reason of the situation of New Zealand, is an interloper. And yet we give it an additional bonus of $20,000. Is there any other government on earth that would do such a thing?

WINNING TRADE.

Forty-six years ago, in 1840, England, as an experiment, paid $450,000 to a line of vessels to carry her mails to Boston and New York, to the intent that she might have more frequent and rapid trips. Lord Palmerston said, "Where there is no mail there is no trade." The establishing of more frequent communications was so successful in creating trade that the next year the pay was increased 50 per cent. It was about this time that the crafty Disraeli said, "Trade follows the flag." Then England said, "We will put our flag into every port in the world." She has done so. To-day she has 55 per cent. of the foreign tonnage of the ocean, and 45 per cent. of the foreign trade of the world. The important question is, has it paid? It has wonderfully paid. It has been the salvation of England's industrial life. The ocean-mail policy of England has been the master commercial stroke of this century. She has doubled any other nation in her ocean-mail pay, and in the same ratio has controlled trade.

SOUTH AMERICAN COMMISSION.

Four years ago the United States sent a delegation of eminent citizens

BRITISH AMERICA.
UNITED STATES.
New York.
Philadelphia.
San Francisco
Charleston.
New Orleans
MEXICO.
CUBA.
WEST INDIES.
CENTRAL AMERICA.
VENEZUELA.
GUIANA.

SOUTH AMERICA.
BRAZIL.
Rio de Janeiro.
BOLIVIA.
PARAGUAY.
ARGENTINE REPUBLIC.
Valparaiso.
CHILI
URUGUAY.
Montevideo.
Buenos Ayres.
PATAGONIA.

to the countries of our south continent to learn from official sources the amount of their imports from foreign governments, and how much from each government, and the value of their exports and their ratio among the people they imported from. The commission was also to ascertain if there was any international cause why we should not export our products to them. The two volumes of the report of that commission lie on my desk. The time allowed me will not admit of an extended review, and I will in the main confine myself to the summary presented to the House by the gentleman from Michigan [Mr. BURROWS] in his able discussion of this question.

Our wisest men agree that we can not have permanently good times until we have a better outlet for our products. If we put our idle men into employment and our producing power should work ten hours a day we would be smothered with unsold goods inside of ninety days. Every revival of business for ten years has revealed this fact. But this report presents us a country whose demand for manufactured products is simply boundless. You ask where will we dispose of our products if we cultivate new fields, fire our furnaces, and set the looms in motion; and the answer comes, "To the people who live at our very door." We have the market at hand if we are only wise enough to control it.

MR. BURROWS'S STATEMENT OF THE SOUTH AMERICAN TRADE.

Within a stone's throw almost, right south of us, is the Republic of Mexico, with its twenty-seven States, with a government patterned after our own, with ten millions and a half of people. Her imports last year were more than $35,000,000.

Who controls the trade of Mexico, lying right upon our border? Why, sir, Spain took over twenty-six millions of it, Germany over eighteen millions and a half, France nearly sixteen millions, while the United States controlled less than ten millions; England took nine millions, and the Central American countries two and a half millions. So that of this entire trade with Mexico the United States controlled but a trifle over one-tenth, while nine-tenths of it was held by foreign countries.

Take Central America, with its five republics. Those five Central American republics have more trade with England by far—yes, double the trade—than they have with the United States, although they lie at our very doors, easily accessible from the ports of the Gulf States. Their principal imports are cotton goods. We could furnish every yard of cotton goods that the Central American countries need, but Great Britain in 1880 sold them 31,000,000 yards, while the United States sold them only 688,000 yards—a little over half a million, while England sold them over 31,000,000. The balance of trade with Mexico in 1884 was against us by over $3,000,000. The import trade of Central America has increased rapidly in the last fifteen years. In 1870 it was only $730,000; in 1884, it was $6,500,000.

In 1883, the United States sold the Central American countries manufactured goods amounting to less than $2,000,000, while Great Britain sold them over three and a half million dollars. Of cotton goods the United States sold them $124,000 worth, while Great Britain sold them $2,500,000 worth. The United States sold them only $4,000 worth of candles, Great Britain $13,000 worth. We sold them $16,000 worth of china and glassware, Great Britain $28,000 worth. Of wearing apparel the United States sold them but $24,000 worth, England $148,000 worth. Of iron and steel we sold them $300,000 worth, while England sold them $500,000 worth. Of wood manufactures we sold Central America but $4,000 worth, England $121,000 worth. And in the last twenty years our entire trade with the Central American countries, so far as exports are concerned, has amounted to only sixteen millions, while that of Great Britain alone has been more than $46,000,000, and with France more than ten millions and a half.

Why, sir, look at these countries south of us—Mexico, Central and South America, embracing within their confines forty-three million people substantially without manufactures—fifteen republics, fashioned after our own, and the great Empire of Brazil. I have referred to the commerce of Central America alone. Take the commerce of Central and South American countries together. Of her $420,000,000 imports, they bought of the United States only $40,000,000—one-tenth—the balance, $380,000,000, was purchased of foreign countries other than our own; yet all she consumes we can produce. Of the $800,000,000 merchandise exported last year from the United States less than 7 per cent. went to Central and South America.

Iron and steel those countries buy of Europe by millions while our mills are shut down. What is the reason of this? What is the trouble?

Why, sir, to those South American countries we have two lines of steamers—only two. We have one line, the Red D line running from New York to Venezuela, and another line running from New York and Newport News to Brazil. Outside of these lines there is not a single American steamer entering a port of the South American countries or flying an American flag. The Brazilian line has three steamers, every one of them American built; the Venezuelan line seven, all of American construction. We thus have ten steamers on two lines running to Venezuela and Brazil, the only two countries of all the South American republics to which our steamers run. And for the mail service to these two countries we paid last year the magnificent sum of $5,603.08. At the same time we paid from Tampa to Key West $23,600.

Take the Republic of Venezuela, with her population of 2,000,000 of people. Our exports of manufactured goods are small. In 1883 we sold her, of cotton goods, $214,000 worth, while England sold her $1,500,000 worth.

We sold her of chemicals $107,000 worth, $278,000 of iron and steel, $77,000 of petroleum, and $75,000 of furniture.

France sold her of leather goods, boots and shoes, $70,000 worth, and the United States, with her great factories, sold the people of Venezuela only $1,700 worth.

The establishment of the Red D line has opened that country to us and done much to increase our trade. In 1870 our imports from Venezuela were two millions, in 1884 they were six millions and a half. Our exports in 1870 were $866,000; in 1884 two millions. In 1870 we imported 11,000,000 pounds of coffee; in 1884 53,000,000 of pounds. In 1870 we shipped to her $15,000 worth of furniture; in 1884 $80,000 worth. In 1870 we bought of her $440,000 worth of hides; in 1880 $1,052,000 worth. In 1870 we sold her $23,000 worth of oil, and in 1880 $82,000 worth. This gives some slight idea of what the Red D line has accomplished. Yet of the entire import trade of Venezuela England to-day controls one-half of it, and the United States a little less than one-third.

The Red D line has advanced our interests with this country, and yet it has but seven vessels. It made thirty-four trips last year, sailing 6,000 miles each trip; yet we paid that line only $1,300, while at the same time we paid to the steamer running from Brunswick to Simon's Mills, in your State of Georgia, Mr. Chairman, 12 miles, $1,000, and we pay only $1,300 to this Venezuelan line.

The United States of Colombia, how about our trade with her? Not a solitary American steamship entering her port, yet her trade is great. England sells her annually three and a half millions of cotton goods, while the United States only half a million. Of boots and shoes she bought of the United States $112,000 and of France $750,000. France sells her $828,000 worth of wearing apparel, while the United States sells her but $85,000. She imports annually $20,000,000 worth of manufactured products, every single article of which we produce in this country and might sell her, but we have not a single steamship connecting with her ports.

Go down to Peru, a country with three millions of people and institutions modeled after our own. She is practically without manufactories.

The United States sold Peru in 1882 of cotton goods only $42,000 worth, while Great Britain sold her $2,325,000. In 1882 we sold her of hardware—iron and steel—but $73,000 worth, while Great Britain sold her $811,000 worth.

Of the article of paper the United States sold $1,170 worth and Great Britain $46,000 worth. Of manufactured hemp the United States sold her $7,000, while Great Britain sold her $100,000. Of wearing apparel Great Britain sold her $58,000, France $178,000, and the United States not a dollar's worth. Of woolen goods she bought of England $481,000 worth, of France $719,000 worth, and of the United States not a dollar. Why is this? We have no communication with that country.

Now and then by a stray sailing vessel American goods reach her ports, but they are shipped generally to Liverpool and Hamburg and carried under a foreign flag around the Horn. The Royal Mail Steamship Company and French line monopolize this entire trade, and do it not by being paid the sea and inland postage, but are aided by liberal compensation for carrying the mails.

How easily the Pacific Steamship Company could extend her line from Panama down the western coast, but the United States says to her, "If you take that venture we will give you half the postage on the letters you carry, though these letters may lay the foundation for a great trade with the Republic of Peru."

Take Chili, with her population of two and one-half millions, and the trade with that country is enormous. I can not go into it at length, but she buys annually $35,000,000 worth of manufactured goods. Think of it; $35,000,000 annually! She has more trade per capita than France, twice as much foreign trade as Mexico, and four times as much as the whole of the Central American states.

Yet the United States has less than 4 per cent. of this trade; England, France, and Germany control more than 80 per cent. of her trade; and Great Britain alone takes more than 50 per cent. of it. In 1882 our trade was only $3,500,000 with Chili, while Great Britain's trade that very year was $73,000,000, and France and Germany $13,000,000. And yet we stand idly by and refuse to do anything to secure this trade. Germany sold of sewing-machines—for they are not savages down there—in 1882 Germany sold of sewing-machines $109,000 and the United States $7,000.

Germany sold her of pianos $112,000 worth and the United States $7,000. Of cotton goods Germany sold $1,645,000 worth, and the United States $300,000 worth. Of boots and shoes Germany sold $234,000, and the United States sold none! In 1882 England sold $7,000,000 worth of cotton goods and one-half million dollars' worth of woolen goods, and two millions of iron and steel, every single yard and pound of which could have been furnished by the looms, mines, and mills of the United States. From 1863 to 1882, in twenty years, England sold her $213,000,000 worth, France $135,000,000, and the United States $36,000,000.

In 1882 Chili bought $10,000,000 worth of cotton goods, only $300,000 of which came from the United States; $4,000,000 worth of woolen goods, $6,000 of it from United States; $319,000 worth of carpets, none from United States; $470,000 worth of silks, none from the United States; $1,289,000 grain and flour bags, $114 worth bought of the United States; she bought $722,000 worth of hats and caps, from the United States none; $1,261,000 furnishing goods, $125 of this came from the United States; she bought $400,000 worth of watches and jewelry, we sold her $21,000 of it; $428,000 worth of boots and shoes, $11,000 worth of which came from the United States; she bought $892,000 worth of glass and crockery, $15,000 of it from the United States; she bought $2,000,000 worth of hardware and cutlery, $200,000 of it came from the United States; $2,300,000 worth of iron, of which the United States sold her but $306; she bought $164,000 worth of watches, but no portion of them came from the United States. What is the trouble? Why this paucity of trade? Why, we have no communication with Chili! And when it is proposed to extend the steamship lines carrying American mails to that country by permitting the Postmaster-General to contract for this service the same as for the domestic service the cry of "subsidy" is raised.

In 1881, thirteen hundred and eighty, and in 1882, fifteen hundred and sixty vessels entered the ports of Chili, more than twenty-five hundred craft in all. Four-fifths of them were under the English flag and not a single steamship from the United States carrying the American flag.

It is easy to extend our Pacific mail down the coast and touch at Chili, but the reply comes "if you take the venture we will give you only 5 cents a letter for carrying American mails."

What does Chili say in her public press? And let me say right here that many of these foreign countries are anxious to establish mail communication with us. They never refer to us but as the "great Republic," and they have standing offers of a hundred thousand dollars if we will do something to establish mail communication with them; but we have refused. When we try to do it we are met with the cry of subsidy.

I read from an article, an editorial, published in a Valparaiso paper, the Journal of Commerce, which will give you some idea of the thought of Chili upon this subject:

The political economists and manufacturers of the Grand Republic [as they call the United States] are beginning to realize the small amount of trade they do with the South American countries in comparison with England, France, and Germany. Without exaggeration we may say that these nations rule our market, and the commerce of the first named exceeds that of all the other nations of the Old and New World together, forming a painful contrast with the United States.

In the last twenty years, commencing from 1863, the exports from Germany to Chili have increased from $772,515 to $10,015,564, those from France from $4,301,858 to $8,935,309, and those from England from $4,090,069 to $31,638,000. From the United States they have decreased from $1,810,846 in 1863 to $1,774,645 in 1882. More notable still are the exports, for to Germany they increased from $664,596 to $4,811,438, to France from $1,649,364 to $6,208,927, to England from $12,313,029 to $58,961,622, but to the United States they only increased from $1,352,672 to $1,665,978.

We can therefore say that, should the commerce with the other nations continue in the same proportion, before twenty-five years shall have elapsed the products of the Grand Republic will be excluded from this coast, as the North American flag now is, being represented last year by only two steamers—vessels of war—in the presence of 10 Spanish, 12 Italian, 78 French, 100 German, 1,944 English steamers. The United States yields in nothing to other nations, neither in population, richness, nor industrial products. It rather surpasses them in most respects, and should have our trade by reason of its proximity and the international sympathy engendered by common institutions and aspirations. It is therefore a case which excites our curiosity, wounds our self-esteem, affects our commercial interests, and needs careful consideration and efficacious remedies.

The people of the United States no doubt believe, as they have good reason to, that the humiliating condition of their commerce in South America is neither natural nor fatal, and there is an easy method of improving it, by overcoming the artificial obstacles which stand in the way, in order that the great Republic may take the first place in rank and honor. The distinguished commissioners will commit a grave error if they attribute the prostration of their commerce to antipathies or bad feeling toward their country, or to a predilection for European manufactures. On the contrary, there is no one in Chili who does not recognize the superiority of American products, natural and manufactured, and as regards price and quality they are preferred to European goods, with perhaps the exception of articles of fashion and fine arts, which they themselves import. Yet in spite of this the English and Germans have almost a monopoly in all the South American markets.

Whenever we have established and maintained steamship communication with foreign countries, increase of trade has rapidly followed. As the result of establishing the "Red D line," running between New York and the ports of Venezuela, our trade with that country has rapidly increased from $1,793,000 in 1879 to $2,903,000 in 1884, and $3,043,339 in 1885.

On the the eastern side of South America the Brazilian line stops at Rio. Fifteen hundred miles beyond lies the great Argentine Republic, with a population of 3,000,000, with fourteen sovereign states confederated into a central government, with her president and national congress, her capital, Buenos Ayres, having 500,000 people, 40,000 of whom speak the English language. We are scarcely known there as a nation.

In 1884 this great republic bought $94,000,000 worth of manufactured goods. Of this amount $38,000,000 came from Great Britain; from France, $17,000,000; from Germany, $9,000,000; from Belgium, $7,500,000; from Spain, $5,000,000; from distant Italy, $4,000,000, and from the United States seven and one half million dollars' worth—only about 8 per cent. of the United States.

Last year she bought $20,000,000 worth of clothing, every article of which could be manufactured in the United States; $8,000,000 worth of furniture, all of which we might have furnished. In the last twenty years we have bought of her $110,000,000 worth of raw material and sold her but $47,000,000 worth, paying her $63,000,000 in cash, which has gone to enrich our foreign rivals. But with whom does the Argentine Republic trade? In the last twenty years we have sold her $40,000,000 worth; Great Britain, $254,000,000 and France, $313,000,000. In 1883 Great Britain sold her of cottons alone $6,665,000 worth; while the United States sold her but $150,000 worth. The United States sold her of woolen goods but $7,500 worth; while Great Britain sold her $2,169,000 worth. The United States sold her of iron and steel $500,000 worth; while Great Britain sold her $6,725,000 worth. Her total commerce with European countries is 90 per cent. of her whole trade, and with the United States only 10 per cent.

What is the trouble? We have no communication with the Argentine Republic, and her great capital, Buenos Ayres, or with Uruguay, and the beautiful city of Montevideo. Twenty-one lines connect her ports with Europe.

In 1884, 3,629 steamers arrived at the great city of Buenos Ayres. How many from the United States? Not one; 3,629 steamships and 3,445 sailing vessels.

Of the total tonnage that entered the port of Buenos Ayres, 24 per cent. was under the British flag, 16 per cent. under the French flag, 9 per cent. under the German, and 24 per cent. under the flags of other countries, and the United States had the miserable representation of 2 per cent. of the sailing vessels. Two hundred ocean steamers ply between Buenos Ayres and European countries, and if you want to reach Buenos Ayres you must take passage across the Atlantic and sail from England. Forty to sixty steamships arrive in Buenos Ayres every month. English, German, French, and Italian lines have over one hundred steamships carrying the mail into her ports, with freight and passengers. Italy has a fast mail line running in fifteen days. We must send our mails, passengers, and freight by Europe. All these lines are liberally paid for carrying the mails.

How easily the Brazilian line could be extended down to the Plate. Yet we refuse to encourage this line in such an undertaking. And if she takes the venture we will promise to pay her only the sea and inland postage on the mails carried.

Look to Uruguay with her seven hundred thousand people and her capital of one hundred and four thousand. The annual value of her commerce is $50,000,000, her imports $26,000,000. In 1885 she imported from Great Britain $8,000,000 worth, from the United States $1,500,000. She imports annually $20,000,000 of manufactured products, more than one-fourth of which comes from England and 18 per cent. from France. Between 1862 and 1882 she bought of the United States $21,500,000 worth, of England $115,000,000, and of France $118,500,000. In 1882 England sold her of cotton goods $3,000,000 worth, the United States $580,000; of iron and steel $1,269,000, the United States $98,000; of woolen goods $865,000, the United States $1,350. England sold her $350,000 worth of coal, the United States $2,000 worth; $286,000 worth of hemp, the United States $38,000 worth.

Twenty-one lines of steamers from Europe enter her ports—eight British lines, four French, two Spanish, one Italian, one Belgian, one with the Netherlands, none with the United States—only an occasional sailing vessel. The result is we have no trade with this country and can not have until we have regular communication. Merchants can not order goods of us with any certainty of receiving them in time for their trade. The South American Commission say in their report that if a merchant in Uruguay orders goods from the United States he must wait from five to nine months for returns, while he can cable an order to Europe and receive his goods in forty-five days. The commission note an instance where a nine months' order had not been received and the last cargo from New York was one hundred and twenty-five days to Montevideo, six months after the order was mailed. We had no mail communication except via Europe; hence the delay. But a cablegram was sent to England and in sixty days the goods were there.

The advantage of mail communication is that the foreign merchant in ordering goods knows they will arrive in time to meet his trade, as mail lines run upon regular time between intermediate and terminal ports; come up the eastern coast of South America to the great Empire of Brazil with its population of 13,000,000, with which country we are connected by the New York and Brazilian Steamship Company.

This empire bought of England in 1885 $34,000,000 worth, and of the United States only $7,317,000. We import from this country annually about $50,000,000 and sell her only eight or ten millions. Her total imports are $140,000,000 annually. Of this, England furnishes 45 per cent., France 17 per cent., and the United States only $8,500,000.

In 1883, she bought of England $15,778,098 worth of cotton goods, of the United States $612,828; of England $95,613 worth of hats and caps, of the United States only $119 worth; of England $1,446,572 worth of flax manufacture, and only $49,000 from United States; from England $5,674,407 of iron and steel, $1,034,648 worth from the United States; $1,000,000 of manufactures of leather goods from England, and $36,000 worth from the United States. She bought of Great Britain $1,618,000 worth of woolen goods; of the United States only $2,842 worth. She bought $1,500,000 worth of wearing apparel from France, and only $17,000 worth from the United States.

I need not follow these comparisons at greater length. In view of their startling disclosures it is amazing that any American citizen should seek to obstruct the passage of this bill before us, which looks to securing to the United States a fair share of this great trade.

The able Secretary of State, in commenting on the report of the South American Commission, said:

I. It seems to be very evident that the provision of regular steam postal communication, by aid from government, has been the forerunner of the commercial predominance of Great Britain in the great marts of Central and South America, both on the Pacific and Atlantic coasts of the continent. It is no less apparent that the efforts of other European nations, Germany, France, and Italy, to share in this profitable trade have been successful in proportion with their adoption of regular steam postal communication with the several markets whose trade they sought.

II. These papers show, also, that the enterprise and sagacity thus shown by European nations have actually reversed the advantages which our geographical position gives us in relation to this extensive commerce of the American hemisphere. The commercial correspondence of our merchants with the trading points on the east and west coasts crosses the Atlantic twice to make a postal connection in a circuit of trade which has its beginning and its end on our own continent. The statistics of our limited trade, under this extraordinary disadvantage, show that the growing preference for our products in these South American markets insists upon being gratified, even at the cost of a circuit of importation which carries our merchandise to Europe and incorporates it as a contribution to the volume and profits of European South American trade. No stronger demonstration of the tendency of commerce to follow in the train of postal communication can be conceived than this vast and expensive circuit of importation resorted to in default of direct opportunities between the countries of demand and supply.

WILL THEY USE OUR GOODS?

The goods made in this country are sought after by the people of this south country. Everything American is regarded by them with favor and sells readily. It frequently happens that the English manufactured goods are branded "American-make." One of our commissioners found large quantities of English-made cotton at Rio branded "Augusta mills," in imitation of the celebrated fabrics of the Augusta (Ga.) mills. We have at this time a favorable opening with this people, for nearly all the products they buy are of the cheapest grades, or such kinds as we can produce at as low a figure as any other people.

It costs more to produce certain kinds of goods here than in foreign countries, where labor is at pauper prices. All goods that we can not produce as cheaply as these countries we could not ship from home and sell in the world's competition; but I say the most of the goods used by this south country are of the class that we can manufacture with the world. Proficiency of manufacture is acquired more quickly in cheap goods than expensive, in the goods everybody uses than in those of rare use. Hence in all the cheap fabrics we are to-day competing with the world. Those people use cotton almost exclusively; they are the cotton users of the world. We are the cotton producers of the world. The cheap and coarse grade of cotton we can put into their markets against the factories of Europe.

In the common cottons 70 per cent. of the cost is in the raw material. The labor is a small item, and we can sell as cheaply as any nation. When we go into the higher grades labor enters more largely, and because of the high prices of labor here we are unable to compete successfully with the old countries; but we can and we do compete with the world in all cheap goods. In all the fabrics of iron, steel, wool, cotton, and leather goods, largely made by machinery, and in which manual labor is comparatively a small element, we invite an open market.

Other countries are lacking in machinery, because with them human hands are cheap; hence that which machinery can not do, or can only do a small part of, they produce at a lower price than we. That which machinery can do largely we can put onto the market at their prices and yet pay our workers American wages.

At this time, when there is such a desire to keep up the prices to our laborers, it seems most auspicious that we have an opportunity to open trade with a people who want the very goods that we can make against the world and yet pay the workmen the best of wages.

We can not ship silk, fine woolens, fine cottons, nor fine goods of any kind to England or elsewhere. There is too much work of the hands in them. Whatever the human hand touches in our country it dignifies, even in price. The human hand is the prophecy of all that can be achieved by human endeavor; it is the incarnation of man. Man is a sovereign on this soil, and the labor of his hand must receive a just remuneration. It is the duty of this House to recognize and protect the dignity of that hand. I shall not ask to strike it down, that the greed of cheap purchase may take its handiwork to the ports of older civilization and lay it beside a pauper's work.

Let us sell what we can to European countries with fair pay to our workmen; but we can ship the coarser goods everywhere, and our Southern neighbors are inviting us to come to them. We need no other trade.

The gentleman from New York [Mr. HISCOCK], in discussing the question of goods we could ship to this country, said:

This is so true in the iron and steel industries that I believe the exportation of iron and steel goods to those and other foreign markets within the last year amounted to over $16,000,000; and yet we can not compete with England in all the steel goods; but in machinery, in agricultural instruments—the hoe, the ax, the shovel, the augur, the bit, nails, wire, and mowers, reapers, plows—in all an agricultural people consume we can and do.

These are goods that Mexico and Central and South America demand and will buy from us and are buying from us to a certain extent to-day and will continue to buy if we can ship them there. This is also true as to cotton fabrics. All the cheaper grades of cotton goods we can produce in this country and compete successfully with the manufacturers of the world. I have been told within the past year our producers of the cheaper, coarser cotton fabrics have been able to produce and export and sell in the English colonies their goods in competition with the English manufactured goods, because they were enabled to produce them cheaper by the aid of labor-saving machinery. And this is proved by the fact our yearly exports of them amount to $12,000,000. Of many products of leather this is equally true.

Of leather goods we export to a foreign market about $10,000,000 in value, and you may go through with lines of goods those people buy and consume and you will establish the fact that by the development of our manufacturing industries, by the use of machinery, we are able to make and sell to them as cheap as any one else those goods of which they consume considerable quantities and which make up their foreign commerce, but which they now the more largely buy in Europe, and we are unable to compete with Germany, and with France only when they control the carrying trade."

On examination of the commission's report of the goods we export to this south country, I find mentioned alcohol, rice, sugar, lard, hams, butter, cheese, cotton goods of all kinds in the cheaper grades; woolen goods of all kinds in the cheaper grades; clothing, wire, agricultural implements, paints, paper, flour, provisions, hats, caps, coal oil, tobacco, and the manufactured articles of iron, steel, and leather. In fact, this people want the goods and products that we produce in the greatest surplus. We have the goods they want and at the prices they are accustomed to pay for them.

ILLUSTRATION.

I shall particularize only an article or two. The people of Brazil annually import $500,000 worth of butter and cheese. But where from? Not from this country; and yet we are the greatest producers of butter and cheese on the globe. Not one pound of either of these has ever been shipped from the United States to Brazil. Butter sells off the vessel there at 75 cents per pound; at my home butter, this week, is worth 15 cents a pound.

The coal trade has grown to vast proportions in South America. Millions of dollars' worth are imported annually, but not a single ton from America. It all goes from England. Yet our coal mines are running on half time or closed up altogether. Just across the Gulf of Mexico from South America lies our State of Alabama, and a recent geological survey says that beneath her soil is coal enough to supply our entire continent for three thousand years.

In Brazil, Chili, and Buenos Ayres the representative citizens complain much to our visiting commissioners that the United States did not open proper commercial relations with their country. Their papers and orators always allude to this country as the great Republic; their highest ambition is to pattern after us. Brazil says she is ready to meet us to the full extent of her ability in supporting an ocean mail. A year ago when it was supposed this country was going to inaugurate an ocean mail line to the south, they offered an additional pay of $100,000 a year. A Canadian line promptly offered to perform this service for $60,000 and extend the line up to Canada. It is well known how our proposed measure failed, and Canada then withdrew her offer.

In every instance the chief dignitaries expressed a desire for closer relations with us. They feel, as we ought to feel, that there should be a close compact of fraternal sentiment and business interest between the countries on this side of the water. Especially is this commercially profitable when climate, geography, and a difference in civilization makes each of our Americas the complement of the other—what we have not, and can not grow, by reason of our climate, they grow bounteously and can furnish us. All that they need and are unable to produce we manufacture in a surplus, and can furnish them. With a population nearly as great as our own, and a territory twice the extent of ours, directly adjoining us, and part of our own continent, they ask us to open the gates of commerce and let the tide of prosperity roll through. And yet some men here cry, "Shut the gates; we can save some thousands of dollars by sending our mails on English ships." Did ever evil genius more unfortunately blind the judgment of men!

ONE SHIP LOAD.

Let me give an illustration from the manifest of a vessel (the Finance) of the Brazilian line which sailed from New York on the 28th of February last. She had on board, going from the United States to those South American countries, $250,000 worth of American goods.

Where did that quarter of a million dollars' worth of products come from? It came from twenty-four States of this Union. Look over the list of articles—hardware, scales, and fur goods from Connecticut; axes, organs, and printing-presses from New York; locomotives, cars, steel tires, and machinery from Pennsylvania; wagons and sewing-machines from New Jersey; ranges from Maryland; cotton cloth from Georgia; steel springs and furniture from Michigan; car-wheels, sewing-machines, and furniture from Ohio; rosin and tobacco-cutters from North Carolina; scales and axes from Rhode Island; engines and machinery from Illinois; sheetings from South Carolina; furniture and slates from Vermont; watches and clocks from Massachusetts; bacon and hams from Kansas; scales and wire from Missouri; flour from Wisconsin and Minnesota; canned fruit and hominy from Maryland; fish from Maine; canned fruits from Delaware; oysters from Louisiana; flour from Virginia; rosin and hominy from Oregon; agricultural implements from Iowa; wagons and plows from Indiana.

Products representing twenty-four States, amounting in value to a quarter of a million of dollars, taken from our farms and factories and going to this southern market. So diversified are the wants of this people that one vessel reaches out its arms and gathers its cargo from twenty-

four States. What a company of men that $250,000 worth of goods had kept employed for one year in its preparation! Estimating the labor in these goods at an average, and I suppose it would be fair to estimate them at that, we have 50 per cent. of this amount paid for labor to the men who work in the field or in the shop, not counting either of the extremes, as, for instance, in diamonds, where the raw material is worth 99 per cent. and the labor 1 per cent., nor that chiseled statue of Garfield in the grand Rotunda, on which the labor was 99 per cent. and the raw material 1 per cent.; but taking goods in the ordinary use, labor runs from 20 per cent. to 80 per cent. of the value.

The London Economist puts the average of labor in the average goods used at 50 per cent. This $250,000 worth of goods furnished labor for two hundred and fifty men for one year at $500 per year. Had all the work been confined to a city of 20,000 inhabitants with a surrounding country population of 5,000, it would have given employment to every one of their idle men for one year.

Who will say the name of that vessel, Finance, was not a good omen? Who will say that people were not helped when these goods were sold to that ship? Who will say a quarter of a million dollars more of goods would not have been left with us had that vessel not sailed? Who will say he does not want more vessels to sail with $250,000 worth of goods from twenty-four States? Who will say it is not a wise economy for our people to accept the policy so profitable to other countries and let trade follow the flag? Who will say he is willing to see thirty-six hundred and twenty-nine steamers enter Buenos Ayres another year, and not an American steamer? Who will say he is willing twenty-one lines of steamers shall continue to ply from foreign countries to Uruguay and not one American steamer enter her port, only an occasional sailing vessel?

Who will say the statesmanlike sagacity pleaded for by the elder Bayard and President Polk forty years ago prudently followed out would not have maintained our prestige on the ocean. Instead of nine-tenths of the trade of the southern continent crossing the ocean, we would today be controlling five-tenths of it; we would this year have $300,000,000 of that trade. We are entering upon this contest after other nations have established themselves; it is a late start, but to Americans all things are possible. We have the advantage of Europe in location; connection is quick and easy; we are producing everything these people need; we have the incentive of a million unemployed men to enter this field. On what other field can we enter with such invitation of prosperity? The passage of this bill would be a measure of sound Government policy.

Sixteen vessels a week leaving our shores for these south ports would carry $4,000,000 worth of goods; this would give us $200,000,000 worth of exports there a year. We could within a short time raise this to $300,000,000. We could easily supply another $100,000,000 to Australia, China, and Japan. This $400,000,000 a year for our products means $200,000,000 for our labor. Where, then, would be the Labor Commissioner's million idle men, and where would be the burdensome surplus? As those vessels steamed daily from New York, Charleston, New Orleans, and San Francisco they would form the grandest argosy that ever floated on the waves; they would have caught up the burden of the nation between their iron sides and sailed away with it.

THE MEANS OF COMMERCE.

The Central and South American Governments have few ships of their own. Hence, wanting a certain kind of goods they buy of the vessels that bring them to their doors, and thus naturally the trade of these countries is controlled almost entirely by those nations which have the largest merchant marine. The control of commerce is in the hands of the nations who control the means of commerce. What are the means of commerce? They are mail facilities, ships, banking-houses, commission-houses, and agents. There must be steamers to convey mail and merchandise with speed and regularity; there must be all the varied exchange, credit, draft, and the large lines of accommodations afforded by banks; and then commission-houses must be established where each line of goods, as it is landed by the vessels, finds reception; then agents must travel the country, after the manner of our drummers, and the goods they sell by sample must be delivered with regularity and certainty.

So it comes to pass that the people who seek important commerce with foreign people must have ships, mails, banks of exchange, commission-houses, and agents. Having the means of commerce, they can control commerce. Wherever the English ship goes laden with the manufactures of Great Britain, she finds at the end of her journey an English commission-house ready to take her goods and dispose of them among the people of that country. It is by all of those means that she controls trade.

Of what avail is the generally favorable sentiment of South America for us if we have not the appliances to furnish them goods? Our mails to them are far between and always irregular. We have but ten steamers going to the entire southern continent, when we should have more than that sailing from our ports every week. We have nothing like regular commission-houses and agencies, and as to banking all our exchange is through English houses. When England, or France, or Germany contract to establish ocean mail to a foreign port it is for a term of years, and it is well known that it will be permanently continued. Thereupon her pushing business men open houses at these ports and exhibit their wares. If they need supplies from home they are received with promptness. A local commission agent from Brazil visited this country and among other things took back a large number of harvesting machines. They were received with great favor, and sold so readily that he at once ordered three hundred more. They took the usual course of American shipping to that country and were received seven months after the order. It is proper to infer that the harvesting season was over when they got there.

If we will make a five-year contract to carry our mail to these southern ports our merchants will flock to Rio, Buenos Ayres, Montevideo, and the great cities of that country, and open commission-houses. The restless agent for American goods will push his way to every trading-post and store in all that land. When the wholesale buyer wants an article the commission-house does not have the drummer will reply: "We will order it for you from America, and have it here inside of thirty days."

Their merchants will open trade with ours because they will know we have come to stay. I know it requires time to get all these appliances at work, and that we can not in a year reach full control of this trade. Yet the first year will beyond, all doubt, yield gratifying results. When the word gets out among these people that the great Republic has recognized them and asked for the fellowship of barter, which next to the kin of citizenship makes a united people, the American ship will be the welcome guests in their harbors.

England has made of herself the workshop of the world, and by sailing her own ships, and maintaining rapid mail communication with all the nations of the earth she is enabled to control commerce to a larger extent than any other nation. She buys less and sells more than any other government. She buys nothing but raw goods; she sells nothing but manufactured goods. She sells to every one of the south countries more than she buys; in some instances six times as much as she buys. Last year she bought $5,000,000 worth of products from the Argentine Republic, and sold that country $30,000,000 worth. Not so with us; we buy from these countries more than we sell, and the triangular ship system helps to keep us in this rut.

English lines of vessels loaded at Liverpool for Brazil discharge their cargo there, and loading with coffee and other goods sail up to New York, discharge their load and sail across to Liverpool. They take a cargo to Brazil, and having no order for a return load home, and as we have no ships there, they take on board the order for a load of goods to America. And this is how we sell to Brazil only $8,000,000 worth a year, and our imports from her amount to $50,000,000. We ought to get rid of British triangular ships.

Now, sir, we ask that this country rise from her criminal inactivity and assert a place on the high seas, and put in her bid on the world's commerce. The Post-Office appropriation bill before us proposes to pay $800,000 for ocean mail service to Mexico, Central and South America, China, Japan, and Australia—$400,000 to be paid to existing vessels for making increased trips to the ports where we now have mail communications, and $400,000 to existing vessels and new vessels for extending our mail communications into ports with which we do not have mail facilities. We have scores of vessels like the Delaware steamers already alluded to that could be called from their tramp trade into this national commerce.

This service is to be let out to the lowest bidder, but not more than 50 cents can be paid for each mile traveled. For this entire service and its extension but $800,000 can be paid. This is less than Germany pays to one line of steamers, and but little more than France pays to the West Indies and South America. If every contract should be made at 50 cents per mile we will then have the cheapest mail service in the world, not another of the great governments paying less than $1.03 per mile.

For carrying the mails from Port Townsend, to Neah Bay, 102 miles, we pay $6,303; yet from San Francisco to Mexico, a distance of 1,520 miles, we pay $208. Does any man believe the latter to be a just compensation?

For carrying the mail from Tampa to Key West, a distance of 249 miles, we pay $23,600. These are American ports; but from Key West to Cuba, a distance of 100 miles, we pay $237, the latter being a foreign island and called foreign mail. Do you approve of this as prudent business management when we seek the trade of that island?

We pay the New Zealand line $20,000 for carrying our mail to Australia, when we have an American line making exactly the same trip, and the New Zealand line is already paid $150,000 by its own government. Their purpose is to secure the trade of Australia and break down our line, which is seeking to secure that trade for America. Is this acting in good faith with American interests?

When we pay $280,000 for carrying our mail in foreign vessels and $46,000 to our own vessels, is that prudent management?

When for carrying commerce from and to our shores we pay to foreign vessels $136,000,000 per year and but $14,000,000 to American vessels, is that the statesmanship that builds a powerful government?

When in 1858 we were masters of the ocean, and in 1886 find ourselves without a vessel crossing the Atlantic with our mail, is it not loyalty to plead for the restoration of our commerce?

South of us lie fifty million people, their country bursting with natural

wealth, an empire richer than India, from which Augustus Cæsar brought back $40,000,000 in excess of values exchanged, or of that field of commerce where Solomon sent one voyage which returned him gold valued at $14,500,000. These people are inactive and without genius. They import $500,000,000 worth of manufactured products annually. They have asked to be recognized in commerce by the Great Republic, for they want to believe that their destiny moves with ours. We view the steamers from England, Germany, and France, loaded to the water's edge, bearing to their ports, into many of which the American flag has never entered, and unloading that merchandise whose sale and profit alone makes the vessel's native country tolerable to live in. We gaze upon this continent of measureless wealth that lies at our very door, and are surrounded at home by fields untended, by furnaces unfired, by a million idle men, by woman's face made white by anxiety and want, and are, like Tantalus, "doomed to parch with thirst in the midst of waves, and viewing banquets, to starve to death."

Rivers and Harbors.

SPEECH

OF

HON. RANDALL LEE GIBSON,

OF LOUISIANA,

IN THE SENATE OF THE UNITED STATES,

Tuesday, July 13, 1886,

On the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, the Mississippi River amendment being pending.

Mr. GIBSON said:

Mr. PRESIDENT: If Senators had read the various reports of the engineers of the Army, of the Mississippi River Commission, and of Captain Eads upon the subject of the improvement of the Mississippi River, I would not at this time make any reply to the observations of the Senator from Kansas or tax the patience of the Senate while I attempt to set forth the facts and principles involved in the correct solution of the problem which concerns so vitally the people of the whole Mississippi Valley.

The idea that led to the purchase of the Louisiana territory originated in the earnest aspiration of the people of the Western country, I may say of the whole country, to gain control of the Mississippi River, that was even foreshadowed in the Farewell Address of George Washington.

If there be anything which is peculiarly the property of the United States, and over which the Government possesses exclusive and absolute jurisdiction, it is this great highway of commerce, for not only was it purchased out of the common Treasury but by the treaty under which it was acquired it was dedicated to the free and common enjoyment of the people of the whole country, and the enabling acts by which the riparian States were admitted into the Union specially denied to these States the right to levy any tax of tonnage or to exercise any jurisdiction whatever over it. And whatever might be the disasters or emergencies threatening the welfare of the riparian States, growing out of the extraordinary phenomena of this inland sea, they are prohibited by the Constitution of the country from any co-operation or agreement whereby they might protect themselves.

This undisputed and unqualified jurisdiction reserved to the Government of the United States, I submit, carries with it corresponding obligations and responsibilities. If it can be demonstrated that radical changes have occurred in the conditions of the lower river in consequence of the improvement of the upper rivers by the Federal Government, the destruction of the forests, and the settlement and cultivation of the country under the sanction and authority of the Government, it might well be held that the people of the lower valley possess an equitable claim that the Government shall at all events interpose to mitigate these newly created conditions that tend to destroy not only the navigation of the river but their homes, lives, and property, the very existence of civil society itself in the alluvial region.

Ownership carries with it responsibility *sic utere tuo non alienum lædas*. I do not propose at this time to discuss that aspect of the question. I merely suggest it. Indeed, I may say that the Government of the United States has accepted the duties and responsibilities arising from the possession and jurisdiction which it holds over this the greatest single highway of commerce within its borders or in the world. For hardly had the national authority been extended over it before engineers were appointed to explore the phenomena with a view of ascertaining the laws to which these phenomena were subordinate.

The first report was made by Major Bernard, an exile from France, appointed a major in our Army, who afterward became Secretary of War under Louis Philippe. He announced the doctrine that if the channel be contracted the velocity would be increased thereby and the channel deepened. This same view was taken by General Barnard, recently deceased, one of the most distinguished engineers of the Army of the United States, who was for many years employed on the Mississippi River, and whose able and comprehensive reports I hold in my hand. The people of the Mississippi Valley owe to this officer a debt of gratitude.

Generals Humphreys and Abbott were for more than ten years engaged in service upon the river, and at the conclusion of their investigations they explicitly condemned and rejected the outlet system and advised that the only way to improve the river was by the establishment of a system of levees. Similar investigations were made and results announced until about the year 1875, when Captain Eads applied the jetty system at the mouth of the river.

Two parallel jetties were extended out over the bar at the mouth of the Mississippi River conforming the water to a narrower channel, and where there had been 8 or 9 feet depth there is to-day 30 feet, affording an entrance for the largest ships to the harbor of New Orleans.

Mr. VAN WYCK. Will the Senator allow me a moment right there?

The PRESIDENT *pro tempore*. Does the Senator from Louisiana yield to the Senator from Nebraska?

Mr. GIBSON. I prefer not to be interrupted until I shall have finished my remarks.

The PRESIDENT *pro tempore*. The Senator from Louisiana declines to be interrupted.

Mr. GIBSON. I will support all statements I may make by the latest reports of the engineers of the United States in respect to this matter, and would prefer not to be interrupted, as I have not reduced my remarks to writing, and might be led into extraneous discussions that would detain the Senate beyond proper limit.

Mr. VAN WYCK. I desired to make a remark in regard to the work of Captain Eads.

The PRESIDENT *pro tempore*. The Senator from Louisiana declines to yield.

Mr. GIBSON. I know some persons deny the existence of the jetties at the mouth of the Mississippi River, just as Berkley demonstrated by analysis that no such thing as matter existed, and as Dr. Johnston replied to him that he stamped his foot on the earth and that was demonstration enough to convince him of the existence of matter, so I will say to the Senator from Nebraska [Mr. VAN WYCK] that if he will visit the mouth of the Mississippi River and look at the jetties he will no longer deny their existence, that is if he is willing to be controlled by the evidence of his senses.

When I myself in the year 1875 went down to the jetties and saw precisely how that system operated, I conceived the idea that it might be adapted to the whole river, for I saw no reason why, if by holding all the water in the river through one of its passes the channel should be deepened, the same process of contraction would not if applied uniformly and gradually up-stream deepen the river every foot of the way throughout the alluvial region.

In order to give practical effect to this system I framed a bill for the establishment of a Mississippi River commission, which I introduced in the House of Representatives in the year 1876, and in favor of which Captain Eads addressed the Committee of Commerce in April of that year, demonstrating as I thought then and still think that the application of that system to the river was practicable and feasible and economical and would not only give deep water, a ship-canal, if you please, to Cairo and Saint Louis, but would at the same time lower the bed and surface of the river so as to protect the people throughout the alluvial region from its disastrous floods.

The bill for a commission finally became a law, approved June 28, 1879, but it was found necessary to recognize the engineers of the Army, the Coast and Geodetic Survey, as well as Captain Eads and the engineers who agreed with him. Some of the most distinguished engineers of the Army were appointed members of that commission. General Gillmore was made its president; Mr. Eads himself was placed upon it in a subordinate position. General Comstock, who had always combated the views of Mr. Eads, was also appointed upon the commission by the President, and the distinguished Senator from Indiana [Mr. HARRISON], and the engineer in chief of the State of Louisiana, Mr. Harrod. In fact every member of the commission had a reputation for high character and ability and devotion to public duty. The act establishing the commission directed it especially "to report in full upon the practicability, feasibility, and probable cost of the various plans known as the jetty system, the levee system, and the outlet system, as well as upon such others as they may deem necessary."

There had been for years discussions of these various plans, and the Government had declined to attempt the execution of any one of them because of this difference of opinion.

I felt that it was but just and right that an end should be put to these academic discussions and that the day should be no longer postponed when the skill and resources of the General Government should be applied to the actual improvement of the river.

I knew that the trade and commerce of the river were suffering, that taxation fell more heavily upon the people of the valley of the Mississippi in consequence of these obstructions in their great natural high-

way, and that great injustice was inflicted upon the people of the lower valley by the indifference or rather inability of the Government to come to their relief.

Hence it was that the Mississippi River Commission was created, and a system has been adopted which in the main commends itself to the common sense of the people of the valley and the scientific men who have examined it. The commission have submitted their reports annually to Congress, and they are here before the Senate to-day to speak for themselves.

Now, it may well be asked, what has that commission accomplished? But in order to answer that question satisfactorily the difficulties to be overcome must be briefly and clearly set forth.

Many Senators representing States distant from the Mississippi Valley express wonder at the idea that there should be any necessity for work upon a stream so large as the Mississippi River. They can well appreciate how necessary it is to improve the smaller rivers of the country and the harbors on the Atlantic and Pacific coast and lakes, but they express amazement when it is suggested that the resources of the common Government should be invoked to improve the channel of the Mississippi River from the Gulf to Cairo, which presents a coast line over 2,000 miles long, longer than the entire Atlantic seaboard, and embraces a commerce larger than our whole foreign commerce.

I hope the Senate will bear with me if I go somewhat into detail in this matter. There were in the Upper Mississippi the following sand-bars between Cairo and Saint Louis. I will name them: Alton, Arsenal Island, Horsetail, Twin Hollows, Pulltight, Chesley Island, Jim Smith, and Cairo.

There were at every one of these points difficulties to be overcome and a depth of only 3½ or 4½ feet of water for from two to four and sometimes five months in the year.

This interruption of commerce for such long periods of the year between Saint Louis and Louisville, between the Ohio and Mississippi Rivers, was not that an obstacle to challenge the attention of the Government? And below Cairo what were the difficulties?

I will state them from a data before me furnished by the commission. They consisted of sand-bars that stretched out, some of them, 40 miles long.

The commission speak of six of these reaches, called, respectively New Madrid reach, 40 miles long; Plumb Point, 38 miles; Bentley, Helena, Choctaw, and Lake Providence. There is one also of my own personal knowledge at the mouth of Red River, which I do not see mentioned in the report.

These reaches or sand-bars place an absolute embargo upon trade, traffic, and commerce, not only upon the Upper Mississippi, between Cairo and Saint Louis, but on the Lower Mississippi, even as far down as the mouth of Red River, just above New Orleans.

I will not attempt here to estimate the increased tax that these obstructions impose upon the country. I hold in my hand a document on the internal commerce of the United States, issued by the Bureau of Statistics, which shows how many days in the year there is less than 6 feet of water over the shallow places and how many days less than 8 feet. In some instances navigation is closed for one hundred and forty-six days, in others one hundred and thirty-six days, and in others one hundred days, but during every year the average is nearly three months. So that here we have the greatest highway of commerce in this country directly closed and navigation suspended on it for three, four, and five months in the year.

These are not speculative but practical difficulties, plainly visible, well known and appreciated by the people in the Mississippi Valley. The same document from which I quote declares that the actual cost of transportation in vessels drawing only 4 feet is nearly twice as great as one loaded to 8 feet. I am well prepared to believe this statement, because when the river is shallow the navigation is difficult and perilous and impossible to the larger boats that carry the staple productions of the valley. Who can estimate, therefore, what a tax these shallow reaches impose upon the people of that valley, nay upon the people of the whole country? It can not be less than $150,000,000 a year.

Hence the improvement made by the Mississippi River Commission on that river has reduced the price of freights one-half by giving full 8 feet of water through the channel which they have improved. I hardly think it necessary to do more than call the attention of Senators to the fact that this operates not only to reduce the price of freight on the Mississippi River but to bring down the price of freights all over the United States, for the Mississippi River itself regulates the cost of transportation on every commodity produced in this country. Nor will I weary the Senate with statistics showing the population and productions of the Mississippi Valley.

The Mississippi River Commission was organized to remove these difficulties, to lift this tax, this burden from the labor of the industrious and frugal people who inhabit the great valley from its gateway at the sea to Lake Itasca. Is it not a legitimate purpose, a public purpose, a national purpose, and highly patriotic purpose? Are we to be sneered out of the Senate because the powers of the Government are invoked in respect to a matter that concerns the vital interests and happiness of the people interested in this the greatest highway of commerce in the world? Mr. President, the removal of any serious obstacle to navigation on the Mississippi River releases every producer, every home, however humble, in the valley, and every consumer throughout the length and breadth of this country from an onerous tax.

Now what have the commission done? I have stated what the difficulties were and I will now endeavor with equal frankness to exhibit how far the commission have succeeded in removing them. What are the actual results? My statements are not drawn from newspaper telegrams springing from the imagination of some sensational reporter, and which, when analyzed, will be found to be entirely erroneous, as I shall presently show was the case with the dispatch just read by the Senator from Kansas [Mr. PLUMB]. I have before me the official reports of the commission submitted to the Government on their official responsibility, and for one I am disposed to accept them as authentic and true. They can not be denied. Congress has appropriated $8,000,000 for the improvement of the river from Port Eads to Cairo, and about $2,000,000 from Cairo to the mouth of the Illinois. It is proper that I should say that not one farthing of this money has been expended by the commission, but every dollar of it has been expended under the direction of the Secretary of War by the engineers of the Army of the United States.

If Senators will turn to the last page of the last report of the commission they will find an itemized statement of the expenditures of every dollar of the appropriations already made.

On page 2875 will be found the financial statement to which I refer, giving an account of every cent that was expended under the direction of the Secretary of War by the Engineer Corps of the Army of the United States for the improvement of the river in accordance with the plans of the commission.

I will read it for the satisfaction of the Senate:

Act of March 3, 1881	$1,000,000 00
Act of August 2, 1882	4,123,000 00
Act of January 19, 1884	1,000,000 00
Act of July 5, 1884, less $5,000 transferred to snag-boat service	2,065,000 00
Total	8,188,000 00
Balances from former appropriations for works below Cairo, July 1, 1882, less $123.42 reverted to the Treasury	272,504 96
Balances from former appropriations for works above Cairo, July 1, 1884	22,632 53
For sale of fuel and loss of property	411 07
Total	8,483,548 56
Expended to June 30, 1885:	
Des Moines Rapids to Illinois River	120,949 22
Illinois River to Ohio River	389,339 56
Protection to easterly bank of Mississippi River near Cairo	27,839 99
New Madrid reach	210,364 74
Plum Point reach	2,379,019 12
Memphis reach	477,073 04
Memphis Harbor	198,580 97
Lake Providence reach	2,240,285 73
Vicksburg Harbor, dredging	61,812 12
Vicksburg Harbor, Delta Point	115,573 71
Survey of Helena reach	8,000 00
Survey of Saint Francis front, first district	4,873 11
Survey of Saint Francis front, second district	4,000 00
Survey of unleveed fronts, third district	1,000 00
Survey of unleveed fronts, fourth district	1,000 00
Survey of Cubitt's gap	137 14
Survey of Choctaw bend	2,679 86
Observations at Carrollton	3,000 00
Closing Bonnet Carré crevasse	15,000 00
Levees.	
Second district:	
Yazoo front	80,950 00
Long Lake	15,000 00
Third district:	
Opossum Fork	25,000 00
Yazoo front	364,875 45
Tensas front	411,107 74
Fourth district:	
Atchafalaya front	133,503 93
Tensas front	548,258 24
Mouth of Red River	98,386 32
Natchez and Vidalia Harbors	6,626 69
New Orleans Harbor	149,394 43
Total	8,093,570 51
Balance July 1, 1885	389,978 05

Respectfully submitted.

J. H. WILLARD,
Captain of Engineers,
Secretary Committee on Construction, Mississippi River Commission.

But I recur to the question, let it be admitted that the money has been honestly accounted for, let it be admitted, as all Senators will admit, that these gentlemen have spent every dollar of the money to the best of their ability, what is the measure of that ability? What practical results have they achieved? What fruits have the commission borne that will justify further appropriations? I will state these results from their own reports.

In the first place, the commission have in their possession a plant (including vessels, machinery, utensils, everything necessary to conduct these vast operations) estimated to be worth to-day to the Government $1,267,000. Speaking of the improvement between Cairo and Saint Louis, they tell us—

The revetment of the head of Arsenal Island has been finished, and the protection of the new banks formed by the system of works below has been continued. Additional hurdles have been put in at Horsetail, Twin Hollows, Pull-

tight, and Jim Smith's. Large deposits have been formed by these works, as expected, and the navigable channel defined by them has continued to improve, the least depth now reported being 12 feet at Arsenal Island, 9 feet at Horsetail, 8½ feet at Twin Hollows, and 10½ feet at Jim Smith's.

These are the results. The river from Cairo to Saint Louis has a minimum depth to-day of 8½ feet along its entire length, where there were but 3½ feet before these works were undertaken and executed. The commerce of the river instead of being carried on to-day in vehicles that draw 4 feet or 3½ or 3 feet of water for three months in the year may be carried on by vessels that draw 8 feet of water, and thus the cost of transportation upon that end of the river is reduced one-half, a fact that the people of the upper valley have manifested their appreciation of in every way in which it was possible by popular conventions, by memorials and petitions, and by the action of their Legislatures.

What has been done below Cairo? The commission have begun work on two of these reaches, Plum Point reach and Lake Providence reach, as I have already informed the Senate; and now we will hear what has been accomplished. I will let them speak for themselves, quoting from their last report:

NEW MADRID AND PLUM POINT REACHES, 220 MILES.

Since the last report work in this district has been confined to the Plum Point reach, and has been conducted in accordance with the general project described in the report of the commission for 1883.

The works of contraction at Gold Dust, Plum Point, and Bullerton have been repaired and extended, and foot-mats have been sunk along the faces of the principal lines.

Mattress work and upper bank revetment were vigorously prosecuted to the close of the season at Fletcher's field, Osceola Bar, Bullerton Towhead, and Craighead Point. The revetment work has remained in generally good condition, except at Craighead Point, where, although the foot mattresses appear to have kept in place, the upper bank revetment has disappeared.

This last work was undertaken in an emergency to protect a caving bank, was prosecuted under great difficulties, and was suspended before completion when severe cold weather prevented the delivery of stone. The general effect of the contraction works in this reach has been good, the main channel from Plum Point giving 12 feet depth. The deposits within the areas inclosed by the dikes have continued, although there has been no rise of any considerable duration. Bullerton Chute is filling up rapidly and the average fill within the Plum Point lines is about 15 feet. The fill within the Gold Dust system has continued, being in many places considerably above low water. It is especially noted that the old channel cut off by the main dike near Cross-dike No. 1 has closed, changing from a depth of 33 feet at low water to a height of about 12 feet above low water, since October, 1884, a fill of about 45 feet, obtained mostly in one small flood.

Losses in this district have been confined chiefly to the earlier work, the dikes and revetments of later construction having suffered but little damage when completed and secured before floods set in. The present value of the plant used in this district is estimated at about $308,000. The expenditures during the time covered by the report were about $350,000, and the balance available July 1 is about $18,000. Special attention is invited to the remarks and suggestions in the report of Captain Leach, to which, with that of assistant Notly, reference is made for details.

We have through that reach, where there were only 4½ feet of water, a uniform channel 12 feet deep, the work of the Mississippi River Commission.

LAKE PROVIDENCE REACH—220 MILES.

Before this improvement was undertaken the navigation of Lake Providence Reach was poor, the depth in low water being reduced frequently to 5 feet.

The general project consisted in preventing dispersion by closing the chutes and reducing the low-water width to about 3,000 feet by the construction of permeable dikes and the formation of artificial banks by deposit, and the preservation of the natural curves of the river by revetting caving banks. This reach has been improved so that there is now a navigable depth of 15 feet throughout its length.

The greater portion of the work done in this district since October 1, 1884, has been the extension of the revetment in Louisiana Bend (Pilcher's Point), the repair of revetment at Mayersville, and the revetment of Delta Point, Louisiana.

No additional works of contraction were undertaken, operations having been limited to repairs of former work, the construction of three cross-dikes in chutes, and raising the screen work on main lines. The necessity for holding Louisiana Bend and Delta Point has been stated in former reports, but is briefly repeated again on account of their importance.

It was five feet when they began their works and now we have—

a navigable depth of 15 feet throughout its length.

These are the practical results which the commission have achieved with the appropriation already made by Congress. Is it not something that they give double the depth and more than double the depth from Cairo or wherever they have applied their work? The reports show that they have been successful wherever they have made a test of the plan which they have adopted. Not only do the reports show this, but I have here the memorials from the commercial bodies of cities on the Mississippi River, one of which I will read, for they all are of the same tenor:

The undersigned, representing the commercial and industrial interests of the city of New Orleans and the State of Louisiana, are deeply interested in the prosecution of the improvement of the Mississippi as inaugurated under act of June 28, 1879, creating the Mississippi River Commission, and do herein respectfully petition that that body be continued in the full exercise of its powers for the following reasons:

First. Its members are so selected as to guard against the control of local motives and influences.

Second. The surveys and investigations undertaken by them are and will always be necessary for any improvement. They should be continued and completed.

Third. The general principles of improvement adopted by them are in harmony with all investigation, all experience, and the successful works on alluvial rivers.

Fourth. That while the limited appropriations have necessarily localized their work on so great a river, yet whenever work has been done under their plan its correctness has been proved by the results obtained. In evidence, we point to the excellent navigation at and below Horsetail Bar and through the Plum Point and Lake Providence reaches, where low-water depths have been doubled; also to the successful protection of Memphis Harbor.

Fifth. The alleged losses, so far as true, have mainly been where the work was incomplete, and where there was no appropriation to complete and protect them.

We make this petition convinced of the national importance of the work, and with confidence in the commission, its plan, and the results.

There are men engaged in the commerce of the Mississippi Valley, and they testify to the practical results of the plan which has been adopted and bear witness to the statements which have been made.

But I have something even stronger than these reports, namely, the testimony of the captains of steamboats, men who are engaged in commanding the steamboats upon the river. They say:

For years the river through the reaches at Plum Point and Lake Providence has been difficult, dangerous, and almost impossible of navigation at certain seasons except to the lightest class or of partially loaded steamers because of shallow waters, sand-bars, and other obstructions. But now, and as the direct result of the plans of the Mississippi River Commission to improve the navigable condition of those two reaches, fully loaded and the heaviest class of steamers can pass through them at any stage of the water, free from danger or detentions of any kind whatsoever.

Mr. GEORGE. Both reaches?

Mr. GIBSON. Both reaches. We have before us not only the official statements in the reports of the engineers who compose this commission, not only the testimony of commercial bodies in the different cities upon the Mississippi River, men whose commercial relations extend throughout the whole valley, but we have the statements of the captains of steamboats who navigate that river testifying to the results which have been produced by the work and plan of the Mississippi River Commission.

I am reminded that I promised to reply to the criticisms of the honorable Senator from Kansas [Mr. PLUMB] based upon certain anonymous newspaper dispatches declaring that the works at Osceola Chute had given way.

There was some loss in the works at this point when struck by the flood when they were in an incomplete state, but it was soon repaired. In their report, December 19, 1884, page 2541, the commission say:

Of the system of works designed to close Osceola Chute and to hold the two head dikes, Nos. 1 and 2 are in good condition. Behind No. 1 the chute is now dry at 10 feet stage and a growth of willows has started over a large portion of the old river bed. A gap in No. 3 has been closed and general repairs made. This dike is now in good condition.

I have now, Senators, laid before you facts taken from the official reports of the commission, and I feel certain the conclusion has been reached that they justify further appropriations.

It must be borne in mind that though many of the improvements have been made many yet remain, and that the river can not be made fully available until navigation is restored throughout its entire length.

General Gillmore, in a letter addressed to me, dated June 11, 1886, presents this view of the question more forcibly than I can. He says:

It is neither desirable nor expedient that the plan of the commission should be further "tested," as the House bill directs, by the completion of the work on the Plum Point and Lake Providence reaches. The plan has been tested there already with amply successful results; there are 50 per cent. greater-low-water-channel depths now over the stretches of river covered by the works than the commission originally promised to accomplish, and quite enough to insure transportation at the lowest water rates when it shall be extended to the shoals above and below. What is needful there at present is that the works should be repaired and maintained at the stage of most advanced progress reached by them. It is not necessary to deepen the channel to 20 feet to prove that a 10-foot channel is attainable.

It must be admitted, however, that the through navigation of the stream has not as yet received any practical benefit, for the simple reason that the improvement is restricted to localities hemmed in by bad river above and below. Two or three additional reaches of shoals and bars should be attacked with the money that first becomes available, with a view to gradually extending the limits of improved navigation. As we already have a fine plant, fully equipped for service, nearly all the money allotted for works of improvement would be applied directly to them.

OUTLETS VERSUS CONTRACTION.

The honorable Senator from Kansas refers to the many conflicting theories and opinions that prevail as a reason why no further appropriations shall be made. Let us, he says in effect, wait until some plan is proposed upon which all shall agree.

Well, if we wait until that time we shall wait forever.

Macaulay has observed that a man's interest may sometimes lead him even to dispute the law of gravity, and, strange as it may seem, this scheme for the improvement of the Mississippi River is based wholly upon the law of gravity, as I will attempt to show.

There have been but two theories suggested for the treatment of the river—one is the outlet plan first offered by Mr. Charles Ellet, jr., civil engineer, in 1852 (see Executive Document 20, Thirty-second Congress, first session), in an elaborate report to the Secretary of War on the inundations of the Mississippi River, the object of which is to take the water at its flood stages out of the river. The other is the plan of contraction, the object of which is to hold all the water in the river, especially in its flood stages. When analyzed it will be clearly seen that these two plans not only differ from one another, but that they antagonize one another; and if there be any principles in hydraulics they are wholly irreconcilable; if one be founded upon the truth, the other must be founded upon error.

The outlet hypothesis, for it does not rise to the dignity of a theory, has been rejected and condemned by every civil engineer who has ever sought to ascertain a knowledge of the laws which control the river. It was condemned and repudiated by Generals Barnard and Totten—by General Bernard, who died but a few years ago, the senior officer of the engineers of the Army of the United States, and who spent most of his life upon that river. It was rejected by Humphreys and Abbot, who spent ten long years in surveys of the river. It has been again condemned by the Mississippi River Commission, by Captain Eads, and indeed everywhere up and down the Mississippi River by the scientific engineers and by the people who have brought their plain common sense to deal with its phenomena.

Sir, it is contrary to reason and repugnant to every fact that has been elicited by the investigations of the river. What is the problem presented by the Mississippi River between Cairo and the Gulf, a distance of only 600 miles in a direct line, though 1,170 by the river, into which forty-three rivers, navigable by steamboats for 16,000 miles and by bateaux and flat-boats for 50,000, penetrating the valley from the Alleghany Mountains to the Rocky Mountains, bringing down from every city and hamlet and cultivated field and workshop and mountain slope *débris* and waste and sand and *détritus* and emptying them into this basin or trunk line, which has a very slight declivity and slope, millions and millions of cubic feet of sand—the wastage of a continent?

The question is how will you carry these deposits to the sea? If they remain in the channel it is very evident that the channel will be filled up and destroyed, for as it shoals it will widen and as it widens it must shoal, and the reports show that during the periods when the river was neglected and its waters unrestrained it shoaled and widened constantly. When Eads proposed to build his jetties it was held by many eminent engineers that the effect would be merely to transfer the bar further out into the Gulf and that there would be no end to the length of the jetties themselves. Others held that the erosion of the current would undermine the jetties and that they would topple over into the stream. But what has been the result?

The latest reports of engineers made under the orders of the Government show that neither of these consequences has followed, that they stand firm and fixed in the positions in which they were first placed, that the vast deposits have been lifted up and carried into the Gulf, and that not a trace of them remains, while the navigable channel contracted for by the Government has been steadily maintained and preserved.

Investigations made within the last few years have discovered just off the mouth of the Mississippi River a vast basin 2½ miles deep and equal in area to the State of Georgia, a receptacle prepared, as it were, for these deposits of sand that are brought down from the upper country.

Humboldt declared that the configuration of the coast of Texas and Mexico disclosed that there must be a littoral current bearing from the east to the west, and recent investigations have confirmed this prediction of the great scientist. Hence it is we need not give ourselves any concern about what shall become of the *débris* and sand which may be swept by the current of the river into the Gulf of Mexico. There is ample room to receive it and forces to dispose of it.

I suggested at the outset of my remarks that the Government itself contributed directly to increase the amount of sand and *débris* which was emptied into the short basin between Cairo and the mouth of the river by the works undertaken to improve the streams in the upper valley, and that the people who inhabited the upper valley, by the destruction of the forest and the cultivation of the fields, vastly increased the floods and sand poured down into the lower river, and that an interesting question might arise whether there was not an obligation springing from these facts imposed upon the Government to give some protection to the people dwelling upon the l wer river against these extraordinary conditions which have been created either by the action of the Government itself or under its sanction by the people of the highlands. I do not mean to say that the maxims of the law apply to the Government and may be enforced against it, but I do say that there is ground in this view of the matter for the people to appeal on equitable considerations to the Government itself for the speedy improvement of the river.

It must be clear that we can not prevent by legislation the people in the valley from pursuing their lawful avocations nor from draining into the rivers that empty into the Lower Mississippi. We must deal with the results of this vast system of drainage.

But to recur to the question. It is a simple one. How can these vast deposits be removed from the channel of the river? In considering the Mississippi River we must regard it as a river of sand as well as of water.

Now, there are three forces constantly operating upon the Mississippi River upon which the plan of contraction reposes. The main force, as I said a moment ago, is the force of gravity. The fall of the water from the higher to the lower level—that constitutes velocity. The second is the force that checks the current of the water, and that is friction. It diminishes velocity. The third is the relation that exists between velocity and the capacity for transporting the sediment in the river and the amount actually carried along. If these three factors are borne in mind I believe they will enable any one to solve the problem of the improvement of the Mississippi River. We are to depend upon the force of gravity to improve the Mississippi River—in other words, upon its velocity. The greater the velocity the greater its capacity to carry the sand and sediment in it. Wherever the current is checked deposits occur, and wherever the current is quickened a larger amount of sediment is picked up and carried along.

This is apparent to every school-boy who watches the creek in the meadow. Whatever, therefore, multiplies the velocity will increase the force of the river to carry this burden to the sea and whatever increases the friction diminishes the power of the current. The greater the friction the less the velocity. The wider the river the greater the friction and less the velocity, and the more shallow the river will be found in such places.

All general propositions of this kind must be qualified by certain limitations within the bounds of reason. Wherever you find wide places in the Mississippi River, as in the shallow reaches that I have named, which are 10,000 feet wide you will find shallow water and slackest current, and wherever the channel is narrow and the velocity of the current is great you will find not only deep water, but uniformity of width.

I hold in my hand two reports embracing facts established by observations made on different points of the river more than a quarter of a century apart, and though not made for that purpose they verify in a remarkable degree the theory that I have announced. The first may be found in the report of Humphreys and Abbott, made during the floods of 1851 and 1858. I will content myself by referring to the observations made at Columbus, 20 miles below Cairo, and at Carrollton just above New Orleans.

It is shown by the first table that when the river at Columbus was 83 feet above low-water mark an additional rise of 2.1 feet was sufficient to increase the current nearly 1 foot per second, and that the discharge was one-sixth greater. The depth of the river at the time was about 96 feet. Therefore 16 per cent. increase of discharge was obtained with the addition of only one-fortieth part of its depth.

The fifth table which I hold in my hand, taken from the same report, shows that with a difference of only 6.8 feet the discharge of the river at Carrollton was more than double. The river there at its lowest stage was 115 feet deep. Hence there was an increase of only one-seventeenth part of its total depth required to produce this astonishing difference in the discharge of the river. The velocity was at the same time increased 85 per cent. In commenting upon these tables, which are the result of actual observation and careful measurement, Captain Eads says:

> They represent stubborn facts without any theorizing, and they show how absurd are some of the statements made as to the effect of outlets in lowering the floods of the river. For instance, the fifth table shows that when the river (March 19, 1851) was nearly up to the highest water-mark known at Carrollton, it would have required an outlet larger than the Mississippi itself to lower it 6.8 feet. Such outlet would have had to discharge 577,000 cubic feet per second, while the whole river could only discharge 572,000 feet when its surface was 6.8 feet lower.
>
> This enormous quantity of water (577,000 cubic feet per second) would cover a square mile 1 foot deep in about forty-eight seconds. In twenty-four hours it would cover 1,800 miles to the same depth, and in less than a fortnight it would put an average depth of 3 feet over the area as large as the entire State of New Jersey. To lower the river only 2 feet at Carrollton when in flood would require an outlet as big as Red River. This is because such loss of volume lowers the slope and increases the frictional resistance in the main stream below the outlet, and this causes it to flow more slowly and thus prevents that great reduction in its height which the thoughtless would expect.

These observations illustrate in what a wonderful degree a slight elevation of the surface of the river tends to increase its velocity and enables it to carry off the greatest floods.

Now I turn to observations taken by the Mississippi River Commission, and you will see how facts that are remote from one another justify and uphold a theory that is based on truth. I refer now to a report of certain observations made by Maj. C. B. Sutter, a member of the Mississippi River Commission and one of the most accomplished engineers in the service of the Government. In speaking of the effects of an overflow upon the progress of the current Major Sutter says:

> The general effect is one of retardation. My attention was first attracted to the subject in the spring of 1881. * * * We have records of gauges which have been kept up by the Engineer Department of the river since 1871. I got all these records and selected from them the data concerning all well-marked floods or rises. I wanted to get at the law if possible. From these records we were able to trace the progress of each flood from the head of the valley down, and to ascertain its rate of progress from gauge to gauge all platted in. These rates of travel or times of transit from Cairo to each particular gauge were thus platted, and the gauge height reached by the rise at that gauge and the mean curve was computed for that station.
>
> From these curves the mean rate of travel of crests of rises or floods of greater or less degree coming from above may be ascertained.
>
> I have had these diagrams prepared, but I have not got them here. Still I can give you the general results. They show that from low water up to high water there is a gradual increase in the rapidity of transmission of the crests of floods until a certain limit is reached, varying in different localities, which corresponds as nearly as I can find out very nearly with the point where the larger outlets begin to draw off water from the river. At that point the rate of progress begins to show a tendency to slow up. As the river rises the outlet discharge becomes larger and the curve shows a further slackening. Then when the top of the bank is reached, or when a general overflow begins, there is an abrupt change, and from that on I find that as the river rises there is constantly increasing retardation.
>
> To give an illustration in figures I will say that prior to the great flood of last year in November there was a sharp and sudden rise which came out of the Ohio. Its elevation was just about the crests of the banks, about forty feet at Cairo, which was just about within its banks all the way down the river. The crest was perfectly well defined and sharp and well marked so as to be traced from gauge to gauge without difficulty. *That flood passed from Cairo to New Orleans in just ten days.*
>
> The next rise was much higher and produced an overflow. I do not now remember the precise figures, but it was slower in its rate of transmission to New

Orleans and so on with each succeeding rise until finally the highest rise of all *was one hundred days in traveling the same distance.*

The sequence of that is just here—if you have water in any channel like that of a river, flowing off at the lower end as fast as it is supplied at the upper end, you will have no rise of the surface at all. If the channel is obstructed you will have more or less rise depending on the extent of the obstruction. The explanation of this is when a river is within its banks, even in those portions where its condition is the worst, you have a channel which is certainly better for the purpose of discharge than when it extends more or less across the whole valley and a large part of the section is obstructed by trees, bushes, and the thousand and one things which influence the flow of water under these conditions. That being the case, you must have retardation.

It is impossible to expect anything else. The conditions are precisely the same, though varying in degree, as they are between a wide and shallow section where the relative proportion of resistance of frictional surface to area is greatest, and what it is in the case of a narrow and deep section where the relation of area to frictional surface is minimum. When you have an overflow of the valley this frictional resistance is largely increased both absolutely and in its relation to the increased area. The area is not proportionately increased, and consequently you must have retardation of the water.

These observations must carry the conviction to every reflecting mind that the only plan by which the vast accumulations of sand and water precipitated into this trunk line may be borne to the sea is that which will induce the greatest velocity, and that the maximum velocity can be acquired only when the river is confined to its channel at its flood stage. Nor can any one doubt its capacity to discharge the greatest floods by its own channel.

The friction does not increase by the weight of the water as if it were a solid mass. The deeper the current and the greater the volume in proportion to frictional resistance the greater the velocity. Friction is not increased by the depth or weight of the water but by the surface of the bed, by the extension of the channel over the wide spaces in the valley of the Mississippi.

Not only is the velocity greatly increased by the increase of the depth and diminution of the surface with which the water comes in contact, but its power of transporting sediment rapidly increases with the increase of velocity. An increase of 6.8 feet, as was shown by the observation at Carrollton, presents to us the spectacle of a river flowing upon top of another river down an incline plane with an ever increasing momentum, for the friction is very slight—one Mississippi River flowing on top of the other by an elevation of 6.8 feet only above its mean depth. It is estimated that the smallest inclination capable of giving motion to water is the descent of 1 foot in a million, or about one-fifteenth of an inch per mile. A fall of 3 feet per mile makes a mountain torrent. Three inches per mile ordinarily gives a velocity of about 3 miles per hour. The quantity of water and of sand, therefore, that the Mississippi River may discharge depends upon its velocity; and the instrumentalities by which the greatest velocity may be obtained are jetties in the wide places of the river and levees on its banks.

Captain Eads says this power increases with the square of the velocity and diminishes in the same ratio; hence if a shallow shore current move at 2 miles per hour, while the central current moves at five, the shallow water can carry only four units of sediment per unit of volume, while the other will carry twenty-five; hence all silt-bearing rivers have a tendency to deposit sediment in the shallow parts and to take up sediment from the deeper parts of their beds.

He further says:

The theory upon which the jetty system is based is that the shoals, shifting channels, caving banks, and inundations result from these excessively wide parts of the river, and from the escape of its flood waters through lateral outlets and over its banks; and also upon the fact that the greater the volume flowing in one channel of uniform width, the greater will be its excavating or erosive power, and therefore the deeper will be its channel and the lower will be the height of its flood line. The logical remedy for these evils consists in the contraction of the wide places, and in the conservation and concentration of all the flood waters into one single channel of uniform width, by the closure of lateral outlets, the repair of defective levees, and the closure of island chutes.

The grand essential feature of the jetty system consists in bringing the high-water banks to a uniformity of width. The contraction works, costing probably one-fourth as much per mile, do not require to be strong, or kept in repair. Having performed their duty during one flood, the next year's work consists in building other similar structures on the deposits caused by those of the previous year. In some parts of these reaches the deposits caused by these works during the flood of 1883 were over 30 feet deep.

It is a mistake to suppose that when breaches occur through these permeable works the deepening produced in the channel by the parts left uninjured will be lost again if they be not repaired. The tendency of the river, as before stated, is to deepen its deepest channel and to deposit in its shoalest parts. Crevasses through the levees and outlets interrupt this natural process by diverting more or less of its volume into abnormal channels. This interrupts the uniformity of its velocity and a reduction of its volume also takes place. The excavating power of the river depends wholly upon these two, namely, velocity and volume. Therefore its natural tendency to deepen and contract its channel is interrupted and lessened. Keep the whole flood volume within levees, and in forty or fifty years it will assume the desired uniformity of width without other treatment than that of contracting the levees as reclaimable land is made by the river deposits.

These observations all rest when analyzed and weighed upon the doctrine of the force of gravity which alone creates velocity, and they further demonstrate that all the water and sediment may be carried along through the channel of the Mississippi River by invoking the power of the river itself.

To my mind these facts and principles constitute a demonstration clear and conclusive and permit no escape from the proposition that the river is competent to do its own work, to take care of itself, if the skill of man will only aid in directing it.

Mr. President, there is some slight difference, not very great, between a majority of the Mississippi River Commission and Captain Eads. A majority of that commission held that it is necessary to carry on an extensive plan of revetment of the banks of the river, and their reports show that this plan is expensive. They show a loss of 26 per cent. of such work so far. The amendment offered by the Senator from Kansas [Mr. INGALLS] is intended to discourage the execution of this system of revetment, at least until it is seen whether the works of contraction, which are simpler and less expensive, may not, by holding the current in the river, accomplish the desired results of themselves.

I have agreed with the honorable Senator from Kansas because I believe that it is of great importance that a rigid economy should prevail in the plans and methods for the improvement of the Missisippi River, and that not a dollar should be expended which did not bring a good return. It will require but a little time to show whether the dikes and jetties may not answer all the purposes, and that revetments, if necessary at all, may be employed merely to protect the banks at the exposed angles of the contraction works. The amendment will not embarrass the commission, for they are authorized to disregard it if experience should not justify it.

It can not be disguised, Mr. President, that the efficiency of the commission has been impaired by divisions of its councils. There are officers on that commission who, as I am informed, had condemned the plan upon which the jetties were constructed and do not approve its application to the river They have no faith in the plan adopted by the commission for the improvement of the river. They are very far from suggesting outlets, but they submit minority reports condemning the plan which a majority of the commission have adopted. By their influence they have secured compromises by which, in my judgment, the best results have not been secured, and steps that were illogical and inconsistent have frequently been taken.

I do not think that officers ought to be required when any one of them is conscientiously opposed to the plan of the commission to execute the plans which have been adopted and which are contrary to his judgment. Such officers should be relieved from duty on the commission. The logic of the plan of the jetty system or the plan of contraction, as well as the very language of the bill which created the commission, would have constrained the commission to begin its operations at the passes near the mouth of the river and to work up stream. I understand that proposition was defeated by a tie vote in the commission in the absence of Captain Eads. The civilian on the commission defeated a majority of the engineers who were present.

If as the current is confined to the channel the channel be deepened, why necessarily that deepening ought first to be effected in the lower parts of the river so as to increase the velocity not only there but in the middle and upper portions of the river. If the bed of the Mississippi River should be lowered 10 or 15 feet from the mouth of the Red River to the gulf it must be very plain that the surface of the river would be correspondingly lowered and that the velocity of the upper river where these vast reaches prevail would be largely increased. Hence the compromise plan by which the commission began its operations in the middle river at Plumb Point and Lake Providence reaches, while it has produced excellent results, can not be defended as in entire keeping with the principles which have been advocated by the commission itself; that is, by a majority of the commission.

It is shown by the report of the commission that below every one of the crevasses in the lower river accumulations of deposits have taken place which have tended to check and enfeeble the current of the river.

General Gillmore says that there has been a maximum fill of 10.8 feet between the years of 1866 and 1877 covering an area of 2½ square miles in the river below Cubitt's Gap, and that this does not include the fill which took place the first three years after the gap was opened.

Mr. G. W. R. Bayley, one of the most distinguished engineers of the State of Louisiana, says that soundings taken in 1856 at the Bell crevasse, 2 miles above New Orleans, 120 feet was the maximum river depth at that point, but that in 1859 in consequence of the crevasse the maximum depth was only 78 feet.

Mr. Bayley further says:

The mean depth in February, 1859, below both of these crevasses, and before the river had again risen to its ordinary high-water mark, was ascertained to be 42 feet less than in 1856, and beyond question the diminution was caused by the two great outlets of 1858.

Professor Forshey and others made examinations in the great Bonnet Carré crevasse which took place in 1850, which showed that the section of the river below the crevasse had 12 feet less mean depth than the section above.

These facts serve to illustrate the principle that if the velocity of the current and its carrying power and scouring power are increased by contraction they must be necessarily weakened and destroyed by diffusion and dispersion.

That plan, therefore, which will produce the greatest velocity is the true one necessarily for the sure and economic improvement of the Mississippi River, and it must be evident that the maximum velocity may be obtained by beginning the improvement and contraction at the mouth of the river and working up stream rather than by beginning operations in the middle of the river, the effect and tendency of which must be to check the current in the lower river and raise its surface and its bed.

But in the main the results which have been obtained by the com-

mission justify its existence and show that the plan of contraction, however applied and wherever applied, is the only one by which the phenomena of the Mississippi River may be made subservient and useful to man. I do not mean to say that the commission have not met with losses in the execution of their plans. It was novel and difficult to them, and at the outset experimental as to details.

But the plan itself is as old as hydraulic engineering. All the important rivers of Europe have been treated on the plan adopted by the Mississippi River Commission for the treatment of the Mississippi River. I was traveling on the Rhine some years ago and saw the effects of this plan of contraction, which was adopted in the last century, and I borrowed the idea of a river commission from a commission which was charged with the improvement of the Rhine, and I have been gratified to observe that the plans are about the same, or at all events founded on the same principles.

By shortening and contracting the channel of the Rhine the Rhine commission have not only improved its navigation and secured deep water where the river was shallow before this process was applied, but they have recovered vast tracts of country that before were given over to the inundations of the river. They have made Cologne almost a seaport, just as Cairo and Saint Louis will be made seaports in the course of time. The French Government has expended upon the river Rhone, between Lyons and Marseilles, a distance of not more than 150 miles, three times as much as we have voted for the improvement of the Father of Waters, and the plan adopted by the French engineers for the improvement of the Rhone is the plan of contraction.

Mr. EDMUNDS. With what results?

Mr. GIBSON. The results are admirable. I have been over it, if the Senator will pardon the personality. I have conversed with the engineers who are engaged on these works. I can bear personal testimony to their success.

Mr. EDMUNDS. Has not the mouth closed?

Mr. GIBSON. I was not speaking of the mouth of the river but of the river itself. The mouth of that river is a very difficult one, and I do not think the jetties have been applied to it, but they have been applied to the mouth of the Danube with remarkable success. By the same plan the Clyde has been converted into a navigable, noble river, the seat of the best ship-yards in the world, and the Victorian embankments on the Thames have produced the best results. So that the plan proposed by the Mississippi River Commission is not a new plan, though the conditions of course vary somewhat from those that prevail in Europe.

Mr. President, perhaps I ought, in conclusion, to make a passing reference at all events to what is called the outlet system, which appears to find favor in the mind of some Senators.

It is very natural that persons who do not live upon sedimentary streams should look upon the outlet system as the correct one. Senators who reside in the upland country upon clear-water courses as a matter of course would say in seasons of flood the way to deal with the water is apparent, it would be to get rid of it by an outlet; but on a stream like the Mississippi where we are not subject to freshets but to vast accumulations of water for many months in the year, when you let the water out you let the force out, and the sand and *détritus* remain in to fill up the channel.

I do not know of a single engineer who does not unite with General Gillmore in condemnation of the outlet system as applied to the Mississippi River. It is not heard of in the valley of the Mississippi, but it comes to us from a distance, and, so far as I know, is commended only by persons who imagine that it would serve their private purposes by filling up swamp lands where the crevasse or outlet might be made. A crevasse below the city of New Orleans at Lake Borgne would inflict a loss upon the people of that community of not less than $50,000,000.

If you will take away for a few days only the guards who stand watching the levees for three or four months every year when the river is full to prevent a crevasse or outlet you would find that a crawfish would make one without expense to the National Government in that time.

When a crevasse threatens at a particular point in the neighborhood everybody, old and young, will rush to the rescue just as you would to a fire in the town in which you live.

I served once as levee commissioner on the banks of the Mississippi River with General Richard Taylor as my colleague and obtained some practical knowledge of this thing; and I believe to-day if an attempt were made by anybody to cut the banks of this river and let in the floods upon the people it would require an armed force to prevent them from rising *en masse* and inflicting punishment upon the authors of such a calamity. That is the practical view the people take of it.

I know that a great many good men imagine that the people in the Mississippi Valley and the Senators and Representatives in Congress who are sent here to speak and work for them do not know what is best for themselves. I do not pretend to say that we all may not be mistaken, but my observations in life, wherever I have wandered, have taught me that the judgment of the people of the place where I happened to be on any particular matter concerning their personal and social welfare was the best judgment that could be brought to bear upon the solution of any practical problem concerning their own comfort and happiness.

I do not believe that the people of the Mississippi Valley constitute any exception to this rule. From the time that valley was first settled by chivalric Frenchmen, followed by the adventurous Spaniard, and after them by Americans, as they are called, that community put forth its best efforts to restrain and keep the river in its channel from its mouth as high up as Baton Rouge and Red River.

The coast, as we call it, was first settled. The land has been cultivated like a garden for more than a hundred years, and it is one of the most beautiful countries upon which the sun shines. The levees along the plantations and homes that border on this part of the river were made substantial and strong and it is rare that a crevasse has occurred upon them.

Behind them was large wealth, a cultivated and enlightened population. What has been the result, Senators? Why, the engineers declare that the river from its mouth to Baton Rouge is an ideal river and it has become an ideal river because the waters were kept by these restraining walls in the channel so that no vast reaches have been formed there and no great sand-bars, but the navigation has been preserved.

But go above Baton Rouge and above Red River, where there was a sparsely settled community of cotton planters who began the levee system after 1840, and what do you find? There it is that the obstacles to navigation exist, and there it is that the rise and fall of the river is three or four times as great as in the lower river where the bed has been sunk by the scouring force of the river, preserved by the dikes upon its banks. You could have no better illustration of the effects of the plan of contraction than by comparing the lower river where that plan has been more or less kept up with the middle river where it has not been fully applied and has not been preserved.

But in order to achieve the best results it is necessary if there be any truth in the theory of contraction that the work to induce the maximum velocity should be begun at the mouth of the river and that the line should be made continuous and complete throughout the alluvial region. I do not believe that it would require very large or expensive works if they were made continuous. An unbroken thin line is more effective than the most powerful works consisting of detachments separated from one another. The momentum once acquired should never be lessened by a gap or outlet, but steadily and constantly increased by inclining the plane and fall without interruption.

I have already referred to the fact that examinations have established the truth that wherever there is a crevasse there is a deposit below it and that whenever a crevasse is closed the deposit is removed by increased scouring force of the river, so that I will not delay longer upon what is called the outlet system.

I have endeavored to place before the Senate in a plain and businesslike way the reasons which led to the formation of the commission for the improvement of the Mississippi River, how the idea originated in the successful application of the jetties at the mouth of the river.

I have endeavored to show what the obstacles to navigation were in the bed of the river throughout its entire length, how the commission which was created have sought to remove these obstacles and how far they have been successful. I have attempted to show that the appropriations have not been misapplied, that they have not been expended by the commission at all, that they do not handle a dollar of the money, but that they have been expended under the direction of the Secretary of War through the Engineer Corps of the Army. I have endeavored also in a desultory way to explain the principles upon which this plan of contraction rests, and how, if properly and legitimately applied, it is fully capable of disposing easily of all the water and all the sand and the *débris* brought down from the immense valley into this basin from Cairo to the Gulf, which bears the same relation to the 50,000 miles of streams tributary to it that the pass in which the jetties were placed does to the lower river.

Interstate Commerce.

SPEECH
OF
HON. CHARLES S. BAKER,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 21, 1886,

On the bill (S. 1532) to regulate commerce.

Mr. BAKER said:

Mr. SPEAKER: Not with any antagonism to railroad corporations should we approach the subject of governmental supervision of that class of common carriers, but rather as the friends and conservators of the public welfare—of the great commercial interests and prosperity of the whole country. We are in duty bound to bring to the consideration of this most important subject our best and maturest judgment. I hold

that he is the best friend of railroad corporations who stands squarest by the rights and interests of the public.

It has been well said that the corporation "has become the all-important factor in the social arrangement of modern civilization." With the growth of the present system of railway transportation in our country there have crept in so many abuses—such disregard of chartered duties and obligations—that within a dozen years past many of the States have, through their Legislatures, asserted their constitutional right to exercise a voice in the supervision of common carriers, to the end that the public should be protected against the evils and injustices which are so apt to creep in where large powers are exercised under corporate management.

In many of the States there already exist boards of railroad commissioners charged, as a rule, with supervisory or advisory powers concerning common carriers, representing in their organization public sentiment and the law, clothed with power to investigate abuses, to let light into dark places, an ever-present agency, prepared to arbitrate between railway carriers and their patrons—the public.

The constitutional right of the States and of Congress to deal with these questions is no longer doubted.

The proposition so ably advocated by the distinguished chairman of the Committee on Commerce is to my mind of that character which may be denominated inflexible legislation. It would deny to common carriers that reasonable elasticity of judgment common to all other corporations and most essential to prompt transportation conclusions, because, as has been well stated, transportation deals more or less directly with the interests of most business men.

The existence of the evils hitherto sought to be remedied by State legislation, and now by Congressional enactment, is notorious. They have been proven before investigating committees raised by and acting under the authority of State Legislatures, and most recently before the Committee on Commerce of the Senate of the United States, which submitted an elaborate report (No. 46) to that body in January last, accompanied with a bill, which, as passed by that body May 14, is before us as S. 1532, and embodies their recommendations to this Congress.

Of the existence of the abuses which have grown up under our present railway management, I need only to cite the evidence of two eminent witnesses, themselves distinguished railway managers both theoretically and practically. The first, Mr. Adams, in a discussion before the committee of Congress several years ago, said:

So far as the railroad system and the railroad business of the country is concerned I propose to argue to this committee, and endeavor to convince it, that hitherto in the case of the vast body of legislation enacted in respect to them no attempt whatever has been made to study anything except outward manifestations; that almost uniformly the symptoms have been mistaken for the disease, and the remedies intended to remove the evil have consequently only tended to aggravate it. That I may have any chance of success in this effort I must ask you to dismiss all preconceptions from your minds and to fairly consider what is the real cause of the inequalities, the injustices, the discriminations of the existing railroad service—those ills of the body-politic for which you are now undertaking to prescribe. I will not stop to dwell upon them or to denounce them. It is not necessary to do so, for I hold them to be proven and their existence notorious. The record is full of evidence on the subject.

We all know, every one knows, that discriminations in railroad treatment and charges do exist between individuals and between places. We all know that railroad tariffs fluctuate widely, not only in different years, but in different seasons of the same year. We know that certain large business firms—the leviathans of modern trade—can and do dictate their own terms between rival corporations, while the small concern must accept the best terms it can get. It is beyond dispute that business is carried hither and thither, to this point, away from that point, and through the other point, not because it would naturally go to, away from, or through those points, but because rates are made on an artificial basis and to serve ulterior ends. In regard to these things I consider the existing system nearly as bad as any system can be.

Studying its operations, as I have, long and patiently, I am ready to repeat now what I have repeatedly said before—that the most surprising thing about it to me is that the business community sustains itself under such conditions. The first principles of law governing common carriers are habitually violated. Special contracts covering long periods of time, are made every day with heavy shippers, under which the common carrier, whose first duty it is to serve all equally, gives to certain parties a practical control of the markets. There is thus neither equality nor system, law nor equity in the matter of railroad charges. A complete change in this respect is a condition precedent to any just and equitable system of railroad transportation.

The same gentleman on another occasion has said upon this subject:

Each road or combination of roads is now a law unto itself. It may work in concert with other roads or combinations, or it may refuse to do so. It may make rates to one place, where it may think for interest that business should go, and may refuse to make them to another place where it is for its interest that it should not go.

All this is essentially wrong. Yet the business community of America, from one end of the country to the other, has been from the beginning so thoroughly accustomed to the extreme instabilities of railroad competition that it has wholly lost sight of what its own interest requires.

What it needs is certainty, a stable economy in transportation, something that can be reckoned on in all business calculations, a fixed quantity in the problem. This, of all results the most desirable, is now even looked upon with apprehension. There is an idea, the result of long habit, in the public mind that so far as transportation is concerned prosperity is to be secured through a succession of temporary local advantages and unending cutting of rates. The idea of a great system of internal transportation at once reasonable, equitable, and certain, permitting traffic to flow and interchanges to be made just how and where the interest of buyer and seller dictate, never discriminating, rarely and then only slowly fluctuating—this is a conception very far removed from the reality, and it may well be doubted whether it even now commends itself when stated to the average man of business. He clings, on the contrary, to the burden of inequalities to which he is accustomed, and is inclined to doubt whether he could live without them. It is as if a mariner had become so habituated to a constant succession of squalls and simoons that he questioned whether it would be possible to satisfactorily navigate a ship in trade winds, especially if the trade winds blew for all.

The second witness I quote, Mr. Fink, of still more experience and knowledge in railway affairs, has said:

The practice of making special contracts with some shippers, the larger shippers generally, at lower than regular rates, and charging the regular rates to all other shippers, constitutes one of the most unjust discriminations. It is practiced to a great extent. The rate of transportation between two points should be the same to all shippers. There is no ground for discriminating in favor of the large shipper. * * * Any discrimination made in his favor is entirely arbitrary. * * * There is no rule, no principle, on which it can be established or defended. All arbitrary discrimination works injustice to others. A common carrier has no right to make itself a party to such transactions. Moreover it is not to its advantage to do so. This policy of discrimination prevents the employment of small capital and prevents the building up by slow degrees the industries of the country. Only large capitalists can afford to carry on business, and they are not always to be found. From small beginnings, if properly fostered, large enterprises are built up. The larger manufacturers enjoy already sufficient advantages over the smaller. Being able to produce cheaper, they do not require the aid of railroad companies to still further discriminate in their favor.

The experience of every State thus far has demonstrated that inflexible legislation will not work a cure of the existing evils. It must be remembered that the problem of transportation is an unsolved one, and from its very nature must ever remain so. Each generation must determine for itself. The constantly shifting conditions which surround it, the ever-changing elements that enter into it, the continual offerings which genius contributes to cheapen and facilitate transportation, present an ever-shifting phase to this kaleidoscopic question, calling for an ever-varying solution. The telegraph, the steel rail, the improved motor, the Atlantic cable, and kindred causes have revolutionized and are continually revolutionizing commerce. The tariff of a dozen years ago seems extortion in the light of present charges.

The bill urged by the honorable gentleman from Texas is simply declaratory and penal, while experience has abundantly demonstrated that an administrative measure—a power representing at once public sentiment and the law, has in every State and country where created proven far more efficient in the prevention of unjust discriminations and in securing due regard for existing common-law obligations.

In discussing this proposition, or one of similar character, Mr. Adams well stated:

It is declaratory of the law and it is penal, but how is it to be put into execution?

Like any other law, you answer, by parties sustaining injury, through the courts of justice. I respectfully submit that the answer is a practical begging of the whole question. The parties in this case are not equal before the court. In wealth, in organization, in power of injury, in power of obstruction, in power of terrorism, if you please to say so, one is infinitely greater than the other. The thing speaks for itself. It is mere waste of time to argue it. In the hands of the railroad companies the law's delay alone is an advantage equivalent to the mastery of the situation.

A bill declaratory and penal in its character is, therefore, defective in that it fails, and fatally fails, to meet the existing exigency. It is giving a stone in answer to a cry for bread. More than this, it is defective also that it transposes the natural order of things. Entering upon a new and wholly untrodden field of legislation, it undertakes to declare principles and to impose penalties, not only in advance of any thorough and systematic investigation of abuses, but without providing any machinery at all for their investigation hereafter. Everything is referred to a committee of the whole people—a sort of town meeting, forty millions strong. It is for this reason I submit that any bill you pass, to be really effective in immediate working and fruitful of future results, should be administrative rather than declaratory and penal. Indeed, so far as railroad corporations are concerned, I can not say that I regard your merely declaratory statutes, no matter how penal you make them, as of any considerable moment.

Practically they are mere harmless thunder. What is needed, in my opinion, is something of a very different character; it is thorough, immediate, searching investigation, throwing the keen light of publicity into the secret places of railroad management. It is there the abuses lurk, and they do not love the day. Indeed, when they are dragged into the day they speedily die.

I believe the ultimate solution of the railroad problem must come through a federation of the railroad system, supplemented by an administrative measure.

It is based upon a thorough study of the subject, and relies on investigation and publicity rather than upon a continued wrangling in the courts. The necessary penal legislation—and on this point I would not be mistaken, I think penal legislation will be necessary—should follow and not precede legislation. The concrete cases should first arise and be made the subject not of slow and profitless litigation, but of swift inquiry on the spot; and from these concrete cases the body of general legislation should gradually be developed. A governmental machinery would thus by degrees be built up corresponding to and competent to cope with that federation of the railroads which is to check the process of consolidation and preserve the essential principle of competition.

On the one side we would have the federation rendering all the members of the system amenable to control, while over against this organization, confronting it, would be the Government tribunal representing the community, public opinion and the law. This is almost the precise result which was arrived at in Great Britain in 1873; and since then the chief cause of complaint in Parliament has been, that there were not a sufficient number of complaints preferred against the railroads to keep the commissioners reasonably occupied.

These considerations, Mr. Speaker, lead me to oppose the proposition of my friend from Texas, and to urge in lieu thereof the creation of an interstate-commerce commission, charged with the powers and duties as provided in the Senate bill recently passed. I desire moreover to suggest some amendments. I would advise an amendment thereof so as to constitute the board of nine instead of five members. The vast interests with which the board will be called to deal can hardly receive due consideration by less than nine men, and they should be men of no ordinary mold. In section 10, page 12, between lines 26 and 27, I would insert the following:

Said commission may in like manner investigate any differences, disagreements, controversies, or disputes that may at any time exist or arise between any railroad company or corporation and the employés thereof, and in case of any differences or disagreements involving the hours of, or the compensation for, labor by the employés of any railroad company or corporation, said com-

mission shall immediately upon receipt by them, from a duly recognized representative of such employés of any such railroad corporation or company, of a statement in writing of the differences existing and of the demands or requests made, proceed to investigate and determine the same, exercising therefor all the powers conferred by section 9 of this act, and the decision or award of such commission shall relate back to the date when such differences arose: *Provided*, Such employés shall not pending such investigation, by striking or otherwise, prevent the usual operation of such railroad and the prosecution of the business thereof as fully and freely as if no differences existed.

In my judgment the interests of the people, through whose patronage has come, and must continue to come, all the prosperity of the great and growing railway interests of the country, demand the enactment of a measure embodying the powers proposed to be created by this bill. More than that, the best and highest interests of common carriers demand legislation which, while rigidly guarding the welfare of those who are while carrying on the business of the country compelled to employ the services of railways, shall at the same time tend to promote their welfare and prosperity.

These corporations represent great aggregations of capital; they, like the money represented by them, are but the fruits of labor.

We say of the railways of our country—now more than 125,000 miles in the aggregate—they represent so many billions of dollars. True, but all those billions are merely consolidated labor; and if they are to be further employed in the service of man must be supplemented by other labor. If, therefore, by ill-considered, unwise enactments we cripple the free employment of all this aggregate capital, do we not at the same time strike a deadly blow at labor? We point with just pride to the growth and prosperity of our country. We see that labor has spanned the continent with highways of steel, and as the States have become populous and great we recognize the fact that railways, more than anything else, have contributed to such greatness. Indeed, our first resources, all the gifts of humanity, are the conquests of labor; and nothing is truer than that commerce and industry, capital and labor perform a single and similar function despite their different tools and processes.

If, therefore, we legislate in the best interests of the producer we are fostering the highest welfare of capital itself. If by our act we enhance the security, prosperity, and usefulness of the transporting companies of the country and of the capital employed, it is plain that we subserve the welfare of that class without whose aid the Representatives on this floor from the golden shores of California would have experienced a tiresome journey indeed when transporting themselves from their homes to these Halls. The timidity of capital is proverbial. To be profitably employed it owes to labor profitable employment also. Wise legislation is such as while conserving the interests of one will promote and secure justice to the other.

These objects can not be secured through inflexible legislation, whether affecting common carriers or their patrons. That legislation is necessary, that it is demanded, is no longer an open question.

The grange legislation in the West some years ago was to my mind of the character proposed by my friend from Texas. That was repealed and superseded by an administrative supervisory power, such as is now proposed by the Cullom bill. Under this we may confidently calculate upon an intelligent investigation of the whole great problem as now confronting us.

The proposition to invest the board with the power and duty to investigate, arbitrate, and make award in cases of differences between railway companies and the employés is in some respects new. Its trial will involve no expense to Government or subjects. The disinterested agency most likely of all to be prepared at a moment's notice to consider cases and differences of the character mentioned, and which is likely at all times to be familiar with the conditions and circumstances surrounding common carriers and those whose labor keep the wheels of commerce in motion, it seems to me will always exist in a well-constituted board of interstate-commerce commissioners.

I believe such a provision would go far to reconcile the differences and avoid the dangers of the past. Nothing can be conceived more cruel than a general labor strike. It stops the wheels of commerce. It is a war carried on by suspended labor at its own expense and at the cost of the families of the laborer.

When justified by the facts and circumstances it is a wrong the responsibility whereof rests upon the employer in refusing to labor its fair remuneration. The amendment proposed by me does nothing more than afford an immediate and disinterested means of arbitration without cost to either party and holds out a most persuasive inducement against strikes.

I am asked, where is the power to enforce the award in such cases? My reply is, the highest court in the land. It is always in session, and its decrees are more binding than any statute—public sentiment.

This court, if we consider a moment, renders many statutes mere dead letters, and is potent for the enforcement of its edicts always. Through the agency proposed public sentiment is concentrated upon a given case, and a railway corporation, if adjudged to be in the wrong in a controversy involving, if you please, the hours of, and compensation for, labor, would hardly dare bid defiance to a decree or award so made and so disregard public sentiment, for if it did then a strike could be made which would be justified in advance and merit the moral support of every fair man in the whole land.

The Navy.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 18, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8975) making appropriations for the naval service for the fiscal year ending June 30, 1887, and for other purposes—

Mr. WHEELER said:

Mr. CHAIRMAN: I fully concur with the gentleman from Rhode Island [Mr. SPOONER] that something more than sentiment should actuate us in considering the naval question.

I also desire to say that the first duty of Congress is to extricate the question from the domain of political controversy, and, for one, I intend to vote for building up our Navy; and we now have an administration which the country feels confident will do it with that honesty of purpose which will attain the desired result.

In 1865 the Navy of the United States was superior, in many respects, to that of any other country, not excluding that of Great Britain.

We had built iron ships which were looked upon with amazement by the naval architects of Europe; and it appeared to a confiding people that the United States was prepared to assert and maintain its supremacy in the open sea, and that the Stars and Stripes floating to the breeze would command the respect due to so great and powerful a Republic.

From the early days of this Government up to 1865 the Navy of the United States was equal to any exigency. Our own people were confident in its strength, and it was respected by all nations.

Its efficiency was not due to any extravagant expenditure.

WHAT OUR NAVY HAS COST.

From 1789 to 1861, a period of seventy-two years, we expended on our Navy $360,042,169, an annual average of only $5,000,585. During the four years of war there was expended $314,223,986, an annual average of $78,555,996, and during the twenty years of peace, commencing with the year ending June 30, 1866, there has been expended $417,779,965, an annual average of $20,888,998.

The question is not what has been done with this vast sum. It is enough for us to know that it has not been judiciously expended. If during these twenty years we had used one-fourth of our annual expenditure for the construction of first-class ships and armaments we would now have an effective navy, fully adequate to all the requirements of our position, and it behooves us to adopt without delay a new and wise policy.

DANGER OF DELAYS.

I think it may be worth considering in this connection if the very wisest policy for a country anxious to remain at peace with all the world is not to be ready at any time to go to war with any power.

I am aware that some gentlemen entertain the idea that it will be time enough to engage in preparations for an armed conflict when, by some means, we shall have become embroiled with a foreign government. In my humble judgment it will be most unwise for us to pursue any such policy. I am firmly convinced that perfect readiness for war is the surest means of maintaining peace.

History is filled with illustrations of the truth of this proposition.

Any of us may readily conceive how it might happen that, being wholly unprepared for war, we would be plunged into hostilities that mere readiness for the contest would have avoided.

Should differences arise with England (or any other power), the mere fact of our engaging in unusual and hurried preparations for war would be immediately followed by similar preparations on the part of our possible opponent. This would inevitably engender bad blood, stimulate ill-feeling, and intensify antagonisms to such a degree that all pre-existing spirit of conciliation or concession on either side would probably be swallowed up in the sentiment of national pride, jealousy, and passion, and a contest would be precipitated which diplomacy might have avoided had not the necessity of preparing for war rendered peace impossible.

I insist, Mr. Chairman, the way to preserve peace is to be ready for war.

ECONOMICAL SHIP-BUILDING.

Those who have been accustomed to read of the hundreds of millions of dollars expended upon a navy, would be surprised to learn at what a comparatively small outlay first-class iron men-of-war can now be constructed.

The superior and cheap iron now being developed within easy access of the Gulf coast will, of itself, enable us to construct iron vessels on the Gulf at about one-half the amount heretofore paid for such ships. Another important feature of economy in the construction of such vessels is the fact that the temperature on the Gulf is such that iron ships

can be constructed in navy-yards on the Gulf at all seasons of the year, while in the colder climate where iron vessels have heretofore been constructed, much time is lost and additional expense incurred in localities which are subject to great changes of temperature.

When vessels were built of wood they were very properly constructed at points near where the timber grew, and Maine, on account of its vast forests, became the great ship-building State of the Union. Now that iron has become the material of which ships are built, a due regard for economy requires that such vessels should be constructed as nearly as possible to the great iron beds where that metal is most abundant and least expensive.

This is a proposition which can not be questioned, and therefore no gift of prophecy is required to foresee that within a comparatively few years the gulf ports must become the center of the bulk of our ship-building industry. Not only can iron be obtained here more cheaply than elsewhere, but, singularly and significantly enough, these ports are surrounded by the very timber which for years past has furnished a very considerable portion of the masts and spars for the ship-builders of all the world.

OUR INFERIORITY AS A NAVAL POWER.

The great bulk of our expenditure for the last twenty years has been for the maintenance of the Navy and for repairs of old ships.

I find that since the war we have expended for repairs of vessels and machinery and equipments $43,385,598, while less than $40,000,000 has been expended in constructing new vessels. The amount spent since 1886 is stated by Secretary Whitney, on page 33 of his report to Congress:

The country has expended since July 1, 1868—more than three years subsequent to the close of the late civil war—over seventy-five millions of money on the construction, repair, equipment, and ordnance of vessels, which sum, with a very slight exception, has been substantially thrown away, the exception being a few ships now in process of construction. I do not overlook the sloops constructed in 1874 and costing three or four millions of dollars, and to avoid discussion they may be excepted also. The fact still remains that for about seventy of the seventy-five millions of dollars which have been expended by the Department for the creation of a navy we have practically nothing to show.

It is not necessary for us to discuss what navy we have. The Admiral of the Navy, in his last report, says:

At the present time we have literally nothing in commission but so-called "vessels of war" that can scarcely perform the duties of a peace establishment, and in case of a conflict with any naval power the aforesaid war vessels would have to go into retirement until peace was declared, the largest of them having neither speed nor battery that would enable her to contend successfully against a two-gun modern French or English gunboat.

This matter was clearly stated by the Secretary of the Navy in his annual report to Congress. He said:

At the present moment it must be conceded that we have nothing which deserves to be called a navy.

And as proof that this lamentable condition of our Navy was not a recent discovery, Secretary Whitney says:

The highest official authority in our service said in 1876:

"There is no navy in the world that is not in advance of us with regard to ships and guns, and I, in common with the older officers of the service, feel an anxiety on the subject which can only be appreciated by those who have to command fleets and take them into battle."

And so recently as 1883 the same distinguished authority stated that it was universally admitted that "we have no navy, either for offense or defense."

And after commenting upon the money which has been spent, the Secretary further says on page 33 of his report:

It is questionable whether we have a single naval vessel finished and afloat at the present time that could be trusted to encounter the ships of any important power—a single vessel that has either the necessary armor for protection, speed for escape, or weapons for defense. This is no secret; the fact has been repeatedly commented upon in Congress by the leading members of both parties, confessed by our highest naval authorities, and deprecated by all.

Secretary Chandler, in his report of 1882, said:

It is not the policy of the United States Government to maintain a large navy, but its reputation, honor, and prosperity require that such naval vessels as it possesses should be the best which human ingenuity can devise and modern artificers can construct. Our present vessels are not such, and can not be made such.

A year previous, Secretary Hunt, in his annual report, in referring to the Navy, used language which I will read:

Emergencies may at any moment arise which would render its aid indispensable to the protection of the lives and property of our citizens abroad and at home, and even to our existence as a nation.

We have been unable to make such an appropriate display of our naval power abroad as will cause us to be respected.

SPECIFIC DANGERS SHOULD BE CONSIDERED.

While the reports of our Secretaries of the Navy for many years past have clearly and conclusively demonstrated the inefficiency and inadequacy of our naval establishment, it seems to me they have not pointed out the specific dangers to which we are exposed by our absolute helplessness against hostile vessels provided with all the improvements in means of offense and defense which are the distinguishing features of modern maritime warfare. Our want of ships, the humiliating inferiority of our armaments as compared with those possessed by nearly every other power on earth, have been eloquently and forcibly dwelt upon. But this has been done in general terms, and the result of this absence of detailed and definite information as to our defenseless condition has been to create on the public mind the idea that while we ought to have a better and more efficient Navy, yet our not having it exposes us to dangers so shadowy, vague, and undefined that by many they are regarded as non-existent and consequently there has been no such earnest, imperative demand for the best vessels and the most powerful armaments as would have followed a just appreciation of the humiliation, disgrace, and pecuniary loss to which we are exposed.

And it is but natural that this should have been so. Americans are a proud, self-reliant people, more prone to overconfidence than to even a reasonable distrust of their power to grapple with and overcome any difficulty or danger, and therefore they are slow to take alarm, especially when the danger is so vague and undefined that it is regarded merely as a threatening possibility.

But courageous and self-reliant as they are Americans are neither reckless nor fool-hardy, and while they may be constitutionally and habitually indifferent to dangers to which their attention is invited in general terms, if we can only make it clear to their understandings that the peril is positive and specific they can safely be relied upon to take prompt and effective measures for their protection.

I may be in error in my estimate of this trait in the character of our people, but, right or wrong, that is my opinion at this time. I have therefore regretted to observe that in the able discussions upon this bill, as well as in the reports of our Secretaries, there has been too much adherence to generalities and too little definite and specific presentation of the evils which our defenseless condition is hourly inviting.

A great deal has been said, Mr. Chairman, that has been interesting and instructive. The able and eloquent advocates of the theory that we should have and must have an efficient navy have illustrated and enforced their arguments in a manner which is very convincing. I shall therefore only briefly allude to some points which have not been considered in the discussion. Before doing so I wish to premise that all the facts I state regarding the condition of our defenses are thoroughly known to all the European governments, and are matters of the most detailed record in their archives.

FOREIGN NAVIES.

To make the point I desire to present perfectly clear to the comprehension of every one, it is necessary we should have specific and accurate knowledge of the naval strength which could be brought against us in the case of war. For this purpose I have prepared a table to which I now ask attention.

Naval strength and annual expenditure of different countries.

Nations.	Total ships.	Available ships.	Total personnel.	Annual expenditure.	Population.
Great Britain	388	336	58,000	$56,928,850	35,246,633
France	436	308	67,636	46,884,161	37,405,290
Russia	197	185	28,400	25,326,000	98,356,100
United States	89	68	11,300	16,021,080	60,000,000
Italy	76	60	12,032	11,529,710	28,452,689
Germany	99	96	13,000	9,802,880	45,194,172
Spain	145	142	21,700	7,466,538	16,625,860
Brazil	34	34	5,800	6,100,000	10,108,291
Austria-Hungary	49	44	9,800	5,369,295	37,741,413
Holland	138	138	10,500	5,032,450	1,400,000
China	49	49	.....	5,000,000	434,626,000
Chili	10	10	1,000	4,359,893	2,400,396
Turkey	100	100	40,400	4,000,000	25,026,480
Denmark	59	59	1,300	3,081,892	2,096,400
Argentine Republic	25	25	1,500	2,915,000	2,400,000
Japan	31	29	7,000	2,103,630	35,700,118
Portugal	26	26	3,500	1,918,780	4,550,699
Sweden	58	57	4,000	1,448,064	4,455,668
Greece	25	25	3,450	885,635	1,979,423
Norway	32	32	1,000	470,000	1,806,900
Roumania	10	10	700	123,000	5,376,000
Mexico	5	5	720	.....	9,389,461

This table gives only a very imperfect idea of our relative naval strength as it will be observed that the Navy Department has, for many years past, called the attention of Congress to the inferiority of the few vessels which we have.

NAVAL ARMAMENTS.

But another great difficulty is the inferiority of our armaments. We have relied mainly upon the old smoth-bore guns. The largest throw a projectile weighing 450 pounds a distance of from 2,000 to 3,000 yards.

We have just completed two 8-inch breech-loading guns which will throw a projectile weighing 250 pounds a distance of nearly 8 statute miles, and six more similar guns are being constructed. Two 10-inch guns to carry projectiles weighing 500 pounds, and one 10½-inch gun the projectile of which will weigh 550 pounds, are now being constructed. The range of these guns will be about the same as that of the 8-inch gun.

But even with these improved guns we are very far behind other nations. There are now mounted upon vessels of foreign navies one hundred and twenty-nine guns which will throw a projectile 10 miles and upward. The caliber of these guns varies from 12 inches to 17 inches, and they throw projectiles which weigh as high as 2,000 pounds. There

are also afloat, in foreign navies, sixty-six guns which throw projectiles weighing from 900 to 1,250 pounds a distance of at least 9 miles.

The charge for the largest named gun is nearly 1,000 pounds of powder, and the projectile is charged with 83 pounds of powder to explode this huge mass of metal at any given moment. Each of these guns can be discharged every ten to fifteen minutes.

I will now read a table, compiled from official reports, showing the vessels which carry guns such as I have described. The reports from which the table is prepared are based upon data more than a year old. From these reports it appeared that some of the guns were shortly to be afloat, and it is believed that all, or nearly all, are now in actual service.

GUNS AFLOAT RANGING POSSIBLY TEN MILES OR UPWARD.

We therefore see that the vessels of any of these nations could lie beyond the range of any guns we have and destroy any ship of the American Navy.

But this is not the worst. They could float unmolested off our coast and bombard nearly all our seaport cities.

NEW YORK AND BROOKLYN.

These cities have a population of 1,772,962. One of these vessels could float in 30 feet water off Coney Island, beyond the range of any guns in our forts, and throw projectiles into the business part of the city of New York and to nearly every point in the city of Brooklyn.

I would like to ask what would be the effect if a shell weighing 2,000 pounds should drop and burst at the corner of Wall street and Broadway, and what would be the further effect of a few hundred such shots in New York and Brooklyn. And yet such an occurrence is at this moment a mechanical possibility.

BOSTON.

This city has a population of 369,832. An enemy's vessel could lie in 30 feet of water 5 miles from the State-house in Boston, and throw these massive shells into Lynn, Chelsea, Charlestown, the navy-yard, East Boston, Boston, Cambridge, South Boston, Roxbury, and Dorchester.

PORTLAND, ME.

This city, with a population of 35,080, could be shelled by any one of the vessels described in the table, lying off to the northeast of the city, or the southeast, in more than 30 feet of water, at distances varying from 3 to 4 miles.

NEW BEDFORD.

This city has a population 26,845. Any vessel with such an armament as I have described could lie off in the outer harbor, at almost any point to the southward of the city, in 27 or 30 feet of water, at any distance the commander might select, from 2 to 6 miles, destroy the bridge to Fairhaven, and either exact a heavy contribution or lay the city in ruins in a few hours.

PROVIDENCE.

The harbor at this point has numerous shoals, which, in the absence of a pilot, would render it impossible for a hostile ship to approach it safely nearer than 6½ miles (Conimicut Point), but the high-powered guns I have referred to could readily destroy the vast and important manufacturing industries which center at Providence, with its population of 104,857, from even a greater distance.

NEW HAVEN.

This city has a population of 62,882. Vessels could rest securely 4 miles from the city, in 30 feet of water, and destroy it in a very few hours.

NORFOLK.

The population of this city is 21,926. Vessels drawing 26 feet of water can approach to within 7 miles, and, with high-powered guns, shell every fort of the city.

BALTIMORE.

This city, with a population of 332,313, is, in a great measure protected by the difficulties of access, but it would be possible for vessels drawing not more than 15 feet to sail abreast of the city, and some of the vessels carrying guns of 10 miles range draw but 10½ to 15 feet.

WASHINGTON.

The capital of our country was once in the hands of British troops. It is 200 miles from the ocean, but vessels drawing 19 feet can sail to the city. Its population is 159,871.

RICHMOND.

This city has a population of 63,600. It is 150 miles from the mouth of James River, which has 13 feet of water to the city.

CHARLESTON.

This city has a population of 49,984. There are many points not more than 7 miles from the city from which vessels drawing 25 feet could shell the city.

SAVANNAH.

This city, with a population of 30,790, could be easily protected. Only very light-draught vessels can approach nearer than 10 or 12 miles.

PENSACOLA.

This city has but 6,845 population, but it is important on account of its excellent harbor. A position could be taken in 30 feet of water south of Santa Rosa Island, the distance being not more than 5 miles from the city.

MOBILE.

This city has a population of 29,132, and could very easily be protected, but at present there is water sufficient to float vessels drawing less than 16 feet to within 4 miles of the city.

NEW ORLEANS.

This city has a population of 216,090. It is 110 miles from the sea, but the largest vessels could sail abreast of the city. The control of the jetties would be a strong element in the defense of the city. Small craft not drawing over 5 feet could enter the lake in rear of the city.

GALVESTON.

The population is 22,248. Vessels drawing 30 feet could select any position not more than 3 miles off and shell the city.

SAN FRANCISCO.

The population is 233,959. The harbor, which is one of the finest in the world, could in the present condition of the defenses be entered, but even if this could not be done, vessels carrying high-powered guns could rest outside the bay in 30 feet of water, at a distance of 6 or 7 miles, and shell the city.

I have referred to the larger cities, but it might be well to mention that our smaller seaports are equally defenseless.

Each of the following-named cities could be shelled by the foreign vessels I have named:

PACIFIC COAST.

Port Townsend, Steilacoom, Seattle Harbor, Olympia, New Dungenness, Astoria, Kalama, Portland, Newport, Empire City, Crescent City, Trinidad, Mendocino, Benicia, Vallejo, Santa Cruz, Monterey, San Luis Opispo, Santa Barbara, and San Diego.

GULF COAST.

Brownsville, Clarksville, Brazos Santiago, Appalachicola, Saint Mark's, Tampa Bay, Cedar Keys, and Key West.

ATLANTIC COAST.

Saint Augustine, Jacksonville, Fernandina, Saint Mary's, Port Royal, Georgetown (S. C.), Smithville, Wilmington, Beaufort, Plymouth, New Berne, Edenton, Annapolis, Hampton Roads, Lewes, Atlantic City, Little Egg Harbor, Perth Amboy, Bridgeport, New London, Stonington, Bristol, Newport, Fall River, Vineyard Haven, Nantucket, Provincetown, Barnstable, Plymouth, Lynn, Marblehead, Salem, Gloucester, Rockport, Newburyport, Portsmouth, Saco, Bath, Camden, Bucksport, Bangor, Belfast, Rockland, Eastport, and Calais.

I mention these places merely for the purpose of corroborating the statement I have previously made relative to the defenseless condition of all our seaports—to show that, in case of war, every seaport of the United States would be exposed to naval guns; that no less than eight foreign nations have ships and guns which could bombard our cities; that neither natural obstructions nor artificial defences give them adequate protection.

THE LAKES.

In this connection it will not be wise for us to omit from consideration the exposed condition of our great commerce upon our lakes as well as of the many populous and prosperous cities on their shores.

Under treaty stipulations both the United States and Great Britain are prohibited from building or keeping a fleet of war vessels on the lakes, and the only national protection to the immense commerce which floats upon their bosoms or to the great cities by which that commerce is conducted is afforded by a few feeble, old-fashioned, and, in case of war, ineffective revenue-cutters of the type and class of the Michigan. Nor would it be in our power, in case of hostilities, to speedily improvise a navy for the protection of these waters. On none of the lakes does the Government possess the facilities or appliances essential to the rapid construction of war vessels. And it should be remembered that if it will be difficult to build a navy for the protection of the lakes, it is impossible to place there any portion of the Navy which we may have elsewhere. The outlet of the lakes into the sea is in the possession and under the exclusive control of England.

Now, though we are at peace with England at present, and I, for one, sincerely hope the existing friendly relations may never be disturbed, we can not be assured that these terms of amity and friendship will be maintained forever, and it is the part of wisdom to be prepared for the worst the future may have in store.

> Wise men, my lord, ne'er wail their present woes,
> But presently prevent the ways to wail.

WHAT ENGLAND COULD DO.

While the case stands thus with the United States as to the lakes what is the condition of England in this regard? Widely different from our own, as we shall see. By means of the Saint Lawrence, the Welland Canal around Niagara Falls, the Lachine Canal, and other artificial water ways, that power would be able within a very short time to concentrate upon Lake Erie a most formidable navy. From official reports I learn that the English vessels available for service on the lakes are as follows:

Three iron vessels, armored, drawing less than 12 feet of water, each carrying two muzzle-loading rifled guns of 7-inch caliber, and two howitzers.

Forty-five gun-vessels and gunboats; two iron, three wood, and forty composite, drawing from 9 feet 6 inches to 10 feet 11 inches, the combined armament of which is twelve 7-inch muzzle-loading rifled guns; fifty-six 64-pounder muzzle-loading rifles, one 40-pounder breech-loading rifled gun; fifty-eight 20-pounder breech-loading rifled guns; two 6-inch breech-loading rifled guns; twenty-six 5-inch breech-loading rifled guns; twenty 4-inch breech-loading rifled guns; one 4-inch breech-loading pivot and two 4-inch breech-loading chases.

Three "special and unclassed" vessels, wooden, drawing from 10 feet 5 inches to 11 feet 1 inch, and carrying four 20-pounder breech-loading rifled guns and one 6-pounder mortar.

Nine gun-vessels and gunboats, one iron, two steel, and six composite, drawing from 7 feet 3 inches to 8 feet 10 inches, and carrying two 7-inch muzzle-loading rifled guns; two 64-pounder muzzle-loading rifled guns; sixteen 20-pounder breech-loading rifled guns; four 4-inch breech-loading rifled guns, and one 43-ton breech-loading rifled gun.

Three torpedo vessels, two steel and one iron, drawing 11 feet, and carrying two 6-inch breech-loading rifled guns, and six 5-inch breech-loading rifled guns.

Forty-four vessels—thirty-eight iron and six wood—drawing from 6 feet to 6 feet 9 inches, and carrying twenty-two 10-inch muzzle-loading rifled guns, two 9-inch muzzle-loading rifled guns, forty-two 64-pounder muzzle-loading rifled guns, one 9½-inch breech-loading rifled gun, five 6-inch breech-loading rifled guns, and one 4-inch breech-loading rifled gun. Summarizing these figures we find that a possible antagonist could, in a short time, bring to bear upon our lake commerce and cities two hundred and ninety-nine guns, to oppose which we have—nothing, practically nothing whatever.

Debarred as we are by treaty obligations from maintaining a fleet upon the lakes, impossible as it is and must forever be for us to carry to their waters any of the armed vessels which the Government has now or may have hereafter, is it not manifest—so obvious that no argument can be required to uphold the proposition—that the only means within our power to effectually defend the lakes is to have such a navy upon the high seas as will suffice of itself to deter any commercial power on earth from engaging us in an armed contest.

TRANSPORTATION OF ARMIES.

But there is another question which merits careful attention. In my speech upon the Army I alluded to the possibility of two or more nations allied against us landing large armies upon our shores.

In considering this matter we should deal with the actual facts, and not indulge in generalities and vague surmises.

I shall not take the time to go into an extended account of the navies of all nations, but as an example I will say a few words regarding the transport service of England.

The permanent imperial transport service of England includes nine troop-ships borne on the navy list, officered and manned by the navy. These vessels have an aggregate displacement of 45,655 tons, which is equal to something more than 30,000 registered tons. For voyages of not more than a week's duration these vessels will transport with the greatest comfort 17,400 officers and men and 300 horses. For long voyages the number of men should, when practicable, be reduced.

In addition to this there are borne on the admiralty list four hundred steamers, of which nearly one hundred are rated as first-class—that is, having a sea speed of 13 knots and upward, with coal capacity, in many cases, sufficient to enable them to steam (economically) nearly around the world. These vessels are constructed in accordance with the admiralty requirements for water-tight subdivisions, &c.

As illustrative of this statement the following figures may be quoted:

In 1882 England hired forty-seven steamers, aggregating 120,000 tons, in English, Mediterranean, and Indian ports, for the conveyance of troops, stores, and material to Egypt.

These vessels, aided by two men-of-war and four troop-ships, conveyed 23,989 officers and men, 6,227 animals, and the field equipage for this force from England, Gibraltar, and Malta. The average interval from the date of these vessels' entry into pay until their arrival in Egypt with the troops and material was twenty-four days.

The English Government also hired forty-nine steamers, which conveyed 13,469 officers and men and 7,272 animals from the Indian ports to Egypt.

During the Soudan campaign, 1884, eighty-nine private steamers were chartered by the government, and were engaged in the transportation of men, animals, stores, &c.

In preparation for the expected war with Russia in April, 1885, the admiralty hired for service as cruisers sixteen steamers of the highest sea speeds, varying from 13½ to 18½ knots, of an aggregate gross tonnage of 78,543 tons (average tonnage of each, 4,900 tons). One hundred and three steamers of various types, in addition to these, were chartered for service as transports, additional cruisers, &c.

TONNAGE FOR EACH SOLDIER.

It is usually estimated that in transporting troops on long voyages, with their necessary army equipage and stores, there should be allowed about 3½ to 4 tons for each man; that is to say, a transport of 2,000 tons should convey about five hundred or six hundred soldiers. But when horses are also transported, it is estimated that about double that tonnage should be allowed for the comfortable transportation of men, horses, stores, ordnance, equipage, &c. That is, to transport an army of 100,000 men, with horses, &c., all equipped for service upon landing, we should provide transports aggregating 800,000 tons.

I desire, however, to call attention to the fact that when ample transportation was available forty-seven steamers, two men-of-war, and four troop-ships, all aggregating not over 135,000 tons, transported 23,989 officers and men and 6,227 animals, together with all the field equipage and stores for these forces.

It will be observed that the proportion of horses was full, if not excessive; and yet about 5½ tons per man was amply sufficient. And I also desire to call attention to the fact that the troop-ships are so constructed that 30,000 registered tons will convey 17,400 men and 300 horses, equipments, &c., which is less than 2 tons per man.

But to be liberal in such estimates, assume 5 tons per man to be necessary, and let us see what England's capabilities are in the great matter of transportation.

While the troop-ships register only about 30,000 tons, and the admiralty list has but four hundred steamers, aggregating 1,000,000 tons, we must bear in mind that this does not pretend to include the great steam merchant marine of England.

The official reports show that in 1883 the total steam tonnage of Great Britain was 4,000,000 tons. Take half of this amount, 2,000,000 tons, and divide it by five, about the proportion required in carrying troops to Egypt, and we find that one-half the steam tonnage of England alone could, in a single voyage, transport to any given point an army of 400,000 men, equipped and ready for service immediately upon disembarkation.

In my anxiety to keep within the inside figures I have given the reported tonnage of 1883. It has been increased very much since that time, and a recent official publication by the French Government states that Great Britain possesses 22,500 trading vessels, with an aggregate tonnage of 11,200,000 tons. Of these vessels 4,649 are steamers, with a tonnage of 5,919,000 tons.

It will therefore be observed that all the steam vessels of England could transport an army of 1,200,000 men, with horses and equipments, ready to land and commence offensive operations. But when we consider the risks nations are willing to incur in war might we not expect that even these numbers could be exceeded.

POSSIBILITIES WORTH CONSIDERING.

Let me ask how long it would take to place a large army at Nassau, or Cuba, or some point in England's American colonies, and when once there how long would it take to put such an army at any desired point in the United States?

Gardiner's Bay would not be the best point; but suppose a large army should be lodged there, what would we do about it? The bay would hold all the transports and the naval guns would protect them.

We would whip them out finally, but it would be uncomfortable for New York to have such an army four days' march from the city, and none of us could tell how near they could get to New York before they were whipped.

I think all will admit that the best plan would be to make such an invasion impossible, and that could easily be accomplished.

We must fortify important points of course, but we must do something more. We must build a navy which can cope with that of any other power on earth. When that shall have been done, and it is known that we possess such a navy, no attempt at invasion will ever be made. If any nation were foolhardy enough to make such an attempt, our Navy, manned by our matchless officers and sailors, would steam out of our ports, defeat the convoys, and sink the transports.

I think no one will deny the proposition that if, in the present condition of our coast defenses and Navy, England, with the aid of her unequaled naval establishment, should place an army upon our shores, we would, temporarily at least, be on the defensive, and any nation necessarily limited to purely defensive operations is half whipped before the first gun is fired.

I wish it were in my power to impress upon every one my idea of the importance of aggression in everything which pertains to warfare—whether on the land or on the sea.

MUST MAINTAIN OUR PRE-EMINENCE.

We are now the most important government in the world, and we must have a naval establishment which can cope with any adversary, and which is able to defend our commerce, protect our seaports, and maintain the dignity and honor of the [illegible]ng sovereignty among the nations of the earth.

This is an important, a vital question. It is one into which no mere party considerations should be allowed to enter, for I take it for granted that each party is willing to credit the other with being animated by a sincere desire to do all that should be done toward upholding the dignity and maintaining the honor of our common country.

They may differ, they will differ, and I think it advantageous that they should differ, as to the best means to be employed for securing this object, but as to the unanimous purpose there can be no disagreement. Every American, whether he belong to the Democratic majority or the Republican minority of the voters of the country, anxiously desires, above and beyond any mere party triumph, to do that which is best calculated to secure the triumph of American principles, the protection of American interests, and the maintenance of the just and proper pride of the American citizen.

If then, Mr. Chairman, all parties be agreed in their wish to secure this result, I can not conceive it possible that there can be any difference between them as to the necessity for the United States to be the equal of any other government in the effective force which defends and maintains the honor of our country upon the high seas.

THE PATHWAY TO PROSPERITY.

War may be the direst enemy of industry and commerce in the immediate scene of operations, but it is an undeniable fact, established by the experience of all nations during the last two centuries, that an effective armed force upon the ocean is at once the midwife and the handmaid of foreign commerce.

If then we shall all unite in the effort to secure to our people such a navy as we should have—if, in the presence of this overshadowing question we can, momentarily at least, sink all party rivalries and only vie with each other in hastening that result—it will not be long ere we can once more rejoice in the knowledge that the sails of our birds of commerce are whitening every sea, that the smoke of our merchant steamers is ascending to the heavens which bend above all portions of the globe where their presence is possible; shall once more rejoice in the days wherein labor finds ready and remunerative employment, and capital gains the just and legitimate reward for its enterprise and risk.

Give us such a navy and we shall have taken the first step toward bringing about the return of those halcyon days when discontent in this land of plenty and promise was unknown, when all were satisfied, and all were happy because all were prosperous. [Applause.]

Eight Hours to Letter-Carriers.

SPEECH

OF

HON. BENTON J. HALL,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 15, 1886.

On the bill (S. 2076) to extend to letter-carriers the advantages secured to other employés of the United States by section 3738 of the Revised Statutes, relating to the hours of labor.

Mr. HALL said:

Mr. SPEAKER: In listening to the discussion which has thus far been devoted to this bill I have observed that it has been confined exclusively to the question of expense—how much will it cost the Government. In the report furnished by the Postmaster-General and the letter of Mr. J. F. Bates, superintendent of the free-delivery system, the increased expense of adopting the eight-hour rule among the letter-carriers would be about $1,350,000. It is claimed by gentlemen who have given the subject very careful consideration that there are errors in these figures and that the additional expense would not exceed $750,000 per annum.

Now, sir, I am not sufficiently familiar with the data to have an opinion as to the correctness of these various calculations, but this bill should have something else about it to commend it, and if it has not it should be rejected, whether the increased cost would approximate the larger or the smaller sum. I am as anxious as any member can be to limit and reduce expenditures and oppose extravagance.

But I confess I do not understand why this measure receives no other explanation or consideration. It is a simple proposition to extend the definition of a legal day's work to the employment of letter-carriers of the United States. It is another move in recognition of the demand of laboring men for help and recognition in their efforts to better their condition. I have no doubt it will increase the expense of the service, and will be beneficial to the letter-carriers individually. But I am not prepared to oppose it because of its expense, nor do I favor it because of its immediate benefits upon a class of men. I favor it because I espouse the cause of labor generally, and am anxious to unite in the great movement—the great experiment that is slowly formulating—to see if the general condition of laboring men may not be elevated, and if they can not be enabled to receive better wages and enjoy a more rational and equal participation in the enjoyment and comforts, which are in fact the not wholly rewarded products of their toil.

On the 25th of June, 1868, the Congress of the United States enacted that "eight hours shall constitute a day's work for all laborers, workmen, and mechanics who may be employed by or on behalf of the Government of the United States." (Section 3738.) This has been since extended to departmental employés and others. Besides, we have provided for leave of absence, for vacation, holidays, &c. But in consequence of the phraseology of the law letter-carriers are not embraced in its provisions. It may be said that the eight-hour law should apply only to wagemen—laborers at daily wages; but I am not quite able to see the distinction. In my judgment it matters little whether the wages are payable monthly, weekly, or daily, and the true criterion is rather the nature and character of the work.

It has been often said that the rate of wages which employers will pay and laborers receive depends upon the great law of supply and demand, and that any system which attempts to fix the length of a day's work or provide that the wages for ten hours shall be the same as for eight must inevitably fail. Let us attend to these suggestions for a moment. I concede that so long as the labor of the world or of any great people is unorganized and incapable of regulating itself, it will always be true that wages must depend upon supply and demand. And this will be true whether the rate of wages is involved or the number of hours of work per day. For unorganized labor is hungry, anxious to secure employment, and competes with itself.

In the world there have always been more men seeking employment than there have been places to employ them. There have been men in place, and men out of place. Those out, with hungry wives and crying little ones behind them, unrestrained by system and without help or

hope, have been and are willing to underbid those who are in by either working more hours or at lower rates. And those in place, rather than go unemployed and have renewed the cries of their dependents, have submitted to the reduction. And thus bitter competition and nurtured selfishness have grown and increased. The rule of demand and supply has governed and will govern under such circumstances, because the greater the number of laborers unemployed the more there were under the duress of poverty and necessity ready to rush in and underbid their fellows in place.

Now, sir, I am not one who believes that it can ever come to be that the man who works eight hours should receive the same compensation as the one who works ten hours; and I would always oppose any legislation that arbitrarily attempts to so provide. Not only this, but in my opinion there should be no restriction or prohibition against any citizen working as many hours as he chooses, or receiving such compensation as his labor was worth based upon his hours of labor. Thousands of frugal and industrious men work extra hours and earn extra wages. There are besides many classes of employment of such character that it would be impossible to limit it with the eight-hour rule as to duration of work, and the limit could operate only as a measure of compensation.

But, sir, this is not the principle of the eight-hour rule as I understand it. Laboring men, appreciating that in the economy of the world they have never been fully or fairly compensated, seeing day after day the results of their labor and toil gathering and accumulating in the hands of a few, who without skill or competency have simply happened to be at the right place and time to have thrust upon them the results of other men's toil, are slowly arranging and organizing with the view of changing and arresting some of the old laws and processes which have always operated so unjustly and oppressively upon them. They are proposing tentatively to modify in a certain sense the old rule of supply and demand. It is insisted that as between men with capital and laboring men the former have an advantage—they do not meet upon equal terms.

The man of capital can wait; the laborer, with no bread or meat in the house, can not. The former can fix the wages and say, "Take that or starve, and I will look for some one else," and if the laborer hesitates another starving workman comes in and takes the place. It is also insisted that in consequence of this disparity the general average of wages is lower than it should naturally be everywhere. Now, sir, the eight-hour rule, or I may say a limited day's work rule, has been suggested and adopted as a means of giving to all men who will work employment. Its purpose is by giving work to all to destroy the competition among laborers, who have heretofore been their own worst enemies in this respect. But to accomplish this it is necessary there shall be organization, understanding, harmony, and a brotherly love among them.

When properly understood and appreciated, I know of no more sublime or noble charity than that which lies at the foundation of the eight-hour rule. It is a concession by the men in place to the men not in place. One class says to the other, let us be friends and divide. We will reduce our time and work less hours so that you can partake in the day's labor and cease your suffering and your bitterness. At first we will necessarily get lower wages, for it must always be true that eight hours' labor can not be the equivalent of ten. But when we have fully established the rule, when all men have employment, when in each home there is bread and meat, when the great family of laborers is no longer divided and inimical to itself and competition ceases in our midst, then we will request the gradual and just restoration of wages for the eight hours' work to a rate justified by principles of right and true economy. Whenever the eight-hour rule shall be generally adopted, so that time to work shall be given to all, the demand for laborers will necessarily be increased, more men will be needed, and wages will be increased.

There are, as just stated, sir, frugal and industrious men now who work extra hours and receive additional pay. Such men will at first naturally be disinclined to limit themselves to eight hours, and there will and should be no law or regulation to compel them to so limit themselves. It is possible that there never will be a time when a large number of laborers will not work in excess of the limit. Indeed it is not a "limit," for any one can work as many hours as he chooses. But the theory of the rule is that social organization and the necessity of giving each individual an equal chance to secure his share of employment will ultimately induce all to observe the charitable rule, and devote the remaining hours to recreation, study, and the development of mind and faculty. These ideas are not theoretical or chimerical, but have been already found of practical operation.

There are several great unions and organizations of labor in the United States and England where competition between artisans in the same trades has practically ceased, in consequence of the social organization, which sees to it that each member shall have his share of labor. And in consequence they have been able to largely regulate and increase the rate of their wages.

Then, sir, I know of no reason why the Government should not, in establishing a rule of this character, be the first to set the example of aiding the great body of the people in increasing the wages of its laborers and employés. Since I have had the honor of a seat upon this floor several propositions have been presented to increase the wages of some of the laboring men in the employ of the Government, and I have heard eloquent and conscientious appeals against such propositions, made in the supposed interest of the millions of laborers in the country who are not thus paid, but who by burdens and exactions help to pay the taxes thus applied to the employés here.

But, sir, in some respects the people, by reason of their remoteness from our individual action and the vastness of their numbers, is like Deity. We can never approach or draw near to them. Neither as legislators nor as individuals can we lay our hands beneath the thighs of the people and elevate them in a mass either in wages, morals, or otherwise. Neither can we be charitable, or generous, or just to them in any such sense. We must deal with those of them whom we can see, with whom we come in contact, with whom we immediately deal. We must be just and generous to individuals. And when we deal justly, humanely, and generously with these, we so deal with the whole people. The example of our action, the influence of our conduct, extends beyond its immediate results. The United States can not act here at the Capitol either justly or unjustly with its employés without its action being felt in the remotest quarters of the Union. And the millions of laborers and tax-payers far out beyond our vision will not complain that we here have recognized our laborers as worthy of a generous and just rate of wages.

I regard with the same conscientious scruples the rights of the taxed people of this country. I favor the closest and most prudent economy. But I believe the laborer is worthy of his hire, and in my opinion the Government should itself, as the exemplar and great exponent of all usages and sentiments, pay its employés the highest rate of wages consistent with the circumstances and nature of the work, and thus by law and example help in this great movement of bettering the condition of the laboring man with regard to both the hours of work and the rate of his compensation.

I grant that the passage of this bill would cost something, but it would be in the direction of increasing the wages of men, reducing their hours of toil, and extending to all an equal chance for employment. Is not that worth the additional cost? Sir, if in fact the labor is worth the increase, it is not an additional cost, but we simply pay what we would otherwise unjustly withhold from our employés. I do not believe we have burdened the statute with enactments for the benefit of labor, except as they might flow, indirectly, from the largesses and grants to capital and combinations. Land grants for railroads, subsidies for steamships, tariff for protection to monopolists and wealth have always in some indefinite sense indirectly benefited the laboring classes, but it has done so subject to the cruel conditions alluded to. They have made capital the master, who has dictated the terms to its employés, who, by reason of the poverty and competition among the laboring classes, has itself fixed the hours of toil and the rate of its wages. It is time, sir, now, that we have some legislation in the direct aid of labor. I do not mean to say that experience may not prove the application of the rule to the case of letter-carriers inexpedient, but I am willing to try the experiment. In my judgment the legislation is in the right direction, and I must support it.

Cyclones.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 30, 1886.

The House having under consideration the sundry civil appropriation bill—

The Clerk read the following paragraph:

For expenses of storm, cautionary, off-shore, cold-wave, and other signals on the sea, lake, and Gulf coasts of the United States, and in the interior, announcing the probable approach and force of storms, including the pay of observers, services of operators, lanterns, and flags, $10,000.

Mr. WHEELER. I offer the amendment which I send to the desk.

The Clerk read as follows:

Insert after the word "dollars," in line 1344, the following:

"To establish and maintain not to exceed six signal stations at such points upon the West India Islands as the Secretary of War may think advisable for the purpose of observing cyclones, hurricanes, and storms of like character, and telegraphing warning of their character and approach, $4,000."

Mr. RANDALL. The point of order is reserved.

Mr. WHEELER. The importance of this subject, bearing as it does directly upon the lives and property of our citizens, more than justifies my effort to have the amendment I offer incorporated in the bill now being considered. It is substantially the same as the bill which I introduced, and which was reported favorably from the Committee on

Military Affairs three months ago. That bill is now upon the Calendar, but the immense accumulation of business will, I fear, prevent its being reached this session.

THE TERRORS OF THE TEMPEST.

We are all aware of the alarm which has been caused throughout the country by the terrible cyclones which have from time to time passed over our land, destroying life and property, and in a moment, as it were, sweeping away entire towns and villages. We are also familiar with the harrowing accounts of the disastrous effects of these tornadoes upon the high seas, wrecking vessels, augmenting the dangers of those who "go down to the sea in ships," and inflicting almost incalculable losses upon owners and underwriters. This measure is designed to enable our people to guard against and protect themselves, so far as human foresight and wisdom can do so, from these perils; and it is universally admitted that it is the highest function, as well as the most sacred obligation of governments, to protect the persons and property of its citizens.

Those who have never encountered a cyclone can hardly imagine the terrors of these manifestations of the irresistible force of the elements when let loose upon their missions of devastation and death. The darkening of the heavens, the appalling stillness of the air, the oppressive sulphurous odor, followed by the furious bursting forth of the unchained winds, must be experienced to be understood and fully realized.

The characteristics of a hurricane are an advancing, generally circular, storm, in which the wind blows with almost inconceivable violence, attended by torrents of rain and terrible electrical displays of thunder and lightning, with a calm space at the center, with constantly recurring fresh outbreaks of extreme violence immediately following the passage of the center, these latter winds always blowing from a direction contrary to those that preceded them.

When these storms sweep the ocean the sea rises in a confused and raging mass, frequently overwhelming the stanchest vessels.

When passing over the land these cyclones not infrequently sweep away forests, houses, and entire villages in a few minutes, the catastrophe being almost invariably attended with deplorable loss of life.

Their repeated occurrence of late years has led the inhabitants of the localities most frequently visited to construct places of refuge in the ground in which their families can find safety during the storm.

HOW AND WHERE CYCLONES ORIGINATE.

As yet science has developed no means of preventing these dreadful visitations, though it has succeeded in discovering their cause, the localities in which they originate, and their general course.

I beg to call attention to a map which I have had prepared, indicating the general track of the most destructive cyclones which have occurred in the last one hundred years. I regret that the map does not extend sufficiently far inland to show the course of these cyclones in traversing the Southern States; but their general track, as shown on the map, indicates approximately the line they follow while moving northeasterly before reaching the Atlantic coast.

From investigation and observation we learn that these cylones originate in the heated belt of the Atlantic Ocean east of the Caribbean Sea. They commence moving westerly or northwesterly, sometimes sweeping over the West India Islands and Gulf of Mexico, and sometimes bearing to the north and sweeping over the Atlantic Ocean. Those that pass over the Gulf of Mexico strike our Gulf coast, and after moving northwardly they are most generally deflected toward the northeast, traversing the Gulf or border and the Atlantic States.

By establishing the signal stations provided for in my amendment all the people of the United States would be given from three to four days' warning of the approach of these cyclones. The first dispatches would inform us that a cyclone was approaching from Trinidad, Martinique, or some other of the Caribbean Islands. These dispatches would be followed by others from San Domingo, Cuba, or the Bahama Islands, announcing the progress and direction in which the cyclone was moving. When it struck our coast its probable course would be determined and definite information upon this point would be supplied to all our people.

WHAT THE STATIONS WOULD ACCOMPLISH.

It is a well-established fact that a rapid and decided fall in the barometer always precedes the approach of a cyclone; therefore if the residents of any locality had received warning that a cyclone had crossed, or was crossing the Gulf, and noticed a fall in the barometer, they would be able to decide that the storm with which they were threatened was a cyclone, and could take all necessary and available precautions against its destructive effects. If, on the contrary, no information of the progress of a cyclone had been received, they would take it for granted that any lowering of the clouds, or winds, or rain, indicated the commencement of a storm of only local character, which was in no way dangerous. The advantage which every community would derive by being relieved from the bewildering apprehensions necessarily attendant upon uncertainty on this point would compensate an hundred-fold for the trivial cost of the signal stations I propose.

Cyclones have also originated in British America, and at other points in the Rocky Mountain region, and near the Pacific coast, but they have never proved so destructive as those to which I have referred.

It is also worthy of our consideration that the cyclones from the Caribbean Sea are fraught with great danger to our Atlantic and Gulf coast, through the effects of what is known as the "storm-wave." The violent disturbance of the atmosphere, and the diminished pressure, and possibly other forces, cause the water to rise above the ordinary level of the ocean, and the wall of water thus occasioned is driven along with or before the hurricane, resulting in fearful inundations, which destroy vast amounts of property.

Interstate Commerce.

SPEECH

OF

HON. FREDERICK A. JOHNSON,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 21, 1886,

On the bill (S. 1532) to regulate commerce.

Mr. JOHNSON, of New York, said:

Mr. SPEAKER: The matter of the regulation of interstate commerce has been before Congress for many years. Aside from the tariff and currency perhaps no other subject has of late years received more attention at the hands of the National Legislature than this. Congress after Congress has considered and debated it, and its importance has been generally conceded. The debates have been so long continued, and participated in by so many able men who have spoken on both sides, and that, after careful thought and study, that the ground would seem to have been already entirely covered; indeed, I very much doubt whether anything new can be presented in the discussion on the bill now before the House from the Committee on Commerce.

The rapid growth and vast extent of the railway system of our country is one of the wonders of these later times—a system so interwoven with the business, the comfort, and the pleasure of all the people, rich and poor, capitalist and laborer, producer and consumer of every section, as to make everything pertaining thereto matters of common interest and consideration. The regulation of a commerce carried over 125,000 miles of railway, representing an investment of $8,000,000,000, with a great army of employés numbering hundreds of thousands, carrying in 1884 350,000,000 passengers and 400,000,000 tons of freight, all must concede to be of such importance as to deserve the most careful thought and consideration at the hands of those who take part in such attempted regulation; and discussion thereon should be had as far as possible without prejudice and in such a spirit of impartiality and fairness as gives the most promise, and in the "long run" always does bring about, the most desirable results.

The greatest care should be taken lest in seeking to remedy known evils we do not unintentionally bring about others which in due time will require other legislation to correct.

None will contend that the system of railway management in this country is free from defects, or deny that some legislation is desirable as well for those who ride and ship and consume as for those who furnish the means of transportation; but I do not believe, as one would be led to suppose from much that had been said and written on the subject, that railroads almost deserve to be classed as great evils and as enemies of the general public, or that railroad managers are all unprincipled and grasping, conducting their business with no thought except for themselves, blind to the interests of the people and regardless of the rights of those who give them patronage.

I can not overlook the great part borne by the railroads in the development of this country. The bringing together of widely separated sections by easy and rapid communication; the opening up and peopling of vast regions of our territory which otherwise would have remained uninhabited; the cultivation of unnumbered millions of acres of our soil, heretofore barren and waste, now made productive under the hands of industrious and thrifty proprietors whose crops find ready and cheap transportation to the markets of the world, and the consequent addition in almost incalculable amount to our national wealth; the appliances for the rapid, comfortable, and luxurious transportation of man and beast, appliances that are being constantly improved and enlarged and which are far in advance of those enjoyed by any other people—all this will be readily conceded and the question possibly be asked why enumerate these things which all acknowledge to be facts; to which I would answer that such an enumeration of resultant benefits would seem to be sufficient to exempt the railroad management from at least some of the harsh judgment and many of the hard names that are so easily applied. Nor can I forget another thing, not so often mentioned by those

who so easily and readily call these hard names, namely, that year by year a large and increasing competition and the inevitable working of the law of supply and demand have caused a steady decrease in the rates of passenger and freight traffic, until to-day they are lower than in any other country in the world.

Human nature is selfish, and men everywhere are looking out for "number one;" but no man or body of men can long pursue a course which ignores the rights and privileges of those about them without paying dearly for it. All men know this and none better than railroad managers, and though among them there may be, as in every business, bad men, bold and unscrupulous, who in their eager rush for wealth and power would ride over everything in their way and disregard the rights of the public so far as possible, yet they are the exceptions, and among the railroad managers of to-day I believe there are men of high character and honorable purpose in as large proportion as can be found in any other line of business. The capital in railroads is there for profit, as is the case in all business investments, and the roads are run to make money while accommodating the public.

If while thus seeking an appropriate return on investment the railroad management shall look only to their own profit and turn a deaf ear to the reasonable demands of the public, a day of reckoning will surely come, and public opinion will certainly compel reform, and that too, if need be, by severe measures and "heroic treatment;" but I believe and am confirmed in such belief by what I have heard and read on the subject, that these managers, many of them as capable and successful business men as we have, are not so blind to their own interests as to persistently disregard public sentiment and opinion; but that same self-interest, as well as their better judgment as honorable men, will lead them to meet at least half-way all efforts for the settlement of grievances, the redress of wrongs, and the correction of unjust and arbitrary discrimination.

The gentleman whose name the bill now before us bears, Mr. REAGAN, of Texas, has for many years been at the front in the debates and attempted legislation on this subject of interstate commerce. I have the highest respect for his ability, and not a doubt as to the sincere and honorable motive and purpose actuating him in all that he has said and done in this regard, and yet I do not favor his bill and did not join the majority of my associates on the Committee on Commerce in their favorable report.

After hearing the discussions on the subject in the Forty-eighth Congress and listening to the arguments made before our committee during this session, with such information as I have been able to obtain in other channels, together with my own limited observation and experience as to general business, I am led to the opinion that the way proposed by the Reagan bill, so called, for the regulation of interstate commerce, is not the best way, but recognizing the demand for some action by Congress, and believing the wise course will be to heed such demand, I therefore favor some legislation; but in my humble judgment the best way now is to attempt such regulation by the means of a board of interstate commerce commission, such, for instance, as the one proposed by a majority of the Committee on Commerce of the Forty-eighth Congress, or as named in the bill introduced in this Congress by Mr. BAKER, of New York, or as provided in the Cullom bill recently passed by the Senate.

I believe that it is unwise to attempt to regulate interstate commerce by enacting laws to reach all the endless and every day details of a business which reaches out toward every point of the compass, that has "gridironed" the land from end to end, and that enters directly or indirectly into every channel of trade, that requires the constant care and closest attention of practical men educated to the business, and so qualified to prepare for and provide for the needs of the ever-varying trade and commerce of the country. Iron rules to govern a commerce so vast, so intricate, so endless in detail, it seems to me, would be impracticable, and would in many cases embarrass rather than help to improve the situation. It may be said that such detailed results are not the intent of the legislation proposed, and possibly such statement would be true so far as the intent is concerned; but I can not see how any other construction can be put upon it.

In place of such legislation why not by a commission covering the whole country provide a channel for the presentation and the candid and careful consideration of complaints, and the righting so far as possible of real wrongs and grievances; a commission with powers wisely restricted, and yet given such discretion in their judgment and decision upon the ever-changing and widely differing phases of the questions presented to them as can safely be intrusted to men likely to be clothed by the appointing power with such responsibilities? Laws have been passed in various States of the Union creating boards of railroad commissioners, and in the main results have been satisfactory.

Shippers have carried their grievances and made their complaints to these commissioners, which have been in that way brought to the attention of the railroad managers; have as a rule been met by such managers in the proper spirit, investigation has followed, parties have been brought together, suggestions have been heeded, recommendations followed, awards accepted, and in almost all cases the results have been satisfactory to all concerned. We have had such a commission in New York for three years past, since 1883. The law was framed by and enacted largely through the efforts of a member of this House, my colleague, Mr. BAKER, and so far as I know the well-nigh unanimous opinion in our State is in approval of the work of said commission and in favor of its continuance.

I quote as follows from the message of the governor of the State (now the President of the United States) transmitted to the Legislature January 1, 1884:

> Since the organization of the board of railroad commissioners they have done a vast amount of work of a character which demonstrates the need and usefulness of such a department and with results which are creditable to the zeal, fidelity, and intelligence of the commissioners. During the eight months next following the organization of the board seventy-five complaints were preferred, all of which were fully investigated. Some of these involved a thorough examination into the financial affairs and history of large railroad corporations, while others had reference to the comfort and safety of passengers and citizens as relating to the operations of the roads. Many recommendations have been made to the railroad companies in order to protect the people in life and limb, most of which have been cheerfully adopted.

I quote as follows from one of the reports of the New York railroad commissioners:

> Our brief review of commissions and their results may thus be stated: Through their well-directed efforts more has been done than through any other known method of State procedure to raise the railroads and the people to the plane which each must occupy before any satisfactory settlement of their relations can begin to be accomplished; each must first learn that their interests are mutual and not conflicting. That railroad which regards its transportation opportunities as prey is digging the grave of its prosperity and is prohibiting its own growth. That community which seeks the correction of railroad abuses through destructive measures is killing the patient as a cure for disease and is losing the very advantages which it theoretically seeks.

In the light of such testimony, to which we might add the experience of other States; in these days when the principle of arbitration seems so popular, as illustrated in the recent debates and vote on this floor on the labor arbitration bill; now when there seems to be a growing sentiment favorable to the bringing together of nations, corporations, and individuals between whom differences have arisen, that by conference and perhaps mutual concession the interest of all may be promoted, is not the proposed correction of all real or fancied evils and real harmony between all the parties more likely to be brought about in regard to the question of interstate commerce through the channel and on the plan of a national commission, whose methods can be changed if need be as shall be suggested by that best of all teachers in such matters, the experience of daily business, rather than by the means and in the manner proposed in the Reagan bill. It is wise statesmanship that seeks to harmonize opposing elements and forces, remembering that there are two sides to every question.

The labor question has of late been very prominent in this country and has properly received attention at the hands of the representatives of the people here assembled, and as a friend of labor and anxious to do all in my power to promote its true interests the recent legislation had my sympathy and support; but in all the eloquent and earnest speeches made on the subject on this floor I do not remember to have heard one word in protest against the taking of the law into their own hands by one side, obstructing travel, disarranging business, and destroying life and property—crimes, and high crimes deserving severe punishment—acts, however, which I am bound to say I believe were not approved, and were condemned by the great majority in the ranks of labor in this country.

At present the popular side is the one against railroads. Let us remember, however, that shippers and carriers both have rights, and the duty of protecting such rights is as binding on the one side as the other. How shall all this best be done? Not, in my judgment, by multiplication of our laws; not by the enactment of statutes at once arbitrary and exacting; but rather by means of a commission wisely selected, simple and practical in its methods, that will recognize the rights of all, and in a spirit of conciliation and right doing will seek to bring the parties together for such settlement of differences as become honorable men.

My friend, Mr. RICE, of Massachusetts, in the course of one of the ablest speeches on this subject in the Forty-eighth Congress, said:

> The government of a free and civilized people must not govern too much.

And, in my judgment, that is just what we are doing in such legislation as that proposed in the Reagan bill.

The honorable gentleman from Pennsylvania, Mr. RANDALL, in the last Congress, in a speech on another question, said:

> Shall we unsettle business interests by constant tinkering? Shall our meeting here be the cause of terror, and our adjourning the cause of rejoicing?

I think such questions may well be asked in connection with the legislation proposed by the Reagan bill for the regulation of interstate commerce; for it is of such a character as to make the business public anxious when Congress convened and relieved when it adjourns. I believe the legislation proposed by the Reagan bill, so called, is of a class that is disturbing, that tends to unsettle and derange the general business of the country; that it is too exacting and far-reaching; and that we can not embarrass and confuse the workings of a business so vast and complicated as the railroad system of this country without a reaction injurious and damaging to the interests of the general public as sure to follow as that the sun will rise and set to-morrow.

Forfeiture of Northern Pacific Land Grant.

SPEECH

OF

HON. BINGER HERMANN,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 26, 1886.

On the bill (S. 2172) restoring to the United States certain of the lands granted to the Northern Pacific Railroad Company to aid in the construction of a railroad from Lake Superior to Puget Sound, and to restore the same to settlement, and for other purposes—

Mr. HERMANN said:

Mr. SPEAKER: As to the policy or impolicy of creating this immense grant of the public domain over twenty years ago it is not now essential to discuss. It is sufficient to know it was done. We do not, however, forget some of the leading inducements. It was in a time of civil war, and in the deadliest of its hostilities. The existence of the nation was in peril. An immense coast line on the Pacific Northwest was exposed and defenseless. Three thousand miles separated it from the center of population. Foreign nations awaited the fatal moment when the Republic should fall in dismembered fragments a prey to the enemies of free government on earth. Great Britain, ever on the alert as to our weakness, and with her rich colonial possessions adjoining us, patroled the high seas with her floating armaments, prepared to seize as well as defend every advantage in the critical hour.

Here was an immense domain constituting west of the Rocky Mountains one-fifth of the whole national area, and separated from the rest of the Union by lofty mountains, uninhabitable wastes, and with no means of rapid transit. Without transportation facilities in the near future, but few inducements were offered the pioneer. Much of the country was rugged and roadless and largely occupied by roving Indian tribes, constantly on the war-path, and requiring the ceaseless vigilance of United States troops at enormous expense to the Government. The entire intermediate country was worthless to civilization without some commercial outlet. The populous communities along the seaboard and in the earlier settled valleys were longing for railway connection with their old homes in the East. Having subdued the country adjacent to the coast after long trials, privations, and suffering, and the display of courage, fortitude, and endurance such as has few parallels on the historic page, they conceived it a duty of the nation to aid them in the realization of their fondest desires. They grew impatient in their seclusion.

Every section of the Union was pushing ahead with giant strides. The Pacific Northwest alone remained uncared for. With railway transit the pioneer was promised a return journey to the Atlantic in six days, which with the slow plodding ox-team he traversed in six months! He was also reminded of the quickening life which railways would impart to every remote section of the great forest and mountain expanse then before him. Is it surprising, sir, that everywhere there was an earnest, enthusiastic desire for the transcontinental railway, even though it cost what was granted to obtain it?

The great benefits to accrue to the citizen and the nation as well were deemed ample consideration for the price paid. These views were expressed by the leading statesmen of the nation at the time. Mr. Hendricks, late Democratic Vice-President, whose sad death this Congress recently, in common with all the people, so profoundly mourned, when speaking in the United States Senate June 27, 1864, on the passage of this very grant, said:

> Everybody can see at a glance that it is a work of national importance. It proposes to grant lands in a northern latitude where, without the construction of a work like that, the lands are comparatively without value to the Government. No person acquainted with the condition of that section of the country supposes that there can be very extensive settlements until the Government shall encourage those settlements by the construction of some work like this.

The man in the West who raised his voice against this generous and patriotic sentiment was at once regarded as an enemy to progress and civilization. He was pointed at as a "fossil" and old "fogy," "a moccasin man," a friend of the cabin, the ox-team, and Indian trail. He was voted an obstructionist. These reflections are submitted not to apologize for but rather to soften somewhat the harsh criticism of the present day for the liberality of the generation of a quarter of a century ago.

A NATIONAL NECESSITY.

The struggling nation painfully realized the necessity of reaching with quick transit those distant portions of the Republic, that it might in future perils be enabled to render rapid and adequate aid. This could best be afforded by a continuous railway communication between the Mississippi and the Pacific Ocean. The task and the required expenditure involved seemed appalling. The object to be accomplished was deemed a sufficient inducement for the sacrifice. The prize was well worth the cost. Our sister republic was already floating an imperial flag in defiance of our cardinal Monroe doctrines, and an emperor exacted allegiance from those who but a few days before were citizens of a free nation.

The States and Territories on the Pacific trembled in hourly anticipation of domestic violence by those who were secretly plotting with the enemy to wrench the feeble authority of the National Government there and proclaim the existence of a Pacific republic. But the great nation was itself in the throes of dissolution. Every man and every dollar was utilized in exerting the supremacy of the Constitution and laws. Every resource of the country was strained to the utmost tension. The last hour seemed to have come. In these dismal days only results were looked for, and little heed paid to the means that led to the end. In these extremities Congress willingly bartered away the rich prize of the public lands that it might strengthen and preserve the Union of the great domain between the Rocky Mountains and the Pacific Ocean. Grants of lands and subsidies were promptly and generously voted the Union and Central Pacific Railroad Companies that communication might be had with California and Nevada on the Pacific. That a like advantage should be extended to the great Pacific Northwest a grant was also made to the Northern Pacific Railroad Company.

THE GRANT AND ITS BENEFITS.

The charter was granted July 2, 1864, for the building of a railroad through that immense region of almost uninhabited country from Lake Superior to Puget Sound, with a branch road to Portland, Oreg. The distance was over 2,000 miles. The grant allowed two years in which to commence work, and required a completion of the road within ten years. After several amendments and extensions of time the last limitation for completion was fixed at July 4, 1879. Financial misfortunes overtook the company, and by the time limited they had only completed 531 miles, to near Bismarck in Dakota. Had Congress seen fit to re-enter by declaring a forfeiture of all the grant westward of this point it is generally conceded this portion of the public domain could and would have been restored.

But no action was taken and the construction of the road proceeded rapidly. As sections of 25 miles were completed they were inspected by United States commissioners, accepted and certified by the President for patent. Towns and cities were built, great mines were developed, population rapidly followed in the van of the army of railroad builders, homesteads and pre-emptions were made of choice places, United States land districts were created, and everywhere a new life was breathed in this hitherto almost trackless waste of 2,000 miles. While this long line was approaching the Cascade Mountains active work was also in operation connecting Portland, Oreg., with Puget Sound and the western foot-hills of the Cascade range. These two ends are rapidly nearing each other, and now it remains to close an interval of but 75 miles when a direct and continuous line will have been completed by this company from the lakes on the Atlantic to the waters of the Pacific. This gap of unfinished road is mainly on the top of the Cascade Mountains, and requires a continuous tunnel of about 2 miles in length. At this point the greatest resistance is met and stupendous work night and day is in progress.

THE PROPOSED SENATE FORFEITURE.

It is this portion of the grant on the Cascade Mountains it is proposed to forfeit, and also the grant along the 214 miles in Oregon, from near Wallula to Portland, within which the company have constructed no road. This was originally known as the branch line. It leaves the completed road running toward Puget Sound at Wallula on the Columbia River and follows that river to Portland, Oreg.

Another road having been built along the Columbia River between Wallula and Portland, and no efforts having been made to earn this portion of the grant, there is a universal desire for its restoration to the public domain, and no equities can be urged for further delays. Much opposition, however, is made to the forfeiture of the grant on the Cascade Mountains, as there it is claimed active work is in progress, energetically directed to a completion of the remaining 75 miles. This is urged as an equity.

THE PROPOSED HOUSE FORFEITURE.

The measure recommended by the Committee on Public Lands of this House includes the restoration of all the grant west of Bismarck coterminous with the line of road constructed and not constructed after the expiration of limit named in the grant, and embracing, it is estimated, 26,000,000 acres of land. Of this about 1,000,000 acres are in the 75 miles of unconstructed Cascade division, and about 2,000,000 acres are in the unconstructed 214 miles of the Wallula-Portland division.

THE EXTENT OF THE GRANT.

The company was originally granted twenty alternate sections on each side of the road in the Territories, and ten alternate sections on each side of the road where it passed through any State. This embraced 12,800 acres per mile in the States and 25,600 acres per mile within the Territories. The estimated available quantity of the grant is 42,000,000 acres, or 65,620 square miles. There was 531 miles of road constructed before the date fixed for completion of the entire line.

THREE PROPOSITIONS.

In the adjustment of this grant there are three propositions advocated

in Congress. First, the entire forfeiture of all that portion of the entire grant westward of Bismarck in Dakota Territory, to which point the road had been constructed July 4, 1879, the maximum limitation named in the grant for completion of entire road. The second proposition is confined to a forfeiture of all unearned lands at this time, which comprise the grant of the 75 miles of unconstructed Cascade division and 214 miles unconstructed Columbia River division in Oregon (Wallula to Portland). The third proposition only includes the Oregon division between Wallula and Portland.

The majority of the Public Lands Committee of this House report in favor of the first proposition, while the minority of that committee favor the third proposition. In the mean while the Senate passes a bill which is submitted to this House, and which with some additional details constitutes the second proposition; that is, forfeiting all lands coterminous with the lines of road not constructed at the date of the passage of the act. This Senate proposition is accepted by the minority of the House committee. There is, therefore, immediately before us for consideration but the two issues: Shall we declare forfeited all the lands westward of Bismarck, in Dakota, which includes about 1,500 miles of constructed road now in operation, or shall we confine our forfeiture to that portion of the grant within which the company has failed to construct its line of road?

ARGUMENT OF COMMITTEE.

It is argued in favor of an entire forfeiture that the original grant as amended limited the completion of the road to July 4, 1879; that this was a condition, and that this condition was an entirety; that time can not run against it, nor can there be a waiver by the Government, and that laches can not be imputed to it in the assertion of its rights; that while the Executive Departments may have recognized a continuing grant, this can not be urged as an estoppel of Congressional action—the executive can not bind the legislative; that the corporation had notice of the limitation and suffered all the consequences which such limitation imposed upon its default; that the road was not completed strictly within the time limited, and that the grant can not be construed to protect any of the road constructed out of time, nor continue title to any of the lands coterminous therewith; that time is of the essence of the contract; that a legislative act of forfeiture is the entry on condition broken, and is likened to the common-law entry by the grantor, and that, as in that case, all transfers and alienations are avoided and the grantor reinvested of all his estate so forfeited.

ARGUMENT FOR SENATE BILL.

Those who antagonize these views assert that this is by its words a grant *in præsenti* with a condition-subsequent; that such condition being performed by the grantee before a judicial or legislative declaration of forfeiture, the grant continues effective. An instance cited is that of a mortgagee before foreclosure and after condition broken, who may avoid the penalty, condition, or forfeiture by subsequent payment. In further illustration, the Government of the United States may be compared to an individual—a grantor who stands by and allows another to comply with a condition after default, and thus he disables himself to take advantage of it. That non-action is an implied waiver. While it is admitted that under the old common law the principle obtained that no performance of a condition, after the day fixed for it, could save the forfeiture, yet in modern times it is construed that such a grant is charged with a trust rather than affected by a condition, and that such construction is based largely in the disfavor of courts to forfeitures upon breach of conditions-subsequent. Confirmatory of these propositions, several leading cases decided in the Supreme Court of the United States are cited.

It is further contended, as to the road constructed out of time, that Congress never asserted its right of forfeiture, but that it did allow the company by an implied assent to extend its road. Notice was brought to Congress of the expiration of the granting time and of the unfinished road, and committees were appointed to investigate, and they reported against forfeiture. It is further shown that by express acts of Congress after this and as late as 1882 the right of way for over 100 miles in the Crow Indian reservation was granted the company that the construction of the road might proceed. In further recognition the Government by its inspectors examined and approved the sections of road completed, and each administration, including the present Executive, have accepted these roads constructed out of time. The Government continues its double minimum price on the even sections by reason of the grant. Settlers have been induced by the company to settle on these lands, payments have been made to it, and contracts of sale negotiated with thousands. In the event of a sweeping forfeiture this great and wealthy corporation will seek redress in the courts, causing uncertainty, anxiety, and expense, with the consequent standstill of much progress and improvement along that immense distance.

THE MOST PRACTICAL.

I do not propose to enter into a discussion of the merits of this proposed general forfeiture, nor do I venture an opinion at length as to the abstract right of the Government to forfeit or the corporation to claim in law or in equity this grant. I take my stand and am controlled in this matter by that course which I conceive will produce a concurrence of both Houses of Congress in some forfeiture. This will give us success at this session. No other course will. A failure to effect a forfeiture now will allow the railroad company to earn the lands on the present unfinished Cascade branch before we can act at the next session. We know that the Senate will not concur in the House bill, but we know we can concur in the Senate bill and pass it now, and save all the grant unearned along unconstructed road. Why, sir, do we not do this? I ask an opportunity to vote on this. If we decline this we lose all. We shall be like the dog, gazing in the placid waters with a slice of meat in his mouth, and seeing the shadow of the meat, he opened his mouth and leaped at it and thus lost the savory substance.

I can see no relief in this persistent and useless struggle. But on the contrary it does seem to me we invite in our defeat a further loss of the public domain by postponing forfeiture of the unearned lands, with continued anxiety and loss to thousands of poor people settled on these grants and inconceivable discouragement to the public progress along the line. Firmly impressed with this belief, I can not believe it advisable to support the measure. To disdain what is possible, indeed what is now offered us, is to directly and practically aid and perpetuate the very system we pretend to abhor. The result of our action is a direct benefit to the corporations and an injury to the people. We prevent a restoration of these unearned lands and enable the grantees by our delay to complete their roads and then to invoke the aid of the courts for their title. For one I do not propose to be hoodwinked in any such scheme. Let us not do by indirection what we would not do by direction. If we are the friends of the settler let us say so by our acts. If we are sincere in our professions of preserving the remainder of our public lands, let us not delay action.

PEOPLE DEMAND FORFEITURE ALONG UNCONSTRUCTED LINE.

It would be well if Representatives would consult the real wishes of the people, rather than the ravings of demagogues, who have no conception of what is practical from the impractical, but do have an utter misconception of the subject as well as the real interests of the people. As to this particular grant I now submit to this Congress a petition signed by nearly three thousand people of Oregon and all within the 214-mile limits. I call these people and settlers into court over their own signatures, and they shall speak for themselves. They ask for a forfeiture of the 214-mile division between Wallula and Portland.

As further showing the sentiments of the people directly affected I now quote from the Bunch-grass Blade, a people's paper (not a railroad organ), and published in the town of Lexington, within the 214-mile grant, and widely circulated among the homestead settlers, the stock-raisers, and farmers. The earnest enthusiasm manifested is indicated in this extract:

MAKE YOURSELVES HEARD.

There is no question about the force of Congressman HERMANN'S remarks upon the necessity of the people of Bunch-grass making some demonstration toward influencing Congress to early action on this railroad forfeiture. Every town in Oregon within 40 miles of the Columbia, between the Cascades and the Blue Mountains, should be the scene of an enthusiastic mass-meeting of men who will make it their business to memorialize Congress upon the wrongs people are suffering under in consequence of this criminal neglect on the part of two bodies of representatives paid to see to their interests. The duty of peaceably meeting and earnestly urging immediate action on Congress is imperative. This is a subject of more importance to us than either Democratic or Republican victory in State or county politics. God helps those who help themselves. Good full meetings should be held in Heppner, Lexington, Hardman, Ione, and Ella, in Morrow County, right away. Rally, organize, and appeal!

The advice here given was acted on and rousing petitions from these people are before us.

The sentiment of the people as to the impracticable House substitute for the Senate bill is well expressed in the Daily Oregonian, of Portland, Oreg., of June 21, as follows:

The Senate passed a bill proposing to declare forfeit those parts of the grant where the road has not yet been constructed. This was sent to the House, which body has substituted for it its own more radical bill to declare forfeit all those portions of the grant where the road had not been constructed up to the time the grant expired, some four years ago. The result of this disagreement very probably will be total failure to do anything, and as a further consequence the company will keep its hands upon all the lands it loosely and widely claims, including those along the Columbia River, where it has no intention or thought of ever building a road.

Within the limits of this grant in Washington Territory in the prosperous town of Goldendale is published the Goldendale Sentinel, and from the issue of June 17 last I extract the following editorial as a fair presentation of the public sentiment in that great section of the Columbia River valley:

It seems that the bill for forfeiting the railroad lands between Wallula and Portland, which tract embraces nearly half the lands of this county, is, like Cæsar, to die by the hands of its friends. The ultra-forfeiture men in Congress, headed by Senator VAN WYCK, whom the people have heretofore looked to as the champion of their rights, seem determined to avoid a square vote on this bill for the purpose of making it a sort of propelling oar to a general forfeiture bill, claiming that if they pass this bill disconnected it will be an implied abandonment of their right to demand the forfeiture of other lands. We wish the friends of forfeiture would bring a little common sense to bear on this question, and not disdain that which they can get because they can not get all they ask. As we have before frequently stated, the question of the forfeiture of the railroad lands down the Columbia River is an independent proposition; and on this proposition there is no division of opinion, or if there is it is a hidden opinion.

So far as the question of the forfeiture is concerned along the line where the road is already built and operating, there is a difference of opinion among the settlers themselves. Many of them have purchased their lands of the company,

and they don't wish their titles disturbed. The road is in operation and they have the benefit of it; and if it were left to a vote of the people, it is doubtful if they would vote for forfeiture, not because they have any respect or love for the railroad, but because, looking at their own interests alone, they would probably doubt the propriety of disturbing the title to the possessions which they hold under the title of the company. But here the case is entirely different. We neither have a road, or the promise of a road. Not only has there never been the stroke of a pick in furtherance of the enterprise, but there has been a continued and pronounced abandonment of the enterprise for years.

Our position is certainly anomalous. For nearly a quarter of a century, half our lands have been tied up from public settlement; the growth of the country has been retarded; its material interests cramped; and its people kept in a perpetual fever of expectancy. We want the grant forfeited, and the company claim that they are willing that it should be forfeited, and yet the forfeiture bill makes no headway. The assertion of Senator VAN WYCK that he should oppose this bill because it was only forfeiting what the company was willing should be forfeited, is as silly as it is unjust to the interests of the people. What difference does it make to the people who are affected by the grant, and who desire the forfeiture, whether the company are in favor of forfeiting it or not. They are not asking for the forfeiture in a spirit of spite toward the company, but because the interests of the country demand the forfeiture. How illogical it is to clamor for a certain right until the party withholding it accedes to our demand, and then refuse to accept it because they do accede. Such performances savor either of demagogy or idiocy. The sensible thing for the forfeiture men in Congress to do is to secure the restoration of this grant to the people while they can, and then contend for more.

I quote now from a prominent Democrat, a leading citizen of Eastern Oregon and along this Columbia line, and whose speeches in the recent campaign in favor of a prompt forfeiture of unearned and fraudulent railway and wagon-road and swamp-land grants were applauded by the settlers and people of all partisan politics. I select his letter as a sample of others received by me and of the prevailing sentiment. It is dated Dalles City, February 11, 1886. He says:

As you suggest, this portion of the grant (Wallula to Portland) is clearly unearned, and on that point there can be no controversy. To go beyond Wallula would be to enter upon controverted ground and would be to invite such complications as would almost certainly defeat the measure. And even if a bill to forfeit the grant beyond Wallula should become a law the whole question would be taken into the courts, and even though the law should be finally sustained, yet it could be kept for years in litigation, and thus keep the lands closed against settlement for an indefinite period.

* * * * * * *

By undertaking too much nothing will be accomplished. So palpable does this seem to me that I should suspect those overzealous advocates of forfeiture who seek to include too much in their measures to be really in the interest of the railroad company and laboring to defeat forfeiture. If Oregon Representatives in Congress succeed in getting through a measure restoring to the public domain the unearned lands of the Northern Pacific grant lying between Portland and Wallula they will satisfy the utmost expectations of their constituency in this respect. And if they do this without having their measure killed by efforts to drag it beyond Wallula they will do well indeed.

The most valuable portion of this 214-mile division I should think from a personal knowledge is that between The Dalles and Wallula, especially on the John Day River. There is a fine scope of country which the past few years of experiments have shown to be highly productive and capable of sustaining a large and prosperous agricultural community. There is really no waste land in the whole vast region, for the lands not suitable for plowing are in every instance, even to the breaks of the Columbia, fine grazing lands. This country, when once settled up, is destined to be one of the chief stock-growing sections of Oregon, an industry even now one of the most profitable of our State. The soil is fertile to the summits of the highest elevations, the climate is equable, and the seasons free from violent storms, from drought in summer and excessive cold in winter. Destruction by blights and insect pests is unknown. Such are the inducements to the home-seeker, and many hundreds have been tempted to make settlements. Their cabins are seen located here and there for a distance of 200 miles along and interior from the Great Columbia in Oregon as well as in Washington Territory. These people are looking wistfully to this Capitol for a remedy. On tiptoe they are listening for some welcome tidings announcing the restoration of these lands to the public domain and the near approach of the day when they can call their present possessions by that dearer and more cherished word—home!

ACTION IS DEMANDED.

They have appealed to this Congress for relief. Petitions, legislative memorials, correspondence, newspaper editorials, resolutions of conventions, and personal appeals have all been made. How much longer shall they be denied? All concede that this portion of the grant is clearly forfeitable, and none deny the power of this body to declare a forfeiture. Then why decline a compliance with the urgent, unanimous, and long-repeated appeals of the people?

To insist on tying this portion of the grant, along which no road has been even commenced in or out of time, with that portion along which a road has been constructed and long in running order is to mock the demands of the people. It does even more; it inflicts positive public and private wrong. It invites these poor settlers to a long and uncertain litigation in some future year with wealthy and all-powerful corporations. It ties up the titles of the country, it discourages settlement of the public domain within the granted limits, and it retards the prosperity of that whole country. To insist on a forfeiture of the whole grant westward of Bismarck is to insist on something impracticable. This is self-evident even to those who so persistently demand this extreme measure. They prate of their love for the settler, of the rights of the people, of grasping monopolies, and then, after coming in at the closing hours of the session, stubbornly refuse to accept measures which all concede are practicable and will afford relief and save millions of acres of public land from further control of corporations. Is it surprising people should become weary of such legislative jugglery?

In the early days of the session I introduced a bill exclusively for a restoration of this 214-mile grant and for the protection of settlers' rights. No reference was made to the Cascade or any other portion of the grant. Even if desired it was deemed impracticable. It was thought Congress would not agree to anything more radical. A Senate bill is now submitted to this House granting this and adding a forfeiture of all lands coterminous with the uncompleted portions of the Cascade branch of the Northern Pacific railroad. This comes to us now in the nature of a compromise. It is a great concession on the past position at the other end of the Capitol. It is the most liberal, as well as most radical, the country can expect. We are now offered a practical and immediate solution of this great problem. To refuse this is to postpone the hopes of the country indefinitely. For one, I accept it as the only possible hope for adjustment. I express no opinion as to the justice or injustice, the rights of the company or the interest of the people in reference to a restoration of the incompleted Cascade branch. It is enough for me to know that the pending proposition will bring success if accepted by us.

Should this House decline this last alternative, let us hear no more eloquent panegyrics about the rights of the people. Such flimsy pretenses can no longer deceive. The country can well say, "The voice is the voice of Jacob, but the hand is the hand of Esau."

The majority of the Public Lands Committee of this House have so far persistently declined to submit as an independent proposition the forfeiture of the 214 miles of Northern Pacific land grant between Wallula and Portland, Oreg., along the Columbia River. Here the company have never commenced operations and do not even now propose to do anything, hence the people of Oregon claim and have constantly demanded the restoration of all this grant, embracing over 2,000,000 acres, to the public domain. No construction of law or equity can even remotely favor the right of the Northern Pacific Railroad Company to retain any portion of this acreage. There is not a voice in this entire Congress sustaining such claim. The law, the facts, and public sentiment all unite in the justice of a restoration. The people along this line and the settlers—those who are the most deeply and directly interested—are clamoring for Congressional relief.

The poor man who has ventured to settle and construct his cabin in the face of the threatening and overhanging grant is in constant anxiety. The capitalist, the manufacturer, the merchant, the builder, all are forbidden to enter. The great mass of the lands are exempt from revenue support to the counties and State. The settlement and progress of the country is retarded and a great cloud has settled over this rich land belt. The people, restless and impatient at repeated delays, ask of Congress why they are denied relief. They are informed by the House committee that they can not be segregated from the general grant; that they propose to forfeit all west of Bismarck or nothing; that the lands coterminous with the completed road out of time shall fall the same as those along the line unconstructed; that a principle is involved, and they must have all or nothing.

The committee are reminded that a different principle operates in this case of a grant with a road completed out of time, and a grant or part of a grant with no road commenced or completed. If the law is not positively conceded, at least not much contention exists as to the definite status of a grant coterminous with a road constructed out of time. A discussion of the controverted question is not essential to my purpose in this debate.

As to a grant like the Wallula-Portland branch, coterminous with no constructed road, no possible doubt is advanced by any one. For this reason the action of the committee in blending the two divergent propositions in one bill and imperatively requiring that the House shall apply the same remedy in the case of both not only antagonizes a conscientious sentiment of the country, but actually jeopardizes the whole plan of forfeiture by the inconsistency and unreasonableness of the position assumed. They require the people of Oregon to suffer the indefinite withdrawal of over 2,000,000 acres of public lands, clearly and unjustly under a suspension and a great blot in the public progress, until both Houses of Congress shall be in a mood to declare a forfeiture of other lands coterminous with a road completed and in running order and furnished and with accommodations such as has few other roads in the world. Is such a discrimination just, is it statesmanship, is it even good sense? And above all is it fair dealing to the thousands of people, the pioneer and American home-seeker? Between man and man is it even honest? We can well indulge in astonishment at such a determination when the committee, when this House, when we all know that the Senate has declined to submit to a like proposition and will never consent to it.

No one can object to restoring these unearned lands in Oregon. Then in the name of right, of justice, and of fair play, why not restore this division at once? The extreme measures of the majority are not justified by the leading statesmen of the Democratic party.

By reference to the Senate report of the Judiciary Committee, on a bill providing that the Attorney-General shall institute suits for for-

feitures, we find as late as January 2, 1883, Senators Thurman, McDonald, and Garland (now Attorney-General) uniting in this language on that bill:

It is believed by the committee such a law will enable the Government to get rid of all these grants of land to railroads that are not being used for legitimate purposes or are misused, or in which no efforts are being made to build roads; and at the same time to have carried out all these grants in which the companies in good faith are trying to finish their roads.

President Cleveland uses the following language in his message on the question of land grants and subsidies:

A faithful application of the undiminished proceeds of the grants to the construction and perfecting of their roads, an honest discharge of their obligations, an entire justice to all people in the enjoyment of their rights on these highways of travel, is all the public asks, and it will be content with no less.

In accordance with this sentiment, the President only a short time since accepted the last 50 miles constructed of the Northern Pacific Railroad east of the Cascade Mountains in Washington Territory.

In considering recently the Senate amendments to House bill declaring forfeited in one bill seven grants of lands to railways in the Southern States, the House committee recommended excepting from the bill the grant to the "Gulf and Ship Island Railroad." This exception was originally added in the Senate on the ground that in this road work was commenced about one year ago and is still progressing. In the case of the six other grants no work was ever done. By indorsing this amendment the committee recognize the distinction. In the debate on the Gulf and Ship Island Railroad amendment the chairman of the Public Lands Committee said:

Every particle of information that the Committee on the Public Lands has upon the subject is that the Senate will not agree to the forfeiture of that grant now. This bill with the Senate amendment leaves that forfeiture out. It proposes to forfeit the other 7,000,000 acres, as I have said, and leaves the half million to be the subject of an independent proposition; and the Committee on the Public Lands have agreed to the Senate amendment, which leaves the question practically this: Shall we accept the seven million forfeiture and let the other remain to be determined hereafter, or will we, by rejecting the Senate amendment, lose the whole? * * * Let us then take the practical question presented, pass this bill, and hereafter take up and consider, and if proper pass, the independent bill for the forfeiture of the Gulf and Ship Island lands.

Another member of the committee [Mr. PAYSON] in the same debate said:

All the committee now asks is to eliminate that question from this bill, and declare the forfeiture of this immense body of land, as to which there is no possible question, leaving the other to be determined hereafter.

Now I ask, with the same distinction and with like reasoning, how can this same committee vindicate its action in considering adversely the Senate bill which confines the forfeiture of the Northern Pacific grant exclusively to such portions whereon no road has yet been constructed? The bill postpones for future consideration that portion of the grant coterminous with the completed road. This is "the practical question presented." The committee must be and is satisfied "that there is no possible chance of getting through the Senate a bill for the forfeiture of the 'grant west of Bismarck' at this time." Now, in their own words, where is the consistency of accepting the Senate Gulf and Ship Island road amendment, and now, on precisely the same reasons of the Senate, refusing to concur in the Senate forfeiture of the unearned lands of the Northern Pacific Railroad Company? The committee can not escape the conclusion that their course is inconsistent and inexcusably unjust, and an unfair discrimination as to the Wallula-Portland grant. The opposition of a large majority of this House to the Senate bill will I fear defeat any forfeiture. By accepting the Senate bill we secure a forfeiture now of all the grant along the unfinished roads, and the same bill expressly saves any future action as to grant coterminous with constructed road. Can anything be more fair? Had we not better take part of a loaf when it is offered us? No injury can arise by deferring action as to the forfeiture along the line already constructed. For these reasons I feel it my duty to favor the Senate bill and to vote against the House bill.

THIS IS NO PARTY QUESTION.

The object of the present proposed legislation is to preserve as much as possible the public domain for homes for actual settlers. This the Senate bill proposes to do now along the unconstructed line and saves any right to do more hereafter. And this bill we can pass at this session. In the discussion of these questions the air is burdened with charges from one party against the other of extravagance and profligate waste in the disposal of the public lands. Such allusions are not called for; neither are they pertinent to the present deliberation. The record identifies both of the great parties in land-grant legislation. In their platforms they each favored aid to the Pacific railroads. In Congress we know that these grants passed by the votes of both parties. The record of the Republican party being more familiar to the public as it is the more recent, we are reminded that while in the majority immense grants of lands were voted away by it. But what do we find on the other side? Up to 1860, before the advent of the Republican party to power, over 48,000,000 acres of land had been voted away for railroads. The grant to the Illinois Central Railroad Company, embracing not mountains, as chiefly in Montana and Idaho, but the finest lands on the face of the earth, was passed largely through the earnest efforts of such distinguished Democrats as Stephen A. Douglas. Though far less in quantity, it was worth more than the entire grant to the Northern Pacific Company. There were also numerous other grants made, such as in Mississippi, Alabama, Florida, Louisiana, Arkansas, Missouri, Michigan, Wisconsin, and Minnesota. Large grants were also voted Indiana, Ohio, and other States for canals.

In addition to these, 75,000,000 acres were voted to various States as swamp lands, and then largely parceled out to syndicates and jobbers. But of all systems permitting speculation in public lands the cash entry was the worst. Here there was no limitation in amount. The great speculators of the country, as soon as lands were proclaimed for sale, rushed to the land districts and there purchased at $1.25 per acre all they had the money to pay for. In this way some of the most fertile lands of the Western and Middle States were secured and held for many years awaiting exorbitant prices. Numerous attempts were made to repeal these laws and restrict sales to actual settlers, but were invariably voted down. Public sentiment was fast changing. In 1852 the cry of free homes for free men resounded over the nation. In a national convention of the Free-soil Democracy, held in Pittsburgh in 1852, in which John P. Hale, of New Hampshire, and George W. Julian, of Indiana, were nominated, respectively, for President and Vice-President, there was adopted in the platform a resolution declaring that the public lands of the United States "should be held as a sacred trust for the benefit of the people, and should be granted in limited quantities, free of cost, to landless settlers."

In every national campaign this forms one of the leading questions. Resolutions and petitions were being submitted to Congress at every session from all parts of the nation. The population was increasing at a marvelous rate. The demand for homes was the demand of the hour. Forming in the East, the great column was already moving to the wide expanse of forest and field of the unoccupied West. The public demand finally culminated in the introduction of a bill in Congress February 1, 1859, entitled "A bill to secure homesteads to actual settlers on the public domain." Various tactics were resorted to in order to defeat it. A motion to lay on the table was lost—yeas 77, nays 113; and the bill passed—yeas 120, nays 76. But one of that House is in this, and he a prominent leader on the other side of this Chamber, and now always ably defending the settler, but then I am sorry to find voting to defeat the homestead bill. In the Senate the consideration of the bill was defeated. In the next Congress the attempts were renewed, and on March 12, 1860, the bill passed—yeas 106, nays 67. Being amended in the Senate, it likewise passed that body.

In all its struggles its warmest defenders were of the North and West. It met its death at the hands of James Buchanan, who justified his veto on the ground that it was unconstitutional; that it was unequal in its operation among settlers; that it was unjust to old soldiers, as it reduced the market value of their land-warrants; that it was confined to one class of people, or, in his own words, "it is a boon expressly conferred upon the cultivators of the soil;" that it is unjust to the old States of the Union; that it would open one vast field for speculation; that it would be open to foreigners on declaring their intention to become citizens; that it would reduce the revenues of the Government; that it would "go far to demoralize the people and repress this noble spirit of independence; that it might introduce among us those pernicious theories which have proved so disastrous in other countries." These were the sentiments expressed by the last Democratic President previous to Mr. Cleveland in apology for his denial of free homes for the landless.

THE PARTY THAT GAVE FREE HOMES TO THE PEOPLE.

A bill was again introduced in the Thirty-seventh Congress, and passed both branches, and on May 20, 1862, it received the willing approval and signature of the first Republican President—that poor man's friend, the immortal Abraham Lincoln. Over 60,000,000 of acres have been entered under this act, and it has furnished free homes to over three-quarters of a million voters and a population of about three and a half millions of grateful people. These exceed the population of California, Minnesota, Oregon, Kansas, Nebraska, Nevada, Colorado, and Florida—eight States of this Union! What a grand and enduring legacy from that great party of freedom to the poor and landless of the nation! A generous and thankful people have erected towering monuments of bronze as well as of marble to the memory of Lincoln, yet in the revolving circle of time these will fall prostrate and crumble in decay. But a more imperishable memorial will still survive in this glorious and monumental ordinance of the nation; and only when the lands shall have dissolved in the sea and human life shall have faded from earth, then and then only will the homestead act cease to be cherished and indissolubly united with that patriotic—that revered name—Abraham Lincoln.

RESTRICT LAND DISPOSALS.

No, sir; this is not a party question, and in view of past legislation it comes with poor grace from the one party to criticise the other for extravagance in the disposal of the public lands. Let us rather engage our thoughts and most earnest efforts in the one intelligent direction of preserving what remains as a trust fund for the landless of our common country. No higher duty appertains to-day to the Representatives of the people than this. There is no greater curse even now existing than the facility with which corporations, monopolies, and syndicates

can acquire immense blocks of public lands. And for one, I shall vote for any practical measures which will restrict this license. Whatever may have been deemed the policy and necessity of the past by the ablest statesmen of the times as to this system, the moment has at last arrived when there must be a halt. Our population is increasing at a marvelous rate. In our own day we shall behold a nation of one hundred millions, and the child is now born who will be one of two hundred millions of souls, of one nation, under one flag and under one Constitution! We look to foreign lands for scenes of overcrowded humanity, of squalor and wretchedness, of class distinction, of arrogant imperial landlordism, and of the galley-slave under the name of tenant.

Let us beware that the scene be not soon shifted to our own beloved country. A nation is strong, happy, and prosperous only in proportion as her people are the proprietors of their own homes. Such a people have a fixed interest which is ever alert for a vigilant enforcement of the municipal law. They are themselves the conservators of the peace. Behold those engaged in riot, in tumult and anarchy, and we find the landless, the idle, the unanchored of society. The pure air of home is a disinfectant to the germs of disorder and crime. It is the nursery of the patriot, the statesman, the virtuous, and the wise. The prayerful sentiment, "God bless our home," is more than a sentiment. It is a blessed realization. Home, the first, the best place on earth! Of all sweet words few leave such a lingering cadence as the word "home." Let us then so shape the legislation of the country as that we shall become as far as possible a nation of homes. To do this let us restrict the speculator and monopolist, and open wider ajar the doors to the poor man and the landless of the nation. Encourage them to pitch their tents in the forest and prairie, and when there protect them by just and impartial, yet inflexible and ready, laws, and enforce a vindication of their rights when assailed by the strong.

THE DANGERS OF ALIEN LANDLORDISM.

Profound as can be the regret that so large a portion of the public domain has been acquired by corporations, syndicates, and individual holdings, inexpressibly more painful is the fact that alien proprietorship of immense tracts of lands is permitted under our existing land system. Over 20,000,000 acres have been purchased and are now owned in large estates by various foreigners and foreign syndicates whose homes are in other nations. Is the Public Lands Committee doing nothing toward reporting a bill which shall restrict aliens holding real estate in this nation? It seems almost incredible, but it is true, that in one of the States of this Union there are two English syndicates, the one holding 4,500,000 acres and the other 3,000,000 acres. Seven million five hundred thousand acres of American soil in one State owned by British land monopolists! In Florida Sir Edward Reid owns 2,000,000 acres. In another State the Marquis of Tweedale Land Company of London owns 1,750,000 acres. Lord Dunmore owns 100,000 acres, Lord Houghton 60,000, Lord Dunraven 60,000, Duke of Sutherland 425,000, Phillips, Marshall & Co., of London, 1,300,000 acres, and so on. Is the committee insensible to these ominous facts?

Much of the time of this Congress and the labored efforts of the committee have been spent in modifying or repealing the pre-emption law so as to restrict American citizens to the limit of 160-acre holdings, and that only under the homestead law; and yet the doors are open for English lords to prey upon the public domain of our country, secure titles to millions of rich acres of our broad lands, and here to establish their accursed tenantry system. We express cordial sympathy for the oppressed of Ireland and denounce in fiery tones and with warlike gestures the tyrant oppressor, the English landlord. With strange inconsistency we invite the same oppressor to our own soil, convey estates of millions of acres into his lordly hands, and then deprive the poor, daring American settler the privilege of securing 320 acres of land by actual settlement on the remote frontiers of his own country! This may seem right to the committee, but to me, sir, it seems like such an atrocious discrimination against our own people and such an alarming admonition to the nation that I deem it high time loud voices were raised against the further continuance of such a system, and, Mr. Speaker, this is the time and this is the place.

In our own nation experience has already demonstrated that large estates acquired in one generation seldom survive the second, and furthest the third or fourth, but under the conditions of English aristocracy, where the rules of primogeniture encourage and great and long-hoarded wealth permits the holding of unbroken estates for indefinite periods, we can easily conceive the difficulties which must ultimately arise from this unpolitic, unrepublican, extravagant, and dangerous license in a free country.

In Ireland over half a million people are tenants under certain English lords, and yet Ireland is about the size of Indiana. Of the people themselves only 68,716 own land, and yet 36,141 of those own less than one acre each. Only 1 man in 79 owns any land, while in the United States 74 per cent. of the farmers own their own land. So rapidly have the lands of England become released from small holdings that now 523 persons own one-fifth of all England and Wales. One-third of Ireland is owned by 292 persons.

This tendency must soon manifest itself in our own nation, if already it does not exist. We find that in 1880 over one million American farms were tilled by tenants. There are between five and six million people engaged in agriculture who have no proprietorship in the land tilled. We read of the barons of the Middle Ages, of their immense estates, and their arbitrary power and exclusive domain, but we have only to refer to Texas, Colorado, Wyoming, Dakota, Montana, and Indian Territory to find their prototypes in the rich and lordly cattle kings, monopolies, and syndicates who are supreme masters of millions of acres of the grassy valleys and water courses of the surveyed and unsurveyed lands in wide ranges.

Maria Hunter.

SPEECH

OF

HON. ROBERT SMALLS,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 30, 1886,

On the bill (H. R. 7167) for the relief of Mrs. Maria Hunter.

Mr. SMALLS said:

Mr. SPEAKER: In the consideration of the pension claims passed by this Congress and vetoed by the President I have thus far remained silent and should have continued so, contenting myself with the expression of my opinions by the vote I should feel constrained to cast; but having introduced this bill and the peculiar relations I bore to this distinguished soldier and patriot for whose widow this bill provides, I would be doing injustice to myself, injustice to history, and an unpardonable injustice to my constituents, constituting most largely that race of American citizens of which I am one, if I longer remained silent or neglected as a member of this body to state the reasons why this bill should become a law notwithstanding the objections of the President.

Mr. Speaker, it is due the beneficiary of this bill that I should say that it was introduced without consultation with or knowledge on her part. I knew it was the custom to pension the widows of eminent soldiers, not so much because of the necessities of their condition but as the grateful tribute of a country saved by their heroism and valor.

During my service in Congress I had invariably voted for such bills. With pride and pleasure I favored the pension to the widow of that magnificent soldier and courtly gentleman, General Hancock, whose death was lamented throughout the land. Who to-day regrets that legislation? Who to-day would not have been indignant at so ungracious and unpatriotic an act as a veto? It was the nation's tribute to the heroic dead. He was the country's pride while living, and it is just that his bereaved widow should be the nation's ward; and actuated by these sentiments I felt that the claim of General Hunter's widow had been forgotten or neglected, and therefore introduced this bill.

I knew, Mr. Speaker, that the pittance of $50 per month was more than would have been allowed by existing law, and yet fall far short of a proper estimate of the eminent services rendered by General Hunter during a long, eventful, and illustrious career, but it was an expression of national gratitude, and it accorded with the almost universal precedent of the Government since the close of the war. So just and meritorious was the claim regarded by the Committee on Pensions that it was unanimously reported and passed both Houses without criticism or opposition.

Mr. Speaker, to me and to my people the circumstances surrounding this case are singularly exceptional. Less than a quarter of a century ago that class of which I am a representative were "hewers of wood and drawers of water." Our importance seemed to consist in the money value we represented. Ownership in our blood and of our labor had long existed. Our lives were one long eternal night, not even an occasional silver lining in the sky of our existence to bid us hope for a brighter future or a happier day. The convulsion of 1861 aroused our minds to active thought and operation and bade us hope for a more useful and grander experience in the affairs of life. We heard words of hope even amid the din of battle and the clash of arms. We were told and began to realize we were human beings made after God's image, and possessed of the same inalienable rights attaching to other citizens of a great and free Republic.

Mr. Speaker, we are not an ungrateful nor unappreciative people. We can never forget the Moses who led us out of the land of bondage, and when the following order was issued it sounded like silver bells upon our startled ears.

[General Orders No. 11.]

HEADQUARTERS DEPARTMENT OF THE SOUTH,
Hilton Head, S. C., May 9, 1862.

The three States of Georgia, Florida, and South Carolina comprising the military department of the South having deliberately declared themselves no longer under the protection of the United States of America, and having taken up arms against the United States, it becomes a military necessity to declare them under

martial law. This was accordingly done on the 25th day of April, 1862. Slavery and martial law in a free country are altogether incompatible. The persons in these three States, Georgia, Florida, and South Carolina, heretofore held as slaves are therefore declared forever free.

DAVID HUNTER,
General Commanding.

ED. W. SMITH,
Acting Adjutant-General.

Mr. Speaker, these were immortal words. Then and there freedom unfurled her standard to the air. A new inspiration was imparted to us; a new heaven was opened to our vision. The horrors of the slave-pen and the auction-block began to diminish. All honor to such sentiments coincided with by General Frémont in his famous proclamation of freedom that became the bugle blast of universal emancipation. Nor was this a vain and ineffectual order. It had its birth in a natural love of liberty developed by the necessity of the circumstances. That it was faithfully enforced is demonstrated by the following order:

HEADQUARTERS DEPARTMENT OF THE SOUTH,
Port Royal, S. C., August 1, 1862.

The bearer, Prince Rivers, a sergeant in First Regiment South Carolina Volunteers, lately claimed as a slave, having been employed in hostility to the United States, is hereby, agreeably to the law of the 6th of August, 1861, declared free forever. His wife and children are also free.

D. HUNTER,
Major-General, Commanding.

Mr. Speaker, Generals Hunter and Frémont were freedom's pioneers; and so far advanced were they that their proclamations failed to command the approval of freedom's martyred President. Ere long, however, he became alive to the great issue involved, and added to the efforts of his generals the great weight of his mighty brain and grand Christian heart.

Mr. Speaker, I might stop here and rest our obligation to General Hunter on the record already made; but as an additional reason for our gratitude and as cumulative evidence of his sense of justice I call attention to the following:

At Fort Pulaski, Georgia, the following general order was issued by command of Maj. Gen. David Hunter, United States Army:

"All persons of color lately held to involuntary service by enemies of the United States in Fort Pulaski and on Cockspur Island, Georgia, are hereby confiscated and declared free, in conformity with law, and shall hereafter receive the fruits of their own labor. Such of said persons of color as are able-bodied, and may be required, shall be employed in the quartermaster's department at the rate heretofore established by Brig. Gen. W. T. Sherman."

General Hunter also addressed to Mr. Pierce, the Treasury agent in charge of the Sea Island plantations, a letter asking for "the names of the former owners and the number of persons formerly held to involuntary service," in charge of the Government agents. On receiving this information it is the intention of General Hunter to afford said owners a reasonable time to prove their fealty to the Government, and then in case of their failure to do so, and upon sufficient proof of their treason, he will at once restore these slaves to freedom.

Mr. Speaker, I will not stop to recite acts of personal beneficence and kindness practiced by General Hunter toward the down-trodden of my race. They were made without parade or ostentation. His relief of the needy, his education of the ignorant, and his encouragement of the oppressed have made his name and his memory dear to every colored man's heart, and they regard with much regret this denial of that justice to his widow which with lavish hand has been extended by this Congress to so many others, and that, too, with the assent of the President. To me, Mr. Speaker, the rejection of this bill is full of significance. No one challenges the brilliancy of General Hunter's record during his forty-four years of active service, including two great wars and several intermediate Indian wars, as appears from the following record:

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, D. C., March 20, 1886.

Statement of the military service of David Hunter, late of the United States Army, compiled from the records of this office.

He was a cadet at the United States Military Academy from September 14, 1818, to July 1, 1822, when he was graduated and appointed second lieutenant Fifth Infantry; promoted first lieutenant June 30, 1828; appointed captain First Dragoons, March 4, 1833; resigned July 4, 1836; appointed additional paymaster November 13, 1841; vacated appointment as such March 14, 1842, having been appointed major and paymaster United States Army from that date; appointed colonel Sixth United States Cavalry, May 14, 1861; brigadier-general United States Volunteers, May 17, 1861, and major-general United States Volunteers, August 13, 1861; honorably mustered out of the volunteer service January 15, 1866; retired from the active service with the rank of colonel July 31, 1866.

He was brevetted brigadier-general United States Army, March 13, 1865, "for gallant and meritorious services in the battle of Piedmont and during the campaign in the valley of Virginia," and major-general United States Army, March 13, 1865, "for gallant and meritorious services during the war."

He joined his regiment in January, 1823, and served therewith in Minnesota to April, 1825; on leave to November, 1825; with regiment in Minnesota and Wisconsin to October 23, 1827; on leave to April 15, 1828; with regiment in Minnesota to June, 1828; at Jefferson Barracks, Mo., to October, 1828; at Fort Dearborn, Ill., to May, 1831, and at Fort Howard, Wis., to June 28, 1831; on leave to June, 1832; with regiment at Forts Winnebago and Howard, Wis., to April 18, 1833, when, having been appointed captain First Dragoons, he left to join that regiment and served therewith at Jefferson Barracks, Mo., to November 20, 1833, and in the Indian Territory and Kansas to January 20, 1836; on leave to July 4, 1836, when he resigned.

He served in Florida from date of reappointment in the Army as additional paymaster until April, 1842; at Washington, D. C., to June, 1842; in Arkansas to July, 1846; in the war with Mexico to July, 1848; at New Orleans, La., to March, 1849; at Washington, D. C., Detroit, Mich., and New York city to May, 1856; in Kansas and Saint Louis, Mo., to February, 1861; and at Washington, D. C., to date of appointment as colonel Sixth United States Cavalry.

He served as a brigade and division commander in the Department of Northeastern Virginia (General McDowell's army) from May 28, 1861, to July 21, 1861, when wounded in action at Bull Run, Va.; commanded first division of the Western Department from September 22, 1861, to November 3, 1861, the Western Department to November 19, 1861, the Department of Kansas to March 11, 1862, and the Department of the South from March 15 to August 22, 1862; on leave to September 23, 1862; member of a military commission at Washington, D. C., to January 20, 1863; commanding Department of the South to June 12, 1863; on special duty at Washington, D. C., to March 29, 1864; awaiting orders to May 19, 1864; awaiting orders to January 31, 1865; on special duty and awaiting orders to muster-out of volunteer service January 15, 1866; on leave of absence to July 31, 1866, when he was retired at his own request, being over sixty-two years of age (act July 17, 1862).

He served as a member of the special claims commission from August 9, 1866, and also of a board for the examination of cavalry officers to June 16, 1868, from which date he was unemployed until he died, February 2, 1886.

R. C. DRUM, *Adjutant-General.*

Can it be that there is secret and sinister motive either personal or political? Is it because of his hostility to slavery before and during the war? Is it because of his proclamations freeing the slaves? Is it because of his official action as a member of the court-martial that tried and convicted Fitz-John Porter for treason to a government which General Hunter aided to preserve? Can it be that this is your revenge for all his patriotic conduct? Mr. Speaker, the future historian of this country's legislation will not be charitable toward you for your treatment of this bill. But after all the action of the Democratic party in this House is not without a useful lesson. It exposes the hypocrisy of its assurances of friendship for the colored man by striking a blow at the nation's brave defenders and the colored man's best friend.

Mr. Speaker, I trust I may be excused in referring to my personal intercourse with General David Hunter. After the surrender by me of the confederate steamer Planter to the United States naval authorities, then under the command of that noble gentleman and splendid officer, Admiral Dupont, I met General Hunter, then in command at Hilton Head, S. C., where he had organized a regiment of colored troops. Not having been authorized to do so, they were disbanded. I was then intrusted by General Hunter with a letter to our country's great War Secretary, Stanton. Proceeding to Washington I was honored with several interviews with President Lincoln and Stanton, and from them bore an official letter to General Hunter authorizing the formation and mustering in of several regiments of colored soldiers. Their records are part of the country's history which I need not repeat here, further than to say that as we were faithful to the Union then we will be true to its defenders now.

Mr. Speaker, by the variations and methods of modern politics, my race of upward of seven millions of people are represented on this floor by the honorable gentleman from North Carolina [Mr. O'HARA] and myself. How long this injustice will be tolerated I will not dare to prophesy; but so long as one of us be permitted on this floor our voice and our vote will not be withheld from any measure of legislation which will add to the prosperity and happiness of all the people, without regard to color or condition, and the permanence and greatness of a common country.

Interstate Commerce.

SPEECH
OF
HON. THOMAS RYAN,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, July 21, 1886,

On the bill (S. 1532) to regulate commerce.

Mr. RYAN said:

Mr. SPEAKER: I want to say a word. The subject of regulating interstate railway traffic by Federal law has been a theme of discussion in both Houses for several years. The demand for such legislation has been and is still pressing. In the past both Houses have legislated upon it. The House had its scheme of control. The Senate had a different plan. The House said to the Senate, Take our plan or nothing.

The Senate said to the House, Take our scheme or nothing. The result has been nothing. Neither body seems in the past to have had so much regard for the public interest as for some supposed partisan advantage that might result to one party or the other from the adoption of one plan or the other. Neither body seemed willing to make concessions to the great principle of legislative control. Neither body seems to have been willing to make such concessions as would crystallize that great and important idea into public law.

There never has been any Federal legislation upon the subject. Therefore any law we may enact must be more or less tentative—to a greater or less degree an experiment. No plan may be expected to be perfect as first formulated. The operation of any law we may enact is likely to develop imperfections. They can be corrected from time to time as experience may demand. Therefore it would seem to be the plain duty of both Houses to come together on this important subject in a spirit of mutual concessions, having in view the primary importance of the assertion by law of Federal control.

The salutary influence of any rational scheme of legislative control, it being the will of sixty million of people, constitutionally formulated into law, would be productive of incalculable benefits to the people of this country. And yet in the past the two Houses seem to have been influenced less by a consideration of that principle than by some supposed partisan advantage to be gained on the one side by the Senate and on the other by the House.

Has not this thing been going on until the people have become doubtful about the sincerity of either body? How much longer will it continue? I prefer the Cullom or Senate bill. If I can not have that, I will take the Reagan or House bill with all its imperfections. I shall vote for the Cullom bill for first choice; failing in that I shall vote for the Reagan bill, confident that some of its most objectionable features will be removed or modified in conference.

The iron-clad provision of the Reagan bill in regard to long and short hauls is likely to be hurtful to the extreme West, should it become a law. In this respect the Cullom bill is preferable. This bill leaves that subject to the discretion of the board of commissioners. The surplus products of the West are subject to the long-haul rates. These are by all odds more favorable than the short-haul rates. The tendency of the Reagan bill is to increase long-haul rates and decrease short-haul rates. The Cullom bill will leave the board of commissioners the fullest discretion to protect the West in this regard.

In regard to long and short haul rates the railroad commissioners of my State, in their annual report for 1883, say:

The cost of hauling a train-load of freight between distant points is much less than is the cost of hauling a similar load a much shorter distance, when the train must make frequent stops to deliver freight at way stations. Besides the loss of time by detentions on the way, which will consume at least one-third of the time in transit, the extra labor involved in frequent switching, unloading cars, and the loss of haulage on that part of the train dropped out at places not remote from the initial point, are elements that greatly swell the cost of this part of the service.

In addition to this, the roads east of the Missouri River, besides the local traffic that is tributary to their lines, transport over them the great volume of commerce that is gathered from the States and Territories west of the Missouri River by our local roads. There are local causes for lower freights east of the river than can, in the present condition of things, be reasonably expected over roads west. The traffic coming to railroads bear a pretty uniform ratio to the number of population to each mile of railroads in operation. In the State of Illinois the ratio is 567, in Missouri 489, and in Kansas 259, to each mile of railroads in operation in each State respectively.

If local and through rates were equal and uniform over all the roads in the country, irrespective of distance and the other elements of cost of the service, the through rates upon the surplus productions of the West would be enhanced to a figure that would consume the whole of the profits of the Western farmer. As it is, the low through rates for long distances enables the Western farmer to derive from the capital invested in Western lands a profit equal and in many instances greater than the Eastern farmer.

In the report of the select committee of the United States Senate upon transportation to the seaboard there is copied a table showing the decreasing cost per ton as the distance increases, which we will transcribe here for illustration:

The regularity of decrease in rates charged corresponds with a general law governing all railway service, namely, cost of loading and unloading, and fixed expenses being the same, whether the trip is long or short; cost of transportation per ton per mile regularly decreases as distance increases, being cost of hauling plus fixed cost, divided by the number of miles. Thus, if cost of loading and unloading be 33 cents, and other items of fixed cost 27 cents per ton, the actual cost of haulage (maintenance of track, repairs, &c., included) being eighty-three one-hundredths of 1 cent per ton per mile, the cost of different distances will be 83+60 cents divided by distance.

The committee go on to say:

Now, if it actually costs 6.83 cents per ton per mile to transport freight 10 miles and only eighty-nine one-hundredths cents to carry it a thousand miles, it is evident that a law establishing equal mileage rates, without regard to distance, would prove a failure, because of its manifest injustice both to the public and to the company. The enforcement of such a rule of charges, instead of bringing relief to the producers in the distant interior of the continent, would add very largely to their present burdens. The average rates for transporting all freights on the leading trunk lines between Chicago and New York in 1872 was about 1¼ cents per ton per mile, which on the bushel of wheat would amount to about 41 cents.

The actual average charge by rail per bushel that year was 33.5 cents. Hence an equal mileage rate on those lines, if adjusted upon the basis of their average charges, would have reduced the value of the 213,000,000 bushels of wheat and corn moved that year about 10 cents per bushel, amounting to an aggregate loss to producers of $21,300,000, with no compensating gain to consumers. And as the price of wheat and corn at the West, as well that part which remains at home as that which is sent abroad, is fixed by the market price in Liverpool, less the cost of transportation, the loss to the Northwestern States on the entire crop that year (estimated at over 1,000,000,000 bushels) would have amounted to the enormous sum of $100,000,000.

A permanent reduction of 10 cents per bushel on the value of the cereal crop of the Northwest would reduce the value of the farms in that section by an amount which would build and equip all the trunk lines of railroad from the interior to the seaboard.

The provisions of the Reagan bill are rigorous enough, but it leaves all violations of them to be prosecuted by individuals at the peril of paying costs, expenses, &c., if they fail. Individuals will prefer to suffer considerable unlawful injuries rather than engage in interminable litigation with a powerful corporation who may protract such litigation for many years. In this respect the Cullom bill is preferable. It organizes a board of commissioners consisting of five members to see the law is faithfully executed. The injured party is not left to cope alone with associated capital, but he has only to inform the board of the violation of law by the railway company and the board enforces the remedy. The board is the embodiment of the law. It is the tribunal that voices the law—voices the will of the people of the whole nation. No railway corporation is likely to disregard its orders; no railway corporation could afford to defy its just demands. The rights of the individual are protected by this plan without serious inconvenience or cost to him.

Again, it is probable the two Houses will disagree. The subject will again be thrown into conference. I can only express the hope that a due regard for the public interest will move the conferees to mutual concessions to the end that this Congress shall by law assert legislative control over interstate railway commerce.

Alien Landholders in the Territories.

SPEECH

OF

HON. JOSEPH K. TOOLE,

OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 31, 1886,

On the bill (H. R. 3230) to restrict the ownership of real estate in the Territories to American citizens, &c.

Mr. TOOLE said:

Mr. SPEAKER: Upon the general principle that American soil shall be owned by Americans I am in full accord with the views of the committee. Public policy and expediency, however, in my judgment, do not demand the extremity to which this bill goes. It provides as follows:

Be it enacted, &c., That no non-resident alien or foreigner, nor any resident alien or foreigner who has not declared his intention to become a citizen of the United States, nor any corporation or association where, at most, one-tenth of its stock or right of property is owned or controlled by aliens or foreigners, shall acquire or own, hold, or possess, by right, title, or descent accruing hereafter any real estate in any of the Territories of the United States: *Provided*, That the provisions of this act shall not apply to the real estate necessary for the construction and operation of any railroad.

It will be observed that its provisions are sweeping and comprehensive, and cover all mineral as well other lands. The principle upon which this bill rests finds its support and exposition in the following language from the report of the Public Lands Committee, to which the attention of the House is directed:

The Committee on the Public Lands in this Congress, as well as in the last, is thoroughly committed to the policy of so adjusting and administering our public-land system that the agricultural lands of the nation shall be parted with, without cost, to be held in small tracts by actual settlers only, for the purpose of cultivation by the owner, securing thereby the thrift of the citizen and economy in his management which ownership always stimulates.

This policy, we submit, should become the national one.

The experience of so many thousands of our people in the securing of homes on our vast area of public lands has been so successful that the desire for ownership of a home capable of producing support for the family is more universal here than in any country in the world.

It was the prevalent idea when the homestead law was passed—one of the most beneficent acts ever adopted by Congress—that it was the duty of the Government to furnish to its people cheap homes; to aid the actual settler whose labor would make the land fruitful and productive, giving added wealth to the locality, and stability and strength to the country; and it had the great, magnificent possession, the public domain of that time, which under proper management would have afforded such grand results for generations to come.

But different counsels prevailed and a different course was followed. Areas of land sufficiently large to make great States were donated with a reckless liberality, indeed prodigality, to railroad and other corporations, and by a lax, easy administration of injudicious laws men of wealth and companies have been improperly, illegally permitted to acquire other great areas of the public lands, until now, out of the vast empire of territory we had at its beginning, this generation has seen it so reduced that less than 5,000,000 acres of arable, agricultural land—upon which crops can be raised without irrigation—remain for the settler under the general laws of the United States, and about 50,000,000 acres only of lands susceptible of improvement by irrigation.

These lands are becoming more and more valuable, year by year; and tempted by the promise, sure to be realized, of immense profits, as well as the absolute security of the investment, these lands, by devious methods in many cases, have been secured in great areas and holdings by capitalists and corporations, foreign as well as domestic. In the hands of many of these foreign owners and holders these lands are made subject to a system of landlordism and conditions totally un-American, and kindred to that existing in the Old World, systems and conditions that have spread ruin and misery wherever they have existed in Europe. Besides this, out of the heritage of the American people, the common property of the nation, its public lands, we are at present permitting the coining of immense private fortunes in the hands of foreign nobility and gentry at the expense of our own people, and giving these foreigners the control of the homes and happiness of thousands of citizens, or those who have come here to identify themselves with us.

Every argument or suggestion deducible from the foregoing pertains to the agricultural lands of the United States. It is designed to prevent the concentration of estates in the hands of the few and the wealthy, estates which by improvement and the lapse of time are enhanced in value.

I contend that the same rule which applies to this character of estates and the reason for its adoption and enforcement does not apply to our mineral lands.

In the first place, it is difficult to acquire large estates of this character by reason of the fact that the Government will not part with the

title to any greater amount than 20 acres to one individual, and the result is that such lands are never held in unnecessarily large quantities by individual or corporate purchasers.

Secondly, this character of land can never subserve any purpose of a home. It is barren and unproductive of food products and valuable only for the mineral it contains.

I submit that there is nothing in the argument of the committee which justifies extending the provisions of this bill to the mineral lands. The best part of my life has been spent in a mineral country, and I know how fatal to the development and prosperity of the mineral regions the passage of this bill will be. Territories which to-day boast of their inexhaustible mineral resources and furnish employment to hundreds of thousands of men would be trackless, unproductive wastes if it had not been for foreign capital. They have invested, developed, and reaped where we would dare not, and thus stimulated and advanced our material prosperity. This is the experience of every mining region in this country. The inhibition proposed is unwise, inexpedient, and not justified by any past, present, or threatened danger.

The development and explorations of our mineral resources require an outlay of vast sums of money—sometimes millions of dollars before a dollar is received in return. These great enterprises are of too great magnitude to entice private capital, and home capital, always timid, seeks less hazardous investments. Our mine-owners, who have been unable to prosecute their development, have uniformly turned to Europe, where accumulated capital has ever been willing to take some chances in the purchase and development of such properties.

But why is it that such restrictive legislation is saddled exclusively upon the Territories of the United States? If this is good and necessary legislation, why is it not made applicable to the District of Columbia? No question of State rights is involved, and the same reasons which apply to the Territories pertain with equal force to the District of Columbia. If this measure becomes a law it ought to be perfected so as to include the District of Columbia within its operation, and the following amendment should be added:

Provided, That this act shall not be construed to apply to mineral lands.

Repairs to the Treasury Building.

SPEECH

OF

HON. JOHN M. GLOVER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 28, 1886,

On the amendment of the Senate to the sundry civil bill appropriating $67,000 for repairs to the Treasury building.

Mr. GLOVER said:

Mr. CHAIRMAN: The necessity for some immediate remedy to be applied to correct the evils arising from the defective sewage and plumbing of the Treasury building is apparent to any one who ever visited that building. It is one of the oldest Government buildings in the District of Columbia, and all of its sanitary arrangements and appliances are of the most ancient and primitive order. There are no scientific or modern means for its proper ventilation, such as forcing out the impure air in any manner and forcing in the pure air, such as are now very generally employed in public buildings, and especially new ones.

To keep pure the air of this room, in which little over three hundred members are congregated when all members-elect are present, an elaborate and costly machinery, requiring the services of a considerable number of engineers and workmen, is constantly in activity. But no such appliances exist in the Treasury building, into which are crowded, breathing over and over again the same contaminated atmosphere, two thousand employés.

My own attention was called to the bad sanitary conditions there by the illness of an acquaintance who was an employé. Inquiry disclosed that the air he breathed was positively putrid. Foul gases flow into the building from the half-open sewers which would extinguish a miner's safety lamp. Sewer-pipes run under the corridors in the sub-basements of the south and west wings, the air ducts above which have not been cleaned for a decade. These breed pestilence and death, the wind blowing the effluvia from the sewers directly into the breathing area of the hive of human beings which crowd the small and unventilated rooms. In the composing-room of the printing office there is a distinct stench when it is opened for work in the morning. That not only means disease, it means languor and listless and ineffective labor. A sewer-trap pours its deadly exhalations into the same room. The sunlight, it is said, never strikes there except for a day or two in midsummer.

One of the most conscientious and effective men ever connected with the Treasury Department, Mr. E. B. Youmans, the chief clerk, made in the early part of this year, at the request of the Secretary of the Treasury, a report on this subject which I will now read:

TREASURY DEPARTMENT, OFFICE OF THE CHIEF CLERK,
Washington, D. C., March 26, 1886.

SIR: Directed by you to examine as to the necessity of and plans for the ventilation of the Treasury building, I beg leave to make the following statement and report:

In my judgment, the subject demands immediate attention and some speedy and certain remedy. I found a state of affairs in the south and west wings of the building that is deplorable and dangerous and should exist no longer.

Sewer-pipes run underneath the corridors in the sub-basement of the wings named, and I am assured that the air-ducts above them have not been cleaned for at least ten years. Their appearance, so far as I was able to observe, would bear out such an assurance. From the top of the sewer-pipes to the air-ducts there is a space of about 10 inches, mostly filled with earth, pieces of brick, and other *débris*, left there when the pipes from the boilers or for other purposes have been introduced. There are breaks in these sewer-pipes from which the gas is constantly escaping and permeating the entire building. This is always noticeable, but when the wind is in the south or southwest it is oppressive and dangerous. It is impossible to locate these breaks in the pipes unless the pipes are entirely uncovered, as the gas may not escape into the air-ducts through the earth and *débris* for many feet from where they are.

In my examination of the matter there was one spot, and that near a grated opening into the corridor itself, where the candle I was using was extinguished by a strong draught of foul air, which was forced into the building through crevices in the sewer-pipes by a southwest wind.

I would recommend that the whole of these sewer-pipes be uncovered with as little delay as possible; that the breaks be found and stopped, the pipes whitewashed, and the air-ducts kept free from earth and rubbish.

In the northeast corner of the building there is a pipe connected with a trap in the sewer, put there for the purpose of ventilating the sewer. This pipe does not work, being imperfect and broken in a number of places. The gas comes out from it into the elevator stack, and is sometimes exceedingly oppressive.

The effect of these defective sewer arrangements is observable all over the building, but most especially in the sub-basement corridors in the south and west wings and the rooms leading therefrom. Workmen engaged in all of these rooms complain of the foul air and of the injury to health from working there. This is especially so in the rooms occupied by the printing office, where there are employed upward of one hundred men and women. In the composing room there are forty-six men employed, and the effect of the bad air and lack of ventilation is plainly observable in them. In the morning when the room is first opened the stench in it is intolerable. To add to its own lack of ventilation there is, not far from it near the northeast corner of the inner court, a sewer-trap, the odor and gas from which penetrate into the room. The sunlight never strikes there except for a very brief period in the summer time.

Heretofore illuminating gas has been used at all hours over every case, adding to the discomfort of the situation and making the room toward the close of the day unbearable. The introduction of the electric light in the place of gas has been a great relief in this respect, reducing the temperature 20° to 28°.

An effort was made to procure some ventilation in the room by means of apertures in the windows, easily regulated, but it failed to work satisfactorily, causing a draft, and two employés died, their deaths being clearly traceable to these openings in the windows.

In the press-room, where illuminating gas is still used, the absence of any ventilation is very perceptible, and the effects are more pronounced for evil than in the composing-room. In the folding-room, where eight female folders are employed, the situation is still worse. In the press-room there is an average of two a day who are ill from the effects of the bad air, and in the composing-room the proportion was about the same until the introduction of the electric light. At the time of this writing there is one employé of the composing-room who is in a serious condition, brought on by breathing the foul air of the place where he has been at work. Within the last few years, some thirteen employés of the composing-room have died, their deaths clearly traceable to the noxious air that they breathed daily.

The foreman of the office, Mr. P. Louis Rodier, said that in the twenty years of the occupancy of his position he had lost by death 1½ per cent. of his force. He attributed this large proportion to the lack of ventilation in the rooms where the employés worked. He himself thought that had he been confined in his work to these rooms, and not compelled, by the duties of his office, to be stirring about, even with an iron constitution such as he has, he would have been dead years ago. As it is, his health is impaired and he suffers from the consequences of breathing the foul, putrid air. An effort was made by him at one time to provide some ventilation for the rooms he occupies, by means of large pipes attached to the ceiling, in which there were placed openings here and there on the lower sides. These pipes were open at one end and connected at the other with the hot-air chamber in the boiler-stacks. This effort worked admirably, and kept the rooms quite decently ventilated, but it was supposed that the pipes interfered with the draft of the boilers, and the end connected with the hot-air chamber was transferred to the cold-air chamber, the draft ceased, and the pipes were of no effect for ventilating purposes.

As another instance—not a solitary one—of the effect of the foul air permeating the building I would allude to the fact that during the past winter four of the employés in one of the rooms of the Division of Loans and Currency, whose offices are situated on the first floor, in the south wing, were prostrated for a number of weeks with a sickness the origin of which, their physicians averred, was in the vitiated air which they were compelled to breathe.

These are illustrations of some of the worst features of the lack of ventilation in the Treasury building, but they are alone sufficient to emphasize the demand that something should be done to correct the great evil that more or less shows its effects all through the building. I can not too earnestly or too strongly recommend that some steps be taken toward that end, and especially that as speedily as possible some remedy should be applied to correct the evils arising from the defective and filthy sewer.

It is necessary in order to carry on the business of the Department (owing to the crowded condition of the building) to occupy these rooms named and others where the effects of the impure air are almost equally perceptible.

Further information in detail, in regard to the whole subject, may be obtained from P. Louis Rodier, already mentioned, the foreman of the printing office, and of Oliver N. Bailey, the plumber of the Treasury building.

I would also call your attention to the fact that reports on this subject have heretofore been made, and among them one by John B. Hamilton, Surgeon-General Marine Hospital Service, dated April 1, 1885, and by M. G. Elizey, M. D., professor of chemistry in the medical department of the University of Georgetown, dated March 30, 1885, on the analyses of the air in the Treasury building, copies of which accompany this, marked respectively, A and B.

No specific estimate of the cost of providing the Treasury building with complete and perfect ventilation can be made without a positive plan and a thorough examination of the excavation necessary for boilers and machinery to furnish pure air, but men experienced in such constructions have assured me that a

least $50,000 would be necessary, and in my judgment a practical and successful system of ventilation applied to the Treasury building would be cheaply attained by the expenditure of such a sum, or by half that named added to it.

Very respectfully,

E. B. YOUMANS,
Chief Clerk.

Hon. DANIEL MANNING,
Secretary of the Treasury.

My statement as to the putridity of the air and the dangerous lack of ventilation rests upon the authority of Surgeon-General Hamilton, as contained in the following letter:

TREASURY DEPARTMENT, *Washington, D. C., April* 1, 1885.

SIR: I have the honor to make the following report on the sanitary condition of the sub-basement and basement of the Treasury building, and to state that on Thursday and Friday of last week, the 27th and 28th ultimo, in company with the Supervising Architect and Mr. Green, an employé of that office, I made an inspection of all the rooms indicated. It was found that in their present condition they are unfit for occupancy, by reason of insufficient amount and impurity of the air. The human body may habituate itself to the breathing of poisonous gases up to a certain degree, without much apparent effect, which accounts for the length of time some of the employés have remained there with so little apparent damage, but the air was so bad that I deemed it necessary to have a chemical analysis made thereof by an expert, and I herewith transmit it as a part of this report. It is seen by that report, on page 2, that, while the carbonic acid in the outside air amounted to 3.40 volumes per 10,000, in the sub-basement the carbonic acid amounted to from 12 to 16 volumes, and when it is remembered that carbonic acid is in itself a deadly poison, and in sufficient amount will instantly destroy life, it can be seen how greatly vitiated this air has become.

My inspection of the place leads me to agree with Professor Ellzey in regard to the source of the contamination, namely, the aspiration of the ground-air through the bricks at the bottom of the basement and perhaps other ways, and also from combustion of the gas-burners in the rooms, and respiration of the occupants. It should be remembered that an ordinary gas-burner in a room throws off an amount of carbonic acid and consumes oxygen about equal in effect to that produced by an adult person. Not only is there a poisoning of the air, but there is a loss of oxygen in the air which is the only thing in it that sustains life, the absence or loss of which amounting, as shown by the chemist's report, to from 2 to 3 per cent. It must be apparent to you, sir, from these facts, that even if the people live in this vitiated atmosphere, their work must be much less in amount than if they were in properly ventilated apartments having plenty of fresh air. But there are other considerations. In the composing-room of the branch printing-office it is found that it is occupied by forty-two persons, and if the room were otherwise entirely empty, each person would have about 880 cubic feet of air space; but in point of fact the solid contents of the room, such as the cases, composing-stones, chases, fonts of type, and made-up forms, take up very nearly 25 per cent. of the available air-space, and the men are confined to a ration of air about one-half of that which is allowed in the construction of an ordinary prison. The air in the composing-room, the press-room, the smithy, and the corridor near where the rags are assorted is quite foul and respirable with difficulty by those whose sense of smell is not blunted by constant exposure to it.

The water-closets on the basement floor are in very bad condition. The woodwork is evidently foul from saturation with the gases of the surrounding atmosphere, and the east corridor of the basement has a very foul air, probably in large measure due to the proximity of the water-closets. The lack of ventilation is further shown by the inanimate objects in the rooms, as, in the store-room, three or four floors have been supplied within a comparatively short period, floors giving way under dry rot. This clearly shows a want of under-ventilation. The portion of the floors covered by brick and iron are damp almost throughout, and there is a marked drain smell in certain corridors. The old paper and old rags should not be allowed to be stored in the sub-basement, as they render the air foul in their immediate vicinity. The entire north corridor is lined almost from one end to the other with immense bales of old paper. The Supervising Architect will doubtless advise you of the details of the mechanical work necessary to insure proper ventilation of the building, together with his account of the present condition thereof.

In conclusion, it is proper to state that every foul room is in itself a source of contamination of the air of the remainder of the building.

Having pointed out the unsanitary condition of the building the remedy is not far to seek, namely, the removal of the employés from the sub-basement to some place where they may obtain a reasonable amount of fresh air and sunlight; and, in the second place, to ventilate the basement, sub-basement, and remove the decaying and rotten wood, introducing fresh air by means of ventilating shafts, so that the basement and sub-basement may not contaminate the remainder of the building.

Very respectfully, your obedient servant,

JOHN B. HAMILTON,
Surgeon-General, Marine-Hospital Service.

Hon. D. MANNING,
Secretary of the Treasury.

The letter of the chemical expert referred to is as follows:

1012 G STREET, NORTHWEST,
Washington City, March 30, 1885.

SIR: In accordance with your request, I have made chemical examinations of the air on three floors of the Treasury building. First, I determined the carbonic acid in outside air taken simultaneously with that taken within the building, and found, in sub-basement:

	Volumes in 10,000 volumes of air.
Outside air	CO_2= 3.40
Printing-room, first floor	CO_2=16.21
Passage near door	CO_2=13.07
Press-room	CO_2=15.75
Waste-paper room	CO_2=12.89
Smithy	CO_2=16.07
Average for first floor	CO_2=14.99

I determined the oxygen at four stations on first floor:

	Per cent. of air volume.
Station No. 1	O=18.00
Station No. 2	O=18.00
Station No. 3	O=17.57
Station No. 4	O=17.75
Average for first floor	O=17.83

Average nitrogen by difference, N=80.50 per cent. of air.
The average temperature of first floor, 78° F.
I determined O for outside air=20.49 per cent. of air. The general average for pure country air is about 20.79 per cent.; purest mountain air O reaches 20.99 per cent.

SECOND FLOOR, BASEMENT.

	Volumes per 10,000 volumes of air.
Canceling-room	CO_2= 9.57
Passage near door	CO_2= 9.25
Ice-rooms	CO_2= 7.99
Store-room	CO_2=12.31
Passage near door	CO_2= 9.33
Average for second floor	CO_2= 9.69

Oxygen at three stations on second floor, namely:

	Per cent. of air volume.
Station No. 1	O=18.96
Station No. 2	O=19.06
Station No. 3	O=19.15
Average for second floor	O=19.05

THIRD FLOOR, MAIN FLOOR.

CO_2 taken at four stations, namely:

	Volumes per 10,000 volumes of air.
Station No. 1	CO_2=7.09
Station No. 2	CO_2=6.90
Station No. 3	CO_2=7.15
Station No. 4	CO_2=7.01

Oxygen taken at two stations on third floor, namely:

	Per cent. of air volume.
Station No. 1	O=19.76
Station No. 2	O=19.76
Average for third floor	O=19.76

By way of explanation of these results, I invite your attention to the great increase of CO_2 on first floor, the average being 14.99 volumes per 10,000 of air as against 3.40 volumes per 10,000 volumes of air for the outside room. This increase of 11.59 volumes per 10,000 of air is due to three causes, namely (*a*) combustion, (*b*) respiration, (*c*) aspiration of ground-air into the building. Pettenkofer, Parks, and other good authorities hold that the CO_2 increase in the building representing ground-air respiration and combustion should not exceed two parts CO_2 per 10,000 of air. On this floor, then, we have CO_2 representing these impurities amounting to near six times the limit of good ventilation.

You will observe that the diminution of O=2.66 per cent. of the volume of air is much greater than represented by the CO_2 of respiration and combustion, and is certainly due mainly to the copious feeding of the air of that floor by ground-air, which is extremely poor in O.

On the second-floor basement the results are much better, but still very bad. On the first floor there is still further improvement, but the best air in that building comes far short of the requirements of good ventilation. In fact, strange to tell, no provision whatever has been made for the ventilation of the building. The process used by me for carbonic acid is the well-known process of Pettenkofer, with Regnault's correction for temperature. I have found by recent careful experience of this method that it gives very accurate results.

In determining the oxygen, I used the method by pyro-gallic acid advised by Liebig, and satisfactory and accurate in the hands of Fesemius and others. I have no doubt of the general accuracy of all results herein reported. I made fifteen determinations of CO_2 and ten of oxygen, besides test analyses, to prove the working of my apparatus.

I am of the opinion that the removal of gas from the basement floor, and the substitution of electricity for lighting, would pay in dollars and cents for the outlay four or five times a year in the improved health and working efficiency of the force there employed.

As long, however, as no direct provision is made for the introduction of abundant air supply upon that floor, the condition of the air will necessarily remain infamously bad, even if the building were not occupied at all.

The devitalization of the air is shown by my analyses to be very great, the excessive temperature, the low humidity of the air, the absence of daylight, and the large aspiration of ground air combine to exhibit a state of things unsanitary to the last degree, and in case of the advent of the germs of infective disease, indigenous or imported, the result would necessarily be calamitous in the extreme.

I do not know what the sick rate and death rate, as hitherto kept, may show, but if there were in the civil service commissioned medical officers, as in the military and naval service, whose certificate on honor is equivalent to an affidavit, I make not the smallest doubt that it would be shown that it costs the Government as much to occupy that building in five years as it would to build a new and modern one, which would scarcely be left entirely without any pretense of ventilation, except as the air may creep in by hook or by crook, by way of the ground, and through such cracks and crevices as may happen to exist.

Very respectfully submitted.

M. G. ELLZEY, M. D.

Dr. J. B. HAMILTON,
Surgeon-General, Marine-Hospital Service.

A letter on file in the Treasury Department of date May 3, 1886, from Samuel A. Robinson, inspector of plumbing for the District of Columbia, emphasizes the gravity of the situation and declares that the atmospheric conditions are simply "vile" and the sewage conditions atrocious. Says Mr. Robinson:

Notwithstanding Congress has enacted laws for the regulation of the disposal of waste from private property, which have been enforced for years with every building erected in this city, yet the most primitive methods are continued in this vast building, hazarding the health and reducing the efficiency of the Government employés.

Mr. Chairman, there is here referred to obscurely the most disagreeable phase of this whole question, and it would not be agreeable nor is it necessary to allude to it circumstantially here. It is sufficient to say that independent inquiry convinces me that the building is in a disgraceful condition demanding immediate attention, and that this House can not with a good conscience fail to make the appropriation which has been asked by the Secretary of the Treasury and ordered by a vote of the Senate.

Physicians, architects, and experts on the subject all unite in the expression of their opinion that something should be done, and done at once, to remedy the evils that are so apparent, and there should in justice be no one who would be willing to set his face against the proposed and greatly needed improvements.

As to the amount desired, it seems to be within reason. The build-

ing is a very large one and the changes required might be a little more expensive than if the improvements were being introduced while the walls were being put up, but for what is required, in my judgment, the sum is moderate, would be a wise and economic expenditure of money, and is sufficient, if expended with care, as it doubtless will be, to reach the end desired.

Treasury Surplus.

SPEECH

OF

HON. GEORGE E. ADAMS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886,

On the joint resolution (H. Res. 126) directing the payment of the surplus in the Treasury on the public debt, to which several amendments were offered.

Mr. ADAMS, of Illinois, said:

Mr. CHAIRMAN: The amount of the available surplus which should be kept in the Treasury as an ordinary working balance or as a provision against an anticipated deficit ought to be regarded as a question of administration. It should be left to the discretion of the Secretary of the Treasury. If the Secretary of the Treasury abuses this discretionary power Congress should intervene, not by taking away this discretionary power from the Secretary and his successors, but by a resolution of inquiry or a resolution expressing the opinion of Congress as to what ought to be done at the particular time. If Congress thinks that at the present time the available surplus of $75,000,000 is too large the very most that it ought to do is to direct its reduction to $30,000,000. Something of an available surplus there always ought to be. It ought never to sink so low as to incur the danger of a deficiency even for a day. This is the opinion of the Secretary of the Treasury. He says:

> After nearly twelve months' experience in the conduct of this Department, and forecasting, as well as I am able, future requirements of the Treasury as now defined by existing law and as they may be affected by legislation yet to come, and considering the course of future receipts which are liable to influence from many causes, such as the fluctuation of imports, the prolonged depression of trade, and the marketing of more or less of our agricultural products abroad, I can not now foresee a state of things which will make it prudent to limit the surplus reserve in the Treasury to a sum ranging from nothing to a maximum of $10,000,000.

The difficulty of forecasting the future requirements of the Treasury and the course of future receipts is illustrated by a striking difference in opinion between the President and the Secretary of the Treasury in regard to the fiscal year 1887. In his annual message the President estimated that at the end of the fiscal year 1886 there would be a surplus of $70,000,000. He thereupon proposes a reduction of taxation, evidently supposing that the surplus of 1886 affords a criterion by which to estimate the surplus of following years. The Secretary of the Treasury, however, in his annual report laid before us about the same time, estimated the surplus of the fiscal year 1886 at $24,500,000. He included in his estimates of expenditures $45,750,000 for the sinking fund, which the President apparently overlooked or disregarded. But the Secretary instead of inferring that there would be a large surplus for the year 1887 estimates that if $45,659,000 were to be placed in the sinking fund there would be a deficit of $24,589,552.34. Certainly it can not be a matter of very exact calculation where there is so wide a difference of opinion between the President and his chief financial adviser.

One element of uncertainty as to the future receipts of the Government is to be found in the proposed revision of the tariff and internal-revenue laws. One of the leaders of the majority of this House, the chairman of the Committee on Ways and Means, has reported a bill for the revision of the tariff, and that bill is now on the Calendar, and under the rules of the House can be considered at any time by a majority vote of this House. Another leader of the majority, the chairman of the Committee on Appropriations, has also reported a bill for the revision of the tariff and internal-revenue laws, and that bill is also on the Calendar, and under the rules of the House can be called up for immediate consideration in the same way. It also appears that not only the two leaders of the Democratic party in this House but the Democratic administration also are in favor of a revision of the tariff. The Secretary of the Treasury in tendering his resignation to the President is reported to have declared for a tariff for revenue only, a more explicit declaration than has been suffered to escape from the lips of any leading Democrat for several years. This declaration appears to have received the indorsement of the President.

Can we say that the income of the Government is not likely to suffer a great change in the near future, when the President, the Secretary of the Treasury, and the leaders of the two wings of the majority of this House lift their voices in unison and declare for a revision of the tariff?

Moreover, to add to the difficulty of the problem, it seems difficult to determine beforehand with any accuracy the effect of such a revision upon the revenues of the Government. With regard to the revenue bill last reported by the Committee on Ways and Means, one eminent financial authority in this House declares that it will reduce the customs revenues about $8,570,576, while another eminent authority declares that it will increase them $5,500,000.

The chairman of Ways and Means, in his somewhat caustic review of the revenue bill of the chairman of Appropriations, declares that "apparently the bill was presented in the belief that a necessity existed for a reduction not of taxes but of revenues, and that the desired end is reached both through higher and lower taxes. The estimates with the bill are made on this arbitrary assumption and are entitled to no respect whatever." If the "arbitrary assumption" referred to is the general proposition that custom revenues may be reduced both by raising and by lowering the rates of duty, instead of being "entitled to no respect whatever" it is on the contrary a sound and fundamental principle of finance. If the existing rate of duty stands exactly at the revenue point, as it is called, then the revenues will be reduced by a moderate increase as well as by a moderate reduction of the rate. If the existing rate be above the revenue point any increase of the rate will diminish the receipts, while a moderate reduction will increase them. If the existing rate stands below the revenue point, then any reduction of the rate will reduce the revenues while a moderate increase of the rate will increase them. Where the revenue point is, however, in the case of any article of necessity or luxury is not to be ascertained by exact calculation beforehand. It must be determined by experiment. Take the case of steel rails for example. The rate of duty is now about $17 a ton. Suppose it were reduced to $14, as some have proposed. This reduction in the rate would undoubtedly cause a larger importation of steel rails and thereby cause a loss to American capital and labor now employed in the steel industry. It would also check the development of the new iron and coal fields of Alabama, Tennessee, and Georgia. It would not benefit the Treasury, however, unless the number of tons imported were enough larger to make up for the smaller amount of duty paid on each ton. Whether the reduction in the rate would cause so great an increase in the amount imported is not to be determined by calculation beforehand. That is to say, there is a large chance of error in all estimates of the effect of a tariff revision upon the receipts of the Treasury, and this is true whether the estimates are suggested by the chairman of Appropriations or come to us with the awful sanction of the Ways and Means.

With two revenue-revision bills now on the Calendar, one of them favorably reported by the Ways and Means Committee, and each of them alleged on good authority to represent the platform of the party which controls this House with a majority of 40; with another revenue bill likely to be reported by the same committee repealing the tax on fruit-brandies and thereby reducing the demand for tax-paid whisky; with still another bill already reported exempting small distilleries from Government supervision and thereby threatening a still further change in the internal-revenue receipts, can it be denied that we are altogether at sea as to the probable income of the Government in the near future? What wonder that the Secretary of the Treasury looks askance at the project of reducing the surplus "to a sum ranging from nothing to a maximum of $10,000,000," when he has reason to believe that the surplus of one year is likely to be swallowed up in the deficit of the next.

Besides, there is the question of expenditure. That is equally uncertain. Take pensions, for example. It is morally certain that there will be an increased expenditure for Mexican pensions, and there are some signs that even the soldiers of the Union are to receive consideration and occasion a large addition to the annual expenses of the Government. If this were not so, what motive could the Committee on Rules have had for providing for the levy of additional taxes to pay them? What could have induced the Committee on Invalid Pensions to go even so far as to suggest a return to the odious income tax which bore with full weight on the honest merchant and manufacturer and let the rogue and the speculator go free? If the action of these two committees was not intended merely as a clog on pension bills, which the majority did not dare to vote on one way or the other, then it must have been intended as a necessary provision for a considerable increase in the annual expenses of the Government.

Then there are the Navy and the coast defenses. Has not the leading Democrat of this country, whose lightest whisper is heard from Maine to California, has he not said that it is our bounden duty to make large appropriations for these purposes? He is right. It is our bounden duty not only as patriots but as business men. I read some time ago a striking remark of Sir William Armstrong in regard to the cost of the British navy. In answer to the complaint made that England had spent enormous sums in building up a modern navy and arming it with modern guns, and still had to make enormous expenditures to maintain it and to keep abreast of improvements made by other nations, Sir William said that he had made a careful computation and was convinced that all the money that England had spent on ships and guns and experiments amounted to only a very small premium of insurance against the mere money loss which England would be likely to sustain if the outbreak of war found her unprepared.

If we pay off $50,000,000 of 3 per cent. bonds we save $1,500,000 in annual interest. If we could put the $50,000,000 into a navy and an efficient system of coast defenses, the money that we should have to charge to interest and repairs would be an insignificant premium of insurance on the four or five thousand millions of property now exposed to attack in the ocean harbors of the United States. Mr. Tilden, at least, believes that to put the money into guns and monitors, instead of putting it into 3 per cent. bonds, would be not only more patriotic, but a more prudent and business-like investment than the other. It is true that the majority of this House refused the other day to concur in a Senate amendment to an appropriation bill by which the completion of the monitors would have been insured, although the appropriation had been urged by their own Secretary of the Navy. They preferred to take the chances of the passage of the new-ship bill rather than accept an amendment from the Republican Senate. It is said, too, that the ruling powers of this House, against the indignant protest of members of their own party, have decided to cut down the new-ship bill one-half. This short-sighted and unpatriotic policy can not long continue. If the Republican party gains the next House the new Navy will be built without delay. Even if the Democratic party continues to control it, it ought not to be presumed that they will disregard, for more than a year or two, the wise and patriotic appeals of the sage of Greystone. We can not tell, therefore, whether the surplus of 1886 will not be needed to supply some urgent need of the near future.

National expenditures and national income being subject to much uncertainty, there are two ways of adjusting the one to the other. One is the American way, the other is the English way. One is adapted to a fiscal system like ours, in which the revenues of the Government largely come from a tariff and other forms of indirect taxation. The other is adapted to a fiscal system like that of England, in which the revenues are derived to a considerable extent from taxes which, like the income tax, can be raised or lowered from year to year to meet the changing requirements of the Treasury. Our method has been for many years to maintain a fair working balance of about $30,000,000 in the Treasury to meet emergencies and avoid a deficiency, which, be it remembered, the Secretary has no power under the law to meet by means of a temporary loan. Under this system we have prospered. American industry has developed. The weight of Federal taxation has not borne heavily upon the laboring population, whatever free-trade theorists may say to the contrary. The financial history of this country has for nearly a generation elicited the admiration of the civilized world. We can well afford to continue the system for a time.

The English system, which we have heard extolled by one or more of the advocates of the pending resolution, is altogether different. The English plan is to avoid an annual surplus almost at all hazards, and take a deficiency almost as a matter of course. They meet a deficiency first by the issue of exchequer bills, which our Secretary of the Treasury is not authorized to resort to, and next by a change in the revenue laws. From 1876 to 1885, both inclusive, the English treasury never had a surplus of £1,000,000 in any one year. In four of these years there was a deficit, the smallest amounting to £1,049,773 in 1885, and the largest amounting to £2,840,699 in 1880. During the ten years the aggregate of the deficits amounted to £8,822,486, and the aggregate of the surpluses to £2,536,616, leaving a deficit for the whole period of £6,285,870. There was not a single one of these ten years in which Parliament did not make some change in customs duties or in internal taxes. In 1875 there was a reduction of £4,186,007, and an increase of £61,250. In the next year there was a reduction in excise and stamp duties of £58,000, and no increase. In 1877 there was a reduction of £422,950, and an increase of £1,881,509. In 1878 stamp taxes were repealed amounting to £6,000. In 1879 there was a reduction of £80,150 and an increase of £4,236,787.

In 1880 there was an increase in the tax on cigars; amount not stated. In 1881 a reduction of £8,444,401 and an increase of £11,524,777; in 1882 a reduction of £2,639,085 and an increase of £653,100; in 1883 a reduction of £11,000 and an increase of £2,926,766; in 1884 a reduction of £3,410,000. In 1885 a reduction was made amounting to £22,000 and an increase in the income tax estimated at £2,000,000. The taxes affected by these various changes were customs, excise, income tax, stamp tax, land tax, house duty, beer duty, licenses, and a few others. There were only two years from 1876 to 1885 in which there was not a change made in the rate of the income tax.

I have heard gentlemen speak with admiration of this system. They say it is far more scientific than ours. That may be. But are we so fond of a revenue revision that we are willing to make one every year as regularly as we make the annual appropriations?

Until we are ready to resort to direct taxation as England and France do, and give up our tariff system which can not be frequently changed without injury to American industry, we may well put up with the inconvenience of a surplus which, according to the estimates of the Secretary of the Treasury, is likely to disappear by the end of the fiscal year 1887, even if no calls of bonds are made beyond the requirements of the sinking-fund act.

The effect of adopting the joint resolution now pending will be either that we shall have no working balance in the Treasury to meet emergencies or else that we shall be compelled to meet emergencies by drawing upon the greenback redemption fund, which ought to be set apart and maintained unimpaired for the security of our paper circulation.

I believe with the Secretary of the Treasury that the amount held for redemption of United States notes "is in no sense a surplus; but is set apart and appropriated as a minimum security and reserve for the redemption and payment of $346,681,016 of United States notes."

I agree with him when he declares that "this reserve, amounting to $100,000,000, should be held above all possibility of encroachment."

The same reason which should restrain us from authorizing the addition of a single dollar to the total amount of $346,681,016 of United States notes ought to restrain us from subtracting a single dollar from the $100,000,000 held for their redemption. To issue twenty-five or fifty millions of additional United States notes might do no great harm of itself. The danger is that it would pave the way for further issues, and so ultimately lead to a very serious evil from which we have once escaped, to the astonishment of European financiers.

So the temporary encroachment to the extent of ten or fifteen millions upon the redemption fund of $100,000,000 might do no great harm of itself. The danger is that it will tempt to further encroachment. I am not surprised that the proposition of the Committee on Ways and Means to encroach upon the redemption fund should be promptly followed by the proposition of the gentleman from Ohio [Mr. WARNER] to authorize the issue of more greenbacks. The one proposition is as dangerous as the other, and is dangerous for precisely the same reason. The issue of paper money has usually led to the issue of more paper money. The temptation to supply the needs of Government by setting a printing-press at work is so strong and becomes so much stronger the more it is yielded to, as the experience of the world has shown, that we ought not to go a single step on that slippery and downward road. The recent decision of the Supreme Court that we have the constitutional power in time of peace to authorize new issues of legal-tender paper money makes no difference in the question of policy. It only makes more urgent our duty to refrain from the unnecessary exercise of a dangerous power now that the restraint of the Constitution appears to have been taken away. The historian Bancroft, in a pamphlet published last winter, has clearly shown that the framers of the Constitution not only thought that the power of emitting bills to circulate as money was a dangerous power not to be exercised in time of peace, but also thought that the Constitution as they framed it had withheld this dangerous power from Congress.

The Supreme Court has decided that on the latter point they were mistaken, but the decision of the framers of the Constitution on the question of policy can never be overruled. The greenback circulation has come down to us as a relic of the war, just as the uncovered issues of the Bank of England are a relic of the war against Napoleon. It may be safely maintained within the existing limit, but when we have once passed that limit by a single step, as the gentleman from Ohio would have us do, the same arguments which he now uses would lead us on and on till there would be no retreat. Suppose we narrow the margin of safety, either by enlarging the greenback circulation or by reducing the redemption fund, where shall we stop? If we reduce the redemption fund from $100,000,000 to $75,000,000 and public confidence remains unshaken, shall we go on until we find that public confidence has been impaired?

If the further reduction from $75,000,000 to $50,000,000 causes a withdrawal of gold from the Treasury, either through honest apprehension of danger or through the schemes of speculators, who, like pickpockets in a crowd, pretend to be alarmed themselves in order to excite and profit by the alarm of others, what will follow? Contraction will follow, contraction of the circulation, contraction of commercial credit. The harm that might be done in this way to the legitimate business of the country might in a single week outweigh tenfold any possible advantage which the people of this country could derive from the proposed payment of bonds and the reduction of the annual interest account. The object of keeping a greenback redemption fund of $100,000,000 in the Treasury is not merely to redeem all United States notes on demand which may be presented in the ordinary course of business. The further and more important object is to make the holders of United States notes so secure of their redemption on demand that no holder or clique of holders will ever dream of presenting them and drawing gold from the Treasury, either to secure themselves or to cause a feeling of insecurity in others.

How much does it cost us in annual interest to keep unimpaired the redemption fund of $100,000,000? Hardly a million a year. Those who oppose the pending joint resolution in its present shape only contend, first, that the $100,000,000 shall, in the words of the act of 1882, be "reserved for the redemption of United States notes," and, secondly, that there shall be a working balance in the Treasury at all times of about $30,000,000 of available funds to meet emergencies and prevent the necessity of resorting to the redemption fund for any other purpose than the redemption of United States notes. Accordingly the difference between the supporters and the opponents of the joint resolution, so far as relates to the amount of available surplus to be kept in the Treasury, is simply a difference of $30,000,000. The interest on $30,000,000 at 3 per cent. amounts to $900,000 per annum. It is an insignificant price to pay for the absolute security which now enables

us to keep in circulation at the same par the various elements of our heterogeneous currency.

What do we gain by the passage of this joint resolution to compensate us for the risk? The chairman of the Ways and Means Committee thinks "it would tend to make money cheaper, increase the means of exchange, and help in the transaction of business." How can that be? Suppose the expansion of the circulation by the payment of bonds is greater than the contraction of the national-bank circulation due to the payment and cancellation of the bonds on which the national-bank circulation is based—suppose, that is, that there is a net addition to the volume of our entire circulation—will it permanently "cheapen money and help in the transaction of business?" A large part of our circulation consists of gold coin. Prices of commodities in the American markets are gold prices, and will be so long as gold remains in circulation here. To expand the currency by adding more paper, more silver, or more gold is to raise the gold prices of all commodities in the American market. To raise gold prices in this country is to stimulate imports of foreign goods. It would have precisely the same effect as a reduction of the tariff.

American manufacturers would suffer, importers would flourish. Gold coin would go abroad until the equilibrium, disturbed by the expansion of the currency, had been restored and the total volume of our circulation had once more sunk to what the gentleman from Ohio [General WARNER] aptly calls "our distributive share of the world's money." A permanent expansion of the currency can not take place till our gold circulation has disappeared and some other medium less exportable than gold has taken its place. A temporary expansion followed as it would be by contraction would injure rather than benefit the legitimate industry of this country.

No one in this House contends that the national debt ought not to be paid. But as we have only about $400,000,000 of bonds that will be subject to call before 1907, there is no strong necessity for paying them more rapidly than according to the requirements of the sinking-fund act. Even at that rate the bonds subject to call would all be redeemed in about nine years. It is not fair to contend that those who oppose the joint resolution in its present shape are opposed to the prompt payment of the national debt. It is equally unfair to say that we are in favor of the accumulation of an unnecessary surplus in the Treasury. The real question is this: Shall the redemption fund of $100,000,000 of gold coin and bullion be "reserved for the redemption of United States notes," as recited in the act of 1882? Secondly, shall there be at all times in the Treasury a working balance of $30,000,000 of available funds to meet all emergencies, and so remove the temptation to resort to the greenback redemption fund for any other purpose than that for which it has been created? The difference between those who favor and those who oppose the pending resolution is simply a difference of $30,000,000 in the amount of the available surplus to be kept in the Treasury. What can be said for and against the proposition to maintain this working balance of $30,000,000?

Against this proposition the only thing that can be fairly said is that it costs $900,000 a year in interest, which we could save by using it in the redemption of 3 per cent. bonds.

In favor of the proposition it may be said: First, that under our tariff and internal-revenue system of indirect taxes, which can not be raised and lowered from year to year without injury to the capital and labor of this country, we are required to keep a working balance in the Treasury to meet the danger of a deficit such as is even now not unlikely to occur before the end of the next fiscal year. Secondly, the maintenance unimpaired of the greenback redemption fund of $100,000,000 of gold gives stability to our currency, and thereby benefits American labor to an amount in comparison with which the annual interest charge of $900,000 sinks into utter insignificance. With the amendments I have suggested the resolution could do no harm. Without these amendments it ought not to become a law.

Presidential Vetoes of Pension Bills.

SPEECH

OF

HON. BYRON M. CUTCHEON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 9, 1886.

On the message of the President returning with his objection the bill (H. R. 1099) granting a pension to Jacob Romiser.

Mr. CUTCHEON said:

Mr. SPEAKER: I desire briefly to give some of the reasons why I think the House ought to sustain its own committees, and why this bill should be passed and all these vetoed pension bills reported back to the House at this session for its final action.

The President has had his day and his hearing, not only before the House but before the country. The clerks of the Pension Office have furnished him with the reasons why these cases were rejected, but they have not furnished him with the evidence upon which the Committee on Pensions reported them favorably, and upon which the House passed them.

It would seem from what appears in Senate Report 1424 in the case of Mary J. Nottage (Senate bill 2005) that when the President referred to the Pension Office for information one hundred and eighteen House bills and eleven Senate bills he did not ask for points in favor of the bills, but only for objections to their approval. So that it is apparent that his examination was rather an *ex parte* than an impartial one. The instructions were as follows:

> Please cause the same to be critically examined and report to this Department whether in your opinion any objections to their approval are known to exist. In cases where objections exist, they should be specifically set forth.

The President's criticisms and objections, his partial and sometimes erroneous statements, have gone out to the country and have created public opinion, while the reports of the committees of this House and the evidence upon which they are based are wholly unknown to the country, and the greatest injustice is done to the painstaking and conscientious members of the Pension Committees.

It is due, Mr. Speaker, to the Pension Committees of the House, and it is due to the House itself, that the other side of this question should be fully heard. The pension vetoes have undoubtedly left the Committee on Invalid Pensions in a very embarrassing and unjust light before the country—in the light of having recommended frivolous and foolish pension cases to the House, and of having attempted to abstract the money from the public Treasury for improper and fraudulent purposes.

I submit that the Pension Committee should report back each one of these cases with such recommendation as it now deems proper to make.

In a few cases, as where the relief has been already granted at the Pension Office, or where it is pending and undetermined, or other technical reason exist, of course no time would be consumed. In the other cases the House should have the opportunity to consider the questions of public policy involved. Judgment ought not to be rendered upon an *ex parte* hearing. The country should have the opportunity to know whether the Pension Committee has really reported favorably improper and fraudulent bills.

We have before the two Houses vetoes of eighty-eight private pension bills. It seems to me, Mr. Speaker, that the significance of these vetoes is much broader than the simple question whether these eighty-eight bills shall become law or fail. There are questions involved far transcending that—questions of the right or wrong of our pension system, and the whole question of what is and shall be the public policy of our pension laws.

I think I am justified also in saying that, in some degree, a question of comity and courtesy in communications between co-ordinate branches of the Government is involved. It has been said here, Mr. Speaker, that the office of President of the United States is a great office. Yes, Mr. Speaker, it is a great office, the greatest held by one man on this planet.

But Congress is a greater office. Here around me sit the immediate and chosen representatives of sixty million freemen. And while respect is due from Congress to the Executive, a greater respect is due from the Executive to Congress, which stands closer than he to the fountain of all power, the people.

The gentleman from Pennsylvania [Mr. CURTIN] said the other day that the President is "entitled to decent respect and decent speech." Let it be granted. And I submit that the Congress of the United States, the supreme law-making power, the greatest legislative body in the world, is also "entitled to decent respect and decent speech."

Mr. Speaker, for one I am not inclined to split hairs with the President upon the question of the extent and constitutional limits of the veto power. Let it be granted that as a matter of constitutional right the President may return any bill to Congress with his objections. He may return it for constitutional objections or on the ground that the proposed legislation is defective or unnecessary. The extent to which he will exercise this prerogative is largely a question of taste, and we know the old maxim, *de gustibus non disputandum*. There can be no no dispute about matters of taste because there can be no common standard or standpoint, and the taste of one President may differ from that of another. Lincoln vetoed one bill in four years; Cleveland has vetoed one hundred bills within three months. But that is a matter of taste, and it measures the distance between the two men in their judgment of their relations to the law-making power of the Government.

When Mr. Cleveland penned his letter of acceptance of the nomination of his party the people of the United States had no reason to expect such extraordinary use of the veto power. Mr. Cleveland then declared that the office of President was "essentially executive in its nature." He saw "nothing in the character of the office" which required from him a statement of his opinions on matters which concerned the legislative branch of government. The laws were enacted by Congress; the only duty of the Chief Executive was to enforce them faithfully. His conceptions of the Presidential office seem to have greatly changed since then, and the question arises, was he right then or is he

right now? We appeal from Cleveland, President, to Cleveland, candidate.

Article 1, section 1, of the Constitution provides that—

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

So it may be safely asserted that it was the intention of the framers of the Constitution that the policy of the laws should be determined by the Congress, the lawmaking power.

Section 1, Article II, provides that "the executive power shall be vested in a President of the United States."

It is significant that the power to return bills without his approval is not found among the enumerated executive powers, but is found in section 7, Article I, among the provisions for the exercise of legislative powers. It may be safely inferred, also, that the framers of the Constitution expected that the veto power would be invoked only upon grave and momentous occasions when serious danger should be threatened to the Constitution or to the general welfare. It can scarcely be imagined that under section 1, Article I, they intended that the policy of the laws should not be left and intrusted to the lawmaking power.

By those Presidents who lived in the era of the formation of the Constitution, and who may be presumed to be most familiar with its spirit, the veto power was very sparingly used. The whole number of vetoes from the foundation of our Government to the present administration was 109, an average of about 1½ per year.

	Years.	Vetoes.	Average per year.
Washington to Lincoln	72	46	⅔
Lincoln	4	1	¼
Johnson	4	17	4¼
Grant	8	29	3⅝
Hayes	4	12	3
Arthur	4	4	1
Lincoln to Arthur, inclusive	24	63	2⅝

The first session of Congress under the present administration is not yet completed, but the President has already returned under his veto the following acts of Congress:

1. The bill to restore Lieutenant McBlair to the retired-list.
2. The DesMoines settlers land bill.
3. The bill for the furtherance of anatomical science in the District of Columbia.
4. To extend the benefits of the immediate-transportation act to Omaha.
5. To make Springfield, Mass., a port of delivery.
6. For a public building at Sioux City, Iowa.
7. For a public building at Zanesville, Ohio.
8. For a public building at Duluth, Minn.
9. For a public building at Dayton, Ohio.
10. For the relief of Martin L. Bundy.
11. For the right of way through the Indian reservation in Northern Montana.
12. For a public building at Asheville, N. C.

In addition to these twelve bills of a general nature, the President has vetoed twenty-three Senate and sixty-six House pension bills, making a grand total of one hundred and one vetoes, all within three months, except the one case of Lieutenant McBlair.

In the few days yet remaining of the session the present incumbent will have no difficulty in getting the other ten, which will enable him to swamp all the Presidents from Washington down to this administration combined.

Were all his illustrious predecessors, including such names as Washington, Jefferson, Madison, Jackson, Lincoln, and Grant, grossly ignorant of their constitutional duty, or grossly recreant to their constitutional prerogative; or was the present incumbent correct when he said in his letter of acceptance that the office of President was "essentially executive," and wrong now when he seeks to constitute himself a member of Congress with a vote equal to one-sixth of both Houses of Congress?

I said, Mr. Speaker, in the beginning of these remarks, that a question of comity and courtesy between co-ordinate branches of the Government might to some extent be involved in this matter.

The President, in some of his veto messages, assumes to know and to criticise the number of members present in the two Houses when some of these pension bills were passed. It is hardly necessary to say that the opinion of the court is the opinion of the whole court, unless a dissenting opinion is filed. The act of the House of Representatives is the act of the entire House, if no question is raised that a quorum has not acted.

In one of his later messages, that on the Francis Deming case, the President uses this language:

The blatant and noisy self-assertion of those who, from motives that may well be suspected, declare themselves above all others the friends of the soldier, can not discredit or belittle the calm, steady, and affectionate regard of a grateful nation.

As this is addressed to Congress, it must be supposed to have some reference to some portion of the membership of Congress.

Suppose that one branch or the other of Congress should send a message to the Executive, in which it should assert that "the flippant, undignified, and egotistical self-assertion of the Executive who, from motives that may well be suspected, declares himself the special and infallible guardian of the pensioners, can not discredit nor belittle the calm, steady, and affectionate regard of Congress for the defenders of the Union," would it be contended that such a message would be the courtesy due from the legislative to the executive department of the Government?

Mr. Speaker, in what I shall further say of these vetoes I shall confine myself to the pension bills. And first I wish to say a few words in regard to the Committee on Invalid Pensions of this House, and its capacity and facilities in investigating these cases:

1. It is a large committee, composed of fifteen members, and by a proper division of the work they are enabled to investigate with greater thoroughness than any one man can.
2. It is an able committee, selected by the Speaker with express reference to this especial work.
3. Several of the members have had large experience in former Congresses and have become genuine experts.
4. At least two of them are physicians of learning and large experience, and capable of judging and advising in regard to the medical phases of cases before them.
5. These fifteen gentlemen devote their entire time, as committeemen, to pensions.
6. Several of them, including the chairman, have served with distinction as soldiers, and are familiar with the life, hardships, habits, and disabilities of soldiers, and can judge of a given state of facts much more accurately and justly than one who has never seen military service.
7. The reports of this committee are in the nature of the special findings of a jury, and are entitled to much the same respect as the verdict of a jury upon a case submitted to them.
8. This committee has been selected to represent and formulate the general policy of the House in regard to the important matter of pensions, as the Committee of Ways and Means represent the revenue policy of the House.

That policy has been declared in the House Report on Senate bill 1886—which passed the Senate by a very large majority (34 to 11) and which has been reported by the House committee favorably, and, as I understand, unanimously—to be that no man who honorably served as a soldier of the Union and was honorably discharged shall be permitted to dishonor that country by becoming an inmate of a poor-house so long as a small pension from the Government will prevent it.

It is against this policy that the President has set his face and directs his vetoes. And he warns us in advance that Senate bill 1886, or any similar bill, will encounter his veto by vetoing these private pension bills, for a large proportion of them would come within the principle of Senate bill 1886, and would be allowed at the Pension Office were that bill or a similar bill to become law.

Among the vetoed bills which come clearly within the principle and scope of that act are those of John W. Farris, Philip Arner, James H. Darling, Andrew J. Wilson, Giles C. Hawley, John S. Kirkpatrick, William H. Beck, Joel D. Monroe, Samuel Miller, and many others.

But in his veto message returning the bill of Francis Deming (H. R. 2971) the President puts his position beyond all question or doubt.

In that message the President says:

I am satisfied that a fair examination of the facts in this case justifies the statement that the bill under consideration can rest only upon the grounds that aid should be furnished to this ex-soldier because he served in the Army, and because he a long time thereafter became blind, disabled, and dependent.

The question is whether we are prepared to adopt this principle and establish this precedent.

* * * * * * *

But with all this, and with the hundreds of special acts which have been passed, granting pensions in cases where, for my part, I am willing to confess that sympathy rather than judgment has often led to the discovery of a relation between injury or death and military service, I am constrained by a sense of public duty to interpose against establishing a principle and setting a precedent which must result in unregulated, partial, and unjust gifts of public money under the pretext of indemnifying those who suffered in their means of support as an incident of military service.

GROVER CLEVELAND.

EXECUTIVE MANSION, *July* 5, 1886.

It will be observed from the foregoing that it is against the principle that the President inveighs and treats us in advance to a veto of Senate bill 1886.

That bill announces the general principle that it shall not be necessary for a claimant to trace his disability to the incidents of the service, but if it be shown that he was an honorable soldier of the Republic, and was honorably discharged, that he is under a present disability to gain a livelihood, and is dependent, he shall be pensionable. The President on the contrary insists that the soldier must be able to trace his disability with precision to his military service in the strict line of duty, or he shall not be pensionable. Not only must he be doing military duty under orders, and in the line of duty, but he must have gone

through the formality of being sworn in, as in this case of Joseph Romiser, or he shall not be pensionable; and that even Congress, the supreme lawmaking power of the nation, shall not be permitted to adopt a different policy of law.

The President's line of reasoning seems to be, "If your case does not come under the general law and does require special legislation, then I will veto your bill, because it does not come under the general law. If your case does come under the general law and does not absolutely require special legislation, then you must go to the Pension Office, or I will veto your bill."

It is very much like the old Calvinistic theological formula:

You'll be damned if you do, and you'll be damned if you don't.

The President in all these vetoes assumes that under the policy of our laws no one is pensionable but those disabled in the military service and in the line of duty, and who can make that appear by positive proof.

Upon that proposition I join distinct and complete issue with the President. I say that has never been the policy of our pension laws, is not now, and never will be.

The soldiers of the Revolutionary war were granted a service pension without regard to disability incurred in line of duty or otherwise.

The soldiers of the war of 1812 have been granted a service pension without reference to disability in the service, or otherwise, without reference to dependence or otherwise.

This House has at this very session passed a Mexican war pension bill by a vote of 157 to 69, in which 121 Democrats voted in the affirmative and only 11 in the negative, by the terms of which every man who was borne upon the muster-rolls even for one day, though he never went within a thousand miles of Mexico or a Mexican, though he never had a pin's scratch on his skin, and never saw a day of illness, and though he may be now in robust health and worth a million dollars, and beyond all need of aid of the Government, shall each receive a service pension (for no service it may be) at the rate of $8 per month as long as he lives.

And does anybody suppose that if that Mexican pension bill had passed the Senate as it passed the House it would have encountered a Presidential veto because the beneficiaries had not been disabled in the service and in the strict line of duty? I tell you nay. Do you ask me why? I leave you to meditate upon that question.

Moreover, it has been the settled practice for several Congresses past to pass hundreds of private pension bills for the very reason that the claimants have not been able to make the required proof at the Pension Office that their disabilities were incurred in the line of military duty.

The last Congress passed more than five hundred of such bills and not one of them was vetoed by President Arthur, because he looked upon Congress as the high court of chancery of the nation, to adjudge the equity of each particular case.

I therefore utterly and absolutely deny the truth of the President's premises that a man is not pensionable unless he can prove that he was disabled in the military service and in the line of duty. It is not true. It never was true. But suppose that were not so, and that up to this time there were no law, general or special, allowing pensions except for a disability traced directly to military service in the line of duty.

In the name of humanity and national honor shall we be precluded as the supreme lawmaking power from making a law that shall meet the exigency of individual cases that appeal to our sense of right and equity? Because, forsooth, a surgeon is dead, or a fellow-prisoner at Andersonville has answered the last tattoo, or a record is lost, or comrades have been swept away, are our hands bound from doing such meager justice as we may? Shall we be compelled to stand by in imbecility and helplessness and see our old veterans in their age and feebleness and poverty go to the poorhouse, and this great Congress of the people's representatives forbidden by the iron grip of the veto power from reaching out to them a supporting hand to steady their faltering steps and smooth their brief pathway to the grave? God forbid! It is not so. It can not be so. If we be true men, true to our country, to our manhood, and to humanity, it shall not be so! Our appeal is to the people, who make and unmake Presidents!

I have spoken of the facilities of the Committee on Invalid Pensions for investigating pension cases. I now wish to contrast them with the President's want of facilities.

First. He is burdened with many cares, both of state and of a domestic character. The crowds of "the hungry and thirsty" dog him and press upon him by day and by night. He has all the legislation of Congress upon his hands for consideration as well as all his proper executive duties. Long into the weary and wakeful hours of these sultry summer nights he is obliged to sit in his shirt-sleeves to hunt out the flaw in some poor widow's case—perhaps like that of Sally Ann Bradley or Louisa C. Beezeley—over seventy years old, or he is obliged to rise up at the voice of the bird in the early dawn, leaving the bride of a fortnight to her lonely couch for the purpose of running down "the ingenuity developed in the constant and persistent attacks upon the Treasury by those claiming pensions," as he says in the case of that gallant soldier and Democratic senator, John W. Farris, of Missouri, whose bill is among the vetoed. It must be manifest from the very nature of the case, from the number of bills presented to him and the length of time given to them, that the President can give but a few minutes to the consideration of each bill, and that not to the evidence filed but rather to the brief of objections furnished by the clerks of the Pension Office.

Second. Another disability under which the President labors is the want of experience in army life. This is well illustrated in the case of Alfred Denny (Executive Document No. 176), in which the President concludes that "those saddles were very dangerous contrivances." This is a brilliant stroke of humor, especially when aimed at the lifelong injury of a faithful officer; but I apprehend that if the incumbent of the Presidency had ridden in a few cavalry charges with drawn saber, or had been mounted on an artillery horse when its mate was torn limb from limb by shot and shell, as I have seen them, or had even ridden a spirited horse under a good, warm musketry fire, as many gentlemen on both sides of this House have done, he might have found that being in the saddle was a dangerous thing. But I forbear. The case is not a supposable one. It might have been well had it been otherwise; but, unfortunately for the country and the soldiers, he is totally wanting in that experience.

The President also shows that he is liable to errors of fact. In this case of Joseph Romiser he vetoed the bill upon the ground that no claim had ever been made in the Pension Office, when in fact all the papers in the case were at that moment on file there. In the case of Carter W. Tiller the bill was vetoed upon the ground that the soldier was a deserter, when the record clearly showed that so far from deserting was he that he died a horrible death in Andersonville prison.

Third. Again, he is greatly wanting in a knowledge of the diseases of the camp. This is well illustrated in the case of Andrew J. Wilson, in which he says—and if any other man had said it it would have been cruelly flippant when spoken of an infirm old soldier:

Whatever else may be said of claimant's achievements during his short military career it must be conceded that he accumulated a great deal of disability.

Had the present incumbent of the Presidency himself been a soldier in the field he would have known that it does not take a soldier many months sleeping in rain and sleet, subsisting upon villainous and half-cooked rations, making forced marches, weighted down with knapsack, haversack, canteen, musket, cartridge-box, and forty rounds of cartridge, and subjected to the terrible strain of the shock of battle "to accumulate a good deal of disability."

Again, in the case of William Bishop the President says:

This claimant was enrolled as a substitute on the 25th day of March, 1865; he was admitted to a post hospital at Indianapolis on the 3d day of April, 1865, with the measles; was removed to the City General Hospital, in Indianapolis, on the 5th day of May, 1865; was returned to duty May 8, 1865, and was mustered out with a detachment of unassigned men on the 11th day of May, 1865.

Fifteen years after this brilliant service and this terrific encounter with the measles, and on the 28th day of June, 1880, the claimant discovered that his attack of the measles had some relation to his Army enrollment, and that this disease had "settled in his eyes, also affecting his spinal column."

Those who served in the Army of the Potomac in the winter of 1861–'62 in front of Washington well know that many a grave on Arlington Heights is tenanted as the result of a "terrific encounter with the measles." And in view of certain other circumstances the sneer at "substitutes" might well have been omitted.

Fourth. In the next place the President is deficient in the necessary medical knowledge which would enable him to judge with reasonable intelligence of the probabilities of certain disabilities. Take, for instance, the case of John W. Farris, already alluded to. The President fairly hoots at the idea that impaired vision and sore eyes could be the result of the general debility resulting from long and exhausting chronic diarrhea.

The President in his message (Executive Document No. 285) says:

In September of the same year, and after this pension was granted, he filed an application for an increase of his rate, alleging that in 1884 his eyes became affected in consequence of his previous ailments and the debility consequent thereupon.

The ingenuity developed in the constant and persistent attacks upon the public Treasury by those claiming pensions and the increase of those already granted, is exhibited in bold relief by this attempt to include sore eyes among the results of diarrhea.

Contrast this with the report of the medical examining board at Lebanon, Mo., October 21, 1885, as follows:

We find the conjunctiva of both eyelids thickened and in a state of chronic inflammation. There is an opacity of the cornea of both eyes, resulting from ulceration, which is of the nebulous variety. The vessels of the conjunctiva of the cornea are very much enlarged. The opacity of the left cornea extends over the pupil and almost completely obstructs the vision. That of the right eye is less extensive, about two-thirds. He can not distinguish the largest test type with the left eye, but with the right eye can distinguish it at a distance of 17 inches. He is totally incapacitated for manual labor. He is in our opinion entitled to a second-grade rating for the disability caused by chronic diarrhea and resulting general debility and sore eyes.

Or this from Dr. Michel, of the Missouri Medical College, one of the most eminent oculists in the Southwest:

That he has been treating Senator J. W. Farris for chronic conjunctivitis with granulation since January, 1885, and that I am satisfied that a vitiated constitutional condition is to blame for his impaired vision and prolonged eye affection

This claimant enlisted at the age of only fifteen; served four years; by gallantry rose to be a commissioned officer; was discharged at twenty with an incurable disease which has resulted in blindness.

Is it any wonder that in his indignation and humiliation he should write to the Saint Louis Republican as follows:

Ordinarily it is enough to be a victim of disease and conscious of approaching permanent disability or early dissolution; but when this is accompanied with the brutal *ex parte* judgment of a President whom the sufferer has aided in electing, the withdrawal of personal and political sympathies, and the rude and vulgar taunts of the press, only faintly illustrates the extraordinary dilemma in which I am placed.

I am at a loss to know how a conservative public can justify the brutality displayed by the Chief Executive of a Government to which I gave four years of active military service, hazarding life, imperiling health, and making myself prematurely old. And yet such seems the result. One of my competitors, Mr. J. B. Rackliffe, possessed of about the same degree of patriotism that induced Grover Cleveland to hire a substitute rather than fight his country's battles, ruled by the same brutal instincts which impelled the President to assault me so unjustly in his message, has gone over the district and covertly, yea, in a cowardly manner, used this veto message to manufacture sentiment against me and build for himself that character and reputation which he had not been able to attain save through the misfortunes of another. I am content with the defeat which will probably come to me, but I am not content to remain silent and be branded by a President—even a Democratic President—with having devised an "ingenious plan to attack the public Treasury."

* * * * * * *

I am proud of the record I made as a soldier. I left the Army at the end of four years' service, when only twenty years old, bearing two commissions won by meritorious service in battle. Though in impaired health as the result of that service I am not too feeble to resist the criticisms and denounce the reflections of Presidents and Senatorial candidates who seek to cast aspersions on my character or impute dishonesty to my motives.

I have yet to find any medical man who denies that defective sight may result from long-continued chronic diarrhea.

Take for a further illustration the case of Francis Deming (H. R. 2971), where the claimant after suffering from rheumatism for many years became almost totally blind. Of this sad case the President says:

Thereupon, and after nineteen years had elapsed since his discharge from the Army, a pension is claimed for him upon a very shadowy allegation of the incurrence of rheumatism while in the service, coupled with the startling proposition that this rheumatism resulted, just previous to his application, in blindness. Upon medical examination it appeared that his blindness was caused by amaurosis, which is generally accepted as an affection of the optic nerve.

The President scouts the idea that the blindness can be referred to rheumatism, because the medical examiner called it "amaurosis;" ignoring the fact that amaurosis, which is an affection of the optic nerve, may be produced by rheumatism.

In the case of William H. Beck (Executive Document No. 181), where it was claimed that epileptic fits or spasms had resulted from the heavy firing of artillery over the man's head, the President says:

If this disease can be caused in the manner here detailed, its manifestations are such as to leave no doubt of its existence, and it seems to me simply impossible, under the circumstances detailed, that there should be any lack of evidence to support the claim upon which this bill is predicated.

Doctors will disagree, and I have yet to find a doctor who will agree with Mr. Cleveland that in a case of recent epilepsy, where the spasms are many days apart, "the manifestations are such as to leave no doubt of its existence."

Fifth. His knowledge of military law seems to be as faulty as his knowledge of therapeutics, when in the case of James Butler (Executive Document 180) he says in one sentence that the claim was rejected because "the claimant was on individual furlough, and therefore not in the line of duty," and in the very next sentence declares "that he was in no sense in the military service of the United States." Exactly how a man could be "on furlough" and at the same time "in no sense in the military service" is something that passes my understanding.

In this same case, as well as in the Joseph Romiser case, he makes the further mistake of supposing that under the general laws of the United States a soldier has not been pensionable unless he has been regularly mustered into the service of the United States.

The Revised Statutes provides (section 4693) that the following classes shall be pensionable:

First. * * * Any enlisted man, however employed, in the military or naval service of the United States or its Marine Corps, whether regularly mustered or not, disabled by any wound or injury received or disease contracted while in the service of the United States and in the line of duty.

This provision was in force until July, 1874. And again, the third subdivision of the same section provides that "any person not an enlisted soldier in the Army * * * who volunteered for the time being to serve with any regularly organized military or naval force of the United States, or who otherwise volunteered and rendered service in any engagement with rebels or Indians, disabled in consequence of wounds or injury received in the line of duty in such temporary service," shall be pensionable. (Section 4693, Revised Statutes.) This provision has also expired by limitation.

Sixth. Even more yet is he wanting in a knowledge of the habits and qualities of good soldiers.

He frequently and grievously complains of the want of "a hospital record." I do not think he appreciates as those who have commanded troops in the field do that it is not the men who have the most brilliant and voluminous hospital record who did the hard fighing and are the most deserving of pensions.

Every man on this floor who has commanded troops knows that the bravest and best soldiers would rather fall in their tracks from exhaustion and be helped into camp by comrades than go to hospital; and even when wounded would endure almost anything in quarters rather than encounter the foul air and depressing influences of a hospital ward.

The incumbent of the Presidency has very much to learn about soldiers.

And lastly, unless I greatly err, he has much to learn of the feeling of loyalty and the spirit of patriotism which inspired our soldiery, and which is worth more to this nation than all its millions of gold and silver piled in the vaults of the Treasury.

Take the case of that old man, Nathaniel Beezeley, the old farrier, whose widow's bill is among these vetoes. At the age of 60 years he heard the call of his country. He wanted to have some share in the grand and patriotic work of upholding its flag and saving the Union of the States to posterity. So, while the young and strong and the prosperous hesitated, the old man said to his wife, "Louisa, I believe I must go. I've got a good deal of strength left yet, and if the old flag must go down I want to go down with it. If anything should happen to me this Government will see that you don't come to want." So he shouldered his musket and marched in the grim ranks of war. He thought he could endure the hardship, and for a year he stood at the post of duty like a man, as best he could. But "he accumulated a good deal of disability," and at the end of a year he was mustered out, as the report of Colonel MATSON, the chairman of the committee, says, "a wreck of his former self."

The old man died at length, and now his aged widow, past seventy, dependent upon charity, recommended by the governor of her State and by ex-Senator Joseph E. McDonald, comes here with trembling hands and tottering steps—comes here to ask of the great, rich Government to which her husband gave the remnant of health and life to assist her in eking out her few remaining days with a paltry pension of $12 per month, and the President of that country says to Congress, "I forbid!"

I would to God that some younger and stronger men had possessed that same spirit of patriotism which the old man Beezeley had, and which led him to the perilous edge of battle. Such patriotism is not so superabundant in these days that we can afford to sneer at it or refuse to recognize it or reward its loyal sacrifices. It was not so we promised these brave men when they went out to battle. It was not so we promised them when they turned their backs upon home and wife and child whom they might never see again; turned away from all the brightness and sweetness and hope of life to do, to suffer, and, if need be, to die in untold and unspeakable anguish for the flag of their allegiance and the country of their love. We told them then to go without fear and without faltering for those they left behind. We promised them that the nation would be husband to the widow and father to their orphan children; that the nation would raise their helpless ones in its great, strong arms and bear them ever in its heart of hearts.

Under that promise they went out. Under that promise they trod the red and slippery fields of carnage down to the blood-besprinkled doors of death.

Their work is done; their duty is fulfilled. But the wrecked and maimed, the widows and the orphans are with us still and claim our helping hand. Our promise remains.

May God help us to be true to the promises we pledged when patriotism was more than gold, when loyal sacrifice was more than place or power, and manhood was worth all that a nation had to give.

Land and Labor Legislation.

SPEECH

OF

HON. JOHN J. O'NEILL,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1886.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 7887) to repeal all laws providing for the pre-emption of the public lands, all laws allowing entries for timber culture, the laws authorizing the sale of desert lands, and for other purposes—

Mr. O'NEILL, of Missouri, said:

Mr. SPEAKER: I hope that the House will not concur in the Senate amendments but will adhere rigidly to the bill that we have passed here. No injury can come to any one who now holds land from the operation of this law, and we simply propose to preserve for the future that immense body of land which one gentleman on this floor has stated amounts to four-tenths of all the entire land in the United States exclusive of Alaska.

In reading this bill, I was amazed to find that while we were trying to get rid of one set of land robbers they were very willing to turn our eyes in another direction while they came in with a land-plunder scheme in a more infamous form. Under this plea of organizing com-

panics for the irrigation of the arid lands, a few men could absolutely control that entire belt. I agree with what gentlemen have said on this floor about the difficulty of reclaiming those lands. I have been over that country and I realize that sooner or later the Government of the United States must directly interest itself in the subject of reclaiming those lands for cultivation.

The tide of immigration has already gone beyond the borders of that portion of the country where there is a regular rain-fall, and its pressure has become so great that we shall have to interest ourselves before long in reclaiming the arid region in order to make homes for future settlers. As the traveler stops by the wayside at the few small spots in that arid region that have been reclaimed by irrigation, he is reminded of the fabled oases of the desert, and that is perhaps the best description that can be given of the effect of irrigation.

The introduction of water transforms that land into the most fertile of any in your country. But the work of irrigation can not be done by private enterprise except in a few isolated cases, and unless it is done by the Government the great mass of that land will remain idle. Let us leave those lands untouched for the present; let us keep the hands of the land-sharks off them; let us preserve them untouched until we adopt some general system for their reclamation. If the representatives from that portion of the country would only organize and come before Congress with a proposition for a general system of irrigating those lands by the sinking of wells, I have no doubt that it would be favorably considered, for I hold that it is as much for the interest of the people of the United States to improve those arid lands and make them available for human settlement and sustenance as it is to improve the water ways of the Mississippi Valley where I live.

By concerted action on their part, by simply exhibiting to this country the advantages which would follow from a change of that kind, I am confident there is enough patriotism in our people to aid them in that effort.

By the passage of land-forfeiture bills we have rescued from the railroads within the last two years over 40,000,000 acres of unearned public lands. House bills embracing nearly fifty millions additional are now pending in the Senate.

The land and labor legislation of the present Congress stand out in bold relief, marking a sympathy for the working classes unprecedented in the annals of legislation.

I append the following sketch of labor legislation, believing it to properly combine with the land question:

LABOR LEGISLATION.

The House of Representatives of the Forty-eighth Congress inaugurated labor legislation by creating among its standing committees a Committee on Labor, to which should be referred proposed legislation affecting the working classes.

As a result of its labors you now have upon the statute-books the law creating the National Bureau of Labor Statistics, and the law prohibiting the importation of contract labor.

I submit a list of bills reported from the Committee on Labor of the present Congress (Forty-ninth) which have passed the House and are now pending in the Senate, with the exception of the bill to legalize the incorporation of national trades unions and H. Res. 142, relating to convict labor, which have passed both Houses and become laws.

Arbitration bill (H. R. 7479) provides that in all controversies between railroad companies and their employés, if submitted to arbitration, the United States would give the arbitrators the power to send for persons and papers, administer oaths, in fact all the power of United States commissioners, and would pay all the expenses of the arbitration, the award to be filed with the Commissioner of Labor and to be made public by him.

TO LEGALIZE THE INCORPORATION OF NATIONAL TRADES UNIONS (SENATE BILL).

The term National Trades Union, in the meaning of the act, to signify any association of working people having two or more branches in the States or Territories of the United States for the purpose of aiding its members to become more skillful and efficient workers, the promotion of their general intelligence, the elevation of their character, the regulation of their wages and their hours and conditions of labor, the protection of their individual rights in the prosecution of their trade or trades, the raising of funds for the benefit of sick, disabled, or unemployed members, or the families of deceased members, or for such other object or objects for which working people may lawfully combine, having in view their mutual protection or benefit.

TO PROTECT MECHANICS, LABORERS, AND SERVANTS IN THEIR WAGES (H. R. 5310).

By providing that for all personal services rendered by any person acting in the capacity of mechanic, laborer, or servant, in the District of Columbia and Territories of the United States, no property shall be exempt from seizure and sale under execution.

CONVICT LABOR (H. RES. 142).

Authorizing and directing the Commissioner of Labor to make a full investigation as to the kind and amount of work performed in the penal institutions of the several States and Territories of the United States and the District of Columbia, as to the methods under which convicts are or may be employed, and as to all the facts pertaining to convict labor and the influence of the same upon the industries of the country.

CONVICT LABOR (H. R. 1622).

To prohibit any officer, agent, or servant of the Government of the United States to hire or contract out the labor of prisoners incarcerated for violating the laws of the United States.

CONVICT AND ALIEN LABOR (H. R. 5541).

To prevent the employment of convict labor and alien labor upon public buildings and other public works, and convict labor in the preparation or manufacture of materials for public buildings and other public works, and to regulate the manner of letting contracts therefor.

IMPORTED CONTRACT LABOR (H. R. 9232).

To amend an act to prohibit the importation and immigration of foreigners and aliens under contract or agreement to perform labor in the United States, approved February 26, 1885. The Secretary of the Treasury is charged with the duty of executing the provisions of the act, and may enter into contract with such State commission, board, or officers as may be designated for that purpose by the governor of any State to take charge of the local affairs of immigration in the ports within said State or may designate any person in any State to execute the provisions of this act, and it is their duty to examine into the condition of passengers arriving at the ports, to go on board of any ship or vessel; and if on examination there shall be found among the passengers any persons included in the prohibition in the act, such persons shall not be permitted to land.

All persons included in the prohibition in the act, upon arrival, to be sent back to the nations to which they belong and from whence they came; he expense of return of the persons not permitted to land to be borne by the owners of the vessels in which they came; any vessel refusing to pay such expenses not to be thereafter permitted to land at or clear from any port of the United States, and such expenses to be a lien on the vessel.

Sufferers by Overflow in South Carolina.

SPEECH

OF

HON. ROBERT SMALLS,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 31, 1886,

On the joint resolution (H. Res. 210) for the relief of the sufferers by the overflow of the Santee, Pedee, and Waccamaw Rivers in South Carolina.

Mr. SMALLS said:

Mr. SPEAKER: In presenting this resolution I am sure a brief and candid statement of the condition of things in the inundated country along the Santee, Pedee, and Waccamaw Rivers in South Carolina will so far appeal to the mercy and benevolence of this House and its committee as to secure for this measure early and favorable consideration.

The recent overflow of these rivers has inundated all the adjacent country, destroying the crops, devastating the country, and rendering houseless and homeless a large number of citizens. This being in a rice-growing locality, the people entirely depended upon the growing crop for their subsistence. By the destruction of this crop they are now confronted with starvation unless immediate relief is afforded.

The following letter from a reliable and respectable gentleman living in that vicinity depicts the suffering to which the people are subjected:

EXCHANGE, *July* 13, 1886.

Editor of the Enquirer:

I returned home this morning to find the country one mass of water. When I left I could look out from my door over hundreds of acres of green fields and busy laborers, all suggestive of prosperity and plenty. To-day I look over the prospect and behold only one dull, dirty, yellow mass of water. No sign of life presents itself, except the fast-running current and the bird of prey that soars overhead.

Men have been to me already asking for work and saying they had eaten the last in their houses. I can not find them work. Thousands are in the same condition here and elsewhere. The disastrous result of last year's cropping caused many to begin this year in debt and they are estopped from what they might otherwise do. What are we to do? The disaster is widespread. I do not know that it will be as severely felt in other sections as here, but here we stand to-day on the brink of a famine.

What are we to do? The State is the only power we can appeal to. She is the legitimate protector of her citizens. It is her part to secure them in life, prosperity, and liberty.

We should have concerted action and we should act before the dire emergency of a starving people is on us.

Let the Legislature be called together to devise the ways and means. Some will say it will cost too much. Well, if the necessary relief can be given without this expense, by all means let us have it. If not, the expense will be but a bagatelle in comparison with the relief to be given or in contrast with the suffering that will ensue.

There are yet three and a half months to the meeting of the next Legislature, and in this space of time relief ought to be found for many.

I offer these as suggestions in order that attention may be directed to the condition of affairs and some means devised for relief.

Respectfully yours,

BENJ. ALLISON.

No immediate relief can come from the State authorities, as the Legislature does not convene until November of the present year.

Mr. Speaker, Congress has not been deaf to similar appeals. When the terrible conflagrations desolated Portland, Me., and Chicago, Ill.; when the yellow fever made such fearful ravages in Memphis, Tenn., and in frequent cases when the Mississippi Valley was submerged by the overflow of the river, Congress with humane and generous heart and sometimes with lavish hand responded to the appeal for relief and saved many of its citizens from the agonies of starvation.

Mr. Speaker, this is no time for argument or hair-splitting constitutional disquisition. Through a visitation beyond their control we are informed citizens of this Republic are starving to death, and in the plenitude of its riches and the surplus in its Treasury you are humanely appealed to for a pittance which may save them from the terrible fate which threatens them, and in view of the emergency whose delay is death I earnestly appeal to the committee and the House to facilitate the consideration of this measure.

Increase of the Naval Establishment.

SPEECH

OF

HON. JOHN R. BUCK,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 24, 1886,

On the bill (H. R. 6664) to increase the naval establishment.

Mr. BUCK said:

Mr. SPEAKER: The people of this country are far in advance of the legislative branch of the Government on the subject of constructing an efficient navy. They are ready to have it built and are willing to pay for it.

Their interest in it has now reached the point of a most urgent demand for the necessary legislation. State Legislatures, commercial associations, and cities exposed to attack from foreign war fleets, have united in urging speedy action on this subject.

National pride is by no means the principal foundation for this interest in the Navy. It is believed to be a necessity, a means of national defense, a protection to coast cities, and to commerce on both ocean and river.

Our people have the traditions of the mother country in regard to the retention of power on the seas as a means of home defense. We separated from a country that maintained its national power by its ships of war, and to-day England relies on its navy to support its power abroad, while its great ironclads are used to defend its coasts rather than forts.

In 1775 Congress provided for a navy, and authorized the construction of fourteen vessels. It was the business of this Navy to cruise along our coast and intercept hostile vessels that came here to bring troops or to prey upon our commerce. This Navy comprised the following vessels:

First Navy.

	Guns.
Ship Alfred	24
Ship Columbus	24
Brig Lexington	16
Brig Cabot	16
Brig Reprisal	16
Brig Andria Doria	14
Brig Hampden	14
Brig Providence	12
Schooner Wasp	8
Schooner Fly	8
Sloop Hornet	10
Sloop Independence	10
Sloop Sachem	10
Sloop Musquito	4

Considerable attention was paid to the Navy after the war of the Revolution, and when the war of 1812 broke out we had seventeen cruising vessels and a few gunboats.

Our Navy did good work in that war, and the President, Essex, Hornet, Niagara, Detroit, and Lawrence are well-remembered names of vessels that added renown to our nation as a naval power.

The character of modern naval warfare, however, dates from the war of the rebellion. That conflict changed the character of war vessels throughout the world.

The Virginia, a confederate vessel, sailed out of Gosport navy-yard on March 8, 1862, and when off Newport News in turn attacked and destroyed the Cumberland and Congress, and was attacking the Minnesota when the day closed and the contest stopped. That evening the Monitor, an iron vessel, constructed by John Ericsson, came to the rescue of the Federal fleet. The next morning (March 9) the Virginia attacked this strange-looking craft and endeavored to run her down, but without success. The shells of the Virginia made no more impression on the little Monitor than the shells of the Cumberland and Congress made on the Virginia. Neither of these vessels could do the other much harm. However, the Virginia, together with the whole confederate fleet, retired from the scene of conflict, and although the Virginia returned to Hampton Roads some time afterward no contest followed.

This singular naval battle attracted the attention of all naval powers. The Virginia was an iron-clad ram, constructed out of the Federal vessel Merrimac which had been partly burned at Gosport navy-yard in April, 1861. According to the descriptions given of her she had an armored casement, constituted by a wooden backing which was 7 inches thick and covered with two layers of wrought-iron plates each 2½ inches thick, disposed horizontally and vertically one above the other. She also had a cast-iron stem or prow which projected 4 feet.

This armored casement was new to naval warfare and was a complete protection from the shot and shells of an opposing vessel. They struck its sides and fell harmless into the water.

The Monitor is described as a vessel which lay low in the water, of light draught, the top of the propeller near the water line, the propeller blades being protected by a projecting deck or stern overhang. The machinery and quarters of officers and men were below the water line and also protected by a side overhang. This side overhang, called "armor timber," consisted of armor and wood backing, bolted to the iron hull and supported by a horizontal girder placed along the side, assisted by vertical gussets of iron secured at intervals to the side by angle-irons. The wood backing was in two layers between these gussets, and the armor consisted of five 1-inch plates of iron and was bolted on outside of all.

Such was these character of the two vessels. Neither of them did much harm to the other; but it is quite probable that with guns of equal power in all respects, the Monitor would have overcome its adversary in the end.

This contest substantially changed the character of naval warfare.

Foreign nations had experimented with iron-clad ships, but this naval battle demonstrated their utility.

In 1843 our Government had contracted with Mr. Stevens, of New York, for an iron-clad vessel or battery for the defense of that harbor. This was probably the first iron-clad vessel known. In 1858 the French Government constructed some iron-clad vessels. That Government built the Warrior and the Gloire, the general characteristics of which are indicated in a table which I will print with my remarks.

Name.	Length.	Beam.	Displacement.	Draught forward.	Draught aft.	Thickness of armor at water line.
	Feet.	*Feet.*	*Tons.*	*Ft. in.*	*Ft. in.*	*Inches.*
Warrior	380	58	9,681	25 6	26 5	4½
Gloire	252	56	5,530	23 1	27 10	4.72

During this same period England had also built ironclads. The following table shows the characteristics of her iron-clad vessels at this time:

Name.	Length.	Beam.	Displacement.	Draught forward.	Draught aft.	Thickness of armor at water line.
	Feet.	*Feet.*	*Tons.*	*Ft. in.*	*Ft. in.*	*Inches.*
Agincourt	400	59	10,395	26 0	27 0	5½
Bellerophon	300	56	7,540	21 0	26 0	6
Iron Duke	280	54	6,034	22 0	23 0	8 to 6
Hercules	325	59	8,700	23 0	26 5	9 to 3
Nelson	280	60	7,323	24 2	24 2	9
Alexandria	325	64	9,492	26 0	26 6	12 to 8

At the close of the war we had fourteen ironclads, which we had constructed while the war was progressing, and which for that day were efficient ships. These still form a part of our naval establishment, but they are of but little use as against modern ships. Their speed, the material with which they were built, the small-powered guns they carry, will scarcely admit of their being called war-ships when compared with the steel-armed, fast-sailing, heavy-armed ships of the navies of to-day. Counting these ships and all others, except those commenced since 1874, and we had at that time eighty-one ships belonging to our Navy which could be used for the transportation of troops, and possibly for some other purposes in connection with the defense of our coast, but which could not resist the attack of a war-ship of the present day.

For some time prior to 1874, the Secretary of the Navy gave special attention to the subject of repairing the vessels of the Navy.

It was believed at that time that the best policy was to repair cer-

tain vessels which the Government then owned, and use them for coast defense. Our ironclad fleet had been useless since the war, and to utilize what there was left of it was thought to be good policy at that time.

The Navy Department proceeded to repair fourteen single-turreted monitors, and the expense was defrayed out of the appropriations for the Department. All that could be repaired, were repaired. These vessels are still in service.

Under authority of the appropriation acts of 1874–'75, the Department commenced the construction of five double-turreted monitors. These were the Amphitrite, Miantonomoh, Monadnock, Puritan, and Terror.

One of them, the Miantonomoh, lacks only her ordnance to be ready for service. The others are not as far advanced in construction.

It would not be considered as good policy to commence the building of such ships to-day; but they are nearly completed, and will be useful for coast defense or inland service.

The side armor of the Puritan amidship is 11 inches thick, her turret armor is 15 and 17 inches, and her displacement is 6,060 tons.

The Miantonomoh, Terror, Amphitrite, and Monadnock are vessels of similar type but of smaller displacement (3,815 tons) and power. Their side armor is 7 inches thick, armor on turrets 11½ to 12½ inches, and their armament consists of four 10-inch breech-loading rifles. Their speed will be from 10½ to 11 knots. The superficial area exposed (as a target) in broadside is about 820 square feet.

These ships will do very good service, and are probably as good as any of their class that would be brought against us in case of war.

In fact, England, which claims to take the lead in naval warfare, is building ships of the class of the Puritan.

The English double-turreted iron-clad vessel Conqueror, not quite completed, has been compared with the Puritan by our Navy Department and with the following result:

Comparative statement of Puritan and Conqueror (English).

	Puritan.*	Conqueror.†

* Armament, four 10½-inch B. L. R.
† Armament, two 12-inch and 4.6-inch B. L. R.

The armament, armor, and speed of the Puritan are superior to those of the Conqueror, while the individual heavy guns of the latter are superior to those of the Puritan.

The Hero, a sister ship of the Conqueror, has been launched within the past six months. The Puritan is a better ship to-day than the Conqueror, for she draws less water and has better speed and more impenetrable armor, being inferior in respect to her guns, which are not as heavy.

It is estimated that the following sums will complete these vessels, and these sums have been appropriated by this bill:

For the Puritan	$969,232
For the Amphitrite	651,084
For the Monadnock, including engines	918,942
For the Terror	638,788
Total	3,178,046

The Miantonomoh is at the Brooklyn navy-yard substantially completed. She needs an appropriation of $206,531 for ordnance, which is also provided for in this bill.

The cost of these five monitors up to the present time is as follows:

Amphitrite (commenced in 1874)	$940,526 62
Miantonomoh (commenced in 1874)	1,751,670 58
Monadnock (commenced in 1874)	938,139 63
Puritan (commenced in 1874)	1,155,591 83
Terror (commenced in 1874)	896,540 92
Total	$5,682,469 58

It has been twelve years since these vessels were commenced and it is time they were finished, and out of the ebbs and flows of party politics.

In 1881 the advisory board, then first appointed, considered the question of putting our Navy upon a more efficient footing. That board reported on November 7, 1881, that this Government should have a navy consisting of seventy vessels, counting thirty-two already in the service which could be used in certain kinds of service, and that thirty-eight new vessels should be built. Congress was asked to carry out this recommendation in part; but nothing was done until 1883, when an act was passed authorizing the construction of three steel cruisers and one dispatch boat. These were the Chicago, Boston, and Atlanta and the now well-known dispatch boat Dolphin.

This latter vessel is not designed for a fighting ship. She is now completed and is in commission. She is built entirely of steel of domestic manufacture, draws 14.25 feet of water, and has a speed of 15 knots per hour. The three cruisers are also built of steel, but none of these vessels have armor, and consequently are incapable of resisting the fire of modern guns. The material of which they are built, however, affords a certain degree of protection, and these ships will be useful and efficient in coast defense and for the destruction of the enemy's commerce. The Chicago will draw 19 feet of water, is to have a speed of 14 knots per hour, and will carry four 8-inch steel breech-loading guns, eight 6-inch and two 5-inch steel breech-loaders. The Atlanta will draw 16.10 feet of water, is to have a speed of 13 knots, and will carry two 8-inch steel breech-loading guns and six 6-inch guns. The Boston is built in all respects like the Atlanta. All three of these vessels will soon be in commission.

On March 5, 1885, Congress authorized the construction of two cruisers, one heavily-armed, and one light gunboat. Plans for these vessels are substantially perfected, and it is expected that they will soon be put under contract or built by the Department. These vessels, with the five monitors, the Dolphin already finished, and the Boston, Chicago, and Atlanta approaching completion, thirteen in all, form the most effective part of our present naval establishment.

The bill under consideration is an important step in the direction of adding to this small beginning, and placing the Navy of the United States on a footing of respectability commensurate with the enterprise, the power, and the grandeur of a great nation.

It is a timely concession to a strong public sentiment that has at last made itself felt in the legislative body. Backed by the whole people, political parties need no longer fear to take the responsibility of appropriating money to construct ships of war.

The bill as originally reported from the committee, provided for the construction of three protected cruisers, 3,500 to 5,000 tons displacement; four first-class torpedo boats, one torpedo cruiser, and two armored vessels, 6,000 tons displacement. It also provided for the completion of the four double-turreted monitors, Puritan, Amphitrite, Monadnock, and Terror. One million dollars was appropriated toward the armament of the unfinished monitors and four vessels authorized by act of March 3, 1885, and of the vessels authorized by this bill and of the Miantonomoh. One hundred and twenty-five thousand dollars was appropriated to purchase torpedoes and $250,000 to improve navy-yards; in all, $6,425,000. This bill was the unanimous report of the Committee on Naval Affairs; but the managers of the majority of this House refused to give the committee a hearing unless the amount appropriated was reduced to $3,500,000 and the number of ships provided for in the original bill reduced one-half. It has accordingly been cut down. It was an unwise, injudicious, and unpatriotic conclusion and a great disappointment to the country, which is anxious that we should have a respectable Navy to defend our coast and protect our commerce.

In the substitute bill the two armored cruisers have no specific appropriation, and there is no provision for the torpedo cruiser. Section 8 appropriates $1,000,000 for armament of three vessels and of vessels authorized by act of March 3, 1885, and unfinished monitors, including the Miantonomoh.

The Secretary of the Navy is authorized to finish the monitors at an expense of $3,178,046.

Those provisions in the bill which allow the armor and other material to be purchased abroad in certain contingencies are unnecessary and should be stricken out. We must make our own armor and our own armament.

The bill also provides for the purchase of a boat armed with the pneumatic dynamite gun, a gun which if it accomplishes the results claimed for it by its inventors and owners, and which they are willing to guarantee, will make a radical change in respect to armament.

This gun placed at an elevation of 10° throws a projectile of dynamite a distance of 1 mile, which, when weighing 100 pounds, strikes a blow of 6,500 pounds to the square inch, and falling within 21 feet of the largest ship now known will sink her. If the projectile weighs 200 pounds and falls within 33 feet of the ship it will produce the same result. The use of this projectile will make short work of naval engagements.

The credit of the development of this destructive weapon is due to Lieutenant Zulinski, of the United States Army.

Mr. BUTTERWORTH. As I understand this provision it simply authorizes the Secretary of the Navy in his discretion to make this contract.

Mr. BUCK. That is all; and it is provided that he shall take a bond from the inventor and owner.

Mr. BUTTERWORTH. This matter was investigated somewhat by by our committee and was favorably considered, but we thought it best that if this "board" should be appointed the matter should be left to them.

Mr. BUCK. The amendment proposes simply to appropriate $350,000 to be expended for this purpose if the Secretary of the Navy deems it proper. If this provision should become law I am inclined to think it would revolutionize the question of armament of all war vessels, for this invention is, in my judgment, altogether the most deadly projectile ever discovered. It would destroy the largest ship of war afloat by throwing a charge of 100 pounds of dynamite, which, falling within 21 feet of the vessel, would certainly sink her.

Of course the ships provided for in this bill and the others in process of building can only be considered a beginning. We should be obliged to build some larger and more powerfully armed ships, if we expect to make adequate provision for the defense of the larger cities on the coast. Many of these cities can not be defended by shore fortifications and shore batteries, however powerful. Floating batteries, torpedoes, submarine mines, and dynamite shells will in the future be great factors in the question of the proper defense of our shores. At present we have no guns, no ships, no fortifications capable of doing effective work.

We have a few fortifications scattered along our seacoast which can be battered in pieces in a few hours if it was any object to do it. They are not capable of any resistance. The United States does not own a single gun that can pierce the modern compound armor of vessels like the Lepanto, Duillio, and other vessels of their rank. Such is our Navy and such the condition of our fortifications.

Admiral Porter declares in his last annual report that—

> In considering our fortifications and naval vessels it is difficult to determine which are most behind the time. But all the forts we have at the Narrows in New York Harbor and all our present Navy could not prevent two first-class ironclads from entering the harbor and laying the city under contribution.

He could have said the same of Boston, Portland, New Orleans, and San Francisco. Our whole coast is completely at the mercy of any nation having a respectable navy. The fact is, we have no guns capable of penetrating a first-rate armored vessel of modern construction. And our fortifications and forts are in such a condition that we need some effective ships of war to protect them.

In the future this country will increase its trade with foreign countries. The trade from the South American states is naturally ours. It is the same with Mexico; and yet the great bulk of the South American and Mexican trade passes by us on the ocean and seeks other markets.

This can not continue. It is against the natural laws of commerce. More intimate relations will be cultivated between these states and our own country, and our merchants will in the future participate in the trade of these countries. Nor will the growth of our foreign commerce be confined to these sections of the world. We shall have something to sell to European and other countries. Our trade is on the increase and our exports exceeded our imports last year. The account is as follows:

Exports, eleven months, ending May 31, 1886	$611,206,638
Imports, eleven months, ending May 31, 1886	581,116,652
Balance in our favor	30,089,986

This growing commerce necessarily involves large amounts of property, and it will often happen that our merchants will be the owners of both real and personal estate in distant countries, the outcome of business complications, or representing the capital necessary for their business transaction.

This property should be protected by our own flag. We should have a navy sufficient for this purpose, and citizens who are pursuing their avocations in foreign countries, are entitled to the same protection, both in person and property, as though they were pursuing it within our own borders. At home or abroad, on land and on sea, each citizen of the United States is entitled to the full and complete protection of its laws, and our Government is a failure if it does not furnish that protection at whatever cost.

Mr. Speaker, the interest which our Government had in the Panama difficulty was a property interest. It was believed that if the insurrection succeeded the United States property there would be damaged if not destroyed. Accordingly our fleet appeared on the scene and did good work in quelling the disturbance. It was, however, a fortunate thing that the fleet had no opposition. It was not attacked by any first-class modern ship of war, and so it came off safe, the expedition costing the Government about $21,000. Just now we are needing one or two first-class ships to aid diplomacy in the fishery question. We construe treaties and issue our decrees and proclamations, but how can we enforce them? What power save a land expedition could force our neighbor to respect our rights in her waters.

The Dominion of Canada claims that the treaty of 1818 determines the commercial rights which our citizens have within its waters, and have recently enforced their statutes in accordance with this view. Our Government, however, claims that legislative arrangements made since 1818 having the force of treaties determine this question. They seize the vessel property of our citizens, and the question of confiscation is being tried in the local courts, defended by attorneys sent there and paid by the United States Government.

Attorneys are all very well, but one first-rate steel-armored ship with armament of modern make and efficiency, cruising in northern waters would be a powerful help in bringing about a mutual understanding, especially if backed by a fleet of steel armored ships at home.

In case of war we need fast-sailing and powerful ships to patrol the sea and destroy the commerce of the enemy, as well as to visit his own harbors and seacoast, and by engaging him at home cripple his power of offensive warfare on our own coast, and compel him to use his resources in self-defense.

The defense and protection of our citizens when engaged in commerce with foreign countries, is but a small part of what a navy is needed for.

The property along our coast is inadequately protected. The cities and border towns, and all vessels engaged in the coast and river trade, comprise wealth almost untold, and are the sources of large revenues to the Government.

These have substantially no protection from a hostile fleet. No duty of the Government could be plainer than that of defending the property of its own citizens on its own soil.

The shelling of New York, Baltimore, New Orleans, Boston, or San Francisco would be a calamity to the whole country. From these cities the lines of commerce and trade reach to every portion of the inland country, and any damage to them would be felt in every part of our land.

Mr. Speaker, I believe there is no division of opinion on this subject in any part of the country. The gentleman from Ohio [Mr. BUTTERWORTH], broad-minded and broad-shouldered as he is, in his speech a few days ago on the floor of this House, on the subject of fortifying our coast, placed the argument on the proper ground, and bore a grateful message to those living on the seacoast, and who have sometimes thought that the inland States failed to fully appreciate the danger to which we are exposed in case of war with foreign countries.

The power of modern guns and their range are constantly being improved. England, including those in service and those now building, has twelve ships which carry thirty-eight of the heaviest high-power guns, with a range of over 10 miles. France already has five ships carrying sixteen guns with equal power and range, and has in process of construction twelve more, carrying twenty-five guns of the same range. Other nations have guns which are the equals of any of these in power and range, making in all forty-three war ships, carrying one hundred and seventeen guns, all available against us in case of war. Sixteen of these ships draw less than 26 feet of water, and consequently can enter the harbors of New York and Boston. Of course they can also enter the harbors of Portland, Narragansett Bay, Long Island Sound, New London, San Francisco, and some other ports.

While there are few, if any, ships now afloat which could endure the strain produced by firing the heaviest high-powered gun placed at an elevation necessary for the range of 10 miles, they can be constructed with sufficient strength for that range, and probably will be in the near future.

Experiments have shown that armored vessels as at present constructed are unable to endure the effect of the heaviest guns, when mounted in forts, within a distance of 2 miles. It follows from these facts that any harbor would be defended by the construction of forts and shore batteries at a distance of 8 miles from the place to be defended.

Of course floating batteries could be built that would answer the same purpose as shore batteries, or guns mounted inside of fortifications. These could also be aided by torpedoes, submarine mines, and vessels of the type of Ericsson's Destroyer, a submarine craft carrying a heavy submarine gun for the discharge of a projectile torpedo. With these facts in mind, by an examination of the characteristics of different ports, we can readily see to what danger we are exposed.

Portland Harbor, with a depth of water of 21 feet and the mean rise and fall of the tide being 8 feet 9 inches, could be approached by an enemy's fleet within 6 miles and yet be 2 miles from any fort that could be built near the entrance.

Boston, 21 feet 9.4 inches, could be approached within 6½ miles of the State-house, although heavy guns were mounted at the east point of Nahant, and on the outer islands of the harbor. They could get into Broad Sound. This would be a little more than 2 miles from these heavy guns on the points named.

Newport inner harbor, 19 feet 3.9 inches, would be within shelling distance from deep water.

New York, 23 feet 4.8 inches, outer defenses on Sandy Hook, Dry Romeo, and Coney Island. Brooklyn could be shelled even with proper defenses at the above points. The soundings off Coney Island indicate that some of the largest ships in the world from this point could shell the lower part of New York, or place that city under contribution.

Philadelphia (20 feet 6 inches), Washington, D. C. (19 feet 1.4 inches to Greenleaf Point), Baltimore (24 feet 1 inch), Savannah (9 feet 7 inches, southwest part of the river), can all easily be defended at no very great expense, but they have no defense at present.

New Orleans, at head of passes, 26 feet .6 inch: The bed of the entrance is constantly changing and the nature of the ground is such on the shore that forts would be impracticable. It is not now defended at all, and is incapable of defense except by mines, torpedoes, floating batteries, and ships of war.

San Francisco, 33 feet 3.6 inches: This harbor has great depth of water with a strong current. The city is within range of heavy guns

for some distance on the shore. It can only be defended by floating batteries and ships of war on account of the depth of water.

These are only the leading harbors on our coast.

Long Island Sound can be occupied by the navies of the world. With deep waters and safe anchorage it invites the presence of a hostile fleet. New Haven and Bridgeport and all the rich towns that are situated on the coast of Connecticut are within shelling distance of deep water, and could be destroyed by a hostile fleet, while one of the main approaches to the city of New York from the sea would be cut off if this body of water were occupied by an enemy. Daniel Webster once said of this body of water that it was such a busy place of commerce the Government should keep it lit up like a ball-room.

New London, 21 feet 2.5 inches (inner harbor): The outer harbor has about 30 feet on the bar at mean low water. This would admit the largest ship. Long Island Sound is indefensible by shore batteries or forts. Floating batteries and large ships only can afford adequate protection.

Chesapeake Bay, with its numerous commercial connections, is also incapable of shore defense. The defense of this important section of the country must be by floating batteries and ships, torpedo boats, &c.

Narragansett Bay is in similar condition.

For the defenses of Long Island Sound, Hampton Roads, Mississippi River, and San Francisco, the board on fortifications or other defenses have recommended three different types of vessels.

The first, of "7,000 tons displacement, and carrying two 16-inch guns in a turret and one 10-inch gun in barbette." "The hull is protected by a belt of steel armor 18 inches thick and 175 feet long, with a backing of 6 inches of wood and an inner plating of 2 inches of steel."

The second, having a displacement of "6,500 tons, mounting two 14-inch guns in a turret and two 10-inch guns in barbette, and protected by 16 inches of steel armor for a length of 160 feet."

"The third type has a displacement of 4,000 tons, mounting two 12-inch guns in a turret and two 10-inch in barbette, on a draught of 14 feet 6 inches. This type is protected by side armor 12 inches thick extending for 132 feet of her length."

Cost of vessels for the defense of Long Island Sound, Hampton Roads, Mississippi passes, and San Francisco.

Ports.	Vessels.			Guns.				Total cost each port.
	First type.	Second type.	Third type.	16-inch.	14-inch.	12-inch.	10-inch.	
Long Island Sound	.....	2	2	.....	4	4	8	$11,550,000
Hampton Roads	.....	2	2	.....	4	4	8	11,550,000
Mississippi River	2	.....	.....	4	.....	.....	2	8,150,000
San Francisco	.....	3	.....	.....	6	.....	6	10,725,000
Total	2	7	4	4	14	8	24	41,975,000

This plan of defense involves a large expense, and it is a serious question whether adequate defense could not be obtained for these locali[illegible] for less money.

The first care of the Government should be to prepare for attack, New York, Boston, Baltimore, New Orleans, and San Francisco.

The custom of modern warfare is to levy contributions and stipulate for indemnity to defray the expenses of the victorious army or fleet. Of course every one knows that all along our coast are to be found cities rich in manufactures and commerce, of vast banking and commercial capital, and containing beautiful and costly buildings.

It is, however, an indisputable assertion that within three weeks from a declaration of war against us by either England, France, Italy, or Spain, the cities of Boston, New York, Baltimore, New London, and Portland could be put under contribution or else suffer bombardment.

It is, of course, impossible to get at the value of the property that would be exposed in case of war.

The report which accompanies this bill gives a statement taken from a paper by Lieutenant Griffin, of the Army, of property on our coast which would be within reach of an enemy's guns in case of war. The statement is as follows:

Portland	$33,000,000
Boston	471,000,000
New York	1,855,000,000
Jersey City	113,000,000
Philadelphia	789,000,000
Baltimore	219,000,000
New Orleans	176,000,000
San Francisco	180,000,000

This list omits all mention of Wilmington, Charleston, Savannah, Jacksonville, Mobile, and in fact of the entire Texas and Pacific coast, except San Francisco. It also omits the cities of Newport, Providence, and places on Narragansett Bay, as well as New London, New Haven, and Bridgeport, and other towns on the shore of Connecticut.

In addition to the property on the land, our people have a large amount of property invested in vessels engaged in the coast and river trade, not including vessels used entirely on inland waters. This property would be swept from the ocean in ninety days after war was declared against us by any respectable naval power.

Notwithstanding the general impression that our merchant marine is of little value, and notwithstanding the fact that it is not as large as it should be, it still commands a large amount of capital and is doing a vast business.

The total number of sailing vessels is 14,489, with a tonnage of 1,918,067.13, and we have 2,693 steam-vessels with a tonnage of 755,752.84; besides these, we have 256 canal-boats, 940 barges, and many fishing vessels.

Most of these vessels are engaged either in the coast trade or are on rivers having a navigable outlet, and in case of war would be exposed to destruction by a hostile fleet.

These vessels, in case of war, must all disappear from our coast at once, for we can not protect them.

It is a great mistake to suppose that many of the best war ships owned by foreign countries can not enter our ports. A somewhat vague impression exists that owing to our shallow ports no vessel of any considerable size and power could enter them. This is true of some of them, but a large majority of the war fleets of other nations can enter any of our ports, and many of the best ships that float, carrying the most powerful guns, can come into New York and Boston Harbors, and nearly all of them can easily come into the harbors of Portland, Narragansett Bay, New London, Long Island Sound, Hampton Roads, and San Francisco. With the permission of the House I will print in the RECORD a table taken from figures and statements from official sources and found in the report of the Endicott board, including soundings made by our Government, showing what vessels owned by leading nations can enter our principal ports.

Table showing number of vessels owned by leading nations which can enter ports of the United States, the number of guns they carry, draught of water, &c.

Ports.	Draught of ships which can enter.	England.			France.			Italy.			Russia.			Germany.

It will be seen that England has 72 ships carrying 348 guns capable of penetrating from 12 to 20 inches of wrought iron, and 2 ships carrying 4 guns which can penetrate from 20 to 33 inches, all of which can enter the harbors of New York and Boston so far as depth of water is concerned. These two ships owned by England are among the best war ships in the world.

Our Government, however, is the owner of no vessel which could offer any obstruction to any one of these vessels.

France has 7 ships of the best type carrying 18 guns which can penetrate from 20 to 33 inches, all of which can enter these two great harbors of our country.

It is unnecessary to state further details. I need only to say here that, according to the report of the Committee on Ordnance and War Ships, there are 198 ships of war owned by foreign countries which are available for hostile demonstrations on our coast, with 42 more in process of construction, making a total of 240.

We can not expect to cope with England, in the present generation at least, as a naval power, but we can at least build a navy capable, in connection with forts, torpedoes, and shore batteries, of defending the most important points on our seaboard.

The only point where we could start on an equal footing with the mother country is on the great lakes between this country and Canada. But unfortunately we made a treaty with England in 1817 by which we are prohibited from building or maintaining a navy on any of these lakes.

This treaty, which was proclaimed April 28, 1818, provided that the naval force on those waters should be reduced as follows:

On Lake Ontario, to one vessel not exceeding 100 tons burden and armed with one 18-pound cannon.

On the upper lakes, to two vessels not exceeding like burden each and armed with like force.

All other armed vessels on these lakes shall be forwith dismantled and no other vessels of war shall be there built or armed.

Such has been the improvement in war vessels and their armament since this treaty was made, that these provisions and stipulations amount to an absolute prohibition of the building and maintenance of any respectable naval ship or force on these inland waters.

Judging from the past, we may reasonably expect that our country will not be an exception to other nations in settling disputes by a resort to arms. The history of our country shows that we have had our full share of war. We have been engaged in wars with foreign countries and within our own territorial limits. Besides the war of the rebellion, we have had numerous cases of calls by States on the Government for military aid in suppressing riots and unlawful assemblies, too powerful for the State authorities to cope with. We have on our pension-rolls 345,125 pensioners, calling for an expenditure of $61,933,288.12 last year.

The day of universal peace, when men will learn no more war, may come, but there is very little indication of it now.

As we have already shown, the late civil war developed a new class of war ships. It tested some of the new ideas that existed in the minds of mechanics and inventors on this subject, and it turned the efforts of all nations into new channels in reference to ship-building. Other nations were not slow to appreciate the lessons taught by that contest. Our own country stands alone in not making use of the experience which cost us so much. We demonstrated the utility of iron ships, built fourteen ironclads, and then, the war being over, stopped all work in that direction while other nations took up the subject where we had left it, developed our discoveries, and perfected our inventions. It has been said that by waiting we have profited by the experiments of others. In some respects this may be true, but iron-clad ships built by us during the war, have been copied by England and other nations for twenty years, and although the thickness of the armor has been increased and steel has been partially substituted for iron, still the class of ships known as monitors, and constructed substantially on the same plan as our own, are still considered as the best war ship afloat, and England is building thirteen of them the present year.

However much we may have profited by this policy of waiting for others to make experiments for us, it is clear that we can now with safety venture to build ships both for defensive and offensive warfare.

It is not probable that war ships will ever be built of any better material than steel, or that they will carry guns very much more powerful in range or penetration than they now carry.

Steam has taken the place of sailing power, but sailing apparatus is still retained in connection with steam power as being less expensive, especially in time of peace. Wooden vessels have been superseded by those constructed of iron, and iron as material for construction is being set aside for steel.

Steel armor is taking the place of iron, but wrought-iron armor is still used, and has been found very effective in resisting some of the most powerful guns.

We should at least make a beginning, and we should begin at that point of perfection already reached by other nations, both in respect to guns and ships. We do not need to wait longer for experiments to be made for us. We can enter upon the work of building and experimenting for ourselves. Our mechanics are as skillful and our material as good as any in the world. We are not too poor to defray the expense of the preparation for war; and while we are a nation of peace, and are engaged in the pursuits of peace, experience teaches us, as it has taught all other nations, that mankind will resort to war and bloodshed for the settlement of disputes which the arbitrament of peace should determine, and that military conflicts with and without cause are still to be expected and provided for.

Interstate Commerce.

SPEECH

OF

HON. JOSEPH G. CANNON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 21, 1886,

On the bill (S. 1532) to regulate commerce.

Mr. CANNON said:

Mr. SPEAKER: I only have time to say a word touching this bill. On the 12th day of May last what is known as the Cullom interstate-commerce bill passed the Senate and it has been pending in this House since that time. I believe it is a wise bill. It was fully discussed in the Senate. The gentleman from Texas [Mr. REAGAN] with the Democratic majority have allowed eight months of this session to pass without considering and passing any bill upon this subject, and now, just as Congress is ready to adjourn, not intending to secure legislation upon this subject, bring forward what is known as the Reagan bill and seek to rush it through under the spur of the previous question without debate and without amendment and consideration. The object is to enable them to make a poor excuse to the people for not at an early day in the session intelligently considering and passing a wise bill.

I believe the Reagan bill if enacted into law would not give the required relief, and fear it would work absolute harm to the producers and consumers of the country. This House has refused to accept the Cullom bill, and has substituted against my vote the Reagan bill for it. It is an open secret that the Democratic majority of this House will not accept the Cullom bill. They seem determined to have the Reagan bill or nothing. However, there may be a bare chance in a conference with the Senate that some bill with apt and wise provisions may be agreed upon, and for the purpose of taking the chances of such agreement I vote for the Reagan bill so as to get both bills in conference between the House and Senate. I shall be agreeably surprised if the other side of the House shall do one wise thing before this Congress adjourns in agreeing to an apt bill upon this subject.

Local Railways in the Indian Territory.

SPEECH

OF

HON. JAMES BUCHANAN,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

June 16, 1886.

On the bill (S. 1486) to authorize the Denison and Washita Valley Railway Company to construct and operate a railway through the Indian Territory, and for other purposes.

Mr. BUCHANAN said:

Mr. SPEAKER: This bill ought not, in my judgment, to become a law, at least without serious amendment.

It proposes to authorize the construction of a railroad from a point on the Red River, near Denison, Tex., through the southeastern portion of the Indian Territory about 65 miles in length, to a point on the proposed Saint Louis and San Francisco Railroad. It is one of a series of bills presented to this Congress the passage of which will cut the Indian Territory in every direction. A partial list of these bills comprises the Kansas City, Fort Scott and Gulf Railway, the Chicago, Kansas City and Nebraska, the Kansas and Arkansas Valley, the Saint Louis and San Francisco, the Fort Worth and Denver City, the Saint Louis, Baxter Springs and Mexican, the Southern Kansas, the Pacific and Great Eastern, the Wichita and Arkansas Valley, the Denison and Washita, the Rogers, Siloam and Muscogee, the Saint Joseph, Kansas City and Arkansas, and the Winfield and Fort Smith. These bills show that in spite of solemn treaty obligations, in violation of the plainest principles of justice and fair dealing, greedy corporations are seeking to overrun this Territory. If more were needed to demonstrate the readiness of the whites to take possession of this country the numerous bills introduced here and in the Senate looking toward the overthrow of the power of the Indian legislatures in that Territory would be confirmatory proof.

Some of these bills are: A bill conferring civil jurisdiction on the United States courts; a bill to authorize the execution of civil process; a bill establishing United States courts therein (seven bills); a bill to open to homestead settlement certain portions thereof; a bill to establish Territorial government for said Territory.

In favor of the passage of bills of the character of the one under consideration it has been urged that the Territory should not lie in the path of progress; that great through lines connecting great sections of the country with their large and important interests should not be hindered.

However much force may lie in this argument, it can not be applicable to this bill. It is no through line. It connects with a road not yet built, and which when built will of itself furnish a through line. House Report No. 769, first session Forty-eighth Congress, adopted by the Committee on Indian Affairs of the present Congress, speaking of the road authorized by this bill, says:

> That the road sought to be built will secure to Texas an independent and competing outlet for its rapidly increasing commerce. It is about 65 miles in length, and will connect the Saint Louis and San Francisco Railway with the three lines of road in Texas now having their northern termini at Denison—

Naming those roads. But this outlet will be secured by the Saint Louis and San Francisco road, and this connection can be secured by way of Paris and Dallas by building a road entirely in the State of Texas, and no greater in length and no more expensive to build than the road sought by this bill.

The true reason for this bill is found, I am confident, in another part of that report which says:

> It passes through a portion of the Indian Territory in which there are large deposits of excellent coal that is much needed by the people of Northern Texas, who are now paying more than double the price at which coal can be profitably laid down at their doors as soon as this road is constructed.
> That the timber along its line, now valueless, is and will be much needed by the country seeking to reach it by means of this road.

Texas wants this coal and this timber. There is no timber there to spare. Recent personal observation enables me to say that the portion of Texas affected by this bill is as well, if not better, supplied with timber as is this portion of the Indian Territory. If Texas wants timber, let her use her own, and not seek to despoil her neighbors, even though those neighbors happen to be Indians. Having objected on Saturday, June 12, to the consideration of this bill, I was favored June 13 with the following telegram:

> DENISON, TEX., *June* 13, 1886.
>
> In the name of thirteen thousand citizens of Denison we beg you not to delay the passage of the Denison and Washita Valley bill. The company is ready to commence work, and it will give immediate employment to thousands of idle men here who are suffering for work. Its passage is of vital importance to this country.
>
> P. O'DONNELL,
> B. N. CARTER,
> H. TONE,
> J. A. TUPER,
> J. D. YADCUM,
> G. G. RANDELL,
> TOBIAS PORTER,
> W. B. BOOS,
> *Councilmen.*
> SAM'L HANNA,
> *Mayor.*
>
> Hon. J. BUCHANAN,
> *House of Representatives, Washington, D. C.*

I have the pleasure of a personal acquaintance with a number of these gentlemen, and know them to be among the most respected business men of the citizens of Denison. I have visited them at their places of business, and know their standing. It will be noticed that they say nothing about the interests of the Indians. They urge solely the interests of their own section. As truthful men, they could do no more; as honorable men, they have done no more. Much as I admire the business enterprise and sagacity which has in so short a time built up their thriving and enterprising city, I can not forget that Indian treaty obligations set apart this Territory for the use and occupation of the Indians, not of the inhabitants of Texas. This bill is for a local purpose. Local interests are behind it, and will receive the benefit.

But even if the construction of the road were justifiable, the details of this bill are in many respects improper and should be amended. The bill grants a right of way 100 feet in width for a road-bed, with an additional width of 100 feet on each side, 300 feet in all, at "cuts" and "fills." It also grants an additional strip 200 feet in width by 3,000 feet in length for station purposes every 10 miles along the road. This additional strip the company can use for railroad purposes only, but the bill authorizes the company to locate thereon their "officers, servants, and employés." Under this provision the company may fill this strip with buildings and dwellings, and effectually cut off the Indian inhabitants of the Territory—the owners of this land—from occupancy of any but the back streets. It would seem but simple justice to put some limitation upon this provision.

The provisions for the condemnation of, and compensation for, the lands to be taken are justly subject to criticism. The title to these lands is in the Indian tribes, each tribe holding collectively the title to the portion occupied by such tribe, and each individual being allowed to own his improvements, with privilege of sale and transmission by inheritance. I will not stop to inquire as to the nature of the Indian title further than this. The question whether the fee-simple reverts to the Government or has passed by treaty to the tribes need not concern us here. The use—the permanent use—was, all agree, granted by treaty to the tribes.

The provision for condemnation of, and compensation for, improvements made by the Indian farmers is peculiar.

The commissioners to appraise these damages are to be three in number—one to be appointed by the President of the United States, one by the chief of the tribe, and one by the company. Is that just? Is that fair? Who will be the more likely to reach the President with suggestions as to names, the influential corporation or the obscure and poor Indian farmer? The question answers itself. The third commissioner is to be appointed by the company. In other words, the party direct in interest is to select one-third the jury. If this privilege is accorded to the company, why is it not given to the claimant also? Why taken from him and given to the chief of his tribe? If he desire the services of his chief in the selection nothing now prevents his calling upon such chief.

Why compel him to submit to such selection; even chiefs are not beyond suspicion. Either give both parties this privilege or deny it to each. In case the decision is not satisfactory, either party may appeal to the United States court sitting either at Fort Smith, Ark., or at Dallas, Tex. This provision will work hardly on the claimants. These courts are held a long distance away, and the expenses of an appeal will be heavy. The claimant will be compelled to pay heavy transportation charges for himself and witnesses, to pay lawyers' fees, and endure the expense attendant upon a protracted trial, fought with all the pertinacity and annoyances which the counsel of corporations know so well how to employ. He must also face a jury of white men with all the antipathy to his race held by the settler on the frontier. He may get justice, but the conditions will all be against him.

For the use of the land itself—and as this is a permanent use it is equivalent to the grant of the land itself—the company is to pay the munificent sum of $50 per mile and the further annual payment of $15 per mile per year, or a total price of $3,250 for a strip of land of the widths named and 65 miles in length, and charged with the annual payment of $975. These amounts are to be paid to the Secretary of the Interior, who is to apportion them among the several tribes. These amounts are ridiculously small. In case any tribe is dissatisfied with this such tribe may have the value of the land determined in the same manner provided for the determination of the value of improvements, with the same objectionable machinery and methods.

The bill contains no provision for fencing the line. It is true the word "fences" is used in the bill, but in such a blundering way as to leave the company without obligation to fence save at road crossings. There should be a provision clearly and definitely requiring the company to fence their whole line. The Indians in this portion of the Territory are civilized and engaged in farming. They have herds of cattle which graze upon the rich pastures of the prairies and river bottoms.

In May last, while in the Creek Nation, noticing that but few of the Indian farmers were located near the line of the railroad, I asked the chief of that nation, Mr. Perryman, a well-educated and very intelligent gentleman, the reason for this. He informed me that the cars had killed so many of their cattle that they were compelled to move back away from the line of the road. By the way, it may be well to say right here that the Indians in the Territory are civilized. They have their churches and schools, their chiefs, legislatures, judges, and other officers; and person and property are as safe there, save from white ruffians and desperadoes, as anywhere else in this country.

There should be in this bill effective means to secure to these Indian farmers recovery of damages for cattle killed on the road or for destruction of grass, hay, or other crops, timber, or bulidings by fire from the locomotives. In each such case, without such provision, the claimant must go out of the Territory to a strange court, before a jury of a strange people, at great expense and trouble, to secure his rights.

Another question arises as to the power of Congress to grant the rights conferred by this bill without the consent of the Indian nations occupying that portion of the Indian Territory through which the proposed road will pass. This question has as yet received no consideration whatever at our hands. The right has been taken for granted. In this connection the following words from a protest against the passage of some other bills authorizing the construction of railways through the Territory, which protest is signed by the representatives of the Choctaw and Chickasaw Nations, would seem to be worthy of thought:

> Although it is clear that the right of eminent domain over the Indian Territory is vested in the United States, and that this right is incapable of alienation while the Territory remains subject to the jurisdiction of the United States, it is, at the same time, certain that in the treaty of April 28, 1866, the United States gave their implied promise not to exercise that right any further for the benefit of railway corporations. Only in a case where great and urgent public interests require a line of railway between given points through the Indian Territory can the United States be justified in exercising the right of eminent domain in favor of a railway corporation, even in the absence of this implied promise of the treaty of 1866.

I suppose there is no hope of preventing the passage of this bill. The white man's greed seems to stop at no treaty stipulation or honorable restraint. The "wants of commerce" is the ever-ready excuse for fresh spoliations, and at the present rate the day is not far distant when this Territory, solemnly set apart by treaty for homes for these people, will be cut in every direction by railroads built, not in the interests of commerce but in the interests of greedy and soulless cor-

porations, seeking not to carry simply a commerce across the Territory from border to border but to seize upon and appropriate the natural resources of that Territory.

Whatever may be said as to the policy of allowing lines for through traffic there ought to be no question about restricting these grants to such and I desire to put on record my protest, not only against this particular bill, but against that whole class of similar bills not yet acted upon but ready to be brought forward at any time, and to demonstrate by such protest that there is at least one who believes that there are some rights possessed by these nations which even the American Congress is bound to respect.

Hennepin Canal.

SPEECH

OF

HON. THOMAS J. HENDERSON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 20, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the amendments of the Senate to the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. HENDERSON, of Illinois, said:

Mr. CHAIRMAN: This amendment provides, first, for the acceptance of the Illinois and Michigan Canal by the United States from the State of Illinois, and, secondly, for the construction of a canal from the Illinois River at or near Hennepin to the Mississippi River, at or near Rock Island, so as to give a continuous line of water transportation from the head of navigation on the Mississippi River to the Atlantic seaboard at the city of New York. This simple statement, it occurs to me, should in itself commend the provisions of this amendment to the careful, candid consideration of every member of the House.

A single glance at the map of the United States would, in my opinion, do more to commend the construction of the so-called Hennepin Canal to the favorable consideration of members of the House than any words I can utter.

This short line of canal, as will be seen by reference to the map, will connect six or seven hundred miles of the navigable waters of the Upper Mississippi River with the lake system of navigation, and then by the Erie Canal and the Hudson River with the Atlantic seaboard at New York; and if water transportation is of any value I appeal to the honest judgment of every member of this House to know if this is not an important measure, and yet it has been characterized as a mere scheme, an impudent job, a raid on the United States Treasury.

Is there no merit in a proposition to bring the city of New York, the great commercial metropolis of the country, into closer connection with the great grain-growing States, lying west and south of the lakes, by a cheap line of water transportation? It seems to me there is, and I confess I have been greatly surprised at some of the criticisms upon this measure which have appeared in some newspapers published in parts of the country deeply interested, in my judgment, in its success. For whether I am right or wrong I firmly believe that a more perfect connection between the lakes of the North and the Mississippi River such as is proposed by the amendment under consideration is in the interest of the great and rapidly growing commerce of the country. There is, in my judgment, no internal improvement proposed anywhere in the United States of greater national importance, unless it may be the improvement of the Mississippi River, of which this canal, if constructed, will form a most important part.

And now, Mr. Chairman, as to the acceptance of the Illinois and Michigan Canal by the United States, I desire to say a few words before proceeding to a general discussion of the amendment.

The Illinois and Michigan Canal was built by the State of Illinois. But the United States granted to the State by acts of Congress lands to aid in such construction with the following proviso:

That the said canal when completed shall be and forever remain a public highway for the use of the Government of the United States, free from any toll or other charge whatever.

This grant of land by the United States, and the acceptance of the same by the State of Illinois, undoubtedly created a legal obligation on the part of the State to forever maintain the canal and keep it open as a public highway or water way for the purposes expressed in the acts of Congress referred to. Now, why should the United States accept this canal from the State of Illinois? Is it because it has become a burden to the State? Not at all, for it has never been a burden to the State. It has never cost the State of Illinois a single dollar to maintain this canal.

The tolls, although kept low in the interest of the people, have not only been sufficient to maintain the canal and pay the expenses of operating it, but about two millions and a half of dollars have been paid into the treasury of the State from them, some seven or eight hundred thousand dollars of which have been expended in the improvement of the Illinois River, and which the General Government itself should have expended. And all this has been done notwithstanding a railroad runs along the entire line of the canal and has done so since 1853, and which conforms its own freight charges to the charges made on the canal during the season of navigation. And every one acquainted with the facts knows that the freight charges on this road are less where it is compelled to compete with the canal than they are on other sections of the road. And so do those know who are familiar with the subject that other roads, affected more or less by the cheaper transportation on the canal, are compelled to make lower rates on such parts of their respective roads as come under the influence of such cheaper canal transportation.

No, Mr. Chairman, the Illinois and Michigan Canal has never been a burden to the State of Illinois, and it is not now a burden. On the contrary, with its completion it brought prosperity to the State, and from that hour to the present time it has been a benefit and a blessing to the State. It has helped to build up the most wealthy and prosperous counties of the State which lie along its borders; and I think, I know what I say to be true, that it would come near creating a revolution in these counties if an attempt should be made to abandon this canal. And it makes no difference whether the tonnage has been large or small so long as the canal is maintained and ready to carry freights. These people know the benefits it secures to them in giving to them cheaper transport.

Mr. Chairman, I firmly believe that the best and surest check which the people of this country can have upon the greed of mammoth railroad corporations will be found in the improvement of our natural water ways, and in the construction of such artificial ones as will improve and make our natural water systems, by useful connections, more valuable to the commerce of the country and the people. And these water ways, whether natural or artificial, should be under the control of the United States, and not that of any State or corporation, and should be absolutely free to the commerce of the country. Of course I speak of great and important water routes of transportation, which are absolutely national or interstate in character.

Mr. Chairman, our fathers intended our commerce between the States to be free. They conferred upon Congress the power to regulate commerce with foreign nations and among the States. They denied to the States the right to lay any imposts or duties on imports or exports, except such as were absolutely necessary for executing their inspection laws, without the consent of Congress; and so without the consent of Congress they denied to the States the right to lay any duty on tonnage, but conferred upon Congress the right alone to lay and collect duties, imposts, and excises. For what purpose, Mr. Chairman? Let the provision of the Constitution conferring this power answer. It says: "To pay the debts and provide for the common defense and general welfare of the United States."

Congress, therefore, has the exclusive power to regulate commerce among the States and with foreign nations, and the exclusive power to lay and collect duties, imposts, and excises, or, in other words, the power to raise revenue from commerce by levying duties on imports; and therefore it seems most reasonable that Congress or the General Government should assume the burden and expense of supplying all necessary and proper facilities for promoting and benefiting the commerce of the country. And surely there is nothing in which commerce is more deeply interested than in cheap transportation.

Why should the State of Illinois or any other State have the power to impose burdens upon the commerce of the country? Certainly no good reason occurs to me why any State should have that power, nor is there any good reason why any one State should be called upon or required to construct and maintain a free water way when so many other States, if not the entire country, are equally interested; and especially when the General Government is expending large sums of money in improving and maintaining free water routes by the construction of locks and dams in some States, it is unjust to other States to require them, at their own expense, to construct, improve, and maintain free water routes which are national in their character and of importance to the interstate as well as foreign commerce of the country.

Benefits as well as burdens in the administration of the Government should be as equally distributed as possible.

I have said, Mr. Chairman, that the Illinois and Michigan Canal has not been, and is not now, a burden to the State. And those who say it is, and that the State therefore desires to turn it over to the United States, are either misinformed or intentionally misrepresent the fact. If it was burdensome to the State it would be a good reason why the General Government should relieve the State from the maintenance of the canal, for the General Government encouraged the State to build the canal by a grant of lands for that purpose, and imposed upon the State a condition that the canal should be and forever remain a public highway for the use of the Government of the United States. But the canal has maintained itself since its completion, and has with low tolls paid some two or three millions of dollars into the State treasury.

A few years since an effort was made by the railroads to drive the canal into disuse. They put down their freights so low that there was

a heavy falling off in the receipts of the canal; and the people, seeing the danger, held a large meeting at Ottawa, Ill., and the Legislature of the State was appealed to, and a contingent appropriation made to maintain the canal. But not a dollar of the contingent appropriation was ever expended, or needed, and last July it was allowed by the canal commissioners to lapse into the treasury of the State. It seemed to make a difference in the receipts of the canal when it was found the State would maintain it.

The following statements, made by an intelligent gentleman of La Salle, Ill., some three or four years since, in the Chicago Herald, shows the facts so well as to the Illinois and Michigan Canal that I ask to read them and make them a part of my remarks. The writer says:

The Illinois and Michigan Canal is a good thing. Chicago thinks so for sanitary reasons mainly, no doubt; but aside from this it serves the original purpose of its creation, and that better than most people suppose. The idea largely prevails that traffic on the canal is dwindling into insignificance. But it is not. Traffic upon it has steadily increased from the start, and is still increasing, despite all efforts to divert trade from it by means of railroad discriminations against it and legislative lobbying for measures intended to bring about its final dissolution at the earliest possible date. The following facts and figures will prove justifying to those who have long been mourning its supposed decline:

First opened for navigation in 1848, the tolls that year aggregated $89,000. Six years later they aggregated $198,000. Later they fluctuated considerably, going up to $265,000 in 1862, and again down to $157,000 in 1864. In 1865 an increased tonnage, coupled with an increase in rates of toll, brought the receipts suddenly up to $301,810, and the following year, 1866, the tolls were the largest ever received—$302,598, the through tonnage of that year being 746,815, and the number of boats running 230. The rates of toll since then having been reduced at various times, the aggregate receipts have generally declined, though the tonnage has as generally increased.

In 1873 the tonnage was 850,000. In 1878 it dropped to 600,000, but since then has increased; and in 1882 the largest tonnage in the whole history of the canal is reported, 1,011,287. It is claimed, however, that the tonnage this year will exceed that of last year, though the season is not yet closed. The tolls for 1882 were only $85,947, or about $3,000 less than the first year the canal was opened. A cash showing, which is *prima facis* evidence, certainly does not indicate any great amount of canal prosperity. The tonnage, however, furnishes the true key to the situation and clinches the argument in favor of the prosperity of the canal. The rates are arbitrary and kept at a figure adequate for maintenance solely.

A little analysis, &c., right here will not be out of place. In 1866 the toll rates per ton per mile averaged almost exactly 400 per cent. higher than they are now or were in 1882. Since 1866 the number of boats running has regularly declined from 230 to 132 in 1882; and of this latter number 23 are steam canal-boats and 7 tugs. In 1866, the year of maximum tolls and number of boats, the clearances were 5,488 and the number of miles run 406,784. In 1882, the year of maximum tonnage, as far as reported, the clearances were 4,055 and the number of miles run 335,710. Bringing the figures of the above two periods a little nearer side by side for the sake of comparison, it appears that in 1866 it took 230 boats, making 5,488 clearances and 406,784 miles, to transport 746,815 tons, and in 1882 it took 125 boats and 7 tugs, making 4,055 clearances (including those at Henry and Copperas Creek) and 335,710 miles, to transport 1,011,287 tons.

In other words, a boat now carries nearly two and a half times as much freight as it did in 1866, and pays 25 per cent. as much toll. Figures always tell truthful tales. There are evidences of decay about the canal, but these are misleading. When there were three hundred and thirty boats running they were propelled by not less probably than seven hundred horses, and these with their drivers and attendants made an array of life and animation along the tow-path, indicative of a much larger business than was really transacted. In those supposed good old times boatmen quarreled with each other for preference in passing locks, at the gates of which boats were crowded thick. Now the towing of boats is done almost exclusively by steam, there not being perhaps to exceed a dozen teams engaged on the tow-path.

After alluding then to the passenger traffic on the canal, which continued for some five years after the opening of the canal in 1848 and until the opening of the Chicago and La Salle Railroad in 1853, and to the disappearance of canal-boats from the canal and what had become of them, the writer concludes as follows:

The canal has not declined, but simply undergone the elimination of its antiquarian features; and this has been mistaken for decay. Traffic over it is not now, as formerly, of the general merchandise order; it runs very largely to specialties. Of the freight transported last year (1882) there were 3,900,000 bushels of grain, 41,000,000 feet of lumber, 22,000,000 shingles; coal, ice, and sand, 104,000 tons. These, with stone, constitute the leading articles transported.

Now, this I have no doubt is a candid, truthful statement of the Illinois and Michigan Canal, and confirms what I have said as to the value of the canal as a means of affording and securing cheap transportation. And it may be safely said that the value and business of the canal will be greatly enlarged when it is extended to the Upper Mississippi, and made an east and west line of commerce, as well as a north and south line, which it now is. The canal would then compete with the railways running east and west, and would either carry an immense additional tonnage of heavy freights seeking an eastern or western market, or otherwise it would have a beneficial influence in keeping down excessive freight charges; and in either event the people would be greatly benefited and blessed by the cheaper transportation which the canal would secure to them. The Government of the United States should therefore accept the Illinois and Michigan Canal, and extend it to the Upper Mississippi River, and hold it as a great water route from the head of navigation on the Mississippi River to the Atlantic seaboard in the interest of the commerce of the country and the people.

Mr. Chairman, I but repeat what has been often said when I state that there is no question to-day of deeper interest to our people, and especially to the industrial classes, whose products, whether of the farm or the factory, must find their way to a market somewhere, than the question of cheap transportation. For it is cheap transport which will enable the farmer and the manufacturer to reach the markets of our own country and of the world with their products and sell them at living prices. And when we consider what England and France and Germany and many other countries have done and are doing in the interest of cheap transportation it is surprising to think how little has been done in that direction by the United States.

It is a fact which needs no argument to substantiate that the cheapest transportation which any people can have is water transportation. Not many years since the French Government instituted an inquiry as to the comparative cost of transportation by water and by rail; and it was demonstrated that heavy merchandise could be carried by water at from two-fifths to one-third the lowest price at which it could be carried by rail. And there can be no reasonable doubt but that water transportation is and always will be cheaper for the carriage of such merchandise than the cheapest possible transportation by rail.

In proof of this I have seen it stated that according to the report of the New York State engineer for 1880 the actual average cost of transporting freights on the New York Central four-track railway was fifty-four one-hundredths of a cent per ton per mile, without allowing anything for the capital invested, and the average charge was eighty-eight one-hundredths of a cent per ton per mile. And now within the last year the Erie Canal has carried grain from Buffalo to New York for twenty-two one-hundredths of a cent per ton per mile, being but one-fourth of the average charge of transporting freight per ton per mile on the New York Central, which runs along the line of the canal.

Mr. Albert Fink, one of the ablest and best-informed railroad men in the country, who has been for many years one of the railway pool commissioners, has given the reason for this. He says:

By comparing the cost of water and rail transportation it will be found that about 40 per cent. of the cost of railroad transportation is required to pay the interest on the capital invested. No corresponding expense is incurred by the carriers on the lakes and canals. From 15 to 20 per cent. of the charges for railroad transportation is required to keep in repair expensive roadways. No such expense is incurred by the carriers on the lakes, and but a comparatively small expense is incurred by the carriers on the canals. The cost of motive power to draw railroad trains over the hills and valleys is necessarily much greater than the cost of the motive power required to propel boats on the smooth and level water ways.

And it must occur to every one who has given any attention or thought to the subject that the large number of persons employed in railroad management and operation, the expensive rolling-stock required, and the constant wear and tear of railroads make railroad transportation more expensive than water transportation.

The following table, found in Nimmo's Report on Foreign Commerce of the United States for 1884, confirms all that has been said as to water transportation being cheaper than transportation by rail:

Average freight charges per bushel for the transportation of wheat from Chicago to New York during the years 1868 *to* 1884, *inclusive.*

Calendar years.	Average rate per bushel.		
	By lake and canal.*	By lake and rail.	By all rail.
	Cents.	*Cents.*	*Cents.*
1868	24.54	29.0	42.6
1869	23.12	25.0	35.1
1870	17.10	22.0	33.3
1871	20.24	25.0	31.0
1872	24.50	28.0	33.5
1873	19.19	26.9	33.2
1874	14.10	16.9	28.7
1875	11.43	14.6	24.1
1876	9.58	11.8	16.5
1877	11.24	15.8	20.3
1878	9.15	11.4	17.7
1879	11.60	13.3	17.3
1880	12.27	15.7	19.7
1881	8.19	10.4	14.4
1882	7.89	10.9	14.6
1883	8.40	11.5	16.5
1884	6.60	9.7	13.0

*Including Buffalo transfer charges and tolls.

But it does not tell the whole truth. It shows that from 1868 to 1884 inclusive, the charges per bushel on grain shipped from Chicago to New York, including tolls and transfer charges at Buffalo, were from about 6 to 18 cents less by lake and canal than by rail. But it does not show what the charges would have been by rail on all the millions of bushels of grain shipped from Chicago to New York during these years if it had not been for the lake and canal. To show something of the saving, Mr. Chairman, take the year 1880, when there was shipped by the Erie Canal about 72,000,000 of bushels of wheat from Buffalo to New York, and which it is presumed came largely by lake from Chicago, and by reference to the above table it will be seen that the difference for that year was about 7.04 cents per bushel less by lake and canal than it was by rail; and that difference on 72,000,000 bushels shows a saving to producers and consumers in the cost of transportation for that year of at least $5,328,000, to say nothing as to the saving on account of lower charges made by railroads because of the cheaper transportation by lake and canal.

And what is true of the year 1880 is true of every year named in the

table, from 1868 to 1884, to a greater or less extent, as the quantity of grain shipped East was more or less. For the difference in cost of transportation was not less than about 6 cents per bushel in favor of the lakes and canal in any year from 1868 to 1884. But another thing, Mr. Chairman. This table shows the difference in charges made by lake and canal and by rail from Chicago to New York from 1868 to 1884 inclusive; and a careful examination of it will, I think, satisfy any candid man not only that water transportation is cheaper than transportation by rail but that water transportation compels cheaper transportation by rail.

Nor is it alone the lines of railroad which begin and terminate at the same points or which run parallel with water lines of transportation that are compelled to make lower rates on account of the cheaper water transportation, but other railroad lines running between other and different terminal points and more remote from the water line are affected, more or less, by it in their freight charges. So that water lines of transportation are the great regulators of railway freight charges, and wherever they exist and can be improved and made more effective by any reasonable expenditure of money, it is the duty of the Government to make such improvements in the interest of the people and as a security against unreasonable and excessive freight charges. If governments are instituted among men for useful, beneficent purposes; if they are to promote the public welfare, the general prosperity of the people, I am sure there is no higher duty devolving upon our Government, which is a government of the people, than to spend a portion of the people's money in promoting their interests by giving them cheaper transportation for the products of their labor.

I have said, Mr. Chairman, that water lines of transportation are the great regulators of railway freight charges; and for this I have again the authority of Mr. Albert Fink, one of the ablest railroad men in the country, a man who has given great attention and intelligent thought to the study of the transportation problem. I heard Mr. Fink make the following statement before the Committee on Commerce, of which I was a member, in the Forty-sixth Congress, namely:

> That water routes not only control the tariffs of their immediate railroad competitors at points where they can render like service to the same people, but their influence reaches directly and indirectly the remotest parts of the country.

And he gave good reasons for his opinion, and stated that while the charters of railroads not unfrequently fixed the maximum limit of freight charges at 8 cents per ton per mile, "water competition had actually reduced the earnings of railroads frequently to one-fourth cent per ton per mile."

In his testimony before the Select Committee of the United States Senate on Interstate Commerce, taken within the last year, it will be seen that he says:

> The rates between Chicago and New York, which are generally determined by the competing water routes, are taken as the basis of the tariff.

And,

> When that is established, a table which has been prepared, based upon the relative distances of other points to points of destination of the freight, gives the corresponding rate from other cities in the territory east of the Mississippi River and north of the Ohio River.

Hence he takes Indianapolis, Ind., for an example, and says the distance from Indianapolis to New York is 93 per cent. of the distance from Chicago to New York, and as Indianapolis is a competing point, whenever the rate is reduced from Chicago to New York from 25 to 20 cents per hundred pounds, as the charges from Indianapolis are 93 per cent. of the charges from Chicago, the charges are reduced to 18½ cents per hundred pounds from Indianapolis.

So we see that the lakes and canal help to regulate railway charges and give to the people of Indianapolis, an inland city, with no lake or canal near it, as Mr. Fink says, cheaper rates of transportation.

While some may doubt the truth of this, those who have given much thought to the subject will not doubt it. And Mr. Fink himself has given the reason for it. He says:

> The Indianapolis railroads, on account of competition with the Chicago roads, and with the lake and canal, have to do the work from Indianapolis for the same compensation per ton per mile that the Chicago roads have to do it, although the Chicago roads are right on the lake, and have to compete with the lake and with the canal.

And this, he says, is "because of the competition with the Chicago roads."

For example—

He says:

> if the Indianapolis roads would hold their rate higher per mile, then the tendency would be for all the grain to avoid Indianapolis and go to Chicago, it would go from all points that could reach Chicago as well as Indianapolis.

The grain, he says, would go where it could get the cheapest transportation; and that if the Indianapolis roads kept the rate too high, the roads that ran from Indianapolis to Chicago would at once go into the business and carry all the freight to Chicago and let the Chicago roads carry it east.

The same may be said of Saint Louis, of Springfield, Peoria, and many other extensive shipping points where there are railroads running east, and also to Chicago. For if not a universal rule, it is certainly a general one, that commerce will seek the cheapest channels of transportation.

Mr. Chairman, I have said this much upon the subject of cheap transportation and of the benefits of water routes as regulators of unreasonable and excessive railway freight charges to show what an inestimable benefit the Erie Canal, connecting the lakes with the Hudson River and the Atlantic Ocean, has been to the country. The Erie Canal has made New York city the great commercial metropolis of the country, and enriched her people beyond calculation. It has contributed to the wonderful growth and the commercial importance of Chicago, that great inland city of the Northwest, which I have seen grow up from a mere village of a few thousand inhabitants to a magnificent city with a population of perhaps three-quarters of a million. It has benefited not only New York but all of New England, as well as the States lying west of New York.

I have said it before, and repeat it here again, that in my opinion the State of Illinois could alone afford to pay for the Erie Canal and to maintain and operate it for the benefit it has been to the people of that State in giving to them cheaper transportation. And the same may be said of Ohio and several other States. And now, Mr. Chairman, what does this amendment propose? I answer, simply to extend this water line of transportation from three to six hundred miles farther west and northwest into the interior, giving to the people who live west of Chicago and west of the Mississippi River, in the great grain-growing sections of the country, the advantages of cheaper if not cheap transportation, by bringing them and their products that much nearer to an east and west line of water transportation.

To accomplish this, this amendment proposes the construction of a canal from the Illinois River at Hennepin, to the Mississippi River at Rock Island, which will be some 75 miles in length, 80 feet in width, and 7 feet in depth, with locks 170 feet long and 30 feet wide, at an entire cost, including right of way and the construction of a feeder, of $6,672,890.67. If we add to this the sum of $2,298,919.15, the estimated cost of enlarging the Illinois and Michigan Canal, we find that by the expenditure of $8,871,809.82 we construct a water line of transportation from the lakes to the Gulf, and from the lakes to the Upper Mississippi, the commercial value of which can hardly be overestimated.

I firmly believe this connection of the Atlantic seaboard with the Mississippi River is one demanded by the highest and best interests of the country. It will benefit an immense amount of commerce transported from the East to the West, as well as from the West to the East. It will save many millions of dollars in reducing the cost of transportation to producers as well as consumers, for cheap transportation benefits undoubtedly both classes. It will extend the advantages of the lake system of navigation, now enjoyed by the people living east and west of the lakes, several hundred miles farther west and northwest; and thus benefit to a greater or less extent the people of Iowa, Wisconsin, Minnesota, Illinois, Missouri, Kansas, and Nebraska, and the Territory of Dakota, by bringing a cheap line of water transportation so much nearer to them, and compelling, as it will, lower freight charges by the railroads.

And, Mr. Chairman, this is not necessarily a war against railroads. It is an absolute necessity that the farmers of the country should have cheaper transport for their cereals. Unless they do they can not reach the markets of our own country nor of the world. And unless we can have the cheapest possible transportation it is certain our farmers can not raise grain and compete with India, Russia, and other grain-producing countries, where the wages of labor are so low and where so much is being done to secure cheap transport. I know that there is a feeling of discontent and dissatisfaction among the farmers and producers of the West and Northwest on account of the cost of transportation and the low prices of the products of their farms. And why, Mr. Chairman, should we not legislate somewhat in the interest of the vast number of people in the United States who are engaged in agriculture? It has been largely the products of their labor which have given us a large balance of trade in our favor for a number of years past and which have contributed so much to the prosperity of the country. And that, to a great extent, has been accomplished through the lakes and canals in giving cheap transportation.

Mr. Horatio Seymour, in an argument read before the Committee on Rivers and Harbors some months since, said:

> We can not look to our railroads to cheapen transportation much more than they have done. The average price for carrying a bushel of wheat from Chicago to New York by rail for the past two years has been about 12 cents, and Mr. Fink says that is not a paying rate, even upon the cheapest operated road.

If that be correct then we have another strong argument in favor of water routes, for the charges for several years past by the water route from Chicago to New York have been about 6 cents per bushel less than that, and have made a saving in the cost of transportation annually of many millions of dollars, not only on the amount carried by the water route but in the lower charges made by railroads in competing with the water route.

And I repeat again that the canals connecting the lakes with the Atlantic Ocean have been of incalculable benefit to the country. And now the lakes being connected with the seaboard, if you will construct the Hennepin Canal and connect them with the Upper Mississippi, you extend this water route or water system five or six hundred miles further west and northwest; you bring the vast grain fields of the Upper Mississippi and the Missouri Valleys that much nearer to a cheap water

route. You greatly benefit that most deserving class of our people, the farmers, by adding millions of dollars to the value of the products of their farms in reducing the cost of transportation. And, Mr. Chairman, if that is not a work of national importance, if to do this is not in the interest of the people of this great and rapidly-growing country, I am incapable of knowing what would be.

I have spoken of the States in the West to be more or less benefited by the construction of the Hennepin Canal, and I have here a comparative statement of the cereals produced in such States and in the Territory of Dakota, as well as in the United States, for several successive years, which I will ask to have incorporated in my remarks as a part of the same.

Comparison of cereal production in the States of the Northwest for the last two years.

CORN.

DEPARTMENT OF AGRICULTURE, *February 23, 1884.*

J. R. DODGE, *Statistician.*

From this table it will be seen that the States of Illinois, Iowa, Wisconsin, Minnesota, Nebraska, Kansas, and Missouri, and the Territory of Dakota, all of which it is believed are more or less interested in the construction of the Hennepin Canal and the enlargement of the Illinois and Michigan Canal, produced in the year 1884, 1,049,374,000 bushels of corn, 238,179,000 bushels of wheat, 16,175,998 bushels of rye, 350,692,000 bushels of oats, 28,464,035 bushels of barley, and 875,403 bushels of buckwheat, while in the same year in the whole United States there were produced 1,795,528,432 bushels of corn, 512,763,900 bushels of wheat, 28,637,594 bushels of rye, 583,628,000 bushels of oats, 61,206,652 bushels of barley, and 11,116,922 bushels of buckwheat.

So that the States and Territory named produced nearly 50 per cent. of all the wheat and barley, and nearly 60 per cent. of all the corn, rye, and oats of the United States in 1884. If we add together the number of bushels of all the cereals produced in the States and Territory named in 1884, we have an aggregate of 1,683,760,436 bushels. If 50 per cent. of that is to be transported to a market and you can save 1 cent a bushel on the cost of transportation you have a saving of $8,418,802.18. If only 25 per cent., or 420,940,109 bushels are to be transported, and you can save 1 cent a bushel in the cost of transportation, then you have a saving of $4,209,401.09. And it ought not to be doubted but that the extension of a water route from the lakes to Saint Paul, or the head of navigation on the Mississippi River, would save in the transportation of grain at least $4,000,000 annually to producers and consumers; not more in the amount of grain carried by the water route than by the effect of it in compelling lower rates by rail.

But I have a letter here from a gentleman and a boatman well known on the Upper Mississippi River. I mean Capt. Joseph Reynolds, and according to his letter the usual charge by rail from Saint Paul to Chicago is 12 cents per hundred pounds, or 7.20 cents per bushel, while the rate by river from Saint Paul to Rock Island is 5 cents per hundred or 3 cents per bushel; and he estimates that wheat can be carried by the canal from Rock Island to Chicago for one-half cent per bushel, and that the canal would make a saving of 4 cents per bushel on wheat instead of 1 cent as I have been estimating it on one-fourth of the cereals produced in the States and Territory named.

But if you estimate the surplus to be transported to market and sold to be one-eighth, or 12½ per cent., it would be 210,470,054 bushels, and that at only 2 cents a bushel would give a saving also of $4,209,401.09. And then when you consider the saving on coal, salt, lime, cement, lumber, agricultural implements, and other heavy freight, how can any reasonable man doubt the great value this canal would be to the commerce of the country, in reducing the cost of transportation to producers and consumers? It seems clear to my mind that, at the very lowest estimate which could be fairly made, this canal, if constructed, will save enough in reducing the cost of transportation to producers and consumers, annually, to pay the cost of construction. And I believe the annual saving would amount to much more than the cost of construction.

Then, if this be true, this canal, it seems to me, should be built. But we are told that canals are a thing of the past; that they have had their day, and belong to a bygone age; that they are too slow, and are frozen up half the year. It is true that canals, as well as rivers and other water routes, are frozen up a portion of the year in the northern parts of the United States; but we do not propose to abandon them on that account. On the contrary, we are expending many millions annually to improve rivers and harbors, and even to construct canals, which will be frozen up a part of the year. And, frozen up as they may be, they exert an influence even in the winter season, when ice-locked, in keeping down freight rates. We know that millions of bushels of wheat lie in the elevators in the great grain markets until navigation opens and shippers can have the benefit of cheap water transportation.

Why is it, I may ask, that Chicago received in 1884 26,397,587 bushels of wheat, 4,960,830 barrels of flour, and 59,580,445 bushels of corn, and shipped of wheat 21,046,577 bushels; of flour 4,808,884 barrels, and of corn 53,274,050 bushels? And why did Toledo, Ohio, receive in the same year 25,057,284 bushels of wheat, 23,186,454 bushels of which were shipped, and 12,056,306 bushels of corn, 12,040,439 bushels of which were shipped? These immense quantities of wheat, flour, and corn went to these two cities because of the cheap transportation given to them by the lakes and canals. Slow as the canals may be and frozen up as they are in the winter, grain seems to gravitate toward them.

I have already referred to the Erie Canal and the great benefit it has been to the people and to the commerce of the country in giving cheaper transportation; and although it was slow, and frozen up, say five months in the year, yet it seems there were shipped by way of it from the Western States to tidewater in 1882, 1,824,129 tons of freight, and about the same quantity in 1883, and for the year ending December 31, 1885, there were delivered by the canal at New York of flour, grain, and meal, reduced to bushel-measure, about 30,000,000 bushels. So the usefulness of the Erie Canal should not be doubted, if canals are frozen up a part of the year and are slow. But we have the authority of Mr. Albert Fink for saying that even in winter water routes prevent excessive railroad charges. He says that in winter railroad charges can not exceed those in summer by more than the expense of storage, insurance, and interest on the investment in the property to be transported during the time navigation is closed. If winter rates were much in excess of those expenses over summer rates, that by far the greater portion of the property would be stored and await the opening of navigation.

But canals are not a thing of the past, and do not belong to a by-gone age by any means. If they are, and have outlived their usefulness, why is it that New York does not abandon the Erie Canal? I have no doubt but that some who profess to believe that canals are things of the past, that they are slow and frozen up in winter, would give millions of dollars to close the Erie Canal up in summer and forever. But New York can not afford to have the Erie Canal closed up and abandoned; neither can the country afford it. It would certainly be a calamity to New England and to Ohio and the Western States, as well as New York, if the Erie Canal should be abandoned. And if it ever shall be, unless some other water route is opened up by which the city of New York is connected with the lakes and water systems of the West, I predict that from that hour the commercial importance of that great city will begin to decline.

No, Mr. Chairman, canals still are, and must continue to be, useful instruments of commerce in carrying heavy merchandise, which must be carried at the cheapest possible rates, and in regulating excessive railway charges. Canals, I repeat, are by no means a thing of the past. On the contrary, I venture to assert that more money has been expended in the last few years, and is now being expended, in the construction of canals than in any former period of the history of the world. France, we are told by Sir Charles Hartley, has a network of canals, with a uniform depth of 5 feet 3 inches and a bottom width of 33 feet, that have been located with the view of giving the cheapest and most direct means of distribution between the great centers of trade and production. Those of them which are classed as principal lines of communication by a law of 1879 are to be deepened to 7 feet and 4 inches; and the same law prescribes that all locks shall be 126 by 17 feet, with sufficient water on their miter sills to allow the free passage of boats drawing 6 feet 6 inches.

France had expended on 7,069 miles of canals and rivers more than $218,000,000 up to 1878, according to Sir Charles Hartley, and it was proposed to expend $200,000,000 more. Austria is improving the Danube, and at the same time is building a canal between the Danube and the Elbe, 138 miles long, at an expense of $29,000,000. Germany has recently built a ship-canal connecting what is known as Lubeck Bay with the North Sea, thereby reducing, we are told, the cost of transportation on wheat 6 cents a bushel; and has also completed surveys for improvements of her rivers and harbors and for the construction of canals, and is expending for that purpose $86,000,000. Holland has just completed a ship-canal from Amsterdam to the sea.

England has 2,360 miles of canal and more than 18,000 miles of railway, and yet is preparing to build a canal from Manchester to Liverpool, 26 feet deep, which it is estimated will cost $40,000,000; also one from London to Bristol, and another from London to Liverpool. Russia has recently completed a canal, which was commenced in 1878, connecting St. Petersburg with Cronstadt, at a cost of $9,000,000. She has also a system of canals connecting the Baltic and the Black Seas, the Volga and the Caspian Sea, and the Baltic and the White Seas. England has also expended many millions of dollars in cutting canals in India, both for irrigation and transportation, and in addition has expended many millions more in aid of railroads.

I have a statement here made by Hon. John C. Dore, of Chicago, Ill., recently, when addressing the Committee on Rivers and Harbors, and I know him to be a very intelligent gentleman, well informed upon these subjects and reliable, and he says the expenditures in India for canals alone up to the end of the fiscal year 1882–'83 was $103,800,000—nearly as much as we have expended on all our internal improvements in this great country since the foundation of the Government. And yet they are continuing to expend money to cheapen transportation, and are now proposing to cut through the Siam Canal at a cost of $20,000,000. In 1882–'83, India had 1,341 miles of canal and 18,633 miles of navigable rivers; and the government also had invested in railroads, subsidized in the interest of cheap transportation, in 1882–'83, $156,800,000. And Mr. Dore says that the government lost $124,750,000 in fostering railroads for that purpose from 1859 to 1883.

Canada also has a canal system which cost her $50,000,000, and yet she is now spending $1,000,000 to deepen the Welland Canal, and is proposing three other canal schemes, the most important of which is one from Montreal to Lake Huron by way of the Ottowa and French Rivers.

So we see, Mr. Chairman, canals have not had their day yet, and do not belong to a bygone age.

But admitting that the Illinois and Michigan Canal shall be enlarged, and that the Illinois and Mississippi River Canal shall be constructed, we are then asked why is it that the State of Illinois does not herself do this work? I answer, in the first place, that Illinois is not alone interested in the work. Other States, and a large number of States, are interested in the enlargement of the Illinois and Michigan Canal and in the construction of the Hennepin Canal to a greater or less extent than Illinois.

If this work should be done at all it is a national work, and should be done by the United States and not by any one State. If this canal uniting the Mississippi River with the lakes and the Atlantic Ocean will secure cheaper transportation, as I firmly believe it will, then it will benefit not only Illinois but New England, New York, New Jersey, Pennsylvania, and Ohio as well as all the States which lie on the Mississippi River and west of it; and it can not benefit those States without benefiting the whole country. If it is of interest to the farmers of the West and Northwest to get cheaper transport for the products of their farms, it must be of interest to those who purchase such products and consume them, for they will share undoubtedly in the benefits of cheaper transportation.

New England, New York, New Jersey, Pennsylvania, and Ohio are largely manufacturing States, and they want to sell their manufactured fabrics to the people of the West and Northwest; and on the other hand the people of the Mississippi Valley want to sell them their agricultural products, and both sections are alike interested in keeping up commercial relations with each other. Why it is that New England and the States of New York, New Jersey, Pennsylvania, and Ohio will repel us in a proposition to keep up these commercial relations and so act as eventually to drive us in other directions, not only with what we have to sell but for what we may desire to purchase, is to me a mystery. Our interests are in harmony with each other. We in the West have been and are to-day largely dependent upon New England, New York, New Jersey, Pennsylvania, and Ohio for our manufactures, and these States have furnished us our best market for our surplus products.

We want your merchandise, your manufactures, your iron and coal, and you want our agricultural products, and cheap transportation is for the interest of both sections. On the other hand, I appeal to Representatives from the South, and especially from the Mississippi River States, and say to you that you have a common interest with us in the Illinois and Michigan Canal, as we have with you in the improvement of the Mississippi River, for by the Illinois and Michigan Canal the lakes are connected with the Mississippi River and the Gulf, and while we are expending immense sums of money in improving the Mississippi River, you should not wish to deprive us of needed facilities for reaching the older and more populous portions of our own country, where the people of the West and Northwest find their best markets for their surplus products. The connection of the lakes with the Upper Mississippi River proposed by this canal would greatly benefit the States west of the lakes and of the Mississippi River, and would help to give cheaper transportation to millions of commerce, annually shipped east and west, and no narrow, selfish policy should lead you to oppose a work which will benefit so large a number of people.

But it is said the canal is all located in the State of Illinois, and is therefore a local measure. So it is. But I have already said that other States are more interested than Illinois. In fact, the construction of the Hennepin Canal has been urged upon Congress more earnestly by the State of Iowa than it has been by the State of Illinois. And I say the whole country is interested in its construction. You can not build up a part of the country and add to its growth and prosperity without benefiting the whole. It is high time that we began to cultivate a broader and more national spirit, a feeling that when something is done to benefit other sections of the country than those in which we happen to reside it is not alone for the benefit of others but for ourselves as well that it is done.

But this proposed canal is all in the State of Illinois, and is therefore a local improvement. Yes, the canal is certainly all in Illinois; and, in a certain sense, every improvement is local. And as Abraham Lincoln once said, in a speech delivered by him in 1848, on internal improvements, when a member of the Thirtieth Congress:

> Nothing is so local as not to be of some general benefit. Take, for instance—

He says—

> the Illinois and Michigan Canal. Considered apart from its effects, it is perfectly local. Every inch of it is within the State of Illinois. That canal was first opened for business last April. In a very few days we were all gratified to learn, among other things, that sugar had been carried from New Orleans through the canal, to Buffalo, in New York. The sugar took this route, doubtless, because it was cheaper than the old route.
>
> Supposing the benefit in the reduction of the cost of carriage to be shared between seller and buyer, the result is, that the New Orleans merchant sold his sugar a little dearer, and the people of Buffalo sweetened their coffee a little cheaper than before—a benefit resulting from the canal, not to Illinois, where the canal is, but to Louisiana and New York, where it is not. In other transactions Illinois will, of course, have her share, and perhaps the larger share, too, in the benefits of the canal. But the instance of the sugar clearly shows that the benefits of an improvement are by no means confined to the particular locality of the improvement itself.

This most pertinent and forcible illustration of Mr. Lincoln may be applied to the proposed Hennepin Canal. A farmer or merchant of Minnesota may ship wheat or flour by way of the Hennepin Canal and the Illinois and Michigan Canal to New York or Boston, and of course ship it by that route because it can be done cheaper, and as the reduction in the cost of carriage will be shared between seller and buyer the Minnesota farmer will get a little more for his wheat or flour and the people of New York and Boston will obtain their bread a little cheaper, a benefit resulting from the canals, not to Illinois, where they are, but to Minnesota and New York or Massachusetts, where they are not. And you may go further and say that the wheat or flour may be shipped by rail and not go over the canals at all, but as the canals will compel cheaper transport by the railroad the result is precisely the same.

In this same connection, Mr. Chairman, I will read an extract from the great speech of Daniel Webster, made in reply to Hayne of South Carolina, which I find in an able address delivered a few years since to the people of Massachusetts by Senator GEORGE F. HOAR, who stands in the front rank of the statesmen of America of the present day, and who deserves our gratitude and thanks for the noble defense he has made of the policy of making appropriations by the General Government for internal improvements.

Mr. Webster in his reply to Hayne said:

> How—

He inquires—

> do I reconcile with these professed sentiments my support of measures appropriating portions of the lands to particular roads, particular canals, particular rivers, and particular institutions of education in the West? This leads, sir, to the real and wide difference in political opinion between the honorable gentleman and myself. On my part I look upon these objects as connected with the common good fairly embraced; he, on the contrary, deems them all, if good at all, only local good. This is our difference. The interrogatory which he proceeded to put at once explains this difference. "What interest," asked he, "has South Carolina in a canal in Ohio?" Sir, this very question is full of significance. It develops the gentleman's whole political system, and its answer expounds mine.
>
> Here we differ. I look upon a road over the Alleghanies, a canal around the Falls of the Ohio, or a canal or railway from the Atlantic to the Western waters as being an object large and extensive enough to be fairly said to be for the common benefit. The gentleman thinks otherwise. On his system, Ohio and Carolina are different governments, different countries, connected here, it is true, by some slight and ill-defined bond of union. On that system Carolina has no more interest in a canal in Ohio than in Mexico.
>
> Sir, we narrow-minded people of New England do not reason thus. Our notion of things is entirely different. We look upon the States not as separated, but as united. In our contemplation Carolina and Ohio are parts of the same country, having interests common, associated, intermingled. In whatever is within the proper sphere of the constitutional power of this Government we look upon the States as one. We do not impose geographical limits to our patriotic feeling or regard; we do not follow rivers and mountains and lines of latitude to find boundaries beyond which public improvements do not benefit us. We, who come here as agents and representatives of these narrow-minded and selfish men of New England, consider ourselves as bound to regard with an equal eye the good of the whole in whatever is within our powers of legislation.
>
> Sir, if a railroad or canal, beginning in South Carolina and ending in South Carolina, appeared to me to be of national importance and national magnitude, believing, as I do, that the power of government extends to the encouragement of works of that description—if I were to stand up here and ask what interest has Massachusetts in a railroad in South Carolina I should not be willing to face my constituents. These same narrow-minded men would tell me that they had sent me to act for the whole country, and that one who possessed too little comprehension, either of intellect or feeling, one who was not large enough both in mind and in heart to embrace the whole, was not fit to be trusted with the interest of any part.

Now, perhaps I have said enough upon the subject of the Hennepin Canal as to its being a local work. But it is local only in the sense that the canal is in the State of Illinois, and that is all. The lumber which would no doubt pass over the canal, whether it came from the South or from the North—and as our Northern forests are being rapidly depleted, large quantities of lumber must ere long come from the South—would pass over this canal, but it would not be the lumber of Illinois but of other States; and so the wheat and corn and flour which would pass over this canal or be carried cheaper by rail by reason of the canal would be largely the products of other States and not alone of Illinois.

The same may be said of the coal, the iron and salt, and other merchandise carried over the canal. It would be the commerce, the product of other States and not of Illinois. Illinois will, of course, have a great interest in the canal if constructed, but not near so much, in my opinion, as Iowa and some other States West and Northwest. It is said that Chicago is alone interested in the canal, and that only as a sewer. But this is not true, and certainly not so far as the Hennepin Canal is concerned, for no sewage from the Chicago River can ever pass through that canal. Chicago, in my opinion, should not be permitted to use the canal as a sewer. If the great cities of the country do not devise other means of disposing of their sewage than by turning it into natural streams and bodies of water to pollute them and breed disease and pestilence we shall sooner or later suffer severely from it.

Chicago, I believe, is greatly interested in the canal, and if that city alone was interested in it we must remember that Chicago contains more than the one-hundredth part of the population of the entire country, and that Chicago is the outgrowth of the vast commerce of the Northwest; and whatever will be beneficial to Chicago in giving additional facilities for the transportation of commerce must be beneficial to the people of the Northwest. If the States of Illinois and Iowa were alone interested in the canal from the lakes to the Mississippi River, as I have heard it said by some, these two States contain the one-tenth part perhaps of the entire population of the country. But, Mr. Chairman, the East as well as the West, and the South as well as the North, are interested, and deeply interested in this great internal improvement provided for in this amendment; and in my judgment every consideration of the public good demands that it shall be constructed.

I know, Mr. Chairman, it will cost some money to do this work. But what if it does? What are the revenues of the Government for? Are they merely to pay the salaries of public officers, to erect armories and arsenals, to build iron-clad fleets, to erect monuments, to adorn and beautify the national capital, and to erect costly public buildings?

Does the Government owe no higher duty to the people than this? If it does not it might as well be abolished. John Quincy Adams, who was one of the most learned of our Presidents as he was one of the most distinguished of our statesmen, said in his first message to Congress:

The great object of the institution of civil government is the improvement of the condition of those who are parties to the social compact. And no government in whatever form constituted can accomplish the lawful ends of its institution but in proportion as it improves the condition of those over whom it is established.

Roads and canals by multiplying and facilitating the communications and intercourse between distant regions and multitudes of men are among the most important means of improvement.

Mr. Chairman, the money expended by the Government for useful purposes, which improve the condition of the country and give employment to labor, is not wasted. It goes out only to come back again increased and multiplied many times for good. As the country grows richer and more prosperous the sources of revenue are multiplied, and the money which goes out of the Treasury for useful purposes is only put in circulation among the people, and is neither thrown into the sea nor otherwise lost to the country. And I am sure, Mr. Chairman, that I have never known a period in our national history when it would do more good to give employment to labor and put money in circulation than it would now in the construction of public works when so many people are out of employment. Solomon said:

There is that scattereth and yet increaseth, and there is that withholdeth more than is meet; but it tendeth to poverty.

And that is oftentimes exemplified in the expenditure of public money, which when liberally expended in the right direction enriches the nation and fills up the Treasury again, and if unwisely withheld impoverishes the people.

But we are told that to construct this canal would set a dangerous precedent; that it would lead to an expenditure of untold millions of dollars, and we are reminded of other propositions to construct canals in other parts of the country.

Mr. Chairman, the man or statesman who sits shivering with trepidation for fear something which may be done will establish a bad precedent and lead to some evil will never accomplish much good, I fear, in this world.

"Sufficient unto the day is the evil thereof," said one who spake as never man spake. And let us consider this measure upon its merits, and do what in our judgment should be done for the public interest; and let other propositions, which may or may never come up, take care of themselves. There is no danger in my judgment to be apprehended from the construction of this canal. If other canals shall hereafter be constructed they would have to be constructed upon their merits. No reasonable man can believe there is any danger of the Government entering upon any reckless system of canal construction. The day of small canals and of the tow-path has undoubtedly passed away.

But water transportation must always be the cheapest transportation any people can have; and where canals of great commercial importance to the country, connecting vast water systems, can be constructed in the interest of cheap transportation, they should be. And I may say, if the people are true to themselves and to their own highest and best interests, sooner or later they will be constructed, and I have no fear that the national Treasury will be bankrupted or that it will suffer severely from their construction. Judging, Mr. Chairman, from my experience, I think there is far more danger of doing too little than there is of doing too much in that direction.

But, Mr. Chairman, a few more words and I shall close my remarks. Some people are so in the habit of characterizing every measure which they do not approve, as a job, a scheme, a raid upon the Treasury that this proposed canal has been denounced as such. But I protest against this denunciation. In no improper sense is this a scheme. It is no job, no raid upon the Treasury. The proposition to construct the Hennepin Canal originated with the people. It has been carried forward by the people. The people have supported and sustained it. The Legislatures of Iowa and Illinois have many times urged the construction of this canal and instructed their Senators and requested their Representatives to vote for its construction; and these Legislatures represented no small percentage of the population of the entire country.

Governors of these two States have repeatedly called attention to this important connection of the Upper Mississippi with the lakes. The Legislature of the State of New York has also instructed her Senators and requested her Representatives to support this measure, and I am assured that this was done largely through the influence of that distinguished statesman and patriot, the late Hon. Horatio Seymour, who was the devoted friend of water transportation in the interest of the grain-growing section of our country. He showed how, through the cheapening of transportation by the lakes and canals, we had been enabled to export our grain, to create a balance of trade in our favor, to go to a resumption of specie payments, and bring prosperity to our country.

I have here the resolutions of the Board of Trade and Transportation and also of the Produce Exchange of the City of New York, both favoring the construction of this canal as a work of national importance in the interest of cheap transportation. The boards of trade of Buffalo, of Chicago, of Duluth, of Doniphan, Kans., as well as numerous large commercial conventions at Davenport, at Saint Louis, at New Orleans, at Saint Paul, and numerous other places, have also favored the construction of this canal. Labor organizations have also throughout the country petitioned Congress to construct this canal; and now the Senate of the United States have for a second time adopted an amendment to the river and harbor bill providing for the construction of this canal. And what will be the response of the House to these numerous and oft-repeated appeals made to Congress in behalf of this measure? Will it be in vain? I trust it will not be; that the House will concur in the Senate amendment, and that the hope of the people in the section of country interested, as I firmly believe, in this great improvement, the hope, I may say, of the great Northwest, so long deferred, may at last be realized.

Personally it will not, I presume, affect me in the slightest manner, whether this canal shall ever be constructed or not. But I honestly and earnestly believe it to be a work of great national importance, a work in the interest of cheap transportation, and therefore, in the interest of the people, and so believing, I have with such ability as I possessed labored earnestly, conscientiously, and faithfully for its success. And I still have faith to believe that the friends of this measure, who have labored for its success, have not labored in vain, that this canal will at last be constructed, and add another and important link to the chain which unites and binds together in commercial bonds the various sections of our great and rapidly growing country.

The Surplus in the Treasury.

REMARKS
OF
HON. WILLIAM S. HOLMAN,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 4, 1886,

On the report of the committee of conference on the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt.

Mr. HOLMAN said:

Mr. SPEAKER: The joint resolution in regard to the surplus funds in the Treasury, as it passed the House on the 15th day of July last by the decisive vote of 207 to 67, was as follows:

Joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt.

Resolved, &c., That whenever the surplus or balance in the Treasury, including amount held for redemption of United States notes, shall exceed the sum of $100,000,000, it shall be, and is hereby made, the duty of the Secretary of the Treasury to apply such excess, in sums not less than ten millions per month, during the existence of any such surplus or excess, to the payment of the interest-bearing-indebtedness of the United States payable at the option of the Government.

The surplus or balance herein referred to, shall be the available surplus ascertained, according to the form of statement of the United States Treasurer, of the assets and liabilities of the Treasury of the United States employed on June 30, 1886.

It now comes back to the House on the report of a conference committee of the two Houses in the following terms:

A joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt.

Resolved by the Senate and House of Representatives, &c., That whenever the surplus or balance in the Treasury, including amount held for redemption of United States notes, shall exceed the sum of $100,000,000, it shall be, and is hereby made, the duty of the Secretary of the Treasury to apply such excess, in sums not less than ten millions per month, during the existence of any such surplus or excess, to the payment of the interest-bearing indebtedness of the United States payable at the option of the Government. The surplus or balance herein referred to shall be the available surplus, ascertained according to the form of statement of the United States Treasurer, of the assets and liabilities of the Treasury of the United States employed on June 30, 1886: *Provided*, That no call shall be made under the provisions of this resolution until a sum equal to the call is in the Treasury over and above the reserve herein mentioned: *And provided further*, That the Secretary of the Treasury, in his discretion, may have in the Treasury, over and above the foregoing sums, a working balance not exceeding $20,000,000; and whenever, in the case of any extraordinary emergency not now existing, and when, because thereof, in the opinion of the Secretary of the Treasury, the public interests shall require it, he may, by written order, postpone the further call for the payment of such indebtedness for such period of time as shall be necessary to maintain the public credit unimpaired; and that such postponement, and the reasons therefor, shall be reported to Congress within ten days after its next meeting, or immediately if Congress shall be in session.

The original joint resolution expressed the views of the House on this important question; the joint resolution as now presented is the result of the conference. The two provisos are in substance the work of the Senate. The question is, Shall the joint resolution as amended be adopted?

I supported the original joint resolution, but with some hesitation, for I am not able to understand why so large an amount of money as $100,000,000 drawn from the labor of our people should be locked up in the public Treasury. But something was gained by that measure, for while $100,000,000 were still to be locked up in the Treasury the large surplus beyond that was to be applied to the public debt. Something at least was to be secured, and it was better to save that than to secure nothing.

With a law in force as proposed by the House, one result was at least secured that only $100,000,000 should lie idle in the Treasury and the

rest should be applied to the public debt; but the proposition now before us prohibits a call of bonds for redemption until there shall be a surplus in the Treasury of a sum equal to the call in addition to the $100,000,000, and as the sum to be applied on the public debt at any one time shall not be less than $10,000,000, no sum can be applied on the public debt until the surplus in the Treasury reaches $110,000,000; and then, by the second proviso, it is enacted that in the discretion of the Secretary of the Treasury $20,000,000 more may be retained in the Treasury as a "working balance," making in all $130,000,000 (a sum nearly equal to twice the entire annual expenditures of the Government twenty-six years ago) authorized to remain idle in the Treasury; and then, as if it was proposed that Congress should abdicate all control of the public revenues, it is proposed that the Secretary of the Treasury may, without restraint or limit, suspend the application of the surplus, no matter how great it might be, to the payment of the public debt, in case any extraordinary emergency, in the opinion of the Secretary of the Treasury, should require it. The term "extraordinary emergency" manifestly refers to the emergencies that from time to time arise in the commercial and financial affairs of the country and the demand for gold in other commercial nations. The result of all this is manifest. It is proposed to leave it to the discretion of the Secretary of the Treasury whether the vast revenues drawn from the public by taxation shall be applied to the extinguishment of the public debt or lie idle in the Treasury subservient to the great capital interests of the country.

In my judgment the present provisions of law in regard to the surplus in the Treasury are better than the proposed legislation. The law now provides in effect that the surplus funds in the Treasury shall be from time to time applied to the payment of the public debt. The country is familiar with the calls for the matured bonds. All of those calls have been made under the existing provisions of law. It will not be easy to satisfy the intelligent people of this country that the Secretary of the Treasury can consistently with existing law hoard great sums of money in the Treasury and pay interest on bonds long since matured.

I insist, therefore, Mr. Speaker, that as a matter of fact the pending proposition only confers on the Secretary of the Treasury a discretion and power he does not now possess, and imposes, or at least authorizes, a limitation on the payment of the public debt that does not now exist.

The statement, or rather the recapitulation of the statement, of the public debt on the 1st day of the present month is as follows:

RECAPITULATION.

		Principal.	Interest.	Total.
Interest-bearing debt	Bonds at 4½ per cent	$250,000,000 00		
	Bonds at 4 per cent	737,766,450 00		
	Bonds at 3 per cent	140,011,750 00		
	Refunding certificates, at 4 per cent	202,400 00		
	Navy-pension fund, at 3 per cent	14,000,000 00		
	Pacific Railroad bonds, at 6 per cent	64,623,512 00		
		$1,206,604,112 00	$8,297,922 83	$1,214,902,034 83
Debt on which interest has ceased since maturity		5,374,185 26	203,128 98	5,577,314 24
Debt bearing no interest	Old demand and legal-tender notes	346,758,436 00		
	Certificates of deposit	19,105,000 00		
	Gold certificates	74,718,517 00		
	Silver certificates	87,564,044 00		
	Fractional currency, less $8,375,934, estimated as lost or destroyed	6,953,702 52		
		535,079,699 52		535,079,699 52
Total		1,747,057,996 78	8,501,051 81	1,755,559,048 59
Less cash items available for reduction of the debt			195,265,443 06	
Less reserve held for redemption of United States notes			100,000,000 00	
				295,265,443 06
Total debt, less available cash items				1,460,293,605 53
Net cash in the Treasury				80,206,325 98
Debt, less cash in the Treasury, August 1, 1886				1,380,087,279 55
Debt, less cash in the Treasury, July 1, 1886				1,389,136,383 40
Decrease of debt during the month				9,049,103 85

This statement, while showing a reduction of the public debt during the month of July of $9,049,103.85, still shows that on the 1st day of August, 1886, there was in the Treasury a net balance of cash in the Treasury, beyond all present demands of the Government, the enormous sum of $80,206,325.98, and that 3 per cent. bonds to the amount of $140,011,750.00 were still outstanding, past due and liable to redemption. So with $80,206,325.98 lying idle in the Treasury, not required for any purpose of Government, with the current revenues over current expenditures reducing the public debt at the rate of $9,049,103.85 per month, we continue to pay 3 per cent. interest on $140,011,750!

Is this done to still further strengthen the "public credit," or for the benefit of the national banks which have deposited the larger portion of the $140,011,750 as security for their issues? If for either purpose, were public revenues ever applied or withheld from application for a purpose so unjustifiable?

Is the public credit in peril when the current revenues over the current expenditures reach monthly the large sum of $9,049,103.85? And why is not this surplus applied? Is it possible that the public revenues are to remain idle in the Treasury, revenues coined from the sweat of labor for the direct benefit of banks?

See, sir, how we are drifting, referring again to the report of the Secretary of the Treasury on the 1st day of the present month. Comparing the state of the Treasury on the 1st day of July, 1886, with its condition on the 1st day of August, 1886, let us see the condition of our Treasury. The following is the statement of the Secretary of the Treasury of the condition of the Treasury on the 1st day of each month, July and August, 1886:

COMPARISON.

Cash in the Treasury.	August 1.		July 1.		Increase.	Decrease.
Available for reduction of the public debt:						
Gold held for gold certificates actually outstanding		$74,718,517 00		$76,044,375 00		
Silver held for silver certificates actually outstanding		87,564,044 00		88,116,225 00		
United States notes held for certificates of deposit actually outstanding		19,105,000 00		18,250,000 00		
Cash held for matured debt and interest unpaid		13,875,237 07		18,999,817 05		
United States bonds and interest				3,789,163 51		
Fractional currency		2,644 99		2,667 17		
Total available for reduction of the debt		195,265,443 06		205,202,247 73		$9,936,804 67
Reserve fund:						
Held for redemption of United States notes, acts January 14, 1875, and July 12, 1882		100,000,000 00		100,000,000 00		
Unavailable for reduction of the debt:						
Fractional silver coin	$28,584,624 69		$28,904,681 66			
Minor coin	343,291 94		377,814 00			
		28,927,916 63		29,282,495 66		354,579 03
Certificates held as cash:						
Legal tender	470,000 00		250,000 00			
Gold	52,258,360 00		55,129,870 00			
Silver	27,728,858 00		27,861,450 00			
		80,457,218 00		83,241,320 00		2,784,102 00
Net cash balance on hand		80,206,325 98		75,191,109 95	$5,015,216 03	
Total cash in the Treasury as shown by Treasurer's general account		484,856,903 67		492,917,173 34	5,015,216 03	13,075,485 70
Net decrease in cash						8,060,269 67

From this statement it appears that with cash in the Treasury amounting to the enormous sum of $484,856,903.67 (a sum more than seven times as great as the entire annual expenses of the Government only thirty years ago), with every conceivable current liability of the Government provided for, interest on every conceivable obligation counted in, and the principal of every matured bond (except those bearing the 3 per cent. interest) counted in, even including the possible liability of the Government for fractional currency long since lost beyond question, there was still remaining in the Treasury on the 1st day of August, 1886, the sum of $80,206,325.98, and that on the 1st day of July, 1886, that balance was $75,191,109.95, showing an increase of the net balance in the Treasury in a single month of $5,015,216.03; and yet there is hesitation about paying this net balance on the public debt.

The revenues of the Government are nearly a million dollars a day. During the fiscal year ending on the 30th day of last June they amounted to $336,144,290 without taking the postal revenues into the account, and they will be found to be at least $44,000,000 when the account is made up, but the postal funds do not enter into my calculations. From all present indications the revenues will exceed the current expenditures during this year $80,000,000. I predict that it will reach $90,000,000, and yet in the interest of the "public credit" the enormous balance of $80,206,325.98 must lie idle in the Treasury, subject to the discretion of the Secretary of the Treasury, unless this joint resolution is passed, and if it is, $30,000,000 with the daily accruing increased net balance in the Treasury will remain idle, all in the discretion of the Secretary of the Treasury. I protest against this line of public policy.

The public credit is not in danger and never has been to the injury of the people even in a time of war. Capital will assert and always has asserted its advantage when the Government is in peril. No matter how much magnanimity you may extend to capital to-day when the emergency comes its demands will be inexorable. The extraordinary concessions you were compelled to make in 1862–'63 to the great capital interests of the country fully attest this, and the unexampled concession made by Congress to the great capital interests by the act "to strengthen the public credit," March 18, 1869, by which hundreds of millions of dollars was added to the value of the public securities and a like burden laid on the shoulder of labor, expresses the mastery of that interest in controlling our affairs. And yet, sir, a tender anxiety for the national banks and an overweaning anxiety for the "public credit" must hoard millions of money in the public Treasury, perpetuating a system of taxation that scrimps the comforts of every home in the land.

But, sir, we are more than ever confronted with the fact that the national Treasury has for years ceased to be simply "the Treasury of the United States." Will gentlemen consider how greatly we have departed from the former theories and practice of our Government in relation to the national Treasury? The Treasury of the United States was designed to be simply "a treasury" to receive, keep in safety, and disburse the public funds under the appropriations made by Congress. The subtreasury system now in force was especially designed to carry that method of controlling the public fund into effect. The subtreasury is not a bank but an institution of Government.

But it is becoming more and more obvious every year that the Treasury of the United States instead of being a depository of the taxes gathered from the labor of our people, and charged with the simple duty of keeping them in safety until required for the public use and then applying them as Congress shall from time to time direct, is becoming a financial power influencing as an irresistible force the monetary and financial affairs of the country. I submit that there is a wide departure from the earlier and better methods and practices of the Treasury Department. I insist that the Treasury Department has nothing to do with the national-bank system except so far as the national banks become in effect subtreasuries as depositories of the public funds.

I insist that the Treasury of the United States shall receive the taxes and other public revenues which under provisions of law shall from time to time accrue to the United States, keep them in safety, and pay them out as Congress shall direct, and nothing more. I insist that except as to the public debt, and indeed even as to that, this is the limit of its power; and as to the public debt and the surplus in the Treasury the duty of the Secretary is plain—the surplus shall be applied on the matured debt, whether it be a bond payable under a permanent appropriation or any other debt which Congress either by general law or current appropriation shall direct to be paid.

A great surplus in the Treasury, or indeed any surplus in the Treasury, is a public misfortune, a calamity. If the surplus in the public Treasury is not applied to the public debt it will be applied to the advancement of the countless schemes of public plunder and public robbery which the inventive schemes of the ever aggressive lobby will bring forward.

With this great surplus now in the Treasury, or with even $100,000,000 there to redeem the greenbacks, on the utopian idea of "great financiers" (the men who amass fortunes out of the labor of other people) honest and frugal government is impossible.

The country will be, I trust, alarmed at the prodigal growth of the expenditure of our Government; and yet no force can prevent it except the commanding force of public opinion. The frugal Government of former years can only be secured by the old methods, moderate and reasonable taxation.

Gentlemen talk about the national credit. I admit its value, and yet in my judgment from the standpoint of public interests the motive for integrity and frugality is still greater. Until of recent years this talk of the "national credit" was unknown. It seems to relate to the public securities, and yet in the history of the human race no nation has ever shown such an overweening anxiety to promote the interests of its creditors, the holders of its bonds and securities, as the United States, as will be seen by many acts of Congress, and especially by the act of March 18, 1869, to which I have referred. The tendency of a surplus in the Treasury—a great surplus, such as has been permitted in recent years, and such as is proposed by the pending report of the conferees of the two Houses—is fatal to frugal and honest government.

The $100,000,000 to be kept in the Treasury to redeem United States notes, when in fact no such redemption occurs, was and is a measure no one can justify or defend except as a compromise between conflicting views. A great balance in the Treasury, no matter what may be the pretense of retaining it, renders extravagant and even profligate expenditure absolutely certain. The experience of this session demonstrates, as every one of recent years has, how impossible it is for Congress to legislate cautiously and prudently in regard to appropriations with an overflowing Treasury at the other end of the Avenue.

It can not be denied that this resistance to the application of the funds in the Treasury to the payment of the public debt is greatly influenced by the apprehension that the Secretary of the Treasury may find it necessary to employ the silver money hoarded in the Treasury as well as gold in payment of the public securities, and yet this silver money is a full legal tender for all purposes and fully meets the extraordinary engagement of the Government of March 18, 1869, to pay in coin obligations based upon an inflated paper currency and payable, as to principal, in that currency by the terms of the contract.

It would be hard to convince any fair-minded man that the public creditors had any right to complain, and it is certain that silver money must enter into our monetary system and constitute a part of the currency of the country, or else great capital interests will absolutely control our affairs. This covert war on silver money is one of the most extraordinary features of our period and clearly indicates the aggressive spirit and selfish purpose of the great capital interest of the country. The public creditors have no right to complain. No other nation has ever treated its public creditors with as much favor and consideration as ours has done.

But it must be apparent to all men that this great Treasury system of ours has been for years going beyond the plain and simple duty of the Treasury of the United States, receiving, keeping in safety, and disbursing the public funds as directed by law. The real question forced upon us is, Shall the Treasury of the United States become a great banking establishment? I think the people of this country will answer this question with a most emphatic negative. If the public Treasury is to regulate and control the current finances and commercial affairs of the country the leading attribute of republican government must soon disappear.

All men can see that if the Treasury of the United States becomes a regulating and controlling financial power in the current financial and commercial affairs of the country, as it will and must be in the progress of time with vast deposits of money under its control, it will of itself produce a complete change in the character of our institutions. Splendid government will take the place of the old-time plain and simple republican institutions. The wealth of the country, not the people, will control its affairs.

I trust the country will compel Congress to apply this great surplus of money in the Treasury to the payment of the public debt, and demand such a reduction of taxation as will leave no surplus in the Treasury to tempt or encourage inconsiderate or profligate legislation.

Increase of the Naval Establishment.

SPEECH

OF

HON. JAMES M. RIGGS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 24, 1886,

On the bill (H. R. 6664) to increase the naval establishment.

Mr. RIGGS said:

Mr. CHAIRMAN: I avail myself of the present opportunity to express, briefly, my position with reference to the construction of a navy. We have, practically, no navy now. We have a long coast line on which are situated many cities and harbors, including the great metropolis

of our country, all exposed to the dangers of attack and absolute demolition in case we should become suddenly involved in war with one of the powers possessing a navy.

I do not intend to go into details, or attempt to make an elaborate presentation of the subject. And I can not do better, in making a statement of our defenseless condition and the dire results which might follow from it, than to quote from a letter written not many months ago by that eminent statesman—whose name is so dear to every Democratic heart—Samuel J. Tilden. He says:

> The property exposed to destruction in the twelve seaports—Portland, Portsmouth, Boston, Newport, New York, Philadelphia, Baltimore, Charleston, Savannah, New Orleans, Galveston, and San Francisco—can not be less in value than $5,000,000,000. To this must be added the vast amount of property depending for its use on these seaports. Nor does this statement afford a true measure of the damage which might be caused to the property and business of the country by a failure to protect these seaports from hostile naval attacks. They are the centers, not only of foreign commerce, but of most of the internal trade and exchanges of domestic productions. To this state of things the machinery of transportation of the whole country has become adapted. The interruption of the currents of traffic by the occupation of one or more of our principal seaports by a foreign enemy, or the destruction of them by bombardment, or the holding over them the menace of destruction for the purpose of exacting contribution or ransom, would inflict upon the prosperity and business of the country an injury which can neither be foreseen nor measured. The best guarantee against aggression, the best assurance that our diplomacy will be successful and pacific, and that our rights and honor will be respected by other nations, is in their knowledge that we are in a situation to vindicate our reputation and interests.

This is a terse and true statement of our defenseless condition. The same great statesman also says:

> It is now more than sixty years since we announced to the world that we should resist any attempts, from whatever quarter they might come, to make any new colonizations on any part of the American continent; that while we should respect the *status quo*, we should protect the people of the different nations inhabiting this continent from every attempt to subject them to the dominion of any European power or to interfere with their undisturbed exercise of the rights of self-government. This announcement was formally made by President Monroe after consultation with Mr. Madison and Mr. Jefferson. It was formulated by John Quincy Adams. Our Government has firmly adhered to the Monroe doctrine, and even so late as 1865 it warned Napoleon III out of Mexico. It is impossible to foresee in the recent scramble of the European powers for acquisition of colonies how soon an occasion may arise for our putting in practice the Monroe doctrine. It is clear that there ought to be some relation between our assertion of that doctrine and our preparation to maintain it.

In the same letter he further says:

> A million of soldiers with the best equipments on the heights surrounding the harbor of New York, in our present state of preparation, or rather in our total want of preparation, would be powerless to resist a small squadron of war steamers. This state of things is discreditable to our foresight and to our prudence.

It is true that the letter was written mainly with reference to the duty and necessity of promptly constructing coast defenses in the way of fortifications, but what I have quoted is just as applicable to the duty and necessity of constructing a suitable and efficient Navy; and that portion of it which alludes to our assertion and maintenance of the Monroe doctrine is more in point with reference to the construction of a Navy, because should we have occasion to forcibly maintain that doctrine we would be compelled to employ naval warfare.

Now, I desire to quote from the platforms adopted by the two great political parties in 1884, not with a view of making a stump speech here on this floor, for I am not here for that purpose, but solely to ascertain and state the position which the majority party in this House occupied before the country, with reference to this subject, during the last Presidential campaign.

The Republican party first met in convention and adopted a platform. The seventeenth paragraph of that instrument contains the following:

> We demand the restoration of our Navy to its old-time strength and efficiency, that it may in any high sea protect the rights of the American citizens and the interests of American commerce.

Afterward the Democratic party through its convention animadverted severely upon the course of the Republican party in failing to construct a navy, and, alluding to the above quotation from the Republican platform, said:

> It demands the restoration of the Navy; it has squandered hundreds of millions to create a navy which does not exist.

Thus we have both parties admitting that we have no navy; the one demanding a restoration thereof to its former efficient condition, the other condemning that one for not having, while long in power, constructed or restored the Navy.

But returning again to the Democratic platform, I find the following language:

> The Democratic party insists that it is the duty of the Government to protect with equal fidelity and vigilance the rights of its citizens, native and naturalized, at home and abroad. * * * It is an imperative duty of this Government to efficiently protect all the rights of persons and property of every American citizen in foreign lands and demand and enforce full reparation for any invasion thereof.

How can the Government discharge this duty to its citizens in foreign lands without a navy? Do not these quotations from the last political platform of the Democratic party bind it to construct and maintain an efficient navy while it is in power? It seems to me there is no escape from this.

It is well known—none of us have forgotten—that during the Presidential campaign of 1884 our party journals, the Democratic newspapers, all over this country unsparingly attacked the Republican party for not having built and maintained a navy, and if they did not expressly, they did impliedly promise that in the event we—the Democracy—succeeded we would put the country in a position to maintain the rights of its citizens abroad, enforce the Monroe doctrine, and defend itself against all assaults from without. The same attacks were made on the other party by our political speakers in every nook and corner of the land, and the same promises were made by them.

Shall we redeem those promises? Or shall we permit the country to remain in a defenseless condition and place ourselves in such an attitude that when the campaign of 1888 comes the Republican party can justly say of the Democratic party, in its platform, what the latter said of the former in 1884:

> Its platform promises are now a list of its past failures.

Mr. Chairman, the majority in this body is now politically in accord with the executive branch of the Government, and ought to have some regard for the opinions and recommendations thereof, and I want to call the attention of this side of the House to some of those opinions and recommendations. Theodore D. Wilson, Chief of the Bureau of Construction and Repair in the Navy Department, in his last annual report, speaking of the propriety and necessity of completing monitors which have been begun, says:

> The bureau has estimated for the necessary amount of money to complete the work in construction department on the double-turreted monitors Puritan, Terror, Amphitrite, and Monadnock, and trusts that Congress will appropriate the amount asked for ($2,923,656), that these vessels may be completed. The machinery of the Puritan has been erected and the dock trial had, and contracts have been made by the Bureau of Steam Engineering for the erection of the machinery in the Terror and Amphitrite, but the work under this bureau remains at a standstill.
>
> I can not too strongly urge the completion of these vessels, in all respects, at an early day, as they will afford as good vessels of their class as are owned by any nation, and are in my opinion the best type of coast and harbor defense vessels in existence to-day. It will require at least a year to obtain their side and turret armor after it is authorized. It therefore seems very necessary that money for armor, if for nothing more, should be appropriated at an early day, in order that contracts for securing it may be made with as little delay as possible. When completed we will have five splendid coast and harbor defense ironclads. Should occasion require it they can be sent to distant points; their seaworthiness has been well tested in the past.

The Admiral of the Navy, in his last report, speaking on the same subject, says:

> We have such a shadow of a navy that we can not afford to throw away any thing in the shape of an ironclad, and those that we have for home defense are worth more than all the wooden vessels in the service.
>
> These remarks are still more applicable to the Amphitrite, Miantonomoh, Monadnock, Puritan, and Terror, turreted vessels under construction, which, if finished, will be valuable additions to the Navy. When they are finished and fitted with modern batteries, there will be no better vessels of this class in any navy, for home defense, which is the only service that should be expected of them, although their capacity to cross the ocean and encounter the most tempestuous weather has been fully demonstrated.
>
> A few years ago, when we were on the verge of a war with Spain, the officers of the Navy would have been much better satisfied if these vessels had been in condition for service.
>
> Should they now be completed they would give such a prestige to the Navy as it has not enjoyed for twenty years, and though far from furnishing all the power required for the protection of our coasts, their completion must show a desire on the part of Congress to begin the reconstruction of the Navy at the point where it is most needed, namely, the protection of our coast, which is now at the mercy of foreign powers.
>
> With such a nucleus of a force as these monitors completed would present there would be much greater hesitation on the part of an enemy in molesting our seaboard cities.
>
> It seems to me to be bad policy to leave the monitors in their present condition. We can not afford to throw them away. We can not sell them as they are, and they are deteriorating by being kept in an unfinished state.
>
> From long-continued observation I am satisfied that the strictures made in regard to the construction of these vessels are very unjust. As far as the work has gone they are better vessels than the originals which they represent, and which at the time they were built were considered to be remarkably efficient, either one of them being more than a match for any contemporary European ironclad.
>
> About $3,000,000 are, I believe, required to finish the ironclads, and when they are completed and properly armed we will at least have taken an important step toward the resurrection of a navy which at one time was one of the best equipped in the world.
>
> Every year adds to the deterioration of the vessels in question, and consequently increases their cost. They are now in that state when they can be completed with all the modern improvements without altering the work already done, and with but little more expense than was originally estimated.

The present Secretary of the Navy, in his annual report, commends the recommendations of these bureau officers in the following language:

> Cruising ships, however, we must have, unless the policy of continuing repairs upon worthless ships is to continue, or unless we are to abandon the national duty of affording the security and protection of our presence and power throughout the world wherever our people sojourn.
>
> I commend to your consideration the recommendations of the bureau officers of the Department upon these subjects.

Now, shall we heed these recommendations of our own Department officer? But I want to call attention to another portion of the report of the Secretary. It is as follows:

> At the present moment it must be conceded that we have nothing which deserves to be called a navy. The highest official authority in our service said in 1876:
>
> "There is no navy in the world that is not in advance of us with regard to ships and guns, and I, in common with the older officers of the service, feel an anxiety on the subject which can only be appreciated by those who have to command fleets and take them into battle."
>
> And so recently as 1883 the same distinguished authority stated that it was universally admitted "that we have no navy either for offense or defense."
>
> * * * * * * *
>
> It is questionable whether we have a single naval vessel finished and afloat at the present time that could be trusted to encounter the ships of any important power—a single vessel that has either the necessary armor for protection, speed

for escape, or weapons for defense. This is no secret; the fact has been repeatedly commented upon in Congress by the leading members of both parties, confessed by our highest naval authorities, and deprecated by all. Such is not the kind of navy which this country, with its extensive coast line, its enormous territorial area, and incalculable commercial resources, requires, nor such as it is entitled to have.

This country can afford to have, and it can not afford to lack, a naval force at least so formidable that its dealings with foreign powers will not be influenced at any time, nor even be suspected of being influenced, by a consciousness of weakness on the sea. While still striving to build up its merchant marine and to multiply its relations with foreign markets, it can not be expected much longer to tolerate such expenditures for a navy which could not for a moment defend even its diminutive commerce against any considerable power.

A naval vessel at the present moment is a product of science. Taking the world over, it will be found that each part of her—her armor, her armament, her power, her form, and the distribution of her parts or characteristics—each of these features of the completed vessel is absorbing from year to year the exclusive study of a class of scientific men. And as men of science throughout the world are continually stimulated to new discoveries and inventions, no vessel that can be built can be considered a finality in any particular.

The problem of keeping pace with the march of improvement in these lines of industry is one of incalculable difficulty; and yet unless the Government is prepared to avail itself promptly of all the improvements that are made in the construction and equipment of its ships its expenditures are largely useless.

It is of little service to a nation to have any navy at all unless it is a fair expression of the highest scientific resources of its day. The destructive power of the modern implements has become so great as to dominate in actual warfare. The bravest and best commander is helpless without them.

For the construction and maintenance of such a navy we have made but little provision. To have and maintain such a navy is, I believe, the wish of the country and the duty of the Government.

Mr. Chairman, this is not all. The President of the United States, whom we elected on the platform from which I have quoted, in his annual message has said:

Congress at its last session authorized the construction of two additional new cruisers and two gunboats, at a cost not exceeding in the aggregate $2,995,000. The appropriation for this purpose having become available on the 1st day of July last, steps were at once taken for the procurement of such plans for the construction of these vessels as would be likely to insure their usefulness when completed. These are of the utmost importance, considering the constant advance in the art of building vessels of this character, and the time is not lost which is spent in their careful consideration and selection.

All must admit the importance of an effective navy to a nation like ours, having such an extended sea-coast to protect. And yet we have not a single vessel of war that could keep the seas against a first-class vessel of any important power. Such a condition ought not longer to continue. The nation that can not resist aggression is constantly exposed to it. Its foreign policy is of necessity weak, and its negotiations are conducted with disadvantage, because it is not in condition to enforce the terms dictated by its sense of right and justice.

Now, Mr. Chairman, the case briefly summarized is this: Our great country, with its sixty millions of people and untold wealth, has no navy, and is almost in a defenseless condition. The party to which the majority of this House belongs, impliedly at least in its last platform, and expressly through its press and public speakers, promised the construction of a proper and efficient navy.

The Secretary of the Navy, who is in accord with that majority, has strongly recommended it. The President of the United States, whom that majority elected, has also recommended it. The condition of the country and our duty demand it.

Shall we heed the recommendations and admonitions of our own President and Secretary on this subject? Shall we redeem our pledges to the people? And, above all, shall we discharge our solemn duty to our country and place it in a condition that will enable it to defend itself when necessary?

Of course it will cost something to construct a navy, but we will surely never have one without paying for it. As suggested by the revered Democratic statesman, from whose letter I have quoted, there is a large and increasing surplus of revenue in the Treasury.

From this we may take enough for this purpose without crippling the operations of the Government, without impairing its ability to discharge other obligations. For myself, I am in favor of providing for the public defense. I am in favor of redeeming the promises we made to the people of this country. I am in favor of discharging the duty we owe the country in this regard, and will, whenever I have the opportunity, vote for all proper measures looking to the accomplishment of these ends.

Shall we Build and Maintain a Naval Establishment?

SPEECH

OF

HON. WILLIAM McADOO,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 24, 1886,

On the bill (H. R. 6664) to increase the naval establishment.

Mr. McADOO said:

Mr. CHAIRMAN: We are to-day virtually without the material that constitutes a navy. It is idle to recount the causes that have produced this state of affairs. Partisan and personal considerations might influence such profitless discussion, but our duty is plainly to address ourselves to the main question of building the new navy, the manner of its construction, and the kind of vessels to be built. It is to me strange that at this late day there should appear in this House a number of gentlemen who, if small in number, are certainly respectable in character and ability, and who seem to be in opposition to any naval establishment. As I have before stated on this floor, Democratic jealousy of military establishments can not be legitimately extended to the naval and militia arms of the Government.

In the discussions which took place at the formative period of our Government a clear line of demarkation was ably pointed out between maintaining a regular army and these other arms of governmental power. A large regular army was looked upon with dread and suspicion. The States, as well as the people, were determined that no great military establishment should ever be placed in the hands of the central government. The people had painful and acute memories of the result of the resplendent and powerful military establishments of Europe. "Freemen," as John Randolph said, in the Eleventh Congress, "needed not to be defended by hirelings." The militia are freemen in arms to maintain the laws made by freemen in council. Our laws being the result of popular action, power to enforce an orderly obedience to them is part of our system. The military arm of the State conserves both the State and the Union.

Now, as to the naval establishment, I repeat what I have so often said here before; that is, that the Navy represents the power of our country not as against its own citizens, but as in defense of them, its own rights and dignity, against foreign aggression and interference. I take the liberty to repeat from the RECORD what I said a few days ago on this subject.

I agree with all that has been so well and eloquently and frequently said on this floor that the United States was able to defend itself successfully against any nation on the face of the earth. So long as we are a united people, and I thank heaven we are, there never will be an invasion of our soil, and no foreign nation, however powerful and great and warlike, that has trouble with the United States will ever undertake to land an army on our shores. The armies of Napoleon and Wellington combined could not invade the United States with its sixty million free people and its enormous territory and great wealth. But our seacoast cities and harbors are in peril.

A navy and a proper fortification of our coast are not in the line of monarchical government. A standing army affects our own people, but the navy and seacoast defenses only menace foreign powers. I am opposed to paternal government and for the man against the State just as much as the upright defender of the Constitution from Texas [Mr. REAGAN] or the able gentleman, Judge HOLMAN, from Indiana. But a government ceases to be a government when at its border lines it is not, as against foreign interests and foreign arms, protective, defensive, and paternal in the broadest and most sacred sense in guarding the lives, liberties, rights, and properties of its citizens and in upholding its own dignity and honor.

That is the very essence of government—to protect its citizens; and as against foreign nations or foreign interests I would provide the strongest defenses that can be produced by the energy and skill of man. Full freedom within, but unyielding, determined, undying, and eternal protection and defense against foreign interference in whatever form it may come. I do not advocate wild and extravagant navies and forts looking to foreign intermeddling and conquest, but sufficient to assert our rights and defend our coasts. Let the robber governments of Europe maintain tremendous military establishments. They need them; free and contented people do not.

Shall we build up and maintain a respectable naval establishment? Shall we protect our coasts at home and our citizens abroad? The wise and good men who directed the steps of the infant Republic answered this question in the affimative. I have taken the trouble to collect a few brief extracts from the State papers of our earlier history on this important question. I might read many, but content myself with a few from sources entitled to the greatest weight—that devoted band who, watching with untiring vigilance the rise and flow of the primal founts of popular government, gauged with an accuracy almost incredible the scope, breadth, and depth of its future progress and development.

Hon. Benjamin Stoddart, Secretary of the Navy, as early as 1798 thus expressed himself on this question:

The protection of our coast, the security of our extensive country from invasion in some of its weaker parts, the safety of our important commerce, and our future peace when the maritime nations of Europe war with each other, all seem to demand that our naval force should be augmented; so much augmented, indeed, as to make the most powerful nations desire our friendship—the most unprincipled respect our neutrality. The peaceful character of America will afford to the world sufficient security that we shall not be easily provoked to carry the war into the country of an enemy; and it will become the wisdom of America to provide a cheap defense to keep it from our own.

* * * * * * *

Thus, in whatever view the subject is considered, whether our object be to prevent invasion, to protect our commerce, to obtain a speedy and a proper peace, to maintain peace hereafter, or by affording security to every part of our country to guard against the long train of ills which must result from disunion, the wisest, cheapest, and most peaceable means of obtaining the end we aim at will be prompt and vigorous measures for the creation of a navy sufficient for defense, but not for conquest.

In December, 1815, Secretary Crowninshield said in his report to Congress as to a naval establishment:

The importance of a permanent naval establishment appears to be sanctioned by the voice of the nation, and I have a satisfaction in stating that the means of its gradual increase are completely within the reach of our national resources independently of any foreign country.

* * * * * * *

The commerce of the United States, increasing with the resources and population of the country, will require a commensurate protection which a navy alone can afford; and the experience derived from the active and vigorous employment of a limited navy during the period of the late war has demonstrated its efficient utility.

Mr. Bassett, from the Committee on Naval Affairs, on November 27, 1812, thus vigorously and accurately stated the naval question. It is as apropos as if delivered to-day. The whole question is briefly, admirably, and tersely stated. An American navy for defense and protection

is the popular demand now as then, and now as then let us answer with a law to increase the navy of the United States:

It is a bright attribute in the history of the tar that he has never destroyed the rights of the nation; in its defense only is he to be found. Thus aided by economy, and fortified by republican principle, your committee think they ought strongly to recommend that the fostering care of the nation be extended to the naval establishment. It is far, very far, from your committee to extend their views of a navy to the mad and wicked prospect of foreign conquest or a silly contest to be mistress of the ocean. Their view is limited to their own defense and to enforce respect to their just rights.

To the objection that it is the nature of man to run into extremes they answer that it is the end, not the beginning, we should guard against. It is surely yielding much of the argument to surrender all of the subject that is good and require submission to evil that good may come thereof. Rather separate the wheat from the chaff—show the good and the bad. Let it be impressed on every citizen that to use force to protect and maintain the rights and liberties of his country is his first duty, while it is the greatest of crimes to attack with force the rights of others. It can require no subtlety to enforce the distinction between defense and offense; neither can it require argument to prove the first ought not to be abandoned as being more than life is worth, though the other may be deprecated as the consummation of wickendess. Limited to the view of defense and protection, the commitee directed their chairman to ask leave of the House to report a bill to increase the Navy of the United States.

Listen to the voice of the statesman from South Carolina, Hon. Langdon Cheves, speaking in the Twelfth Congress, 1811, from the Committee on Naval Affairs. The voice of wisdom speaks here, my masters! History does indeed repeat itself, and human nature has changed little in all the ages, for he pictures here the very objections of our own day. As it is said in Scripture, "Wisdom is justified of all her children." How eloquently, ably, and strongly he presents the case:

That the subject referred to your committee in its several relations presents a question of the highest importance to the interests of the people of this country, inasmuch as it embraces one of the great and leading objects of their Government, and that which above all others laid the foundations of the happy Union of these States, your committee need hardly say they mean the protection of maritime commerce, an interest which, though when superficially viewed seems to affect only the Atlantic portions of the country, yet really extends as far as the utmost limits of its agriculture and can only be separated from it in the opinion of your committee by a total blindness to the just policy of Government.

The important engine of national strength and national security which is formed by a naval force has hitherto, in the opinion of the committee, been treated with a neglect highly impolitic, or supported by a spirit so languid as, while it has preserved the existence of the establishment, has had the effect of loading it with the imputations of wasteful expense and comparative inefficiency. No system has hitherto been adopted which though limited by the dispensing security of the times, and the just economy of our republican institutions, was yet calculated to enlarge itself gradually with the progress of the nation's growth in population, in wealth, and in commerce, or expand with an energy proportioned to a crisis of particular danger.

Such a course, impolitic under any circumstances, is the more so when it is demonstrably clear that this nation is inevitably destined to be a naval power, and that the virtue of economy, if no other motive could be found, would recommend a plan by which this force must be gradually increased, the necessary expenses diminished, and durability and permanency given to the strength which they may purchase.

That a naval protection is particularly secured to the interest of commerce by our great political compact is proved by that part of the Constitution which expressly gave to Congress the power "to provide and maintain a navy," and is confirmed by the history of the times and the particular circumstances which led to its institution; but it is alike secured by the fundamental nature of all government which extends to every interest under its authority a protection (if within the nation's means) which is adequate to its preservation; nor is this protection called for only by the partial interests of a particular description of men or of a particular tract of country. A navy is as necessary to protect the mouths of the Mississippi, the channel through which the produce of the agriculture of the Western States must pass to become valuable, as the bays of the Chesapeake and Delaware, and more necessary than on the shores of the Eastern or the Southern States.

President James Monroe, in his message to Congress on the subject of the Navy on January 30, 1824, thus spoke wisely and well. If he was living now he would learn how much more important in the view of some gentlemen it is to improve ghostly and undiscovered rivers and marine hallucinations under the guise of harbors that, however much they may trouble the Treasury, have no place in the thoughts of geographers. Here are a few extracts from his message:

If a system of universal and permanent peace could be established, or if, in war, the belligerent parties would respect the rights of neutral powers, we should have no occasion for a navy or an army. The expense and dangers of such establishments might be avoided. The history of all ages proves that this can not be presumed; on the contrary, that at least one-half of every century, in ancient as well as modern times, has been consumed in wars, and often of the most general and desolating character. Nor is there any cause to infer, if we examine the condition of the nations with which we have the most intercourse and strongest political relations, that we shall in future be exempt from that calamity within any period to which a national calculation may be extended. And as to the rights of neutral powers, it is sufficient to appeal to our own experience to demonstrate how little regard will be paid to them whenever they come in conflict with the interests of the powers at war, while we rely on the justice of our cause and on argument alone.

Two great objects are, therefore, to be regarded in the establishment of an adequate naval force—the first, to prevent war, so far as it may be practicable; the second, to diminish its calamities when it may be inevitable. Hence the subject of defense becomes intimately connected in all its parts, in war and in peace, for the land and at sea. No government will be disposed in its wars with other powers to violate our rights if it knows we have the means, are prepared, and resolved to defend them. The motive will also be diminished if it knows that our defenses by land are so well planned and executed that an invasion of our coasts can not be productive of the evils to which we have heretofore been exposed.

The great object, in the event of war, is to stop the enemy at the coast. If this is done, our cities and whole interior will be secure. For the accomplishment of this object our fortifications must be principally relied on. By placing strong works near the mouths of our great inlets, in such positions as to command the entrances into them, as may be done in many instances, it will be difficult if not impossible for ships to pass them, especially if other precautions, and particularly that of steam-batteries, are resorted to in their aid.

In the wars between other powers, into which we may be drawn in support of our neutral rights, it can not be doubted that this defense would be adequate to the purpose intended by it; nor can it be doubted that the knowledge that such works existed would form a strong motive with any power not to invade our rights, and thereby contribute essentially to prevent war.

* * * * * * *

The amount of the property of our fellow-citizens, which was seized and confiscated or destroyed by the belligerent parties in the wars of the French revolution, and of those which followed, before we became a party to the war, is almost incalculable.

This recital might be continued in unbroken line to this day—so important to the future of the Navy, which if no obstruction ensues here may now take its first forward move since the civil war.

WHAT KIND OF NAVY SHOULD WE BUILD?

There being no reasonable room, in my humble opinion, for doubt as to the policy and wisdom of rehabilitating the Navy, we are confronted in this wondrous age of science and advance as to what kind of navy we should build. A navy is, I am convinced from all that I have read and heard on this subject, the best harbor defense. With us, in fact, this is its prime importance. We have no wish to emulate the mere glitter and display of aristocratic governments.

The manly simplicity and dignity of a true American embassador, amid the plumes, lace, stars, jewels, fantastic foolery, and glittering gilt of a European court, typifies truly our traditions and institutions. With us a navy is for use and as a necessary defense from outside powers. Thomas Jefferson, who will stand for all time without a rival as the father and founder of a great and enduring school of political thought, is on record as strongly recommending gunboats for harbor defense. He has given to the world a very interesting letter on this subject. The number of gunboats he advocated for the harbors of New York, Philadelphia, Norfolk, Charleston, and other ports would make his declared disciples on this floor, who criticise any naval increase, hold their breath.

Mr. Jefferson was a very broad-minded and wise man, and did not believe in logs, flags, and universal peace. Forts are well enough in their way, but, as Admiral Porter said before our Committee on Naval Affairs, in the whole history of the world, from the wars of Holland to the capture of New Orleans, ships have never been successfully opposed by forts. I read his testimony:

By Mr. McADOO:

Q. Do you not think that vessels of this type—monitor ironclad—would be a much better coast defense than any system we have got?

A. Without any hesitation I say it is the best system of defense in the world. The English try to do without it now and then and do away with the monitor turret as much as they can.

Q. Do you think it is better than forts and guns—better for coast and harbor defense than the coast fortifications?

A. I would not give anything for guns and forts. If you will give me five guns, one a ship to one on shore, I will volunteer to destroy any fort on the coast. There is no instance where ships have not whipped forts. As to our forts in New York Harbor, I would rather have those five vessels to protect New York Harbor than the forts.

If time permitted, the history of the advance and progress of naval architecture would, I think, be highly interesting. In this field the researches of science, the cunning and ingenuity of man, have been put to the full test. From the rude war vessels of the Greeks to the magnificent and nearly impregnable steel-armored war ships of Italy, France, and England, is of itself almost the history of modern civilization and mechanical invention. Before the civil war the United States was one of the great naval powers, if not the greatest. We had the resources, facilities, genius, and enterprise to build the model wooden war vessels. We led then; now we follow feebly and afar off. Iron superseded wood.

While we were healing up the hideous wounds of civil war Europe was directing all her skill and energy to prepare for future war on the seas. Even as our maritime and naval glory expired in the changes and losses of that great strife, American genius in the very heat of battle created the first successfully tested ironclads. Among the officers of our older Navy those who joined the South cast luster on our military schools by inventing and creating the iron-clad ram Merrimac and successfully using that dread of sailors, the torpedo. In saying this I do not forget the French war ship, La Gloire in 1858, nor the armored iron steam-frigate Warrior of the English.

This successful stroke of American genius and daring in the South was countered in the North by Mr. Ericsson's never to be forgotten Monitor, which has revolutionized the navies of the world and won for its patriotic, daring, persistent, and gifted inventor enduring and universal fame. The steps of naval growth to date are (1) the application of steam, strictly the screw propeller; (2) shell-firing and the increased power of artillery; (3) the use of armor; (4) the submarine torpedo. I can not do better than give here this brief history of naval development and growth from Francis T. Bowles, esq., assistant naval constructor. Mr. Bowles says:

The U. S. S. Princeton (1842-'43) was the first screw war steamer. She was designed by Ericsson, and her success and construction were mainly due to the efforts of Capt. R. F. Stockton, United States Navy. Great naval powers are reluctant to begin changes that involve costly reconstruction; this, with the conservatism regarding any new system, was the reason of the otherwise inconceivable reluctance of the English to take up the project of a screw navy. When the French built the screw line-of-battle ship Napoleon (1850) the English took alarm and began reconstruction with vigor; and the renovation of their navy by the application of the screw was well advanced in 1859, when the French

launched the iron-clad wooden frigate La Gloire. Then began the decline of unarmored battle-ships.

The principal incentive to the application of armor was the destruction anticipated from shell-fire. It was not until 1854 that naval batteries consisted entirely of shell-guns, the magazines being filled with loaded shells already fused. Admiral Dahlgren in the United States frigates of 1854 carried the application of this missile to great perfection. The Merrimac, one of these, visited Europe in 1856, startling naval administrations by the enormous shell-power of her battery. The swift destruction of the Turkish fleet at Sinope by the shells of the Russian ships during the war in the Crimea (1853) had much to do with hurrying forward its application; the destruction of the Congress and the Cumberland and the engagement between the Monitor and the Merrimac (1862) gave it fresh stimulus.

The first definite proposal for building an ironclad was made in 1841 by R. L. Stevens; armor, it is stated, was suggested by his father, John Stevens, in 1812. An act approved April 12, 1842, authorized the Secretary of the Navy to enter into a contract with Stevens for the construction of "a war steamer for harbor defense, shot and shell-proof, to be built principally of iron." The contract was made February 10, 1843; it called for the following dimensions: Length, not less than 250 feet; beam, not less than 40 feet; depth amidships, 40 feet; protection against shot, 4½ inches of iron; horse-power, 900. About this time Commodore Stockton, United States Navy, was experimenting at Sandy Hook with one of the 12-inch wrought-iron guns for the Princeton. A 224-pound shot, with 30-pound charge, was fired from it against a target representing the armor proposed by Stevens; it pierced the target and passed through a sand bank 8 feet thick. This stopped the construction of the ironclad until, by a second contract (November 14, 1844), Stevens increased the dimensions as follows: Length, 415 feet; beam, 48 feet; depth, 33 feet 6 inches; protection, 6½ inches of iron; horse-power intended, 8,624. Work was begun in 1854; and when the vessel was about half completed the Government refused further appropriations. In the early part of the civil war (1861) the Navy Department again declined to ask Congress for money, a naval board having made an adverse report.

It was the initiative taken by the Emperor Napoleon III which brought about a complete revolution in modern naval construction for war, as the first ironclads used in battle were the French batteries Dévastation, Lave, and Tonnante, begun for service in the Crimea in September, 1854, two months after the keel of the Stevens battery was laid at Hoboken. They were all of the same dimensions, namely: Length, 171 feet 9 inches; beam, 43 feet 1 inch; draught, 8 feet 8 inches; hulls, of wood; armor, 4.33 inches thick; armament, sixteen guns of French "50," corresponding to 68-pounder, carried 2 feet 11 inches above water line. They were about 1,600 tons displacement, with speed about 4 knots an hour. They formed part of the fleet, carrying fifteen hundred guns, which destroyed Fort Kinburn, an inferior barbette work. The ironclads engaged at about 1,000 yards, at which range they were proof against 32-pound shot with 10-pound charges. The English adopted the design and built five, but they were never in action.

In view of these successful results, the French determined to build ships which should combine with their protective armor satisfactory sea-going qualities, and in March, 1858, the first iron-clad frigate, Gloire, was commenced at Toulon. The construction of two other wooden armored frigates—the Invincible and the Normandie, of the same type as the Gloire—and the Couronne, an iron vessel, was ordered. The latter ship differed from the others not only in the materials employed, but in the strength of the deck, which afforded protection against the projectiles then in use. The Couronne was especially constructed with a view of establishing comparison between wooden vessels and those of iron. The four frigates were completely armored above the water line with 5-inch plates resting on a 26-inch wood backing. The armament at that time consisted of thirty-six 5-ton guns mounted on a single battery, extending the whole length of the ship, 6 feet 3 inches above the water line.

England, where grave doubts had been felt as to the utility of armor, and of armored ships such as France was building, was at last compelled to follow in the same direction. The Warrior was ordered in June, 1859, a few months before the completion of the Gloire. The Warrior and her counterpart, the Black Prince, were one-half greater displacement than the Gloire, and 132 feet greater length; they were completely built of iron and armored with 4½-inch iron plates over a length of 213 feet out of a total length of 380 feet. Their speed was 14½ knots, compared with 12.8 for the Gloire. The wise choice of the material of construction leaves them serviceable vessels to-day, while the French ships were some years since stricken from the list. The Defense and the Resistance, of 6,150 tons displacement, with similar disposition of armor, were commenced at the same time. In 1861, following upon the four ships just mentioned, England undertook the construction of not less than eleven ironclads, representing four different types—the Achilles, 9,800 tons displacement, armored along the whole length with 4½-inch plates, then the Minotaur, the Northumberland, and the Agincourt, of 10,500 tons displacement, similar to the Achilles, except that the armor was 5½ inches thickness amidships, tapering to 3 inches at the extremities. The vessels of the fourth type, the Hector and the Valiant, have proved more serviceable than the others, being smaller, more manageable, and much more economical; they were armored throughout the whole length with 4½-inch plates, the protection being only above the water line at the bow and stern. The Magenta and the Solferino, laid down two years after the Gloire, formed part of the first group of French ironclads. The second group consisted of ten vessels of the Provence or Flandre class. The displacement was slightly augmented, but the protection was increased to 6 inches of armor.

Thus, from the preceding, we see that for two years before our civil war European powers were fully committed to building battle-ships with armored broadsides, and that before the occurrence of any naval battle in the United States several of these vessels were afloat.

Up to 1855 the vessels built for the United States Navy were the best possible specimens of their class; among the early steamers, the Powhatan and the Susquehanna, at the time they were launched, in 1850, were the most efficient naval vessels afloat. The screw-frigates, built in 1855, were regarded all the world over as the model men-of-war of the period. Of these, the largest was the Niagara. The other five—the Roanoke, the Colorado, the Merrimac, the Minnesota, and the Wabash—were vessels of a little over 3,000 tons, and carried a powerful battery of shell-guns.

The twelve screw-vessels were of two classes, built in 1858, the first, of about 2,000 tons, including the corvettes Lancaster, Hartford, Richmond, Brooklyn, and Pensacola; the second class, small sloops. These were all admirable vessels, but they were no advance upon the type of the Wabash class. At the beginning of the war, of the ninety ships on the naval register fifty were sailing vessels, and only twenty-four of the forty others were serviceable steamers. We not only had not begun the construction of iron or armored vessels, but had only partially replaced sail-power by steam-power. The war forced upon us new systems, which, from lack of previous consideration, were first used in the crudest form. At the outbreak of the war a special naval board was appointed to determine upon types of ironclads to be built for immediate service. The three ships ordered on the recommendation of the board were the broadside vessels Galena and New Ironsides, and the Monitor. The first vessel was armored with bars, of 2½ inches total thickness, put on in a very complicated manner, which proved so deficient that the vessel failed in the first test under fire, in the James River, in an action from which the Monitor came out unharmed.

The New Ironsides was a casemated iron-clad wooden frigate with unarmored ends, except that the water-line belt was complete all around. Her armor consisted of 4½-inch solid plates backed by 21 inches of oak, the whole inclined throughout the casemate at an angle of 30° from the vertical. Her battery consisted of fourteen 11-inch smooth-bores and two 8-inch Parrott rifles. Though her speed was only about 6 knots at the best, this vessel performed most valuable and effective service throughout the war, both before fortifications and on the blockade. In a period of about six months she was struck some one hundred and ninety-three times, and never forced to go into a home port or to depend upon outside assistance for repairs. The Monitor was built of iron under the superintendence of, and from an original design by, John Ericsson. The opportune appearance of the Monitor in Hampton Roads in March, 1862, and her successful combat with the Merrimac, gave a fictitious value to this vessel as an example of naval architecture; for, though the plan was noble, the details were melancholy. Owing to her defective method of construction, the Monitor was lost at sea in a gale off Hatteras nine months after her first battle.

Notwithstanding the reports of several intelligent officers on the serious defects of this vessel many of them were repeated in the numerous monitors subsequently built of wood and of iron. Nevertheless they performed invaluable services and furnished the type of modern coast-service ironclads and a system of armament which has been followed in the most powerful iron-clads of recent construction. At the termination of the war it was determined to build four sea-going double-turreted monitors without overhanging armor-shelf at either the ends or the sides. These were the Miantonomoh, the Monadnock, the Terror, and the Amphitrite. Their hulls were of wood, and were armored with laminated plates 1 inch thick, with a total thickness of 6 inches at the sides and 12 inches on the turrets. The Miantonomoh made a voyage to England, where she attracted much attention, and was no doubt the progenitor of the Devastation; the Monadnock was sent round Cape Horn to San Francisco. In 1874 these vessels were broken up and "rebuilt" into the double-turreted monitors of the same names, which are at present unfinished.

During the period of our war iron-clad construction proceeded rapidly abroad, but until a later period it was more influenced by the developments in artillery than by the results of the war. The introduction, in 1864, of the 7½ and 15½-ton guns into the French armaments made the Flandre class ineffective before they were completed. In 1865 the Ocean was begun, and later the Marengo, the Suffren, and the Friedland, after the same type, only the latter being completely of iron. They were protected at the water-line by 8-inch armor. The armament consisted of four 23-ton guns mounted in a central battery protected by 6½-inch armor, and four 15½-ton guns in barbette turrets at each of the four corners, projecting beyond the sides of the ship, and armored with 6½-inch plates. The Friedland differs from the other ships in having only two barbettes, each armed with a 23-ton gun. In 1868–'69 a fourth group of ships was commenced, the Richelieu, the Colbert, and the Trident, plated with 9-inch armor and very similar to the preceding group, the excess of 1,200 tons displacement being devoted mainly to armor and armament. The hulls of these ships were constructed of wood, except the extremities forward and abaft of the central battery, which were of iron. Such was the construction of the French iron-clad navy up to the time of the Franco-German war.

The names of Stevens and Stockton in this statement of Mr. Bowles are interesting to me as a representative of New Jersey. They were both illustrious Jerseymen, of families respected for their patriotic history, their virtues, and their ability.

We are now confronted with these wonderful armadas and modern armaments. We must either abandon defense and protection or prepare to meet them, at least to a moderate extent. Lieut. William H. Jaques, United States Navy, presents this startling picture. It is made up of cold facts and figures:

There are 198 armor-clad vessels in the world available for offensive operations against the United States, and 42 more are building, making a total of 240. Of these, 194 are plated with wrought iron, 19 with all compound armor, 12 with compound and wrought iron, 10 with all steel, 4 with steel and wrought iron, and 1 with steel and compound armor. Only 8 of the 42 now building have all wrought-iron armor, 6 of these being in Russia. Only 6 of the 240 vessels are under 2,000 tons' displacement; 209 of the 240 are over 3,000 tons.

England owns 70 armor-clads, of which 13 are building.
France owns 50 armor-clads, of which 12 are building.
Russia owns 24 armor-clads, of which 6 are building.
Italy owns 19 armor-clads, of which 5 are building.
Turkey owns 15 armor-clads.
Germany owns 14 armor-clads.
Austria owns 13 armor-clads, of which 3 are building.
Denmark owns 7 armor-clads, of which 1 is building.
Holland owns 7 armor-clads.
Spain owns 6 armor-clads, of which 1 is building.
Brazil owns 6 armor-clads, of which 1 is building.
Japan owns 3 armor-clads.
Chili owns 3 armor-clads.
China owns 3 armor-clads.

Besides these vessels there are in Europe a large number of gunboats, monitors, and other vessels for coast defense, and an immense number of unarmored cruisers.

The United States has ready for service but six monitors of 2,100, and eight of 1,875 tons' displacement. These monitors are twenty years old, their guns are obsolete, their armor thin, and their power of offense or defense is insignificant. Besides these there are four monitors of over 3,900 tons each, and one (Puritan) of over 6,000 tons, in various stages of construction. The Miantonomoh, at the New York navy-yard, has hull and engines complete, and is being supplied with armor and guns. The Puritan, Amphitrite, and Terror are at private shipyards; they have the hull and engines practically complete, and are ready for their armor and guns. The Monadnock, at San Francisco, has the hull complete, but requires engines, armor, and guns. These four monitors will require together about 3,000 tons of armor.

The five large monitors, if armed with 10-inch high-power steel breech-loading rifles, will make good fighting ships, and will be efficient for coast defense and for service in the West Indies or at the Isthmus of Panama; and if armored with steel plates instead of iron (for which they were designed), they will have a very much superior power of resistance with the same displacement.

The coast-defense fortifications of the United States are considered by all authorities to be about worthless; we have no torpedo-boats nor automatic torpedoes; and submarine mines and electrically controlled torpedoes can be easily taken up unless protected by guns and automatic torpedoes; yet, from the estimates of Lieutenant Griffen, United States Army, there is now exposed to the fire of an enemy on our coast, in eleven cities, nearly $5,000,000,000 of destructible property.

And all this while the gallant and battle-scarred Admiral Porter recently made this statement before our committee:

Q. I am just directing your attention to the improvements in modern ordnance. What would be the effect of a bombardment of New York now?

A. There is a place near Coney Island [indicating on a rough diagram], which

I have surveyed, where an enemy could be out of the range of the guns at Fort Hamilton, and from where they could throw shot into the city hall and into the middle of Brooklyn. I had an argument with Secretary Fish once about this, and wrote him a letter showing how it could be done. There is a good deal of difference between a shell weighing 150 pounds and one weighing 800 pounds, with the increased charge of powder.

THE PRESENT BILL.

The bill now before us is the result of long and patient investigation on the part of the Naval Committee. It has the sanction of our best experts and of the present Secretary of the Navy, than whom a more able, upright, progressive, and devoted public officer never had in charge a great Department of Government. It has been reduced in its expenditures to meet the desires of conservative leaders in this House. For myself I would favor it if it provided for double the present number of ships, but I am content to take it as at least one step toward a respectable navy. It is, in my opinion, a wise and carefully considered matter and deserving of the confidence it inspires.

Any measure which at this period in the session, and especially on this day, would arouse any determined opposition would be doomed to defeat. No more advanced naval measure than this could have got a hearing at this time, and I believe it to be a patriotic duty to accept this bill without quibble or delay. Let us sink all personal and partisan considerations, and in the interest of our people and our country make of this bill law before this session adjourns. No more popular measure is before this Congress. No more pressing and righteous measure has ever been before any Congress.

The bill has, among others, three good, sound, and strong propositions. It proposes to build a first-class ironclad of the second grade, provide torpedo boats, and complete the monitors. This style of ironclad is a combination of cruiser and armored vessel, sometimes called a belted cruiser, from the fact that a belt of armor protects her vital parts. She has good speed, and when well armed a formidable battle-ship. The Navy Department will in all probability follow the plans of the recently constructed Brazilian ship Riachuelo. A naval expert thus describes that vessel:

Among the second-class ironclads the Brazilian twin-screw turret-ship Riachuelo, completed in England in 1884, is by far the best example. The Riachuelo is 305 feet in length, 52 feet beam, and 19 feet 6 inches mean draught at a displacement of 5,700 tons. On trial the engines developed 6,900 indicated horse-power with natural draught, giving a mean speed of 16½ knots per hour. The armor belt is 11 inches thick, 7 feet deep, and extends an armored deck 2 inches thick, depressed at either end of the ship to meet the ram and protect the steering-gear. Upon this are two oval 10-inch armored breastworks *en échelon*, rising to a height of 12 feet 6 inches above the water line, each supporting a turret whose turning and loading-gear it protects. Each turret mounts two 20-ton breech-loading rifled guns. The rest of the armament consists of six 70-pounder guns and 15 machine-guns. This vessel is a remarkable instance of the increased skill in marine engineering, the high speed obtained being mainly due to the great power developed from the limited weight of machinery.

Her internal machinery—now the great desideratum in marine architecture—is the acme of modern advancement. The skill and genius of American mechanics will readily duplicate if not improve upon this wonderful enginery. This vessel will be double-bottomed and divided into many water-tight compartments, and will besides have a complete torpedo outfit. She is made to chase, run, or fight, as may be most desirable.

As to the completion of the monitors, I can say that while many of us were prejudiced against them and the manner of their inception there is almost unanimity among naval experts in favor of completing them and as to their value when completed. Let me read a few brief opinions in their favor from the highest naval authorities. Speaking of them Secretary Whitney said:

Q. Give us your opinion as to whether this Congress ought to appropriate money to complete these monitors?
A. It would be my opinion that they ought. It was not my opinion originally when I first began to think about it. I think there has been considerable prejudice against these ships. They have been taken up piecemeal and carried on by little contracts and drawn on through a great many years, and I don't think perhaps in a business-like way. I think there is some prejudice against them from that. When you think what we have spent on those ships——

By Mr. HARMER:

Q. You base your opinion upon what their usefulness would be to the Navy?
A. Yes, sir. We have already spent nearly $5,000,000, and they require about four million two hundred and odd thousand to complete. So, of course, it is not as if it were an original question.

By Mr. NORWOOD:

Q. How many ships?
A. Five. As I have said, the Miantonomoh is nearly completed. She only requires about $200,000, and that entirely for her armament. I don't suppose for the expenditure of $4,000,000 you could expect to get the same amount of fighting qualities any way other than by completing those ships, and that I suppose is about what the question is just now.

By Mr. THOMAS:

Q. Before you leave the Miantonomoh I would like to ask you if you have made a personal examination of these vessels, especially the Puritan.
A. No; I have not.
Q. You have examined the Miantonomoh?
A. Yes, sir.
Q. For the purposes for which they are intended, do you not regard them, if completed according to your proposed plan, as first-class vessels?
A. I suppose they would be quite formidable vessels.
Q. Would be successful vessels, as far as you can judge now, for coast and harbor defense?
A. I should suppose so. It is a great question whether the turret form of carrying guns is not the best. When you undertake to carry the necessary amount of armament now, it is so weighty, it takes so much displacement, that it is a great question how to carry. The turret form was a great discovery, of course. The English have now abandoned it, but I think they will come back to it.

Admiral Porter, being questioned, thus spoke of them:

By Mr. THOMAS:

Q. They are perfectly seaworthy?
A. Yes, sir; no trouble about that.
Q. These vessels are not built on the same plans as the first monitor?
A. There is no comparison at all, though I would not like to have Mr. Ericsson hear me say so, because he does not think so. They are very much better. There are no finer vessels of that class. The British navy has not got them. I would rather take two of these vessels than take one of their sea-going ironclads. They would knock her to pieces. Take those big ships, the Lepanto and Italia. Those ships are of no practical use. They can not go to sea anywhere, and they can not maneuver like these vessels. Take two or three like them and put them around one of these Italian ships, and they will give her just as much as she wants. I am satisfied of that.

As to torpedo boats, it may be fairly stated that they represent the best and most efficient style of torpedo warfare. The submarine torpedo may be precautioned against, and the Whitehead auto-mobile torpedo is at best uncertain as against a moving vessel. They were launched against the Turkish fleet in the Russo-Turkish war with effect in only one case. Some were afterward found by the Turks intact, having failed in their aim. Our own, the Howell torpedo, promises better results. Torpedo boats are well suited to our harbors, and almost indispensable to our defense. The torpedo boat and the dynamite gun are yet destined to play important parts in naval warfare. The latter invention is entirely American. If sufficient force can be given to the projectile without endangering the gun, dynamite firing will be an eminent success. The bill provides for both torpedo boats and an experiment with the dynamite gun.

AN AMERICAN NAVY SHOULD BE BUILT IN AMERICA.

The bill is, in my opinion, a good one in another particular. It coincides with the full consensus of American authoritative opinion in the whole history of our country that an American navy should be built in America. A country that buys its war ships abroad can have no standing among nations. It would be an anomalous state of affairs if a country that produces $650,000 annually more manufactured products than Great Britain should be compelled to go to the latter for her war ships. Let us induce our manufacturers to get any plant now wanting so as to be able to produce the necessary steel ingots for guns and ships. This bill, if enforced, as I believe it will be, will do much to stimulate our own people to prepare to make both implements and vessels of war. I think I am not saying too much when I assert that such is the temper of Congress that if the question were whether we would have a foreign-built navy or none, many gentlemen, much as they desire one, would hesitate before buying war vessels or their parts abroad.

This is a healthy American spirit, which, while it may find critics among the very few who are fond of belittling their country, is the honest and patriotic sentiment of the overwhelming majority of our countrymen. Our mechanical and inventive genius is universally admitted; our resources are practically unlimited; our labor is the most intelligent and skilled in the world. To go abroad under these circumstances would be unpardonable. Our manufacturing plants for guns and ships are not yet perfect, but by compelling these ships to be built in the United States the great steel manufacturers will be stimulated to the necessary investment. Public and necessary expenditures should as far as possible benefit American labor. The great industrial army in mine and shop will not suffer in silence any deviation from this policy. There are many other phases of this bill which it would be interesting to discuss if time permitted. If this bill is passed to-day this Congress will be forgiven many faults of omission and commission.

WHAT MODERN NAVAL WAR MEANS.

Modern naval war is short, sharp, and decisive; mere valor can not contend against wealth and science. Our naval force, heroic in its *personnel*, and fired by glorious traditions and memories, could not without ships and proper armament maintain themselves against modern powers. If living to-day, the great galaxy of our naval heroes, from Paul Jones to McDonough, and from Perry to Farragut and Porter and Dupont, could not float our present skeleton Navy against an attack of the most moderate naval power. A coward behind 22 inches of pressed steel, armed with a hundred-ton rifled cannon, can readily destroy the bravest man and the best sailed wooden ship armed with smooth-bore, muzzle-loading, cast-iron guns. Let me read here this graphic description of a naval combat in the recent Franco-Chinese war; it is the official report of one of our naval officers to the Navy Department:

The signal, the discharge of a machine gun in one of the tops of the Lynx, was given at 1.56 p. m., and was answered immediately by the batteries and machine guns of all the French vessels. The Yung-Woo replied at once with her stern gun, and the other vessels as soon as they could bring their guns to bear. The action at once became general and the scene was soon enveloped in a dense smoke. At the signal the two torpedo boats launched out on their errand of destruction. The admiral in his flag-ship, with the Lynx, Aspic, and Vipère, slipped and moved up against the Yung-Woo and the vessels lying above him. To the Villars, Duguay-Trouin, and D'Estaing, assisted by the Triomphante, which came into action shortly after it began, was allotted the

destruction of the three gunboats anchored abreast of them and in silencing the works on Pagoda Point.

The Triomphante, which had been discovered coming in about 1.30 p. m., opened fire with her bow gun when about a mile off, and stood up to her station off the custom-house and near the D'Estaing.

Four minutes from the commencement of the action a heavy explosion told the successful work of the torpedo boat detailed to destroy the Yung-Woo. In this short time, and before the Yung-Woo was fairly in action and had brought her guns to bear, the torpedo had done its deadly work and destroyed this fine vessel. The officer in charge of the torpedo boat had successfully placed a torpedo under her counter while she was in the act of turning. It nearly blew her out of water and the vessel soon sank, on fire fore and aft, a total wreck. Many of her officers and crew perished. She lies close inshore, 100 yards above the point.

The torpedo boat dropped down the river out of action, her commander and one of her crew having been wounded, probably by one of the French machine guns.

Soon the whole scene was enveloped in smoke, nothing could be observed, and the effect of the incessant discharge of the heavy guns and machine guns was deafening. In about fifteen minutes the fire slackened and as the smoke rose the complete destruction of the Chinese fleet was disclosed, while the French vessels appeared uninjured. The Chuen-Wei was sinking at her anchors, riddled by shot, on fire from stem to stern, carrying most of her officers and crew down with her. She was gallantly fought, and went down with her colors flying and guns firing. She was overpowered by her antagonists and one of the torpedo-boats finished her. The two other vessels near her, the Fei-Yuen and Chi-an, met a similar fate. They drifted down the river total wrecks, in flames, and finally sunk near Flat Island. These three vessels could make no impression upon their opponents, the largest French vessels, and most of their officers and crews must have been cut down by the machine guns in the tops. They were riddled with shot.

The admiral, with the French gunboats, did equally destructive work above the point. All the Chinese vessels above him were sunk, and, with the exception of the Foo-Poo, were total wrecks. The commander of the Foo-Poo ran his vessel up the river after receiving several shots. She sank and broke her back. One of the mosquito boats drifted down the river a helpless wreck. Her decks were covered with dead and wounded, and she sank near the foreign shipping, a short distance below the point. About an hour after the action began one of the gunboats above the point, the Fah Shing, drifted down the river in flames, with the French colors flying. She had been carried by boarding, and passed out of sight through Mingan Pass. Two hours afterward a heavy explosion down the river told the story of her sad end. About 8 o'clock one of the transports which had been destroyed drifted down the river in flames, burned to the water's edge. She was sunk in a few moments by the French vessels before she exploded. (This was some time after these vessels had resumed their anchorages). The war-junks played no part in the action, and only served as targets for the French gunners. They were mostly sunk at their moorings. A number of fire-junks drifted down the river without doing any harm, and they passed out of sight below the pass.

In less than half an hour the entire Chinese fleet was destroyed, and all that could be seen of the fine fleet were hulks in flames, or sunken vessels. The French gunboats took position off the arsenal and kept up an active bombardment until sunset, when the fleet returned to their anchorage. The Chinese troops on the hills back of the point occasionally received attention with a few shell, which soon effected a retreat to safer quarters. During the night the electric light was actively employed to discover any movements on the part of the Chinese, and the occasional discharge of a gun reminded them of the alertness of their opponents.

The French fleet received no injury in any of its vessels. They were apparently unhurt after the action.

Imagine such an account following the bombardment of New York! And the Chinese have some really first-class war-vessels, while we have scarcely any. This short table is instructive in this connection:

Armored displacement tonnage of the navies of the world.

Country.	Effective.	Non-effective.	Total tonnage.
England	345,643	75,050	420,693
France	209,290	134,632	343,931
Russia	119,299	41,082	160,381
Italy	75,135	57,583	132,718
Germany	97,396	6,950	104,346
Turkey			69,530
Austria			63,780
United States	22,020	27,560	49,580
Spain			28,783
Holland			40,479
Denmark			17,925
Brazil			29,488
Sweden and Norway			16,652
China			17,615
Japan			10,880
Chili			8,250
Argentine Confederation			7,270
Portugal			2,479
Greece			3,854

NOTE.—The non-effective portions of the tonnage of England, France, Russia, Italy, and Germany consist of powerful sea-going ships of modern types building and to be ready for sea in two or three years; that of the United States consists of monitors of the old type, needing extensive repairs.

Speed the rising of the new navy! Speed the day when the 12,000 miles of our seacoast shall be properly defended, and when Canadian offensiveness, Mexican bluster, Spanish outrages, and general European contempt shall give place to respect, if not fear, of a people ready for defense and able to maintain their rights on sea as well as on land! We look not for conquest; we seek peace instead of war—to make men happy, free, and prosperous instead of coerce and enslave them; but the North American continent is dedicated to liberty, and our citizens and our rights must be protected in all lands. We excite now the jealousy and dislike of European states; let us not by our defenseless condition excite their cupidity and revenge.

The Financial Operations of the Post-Office Department.

SPEECH

OF

HON. JAMES H. BLOUNT,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, July 28, 1886.

The House having under consideration the bill (H. R. 9726) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1886, and for prior years, and for other purposes—

Mr. BLOUNT said:

Mr. SPEAKER: I beg to call attention to the following communication from the Postmaster-General, with the accompanying tables in relation to the postal service of the United States:

POST-OFFICE DEPARTMENT, OFFICE OF THE POSTMASTER-GENERAL,
Washington, D. C., July 26, 1886.

SIR: I have the honor to acknowledge due receipt of your communication under date of July 10, requesting that I furnish for the use of the Committee on the Post-Office and Post-Roads such information as may be in my power in regard to the financial operations of this Department during the preceding fiscal year ended June 30 last, and that I exhibit in some convenient form such changes as have been made in the rate of the cost of the postal service, including also the departmental service. Also, that so far as is possible you desire that I should embrace an account of the expenditures by the items usually mentioned in the acts of appropriation, and show the unexpended balances, if any, and whether any and what savings have been effected in the cost of the service; as well as any other information of kindred character which may suggest itself to me as of interest and value to the committee in this connection.

And in response thereto I transmit herewith tabular statements marked, respectively, "A" and "B," the first of which shows the amount of expenditure for supplies furnished for the use of the Department and the postal service during the fiscal year ended June 30, 1886, under contracts made since March 4, 1885, the date and duration of such contracts, cost of like kinds and quantities of supplies at prices paid under contracts made before the 4th of March, 1885, and the amount and rate of savings by the new contracts; and a further statement showing the estimated expenditure during the full contract term of four years of the four contracts made for that length of time since the 4th of March, 1885, being all the contracts of that duration, and the cost of like kinds and quantities of supplies at the prices in force March 4, 1885, and the rate of estimated amount of saving by the new contracts during the contract term.

I also transmit a table marked "C," showing the appropriations, expenditures, and unexpended balances for objects pertaining to the care of the Post-Office Department building and conduct of the departmental service and salaries of officers and employés of the Department, with the amount and rate of decrease of expenditures for the last fiscal year as compared with the preceding. Also a table marked "D," showing the appropriations, expenditures, and unexpended balances of appropriations, by fiscal years, from July 1, 1865, to June 30, 1886, inclusive, for the several objects mentioned in the caption of the table, which embrace all the ordinary items mentioned in the acts of appropriation for the postal service except such as are for the transportation of the mails, the free-delivery service, and such like compensation to postmasters and payments for ship, steamboat, and way letters, as are governed by law and not made by the Department.

All of these items not so embraced cover expenditures the amount of which for the last fiscal year can not be given until the Auditor's accounts are completed, usually about three months and a half after the end of the quarter. This table gives the average annual percentage of unexpended balances of appropriations for the twenty years preceding and for the last fiscal year, and like annual average percentage of increase with the percentage of increase for the last year. Also Table E, being the totals of the items included in Table D, for the year ended June 30, 1886, as illustrative of the method by which each year has been tabulated and the summary of results given in Table D.

As already indicated, it is impossible now to give the actual figures of the cost of the transportation of the mails for the last fiscal year. The Second Assistant Postmaster-General keeps accounts of the rate of cost from day to day, as affected by changes ordered in the Department, which indicate, perhaps better than the total figures of expenditures, the real saving effected in the star, steamboat, and mail-messenger service; and I transmit herewith his letter to me, under date of July 27, and four tables exhibitory of such changes as have been made in those branches of the service, together with some reductions in the expense of railroad transportation.

Table No. 1 exhibits a statement of the net monthly result of orders affecting the star, steamboat, and mail-messenger service from the 1st of April to the 30th of June, 1886. Many new or additional services have been provided in many instances, and curtailments and discontinuances in others which were demanded by the proper necessities of the service. Table No. 2 shows the annual rate of cost in these services as affected by the changes made since and by contracts for new service which had been made before March 4, 1885. Table No. 3 shows some items of reductions in the cost of railroad transportation and postal-car service.

There have been additions made to railroad transportation service by its extension upon new lines, and otherwise, to the amount during the fiscal year, in total, of $736,696, or at the rate of 4.99 per cent. on the whole service. During the preceding year such increase amounted to $1,146,899, or at the rate of 11.18 per cent. It is noteworthy in this connection that the increase in mileage of railroad service during the two years is disproportionate to the relative increase of cost, the increase in 1885 being 3,872 miles and in 1886 2,901 miles.

The table No. 4 exhibits the gratifying results of diminution in the rate of cost for the current fiscal year, begun with the 1st of the present month, caused by more favorable contracts in the Territories mentioned in the caption of the table, which have been advertised for at the periods there indicated.

The effect in the totality of compensation can not be during the past year equal to the diminution in the rate, because the changes have been gradual, as indicated by table No. 1. But during the current fiscal year results may be expected in a corresponding diminished cost.

I may further add, in connection with the tabular information given above, that the Auditor's reports for the first three-quarters of the fiscal year just closed indicate that the revenue will reach the estimate given in the last annual report of the Department, an increase now to be estimated with reasonable confidence at about $1,500,000 in the sale of stamps and stamped paper, a gratifying evidence of increasing advantages to the public of the postal service. On the other hand, the estimate for the expenses of the Department during the same year, as

shown in the departmental report for 1884 of $56,000,000, and even the corrected estimate in the report for last year of $53,000,000, will be so materially reduced that the deficiency for the year will prove to be probably two million less than was anticipated last year.

The total compensation to fourth-class postmasters during the past year has not made the expected percentage of increase. In many cases where the postmasters have been changed within sixteen months past, it has transpired, by the returns of cancellations since received, that occasion existed for the exercise of the powers vested in the Department by the act of June 30, 1879, to withhold commissions on false returns and allow only a reasonable compensation according to law. Orders in above one hundred such cases have diminished the compensation of the postmasters affected to the extent of $52,619.08, and a large number of cases are awaiting examination by the inspectors in which indications significantly point to a state of facts requiring further action of the same character.

I have the honor to be, very respectfully, yours,

WM. F. VILAS, *Postmaster-General.*

Hon. JAS. H. BLOUNT,
Chairman Committee on the Post-Office and Post-Roads,
House of Representatives.

TABLE A.—*Statement showing amount of expenditure for supplies furnished for use of the Post-Office Department and the postal service during the fiscal year ending June 30, 1886, under contracts made since March 4, 1885, the date of commencement and duration of such contracts, the cost of like kinds and quantities of supplies at the prices in the contracts in force March 4, 1885, and the amount and rate of saving by the new contracts.*

Articles.	Date of commencement of contract.	Duration of contract.	Expenditure year ended June 30, 1886.	Cost of like kinds and quantities of supplies in contracts in force, March 4, 1885.	Saving by new contracts.	
					Amount.	Per cent.
Adhesive postage-stamps	July 1, 1885	Four years	$114,969 09	$150,045 93	$35,076 84	23.3+
Postal cards	July 1, 1885	Four years	168,826 06	193,498 11	24,672 05	12.7+
Registered package, tag, and official envelopes	July 1, 1885	One year	72,366 21	127,703 22	55,337 01	43.3+
Mail-bags and mail-bag catchers	April 1, 1885	Four years	211,577 24	247,195 13	35,617 89	14.4+
Wrapping-paper	July 1, 1885	One year	11,216 25	12,099 78	883 53	7.3+
Wrapping-paper for facing slips	July 1, 1885	One year	17,700 00	29,100 00	11,400 00	39.1+
Twine	July 1, 1885	One year	69,522 00	78,424 50	8,902 50	11.3+
Marking and rating stamps	July 1, 1885	One year	9,420 40	10,967 74	1,547 34	14.1+
Letter-balances, test-weights, and scales	July 1, 1885	One year	1,120 00	638 00	*482 00	*75.5+
Stationery for postal service	July 1, 1885	One year	23,189 93	24,221 54	1,031 61	4.2+
Stationery for Department	July 1, 1885	One year	6,953 55	7,189 29	235 74	3.2+
Total			706,860 73	881,083 24	174,222 51	19.7+

*Increase.

TABLE B.—*Statement showing estimated expenditure during full contract term of four years of certain contracts made since March 4, 1885, for supplies for the postal service, the date of commencement of such contracts, the cost of like kinds and quantities of supplies at the prices in the contracts in force March 4, 1885, and the rate and estimated amount of saving by the new contracts.*
